Why not visit

The SUDAN

this Winter?

KHARTOUM can be reached either via Egypt or direct by steamer to Port Sudan and thence by train-de-luxe. The social life of Khartoum during the season (December to March), the scenes of Wild Life on the Southern reaches of the White Nile, or interesting short trips organised by the Sudan Government Railways and Steamers from Khartoum, offer a unique variety of experiences to those in search of something out of the ordinary. It is also a new route to or from UGANDA and KENYA, involving neither difficulty nor discomfort. To the Sportsman it is Paradise.

Notes of the Week.

Lake Tana.

In our issue of January 23 we were able to announce that discussions were once more taking place at Addis Ababa on the subject of the construction of a dam at Lake Tana. These discussions acquired additional significance from the fact that a representative of the White Corporation of America was taking part in them. The White Corporation, it will be remembered, announced in 1928 that they had concluded an agreement with the Abyssinian Government for the construction of a dam at Lake Tana and for regulating the headwaters of the Blue Nile. As Abyssinia was bound by an agreement concluded by the Negus Menelik with the British Government not to allow any works to be undertaken at Lake Tana without Great Britain's consent, it was clear that there had been some misunderstanding on the part of the American firm, and subsequently it transpired that an Abyssinian representative sent by the Regent, now King Taffari, to the United States to inquire into the probable cost of construction of a dam at Lake Tana had so far misunderstood his instructions as to leave the White Corporation under the impression that it had already secured what it termed the Lake Tana concession. The misunderstanding was easily cleared up, but it was probably a sound move on the part of the British Government to make the Corporation a party to further negotiations on the subject with the Abyssinian Government. For some thirty years spasmodic attempts have been made by Great Britain to obtain Abyssinian consent to the construction of a dam at Lake Tana, which is one of the works regarded as necessary for the complete regulation of the Nile and the securing of an adequate water supply for the Sudan and Egypt. Hitherto all these attempts have failed, partly on account of Abyssianian suspicion and partly as a result of the action of other Powers represented at Addis Ababa in deliberately putting a spoke in Great Britain's wheel.

A Preliminary Agreement.

More recently a better spirit has characterised the local relations of the Western Powers represented in Abyssinia, and the Abyssinian Government under the enlightened lead of King Taffari, has gained a clearer understanding of Great Britain's interest in Lake Tana. At the same time, in spite of the cautious reforms that the King has been able to introduce, the Abyssinian people as a whole remain suspicious of foreign enterprise in the country, and in regard to Lake Tana itself the fears and superstitions of the Abyssinian Church have been notoriously exploited in the past to the prejudice of Great Britain. In these circumstances there would be much to be said for associating in the construction of a Lake Tana dam an American firm, provided that there is no question of control of the waters when the dam has been completed and the regulation works are in operation. The United States occupy a special position in Abyssinia; they are not territorial neighbours, as are Great Britain, Italy, and France, nor have they been identified with big, and not altogether successful contracts, as Belgium has in the close co-operation which has existed between the Belgian Legation at Addis Ababa and such an enterprise as the alcohol monopoly. It is possible, therefore, that much of the artificial opposition that has been aroused against the Lake Tana scheme will subside, when it can be shown that the dam is being built by Americans and not by Great Britain. The main desideratum is that the dam should be built, and that the waters of the Blue Nile should be conserved in such a way as, without prejudice to Abyssinia, will provide the maximum advantage to the Sudan. The agreement that has now been made after two months' negotiations provides for a detailed investigation by the White Corporation next October of the engineering aspects of a dam at a suitable point near where the Blue Nile leaves Lake Tana, with a view to a final agreement regarding the construction of the dam when the engineers' report has been considered. That this stage has at last been reached indicates a welcome improvement in the attitude both of the Abyssinian authorities at Addis Ababa and, we may hope, of the inhabitants in the neighbourhood of the Lake.

Communist Troubles in Roumania.

It is to be hoped that the Roumanian Government is philosophical enough to reflect that the good done in this world is more often than not proportionate to the trouble experienced in achieving it. Dr. Maniu's tenure of office is not proving an easy one in any direction. In spite of the smallness of its numbers in Parliament, the Liberal Opposition, in virtue of its economic hold on the country

Digitized by Google

and the prestige of its chief's name, was able to marshal a considerable amount of passive resistance to the new Government's reforms, and it has taken Dr. Maniu no little time to speed the ship of State on its new course. There have been some notable achievements in the domain of foreign affairs; the economic prestige of Roumania has been largely restored by the sane practical policy inaugurated by the National-Peasant Party, the Optants' question is out of the way, and Roumania has no reason to be dissatisfied with the position that she holds in the councils of Europe. A year ago when in company with Poland she signed the Moscow Peace Protocol, there seemed reason to hope that a better spirit would enter into her relations with Russia. The Soviet authorities, however, seem to experience no difficulty in keeping practice and professions in separate water-tight compartments. Bessarabia is still a bone of contention betweent Moscow and Bucharest, and the Roumanian Government has now unearthed a Soviet organisation, in which Roumanian officials are implicated, for the furtherance of Communist principles and the promotion of unrest in Bessarabia. The Bessarabian problem is admittedly a difficult one. Its only solution lies in the contentment of the population, and this in turn raises the whole question of minorities, with which the Government has shown a wise desire to grapple.

"Above the Battle."

It is the fate of all those who do not take sides in a particular controversy to suffer misunderstanding, and nowhere can the truth of this dictum be more clearly seen than in Palestine. He who is not with the Zionists is against them, and *vice versa*. It is an unfortunate limitation of many Zionists and Arabs to suppose that those who hold the building up of a "Palestinian" sense to be the main need of Palestine are necessarily against either Arabs or Jews. For instance, our recent remarks upon the necessity of further co-operation between the Arabs and Jews in the economic sphere have been misunderstood not only in Palestine itself, but also in London, where the official organ of the Zionist Organisation, the *New Judæa*, takes us to task for things which we did not say and also for things which we did not mean. The summary which this organ makes of our comments in the issue of The Near East and India of January 30 is extremely unfair and misleading—as will be seen by the inference which the *New Judæa* makes from it, namely, that "The Jews must efface themselves." By the way, the *New Judæa* attempts to traverse our statement that the original spirit in which Zionists and certain influential Arabs regarded the immigration of Jews into Western Asia has been departed from, and seeks to find in the disturbances in Palestine in the years 1920 and 1921 evidence of its contention that the later spirit of the Zionists was the same as the first. That begs the question. The point is that the Zionists who came to Palestine in 1920 and 1919 were not imbued with such a spirit of economic collaboration with the Arabs as had been presumed in earlier negotiations. There is a Zionism from which the Arabs can not only gain benefit, but also can be persuaded that they can gain benefit. We remember, for instance, a speech which the leader of the Jewish Agency, Dr. Weizmann, recently made before the Central Asian Society. It was agreed by nearly all who heard it that, had that speech been made in Palestine ever since the War in season and out of season, there would probably have been no bloodshed in Palestine. Unfortunately, other presentations of the Zionist case have been made and, not unnaturally, have been fastened on to by the Arabs. To those who are, so to speak, above the battle, this fact is clear as daylight. Could the *New Judæa* appeal to the findings of the Haycraft Commission, for example, for evidence that the sweet reasonableness of certain Zionist leaders had been cherished by the mass of immigrants after the War?

The Main Goal.

Facility in self-criticism is, however, a gift in which the Jews are certainly not lacking, and if the *New Judæa* is unable to believe that a particular case can be spoiled by a peculiar presentation, and can, to such a community as the Arabs of Palestine, appear not to be the same case at all, no words of ours are likely to convince it. In any case, verbal disputes are nothing when compared with the main goal in Palestine, which is peace and co-operation. The theme of the Palestinian symphony must be the common development of Palestine by both Arab and Jew, working in harmony. We want no fugues in which two or more themes now take ascendancy, for there are, we are afraid, no Bachs in Palestine to effect a joinery of independent themes. So long as the Jews assert that the policy of the National Home must prevail, even, if necessary, at the expense of the development of the Arab population (of course they do not assert such a thing, but they appear often to entertain such a conception), and so long as the Arabs assert that the development of Palestine absolutely excludes the possibility of building up a Home for the Jews, we shall get no symphony, but merely a series of discords given out, possibly, by percussion instruments. It is to be hoped that after the publication of the findings of the Commission of Inquiry the whole tone of discussion in Palestine, and outside it, will be changed for the better. Great Britain has, perhaps, the most important duty in more clearly describing her aims in Palestine, but she must, if the country of Palestine is to progress satisfactorily, be backed up by both majority and minority there.

The Viceroy of India.

The best advice that has been given for a long time to the English people with reference to India was given by Sir John Hewett last week. It was: "Trust the man on the spot." It is safe to say that Lord Irwin is the most popular and most respected Viceroy of modern times. All Indians of every shade of opinion acknowledge that he is absolutely sincere in all that he does and says. And all the responsible classes in the country—the Ruling Chiefs, the landowners, the moderate politicians, the non-official Europeans and so on—have the utmost confidence in his ability, judgment and sincerity. Surely, therefore, the Government of India under Lord Irwin's direction may be safely left to deal with the difficulties—serious as these admittedly are—of the existing political situation. As Sir John Hewett wisely pointed out, India has sensibly changed during recent years. There has been a large development politically and this must not be disregarded or overlooked. Action which might have been sound and beneficial a quarter of a century or so ago might be imprudent if not indeed dangerous to-day. With every aspect of the political problem the Government must be, and undoubtedly are, familiar; and their attitude so far seems to us to be unexceptionable. For example, the Viceroy's reply to Mr. Gandhi's so-called "ultimatum" is precisely what it ought to be. Mr. Gandhi said that he intended to start a campaign against the payment of the Salt Tax; and Lord Irwin told him that that would be a course of action which would be bound to involve a violation of the law, and would be also a danger to the public peace. It may be accepted, we think, that if in the face of so plain a warning Mr. Gandhi persists, the Government will enforce the law just as they have already enforced it with reference to Mr. S. C. Bose, and Mr. Vallabhai Patel. The danger is that the suggestion should get abroad that the Government of India's hands can or might be forced by the home authorities. Rumours, for example, have lately received some currency in India, and reached this country to the effect that Mr. Gandhi was likely to be invited to visit London to discuss the situation with members of the Home Government. Manifestly there could never have been a shred of truth in the reports, but we are glad nevertheless that the India Office has authorised a Sunday contemporary to give an unequivocal denial to the suggestion which is described as fantastic and "illogical" in its conception.

THURSDAY, MARCH 13, 1930.

GREECE AND TURKEY.

On previous occasions it has been announced with some confidence by one or other of the interested parties that the Greek and Turkish Governments were on the point of reaching agreement on the matters that have been under negotiation between them ever since the first attempt to implement the Convention concerning the exchange of Greek and Turkish populations signed at Lausanne on January 30, 1923, was made. This time it is stated semi-officially on both sides that the terms of a new convention have been agreed upon, and that its signature is now only a matter of days. If it is a fact that an understanding has been reached by the two Governments on the vexed questions involved in the exchange of populations, a recent speech made by M. Venizelos on the subject of Greek naval policy may be found to have been a determining factor in bringing about a better spirit in the negotiations. A month ago the Greek Government was interpellated in the Chamber by a Deputy who challenged its declared policy of trusting for the naval defence of Greece to light vessels and aircraft rather than to capital ships. A definite naval policy was called for, as any hypothetical naval equilibrium in the Ægean Sea had been disturbed by the re-conditioning of the Turkish cruiser Yavouz (ex-Goeben), and Greece had an opportunity of redressing the balance by agreeing to take delivery of the battleship Salamis, which had been laid down to her order in a German yard before the war, but which successive Greek Governments have been anxious not to take over. The Deputy cited many authorities in Great Britain, France, and Germany to show the superiority of the capital ship in war, and without mentioning Turkey once in the course of a long speech, pointed the moral for Greece. M. Venizelos in his reply paid a tribute to the delicacy with which the Deputy had stated his case, but declared that he had no scruples in naming Turkey as Greece's potential adversary, in order to make his point the more clearly. He then proceeded to set out the reasons that had led the Government to favour a naval programme of light vessels instead of entering upon a competition in naval armaments with Turkey.

Greece, said M. Venizelos, was resolved upon the maintenance of peace. She had no intention of engaging in a war of aggression against foreign territory. For four and a-half centuries she had been actuated by the "Great Idea," and naturally aspired to naval supremacy in the Ægean in furtherance of a policy of warlike activity against Turkey. From the moment, however, when the Greeks accepted the frontiers assigned and assured to them by the treaties and were determined to work within those limits to create Greek prosperity, from that moment the contention that there was need for the mastery of the Ægean ceased to have any foundation. Greece's need to-day was restricted to the security of her maritime communications. Turkey, he was equally convinced, was also to be regarded to-day as an eminently pacific State. She had no designs on Greek or any other foreign territory; but, consecrated to the reconstruction of a Turkish State after the abolition of the Ottoman Empire, she realised that she had no interest, if she wished to be a national State, in aiming at the conquest afresh of alien populations. This was the tenor of the assurances given him at Lausanne by the head of the Turkish Government, and he believed them implicitly. Even to those who might be tempted to think that he was too truthful, M. Venizelos was prepared to prove that the naval policy advocated by the Greek Government was the best in the interests of the nation. He then embarked upon a technical analysis of Greece's naval requirements, in the light of the fact that, in the event of a competition in armaments between the two countries, Turkey, even though starting on an equal financial basis, could be relied upon to outdistance Greece, if only because a Turkish Government could always draw more freely on its Budget for military or naval purposes than a Greek Government under the critical supervision of a democratic country. On a declaration of war Greece's aim must be to carry out her mobilisation, entailing the transport of troops from the numerous islands, without interruption. For this purpose a Salamis would be useless, apart from the fact that the acquisition of this battleship would only provide Turkey with an incentive to go one better; whereas light vessels are required to escort troopships, and submarines and aircraft could be relied upon to neutralise the Yavouz. Continually throughout his speech M. Venizelos was careful to state that he was convinced that the likelihood of war with Turkey need not be taken into consideration, but he preferred to meet the opponents of the Government's naval programme on their own ground, in order that he might more effectually press home the Government's contention.

The candour of the speech would seem not to have been lost on the Turkish authorities, who could, indeed, hardly fail to be impressed by the way in which M. Venizelos laid all his cards upon the table, even to the extent of disclosing Greece's plans for dealing with any Turkish attack by sea. It was after this speech, if it was not on account of it, that the negotiations at Ankara seemed to move forward suddenly on a smoother course to the agreement which is now said to have been finally reached, and it will cause no surprise if M. Venizelos is invited to carry out his desire of visiting the Turkish capital, in order to conclude a formal treaty of friendship and arbitration, between Greece and Turkey after the signing of the agreements settling all outstanding questions connected with the exchange of populations. His hope, as he told the Greek Chamber, is that the treaty will itself be followed by a naval entente between the two countries, based on the parity of the Greek and Turkish fleets. It will be strange if the Turkish Government does not reciprocate M. Venizelos's trust. To-day the whole nation has been roused to the seriousness of its financial position, and even if the Cabinet is able to conduct the administration of the country without recourse to a foreign loan, it is obvious that the well-being of the people calls for an influx of foreign capital, in order to develop resources that are lying idle for lack of the necessary funds. A country, however, that spends more than thirty-five per cent. of its Budget on national defence, while money for development purposes is scarce, is inevitably handicapped in its dealings with foreign financial interests. Yet, hitherto, Turkey has not been able to free herself from the exigencies of her geographical position. Confronted with Russia on the north and Greece, another traditional enemy, to the west, it is little wonder that the Ankara Government has felt constrained to adopt the policy of the strong man armed. No agreement with Russia, even if it be honoured in practice by the Soviet authorities, can relieve the Turks altogether from anxiety in this quarter. The greater the need, therefore, to explore all possible ways of arriving at a permanent understanding with Greece, which will remove all chances of conflict in that direction. Such an understanding is now offered by M. Venizelos, and it is for the statesmen of Greece and Turkey to see that full advantage is taken of the present favourable situation to complete all the agreements necessary to enable the two countries to concentrate their undivided attention on internal development.

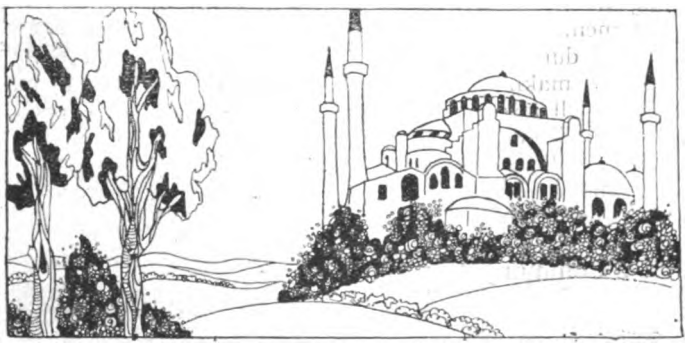
*The Near and Middle East

From Our Own Correspondents.



TURKEY.

Istanbul, February 25.

The Taurus Orient Express.

In accordance with scheduled arrangements, the Taurus Orient Express service was inaugurated on February 15, and passengers who left Victoria by the 11 a.m. boat-train on Tuesday, February 11, had the privilege of helping to blaze a trail along the new route to India. There were four passengers who had booked through from London to Baghdad and Karachi.

For the benefit of intending India-bound travellers by this route, it may not be out of place to indicate briefly the arrangements at this end for safely shepherding passengers across the Bosphorus from Europe to Asia. The through carriages from Calais on the Simplon-Orient Express run into Stamboul terminus at 11.55 a.m., and the Taurus Express leaves Haidar Pasha station at 4.08 p.m. For the time being, passengers, luggage and mails are being ferried across the Bosphorus by motor-boat, but it is hoped to inaugurate a regular train-ferry service at a later date. Departures from Haidar Pasha take place three times a week, on Mondays, Wednesdays and Saturdays, linking up with the boat-train departures from Victoria on Fridays, Sundays and Tuesdays. At Aleppo the Taurus Express is divided into two sections, the one heading in the direction of Cairo and the other in that of Baghdad, the journey from London to India occupying eleven days.

The inauguration of the new service was celebrated by a banquet given at Tokatlian's Hotel, which was graced by the presence of the senior Civil authorities, Hakki Chinassi Pasha, Inspector-General of the Popular Republican Party, the Inspector-General of the Wagons-Lits Administration, and a number of railway officials.

The Istanbul Fire Brigade.

For one reason or another, fire brigades, particularly village equipments, have ever formed the target for the satirical shafts of writers at a loose end for copy. There is scarcely any subject in the journalistic line that tickles the fancy of the Frenchman, for instance, so much as a subtle *boutade* at the expense of the inoffensive *sapeur-pompier*. The latter's Turkish counterpart, forming no exception to the rule, has not escaped the fate of his foreign brothers-in-arms.

The Istanbul fire-brigade, although a semi-military organisation for purposes of discipline, is administered by the Municipal authorities of the city. Two former Prefects of Istanbul, Haydar Bey, now a Deputy, and Emin Bey, have latterly criticised the organisation and indulged in quizzicalities respecting the personnel of the local fire-extinction service. They complain that the whole system is in the hands of a set of irresponsible children.

Whether the simultaneous strictures of the two ex-Prefects are the outcome of genuine alarm at the number of fires which have been more or less unsuccessfully dealt with of late, or whether the judgment of the two critics has been slightly warped by a picture viewed through jaundiced ex-Prefectorial eyes, it is not easy to say. Fire-brigades, like all other human institutions, probably have their runs of good and bad luck, and the star of the Istanbul turn-out may not have been exactly in the ascendant during the past few weeks.

It is no more than fair to say, however, that the present form and state of efficiency of the brigades are infinitely superior to those of the body which existed in the old pre-War days. Horse-drawn vehicles, with the crews on foot at the jog-trot, have been entirely replaced by up-to-date motor-drawn engines, which are fitted to carry personnel, equipment and spare water-tanks.

The smartness of turn-out presented by the brigade is unquestionably due in great part to the precept and example set by the British Military Fire-brigade, the crews of which, in later Armistice days, were recruited entirely amongst local Turks, who were trained by British officers.

Treasure Trove.

Some few days ago a gardener digging on his small patch of land at Prinkipo, one of the Princes Islands, struck with his pick a hard substance which finally gave under repeated blows and revealed to his astonished eyes a pile of golden coin.

His joyful capers attracted the atention of two neighbouring cronies who hastily joined the gardener with a view to stimulating his efforts by a little outside help and advice. Together the three continued to dig and delve until their efforts were rewarded by the recovery of three large stone jars full of golden treasure. In these days of depreciated paper currency and costly living, their delight can well be imagined. Alas for gardener and cronies alike, they are now sadder and, let us hope, wiser men. The trouble arose, as it so often does in these cases, over the share-out. A quarrel took place, blows were exchanged, whereupon one of the cronies informed the police against the gardener. The police entirely disregarded the charge of assault and battery, but descended with all the majesty of the law upon the three jars which were removed forthwith to the police-station whence, so it is reported, they will be handed over to the Museum of Antiquities.

State Bank of Turkey.

After weeks of patient and laborious negotiations carried on at Ankara between the senior Treasury officials and the delegates of the Ottoman Bank with respect to the participation of the latter in the capital-issue of the projected State Bank, the negotiations have been abruptly broken off, and the foreign delegates have left the Turkish capital. An initial difficulty arose some fortnight ago over the quotas to be contributed by the Turkish Government and the Ottoman Bank's group respectively. The divergence over this matter appears to have been

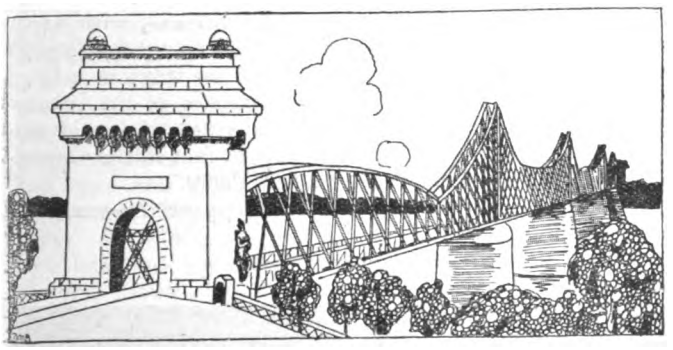
adjusted satisfactorily and the transactions were resumed, only to be broken off definitely over a question of much more serious import to all parties. The delegates of the Ottoman Bank are said to have made it a condition of the Bank's participation that the records of budgeted State Revenue and Expenditure kept by the Treasury be open to quarerly inspection by the Bank's representatives. This suggestion the Treasury immediately rejected as being incompatible with and derogatory to the dignity of a sovereign State and as approximating too blatantly to pre-War capitulatory impositions.



ROUMANIA.

Bucharest, March 5.

Bessarabia.

The Press continues its alarmist campaign in regard to the Communist menace in Bessarabia. There is, of course, no doubt, that Soviet propaganda is very active here, as in all parts of the world, and, if further proof were needed, it might be found in the recent discovery that a subordinate official of the Gendarmerie had allowed himself to be bought by the Soviets' money to spread their propaganda. Nevertheless the alarmist rumours are obviously exaggerated, possibly in the interests of the Opposition. Bessarabia cannot be said to be a communistic province, and indeed it is keenly opposed to Bolshevism, having tasted of its horrors under the Russian régime. The facts upon which this campaign is based are inexact and misrepresented, and there is in reality nothing to support the alarmist thesis. The Press speaks of discontent and agitation among the population of Bessarabia. It is true that some discontent exists, and the Government, far from ignoring it, recognises that in part it is justified and is doing its best to meet the requirements of this province, which have hitherto not been satisfied.

One of the most pressing necessities is the reorganisation of the transport system towards the new economic outlets for the produce of the province. It is a fact that for want of proper communications whole districts of Bessarabia are isolated during a great part of the year, there being no transport possibilities by road, rail or canal. On the other hand, the Bessarabian population has suffered, as has all the rest of the country, from the prevailing low prices for cereals, and large quantities of grain have not been sold or have been sold at a loss from sheer necessity. The Government is carefully seeking a solution of this difficulty and a means of improving the conditions.

The Opposition Press is carrying on a keen campaign on this subject and demands that some important personality should immediately be appointed to examine the situation and find some practical solution, a personality, that is, who stands outside of party interests and who would undertake the task with impartiality. The name of General Presan has been mentioned in this connexion, by the partisans of this method.

Count Hochberg.

A subject which has aroused general interest is the campaign against Count Hochberg which has been carried on by certain foreign daily papers. The rumour is abroad that his engagement to Princess Ileana has been broken off, and this rumour is most insistent. The Court circles have preserved a discreet silence and have given no information whatever. The President of the Council, M. Maniu, in his declarations to the Press, insisted that the question was purely a private one and regarded the Royal Family only. Consequently the Roumanian papers, adopting this point of view, have refrained from making any comment on the matter. No doubt the question will be settled during the journey which Her Majesty the Queen is now making in Egypt with H.R.H. Princess Ileana. They will also visit Palestine and they are not expected back in Roumania until towards the end of the month of April. [It has since been reported from Bucharest that an official announcement states that the engagement has been broken off. —ED.]

The Communal Elections.

The Communal elections are following their normal course. Up to the present the results are known in regard to some of the Departments, and in 90 per cent. of these the Government party's candidates have been successful. In several places, however, the Liberal candidate obtained the required number of votes to give this party a representative on the Muncipal Councils, but no Liberal mayor has yet been elected.

The Government still continues to adhere to its principle of allowing the greatest possible independence to the rural communes, and has taken no steps to influence public opinion by undue pressure, with the aim of having its own representatives elected. The party in power considers that in accordance with the principle underlying the new Law, which forms the basis of the political administrative programme, it is best to let the villages manage their own affairs in the way that suits them best. It is for this reason that the Government put up no official lists except in the municipalities of large towns.

It is worthy of note that this is the first time that women have exercised their somewhat limited right of vote which

was only recently granted to them, and already one of the villages has elected a woman to the post of mayor.

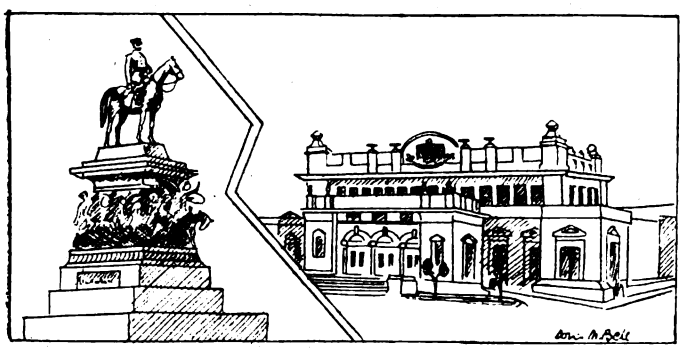
M. Madgearu at Geneva.

Public opinion followed with great interest the action of the Minister of Finance, M. Madgearu, at Geneva, where he took up the defence of the agricultural countries against prohibitive Customs duties. This question is a very vital one for Roumania at the present time, as farmers have suffered severely during the year just past, in spite of the splendid harvest, from the fact that Roumanian grain has not been able to find a market and has remained unsold, owing to the prohibitive Customs duties imposed by neighbouring countries. Up till now these had been the principal buyers of Roumanian cereals. This question is also raising difficulties in the Germano-Rumanian negotiations for a commercial treaty.

In this connexion, there are some economists who advocate the adoption by Roumania of a system of exchange of cereals with various countries, a system which has just been established by common accord between Germany and Poland. Public opinion is following with interest all those proposals and negotiations in the earnest hope that some satisfactory solution will be found before the new harvest is ready to come upon the market.

Harvest.

It is felt that the first thing to relieve the present distress and bring new life into the market and trade generally would be a good harvest this year, provided that prices are favourable to enable the grain to be disposed of. It is too early now to offer any prediction as to what the harvest may be. There has been very little snow this winter, as well as little rain, so that the ground is hard and dry. For the last fortnight the weather has been spring-like, with light frosts at night, but latterly the temperature has gone up rapidly and reached 16 degrees Centigrade in the shade a few days ago. The rose bushes are already putting out green shoots and the tree buds are visibly swelling. It would be little short of a calamity, if a heavy frost were to set in now. But it is difficult to believe that the winter is over, as there has been practically no winter weather at all.



BULGARIA.

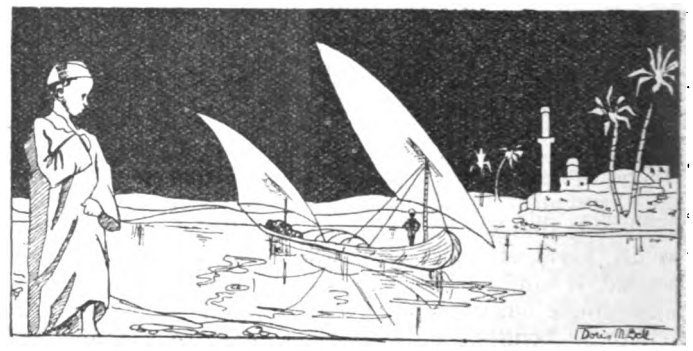
Sofia, February 25.

The Communal Elections.

Elections for the communal Councils were held on February 16 in all the rural communes in Bulgaria. Usually these elections have no political importance, their results depending on combinations which the peasants make for purely local needs. This time, however, they assumed considerable significance, both for the Government and for the Opposition, each wanting to find in them justification for particular aspirations. In effect, the struggle was waged principally between the Government group of the Democratic Entente and the Agrarian Party.

The actual day was unfortunately marred by several regrettable incidents, notably in two or three villages in the district of Tartar Pazarjik, where there were a certain number of killed and wounded. Elsewhere, however, calm was maintained. The results, which were energetically contested by the Opposition—it alleges violence at the elections and even accuses the Government of having "cooked" the figures—were, in appearance at any rate, very favourable to the Democratic Entente, which is stated to have received 588,847 votes against 369,066 for all the other parties, and 40,000 independent votes in the Petritch Department—or sixty-one per cent. of the votes cast. But, if one considers only the numbers attributed to the Ententists and to the Agrarians—588,847 and 179,541 respectively—one sees that there is a manifest disproportion, for the Ententists are not so well thought of in the villages as to gain there three times as many supporters as the Agrarians. The explanation lies in the fact that, often under administrative pressure, the village population, in order to avoid unpleasantness, with which it is threatened, allows the names of its own candidates to be inscribed on an official list. In this way, in a large number of communes, which the Minister of the Interior has registered as having given their votes to the Government, the elected councillors belong in fact to the Opposition and especially to the Agrarian Party.

This explains why everyone is happy at the results of the elections.



EGYPT.

Cairo, March 1.

The Political Situation.

There is a noticeable lull in the political situation, owing to the fact that it has been definitely decided that a delegation from Egypt will go to London next month to negotiate a settlement of the Egyptian question. The only matter in this connexion which occupies public attention is: Who the representatives of Egypt will be? It seems fairly certain that in addition to the Prime Minister the delegation will include Makram Ebeid Effendi, Minister of Finance, Wassef Ghali Pasha, Minister for Foreign Affairs, and Osman Moharram Pasha, Minister for Public Works. Opinion is divided in both Egyptian and European circles on the outcome of the coming negotiations. On the other hand, there is general agreement that the mere ratification of the treaty, which it is intended to conclude, will not remove the difficulties of the situation—which, in fact, will begin to make themselves felt only when the execution of the agreement is entered upon.

It is in the circumstances very unfortunate that an incident should have arisen in the Mixed Courts of Alexandria necessitating the resignation of one of the Egyptian Judges. The details seem fairly well known, to judge from the comments in all circles, particularly Egyptian, where the reflexion on the Egyptian magistracy caused by the action of the judge in question is very keenly felt.

The Sheikhs Party.

The annual Ramadhan Sheikhs party was held last Friday at the Residency. It proved the usual great success, an unwonted number of the Ulema accepting the invitation, and the occasion was rendered remarkable by the fact that Lord Allenby was present in addition to Sir Percy Loraine, and no fewer than four of the six Oriental Secretaries that have been attached to the British representatives since the Occupation were in attendance, viz., Mr. R. A. Furness, Major Gayer Anderson, Mr. Keown-Boyd, and Mr. Smart. The two missing ones were, of course, Mr. Harry Boyle and Sir Ronald Storrs.

The Season.

The present season is not up to normal. Various reasons are responsible for this, the most important being the financial stress in America and Great Britain and the recent troubles in Palestine, which country since the War has more and more become part of the usual Egyptian programme, being taken either on arrival or on the way home. In a lesser degree the unsettled political situation here has had something to do with the holding off of visitors, though there has never been the slightest justification for any fear of disorders or unpleasantness for foreigners. Upper Egypt and the Sudan have the same tale to tell of fewer visitors, and 1930 may be written down as possibly the leanest season since the War.

But if there has not been the same abundance of visitors as in previous years, at least it can be said that Egypt's visitors this year have been unusually distinguished. At the present moment the Queen of Romania with her daughter, the Princess Ileana, is in Upper Egypt prior to making a stay at the Semiramis. Next week the King and Queen of the Belgians are coming to return the visit which King Fuad paid Belgium last summer. They will stay as his official guests for three days at Abdin Palace, and then go by steamer to Upper Egypt. At about the same time there will arrive the ex-King Ferdinand of Bulgaria who was here two years ago; and in April the Prince of Wales will be here on his way back from East Africa, though whether his visit will be official or *incognito* has not yet been decided.

There has been a good deal less entertaining at the Residency, but, on the other hand, private parties have been much more frequent, while the entertainments at the hotels, dances, dinners and concerts, have proved a great attraction. At the Royal Opera House the programme has proved another triumph for Cavaliere Dalbagni, though, owing to the tightness of money, the houses have by no means been what the fare provided deserved.

An Artist's Experience.

Mr. F. Richards, who was a pupil of Sir Frank Short, held a very successful exhibition of etchings this week at the Continental Savoy Hotel. He had a large number of visitors, including the High Commissioner and Lady Loraine, and sold a considerable number of pictures, notably to the Department of Beaux-Arts of the Ministry of Education. Recently Mr. Richards held a similar show in Alexandria, where he met with like success. He is to be commended for his enterprise in providing the public of this cosmopolitan land, which is generally fed on foreign fare, with an opportunity of seeing what present-day British artists can do.

Mme. Zablovski has been elected mayor of the Voinesti Commune of the Vaslui District of Roumania. She is the first woman mayor in Roumania.

The King and Queen of the Belgians left Brussels on March 5 for Egypt to return the visit paid by King Fuad to the Belgian Court in October, 1927. They were accompanied by M. Paul Hymans, Minister of Foreign Affairs.

At a special meeting of Convocation to be held at Oxford University on May 3 in connexion with the International Historical Congress, the honorary degree of D.Litt. will be conferred, among others, on Mr. Nicholae Jorga, Professor in the University of Bucharest.

SCHOOL OF ORIENTAL STUDIES.

The fourth annual dinner of the School of Oriental Studies Union Society was held at The Trocadero Restaurant on March 5. Sir Denison Ross, Director of the School, presided.

Sir Harcourt Butler, responding to the toast of "The Guests," which was proposed by the Chairman, said that things were changing rapidly in many ways in the East. Looking back on his 40 years' experience there, he said that the greatest pleasure he derived was the feeling that the countries were getting a better understanding of each other, and social relations were steadily improving.

The Persian Minister, proposing "The School," said that, though primarily an educational institution, it served a great many useful purposes quite outside the scope of its special object. The beneficial influence which the school undoubtedly exercised was not confined to linguistic and historical scholarship, but reached far beyond, even to the whole spheres of commerce, economics, diplomatic intercourse, the Civil Service, and the most important question of a better understanding between nations of widely different culture. The college, together with its sister institutions in other Western countries, was contributing in no small degree to the promotion of friendliness and intimate intercourse between East and West.

Sir Harry Stephens, Chairman of the governing body of the School, in reply, said that last year it celebrated its tenth birthday. It had established itself on a firm basis and had sent out to various parts of the Orient men much more qualified than they otherwise would have been if the school had not been in existence. The school, still in its infancy, had a most astounding prospect before it. Others present included:—The Iraqi Minister, Lady Ross, Sir John Cumming, M. Georges Cattaui, Mr. A. S. Gilbert, Sir Edgar Bonham-Carter, Professor R. L. Turner, Professor Bruce, Dr. C. O. Blagden (Vice-President of the Union Society), Mr. D. A. J. Cardozo (Deputy-President), and Mr. A. P. Firth (Hon. Secretary).

THE ANGLO-PALESTINIAN CLUB.

The ninth annual general meeting of the Anglo-Palestinian Club was held in the First Avenue Hotel, High Holborn, W.C.1, on March 2, the Chair being occupied by Col. Harold J. Solomon.

The Chairman mentioned that the Club had now acquired premises within the walls of the First Avenue Hotel, but entered into by means of a separate entrance at 13, Warwick Court. This had proved to be a starting-point, and the Committee had appointed a House Committee to supervise the conduct of these premises.

The reports of the Hon. Secretary and Treasurer, together with the accounts for the year ended December 31, 1929, were unanimously adopted.

The following were elected Honorary Officers and Committee:—Patron, The Rt. Hon. the Earl of Balfour; President, Mr. James de Rothschild, M.P.; Vice-Presidents, Brig.-Gen. Sir Wyndham Deedes, Dr. M. D. Eder, the Rt. Hon. Lord Melchett, Major H. L. Nathan, M.P., Mrs. Philip Snowden; Chairman, Col. Harold J. Solomon; Vice-Chairmen, Mr. P. Horowitz and Dr. M. Sourasky; Treasurer, Mr. J. Linton; Hon. Secretary, Mr. L. Assoushkin; Committee, Mrs. Beloff, Col. W. Elliott, Messrs. L. Gildesgame, J. Halevy, D. Hos, A. Puniansky, C. M. Spielman, B. Shklow, and Mrs. Wolf.

A "Masaryk Forest" is being planted in Palestine by Czech Zionists in celebration of President Masaryk's 80th birthday, which occurred on March 7.

King Amanullah left Constantinople on March 6 for Rome, but will return later and spend the summer at a villa at Therapia lent by the Turkish Government.

Three Egyptians who have just completed their training took part in the air display at Heliopolis Aerodrome on March 3 of the Middle East Command of the Royal Air Force.

Sir Henry George Outram Bax-Ironside, K.C.M.G., of Grosvenor Place, Westminster, S.W., and of Houghton-le-Spring, Durham, late H.M. Diplomatic Service, from 1911 to 1915 Minister at Sofia, who died on April 16, aged 60, left settled land valued at £6,999.

M. Vassil Poundoff, Editor of the Macedonian newspaper *Vardar*, an organ hostile to the Mihailoff faction, was assassinated in Sofia on March 4 by followers of Mihailoff. M. Poundoff was shot with a revolver on leaving his house; a companion was also killed. The police have arrested three persons who are reported to have proceeded specially from Kustendil for the assassination.

The new Albanian Cabinet which was formed in Tirana on March 6 is constituted as follows:—

M. Pandeli Evangeli	Prime Minister.
M. Vassil Avrami	Justice.
M. Rauf Fitso	Foreign Affairs and Interior *ad interim*.
M. Hil Mosi	Education and Public Works *ad interim*.
M. Kol Thatch	Finance.
M. Mehdi Frasheri	Public Economies.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, February 20.

Political Unrest.

There is an interesting cablegram in my last newspaper. It reports that the Secretary of State for India, replying to Mr. Clifton Brown, who, after drawing a contrast between the unrest and sedition in British India and the law and order maintained in the Indian States, suggested common measures against the disruptive elements, said that he saw no reason why the authorities in India responsible for law and order should make a special approach to the Rulers of the Indian States. There may be no reason. It is certain that there is justification for any man's drawing attention to the political unrest in British India; for it has now endured for forty or fifty years, and it is at this moment more widespread, with deeper roots, than it has ever been before, if in the last six months there have been fewer outrages than in other periods of six months in the past forty years. All the efforts of the Central Government and the Local Governments to heal the political unrest have been unavailing. The Viceroy can move about India now, only surrounded by a thick moving wall of policemen, C.I.D. officers, and soldiers. "So the Viceroy is coming" I said to the Maharaja of Mahmudabad, a few days before the date of his recent visit to Lucknow. "Yes," the Maharaja replied, "but as a prisoner!"

A New Approach.

So, though there may quite possibly be, as the Secretary of State has said, no reason for that approach to the Rulers of the Indian States suggested by Mr. Clifton Brown, there is very great reason for a new approach to the problem of unrest. It may be said with absolute truth, my Indian friends inform me, that, if the authorities do not make a new approach to it, and succeed this time, the unrest will approach them in the form of revolution. They tell me so. I had an hour of it last night from an Indian to whom I am paying a visit, and in whose house I write. I have put Calcutta at the top of my letter as usual, but I write from a city within not very long a motor car run of Delhi. This will show how things have changed, what the proof is, to put it so, that boiling-point has now been reached. I have been quite close friends with this Indian for eighteen years. Last night was the first time we ever talked politics. The man had at last to broach the subect with me. He feels too hotly to keep silence any longer.

A New Chapter.

It may be thought that I have not myself been setting the example of a new way of approaching the problem of political unrest, with my insistence on the danger of loose talk of Dominion Status, "great constitutional changes," with my insistence on the general lack of capacity and of education among the Indians, of their lack of the sense of discipline, of their disposition to use words with only half a sense of their meanings, and all the rest of my writing during the last six months. I saw a reason for that writing, and still see it. That was what I may call my second chapter. I had written a first. In it what I dwelt on was the necessity of a change in the form of government; such a chance a would make the better Indians feel that their sense of self-respect had been restored to them. I said that they felt that they could not live under the existing Government without feeling that they had lost their self-respect. That was my first chapter. In the second chapter I was concerned to warn the authorities aganist any too blind belief in a panacea's being found in mere constitutional changes. The mind of the Liberal school of politicians—it must be remembered that many members of your Labour Government were Liberals to begin with—tends to over-value mere institutions; to see a cure for a country's ills in things like Parliament, the ballot-box, a free Press, etc.

A New Spirit.

I would now write a third chapter. What I shall insist on in it is that the good we seek for India is not to be sought along the lines of a change in the political institutions of the country, in such things as Provincial autonomy, greater freedom in fiscal matters, an extended parliamentary franchise, and so on, but in a radical change of spirit. The spirit of the Administration must be renewed. There must be a greater humanity and less a seeking of material profit, as men seek profit whose values are all money values; there must be more kindness of heart, more courtesy, in the officials; the "independent" among the officials must be those to whom preferment is given rather than the time-servers and the sycophants. I will set all that forth in later laters. The rest of this letter I must give to the humbler task of reporting what has happened during the week.

The Congress.

The Congress Working Commmittee has been in session at Ahmedabad, and a resolution has been passed, the feature of which is what it reveals of Mr. Gandhi's passionate desire (passionate, if it is not assumed for a purpose) to keep the movement by which the Congress is to attain independence a bloodless one. This is the resolution; it is very long, but I feel I must give it in full: "In the opinion of the Working Committee, civil disobedience should be initiated by those who believe in non-violence . . . as an article of faith, and as the Congress contains in its organisation not only such men and women but also those who accept non-violence as a policy essential in the existing circumstances of the country, the Working Committee welcomes the proposal of Mahatma Gandhi and authorises him and those working with him, who believe in non-violence as an article of faith, to the extent above indicated, to start civil disobedience as and when they desire, and in the manner and to the extent they decide. The Working Committee trusts that when the campaign is actually in action, all Congressmen and others will extend to the civil resisters full co-operation in every way possible, and that they will observe and preserve complete non-violence, notwithstanding any provocation offered. The Working Committee further hopes that in the event of a mass movement taking place, all those who are rendering voluntary co-operation to Government, such as lawyers, and those who are receiving the so-called benefits from it, such as students, will withdraw their co-operation, or renounce the benefits, as the case may be, and throw themselves into the final struggle for freedom. The Working Committee trusts that, in the event of the leaders being arrested and imprisoned, those who are left behind and have the spirit of sacrifice and service in them, will carry on the Congress organisation and guide the movement to the best of their ability."

India's Sea-borne Trade.

The Viceroy has delivered a carefully prepared speech to the Federation of Indian Chamber of Commerce and Industry. This passage regarding India's sea-borne trade occurs in it: "A discouraging sign of India's post-War trade was that, relative to pre-War prices, the general level of prices for imported articles was considerably higher than that for exported articles; in other words, India was paying more for her imports than she was getting for her exports. Index numbers prepared in the Department of Commercial Intelligence and Statistics, show that in 1920-21 the general level of prices for imports stood at 237 and for exports at only 140. On the basis of 100 for both import and export prices in 1913-14 this represented a difference of 97 points, a difference which interfered considerably with the overseas trade of India. In 1925-26 the difference still stood at 26 points, but by 1928-29 it had fallen to only six. Unfortunately, however, although the position up to the end of the year 1928-29 gave good ground for sober optimism, the tide of progress has slackened. Forces, world-wide in their character, have exercised a depressing effect on trade in

Digitized by Google

general, and the outlook for Indian trade and commerce is at present less favourable than it was a year ago."

Coal Revival.

"There is, however," to pass to another part of the Viceroy's speech, "one exception to the present somewhat unfavourable outlook. Recently conditions in the coal trade have exhibited a marked improvement, and at present the industry is more prosperous than it has been for some years past. The success attained by the Coal Grading Board has probably contributed to this welcome change. The Board was constituted at the beginning of 1926 . . . , and since then the total shipments of coal from the Kidderpore Docks for cargo and bunkers have risen steadily from 1½ million tons in 1924-25 to nearly 3¾ million tons in 1928-29."

Trade Commissioners.

"I welcome the interest," said the Viceroy, "taken by your Federation in the development of overseas trade organisations, as indicated in one of the resolutions on your agenda, dealing with the appointment of trade commissioners. It will interest you to know that a scheme has been prepared for the appointment of Indian trade commissioners at Hamburg, Milan, New York, Durban, Mombasa, and Alexandria. As a corollary to the establishment of trade commissioners in Africa and the Near East, it is also proposed to appoint a deputy director of commercial intelligence at Bombay, who will be in direct contact both with the exporting houses and the trade commissioners."

Kumbh Mela.

The great Kumbh Mela at Prayag (Allahabad) is nearly over. Many words, I knew, would be said of it in the cables to England. I need not, then, say anything of it; but I may quote this from my newspaper, as a thing throwing light upon India, and how little it is a country in which to make rash political experiments. Cholera has broken out among the pilgrims. A medical man in charge, interviewed, said: "Due to their obstinacy and superstition—many pilgrims being of opinion that cholera is a visitation from on high, and that prayer, not medicine, is the proper remedy—scores of persons have been picked up by the *doli* bearers from the roadside. Many of them died before even an injection could be administered." There is another difficulty. The patients, as soon as they feel better and before they are fully cured, try to escape from hospital, and constables have had to be posted to watch them at night.

BRITISH TRADE WITH INDIA.

An appeal to the leaders of the Lancashire cotton trade to refrain from any strong expression of their views on the proposed tariff changes until the debates in the Legislative Assembly was made by Mr. T. M. Ainscough, H.M. Senior Trade Commissioner in India and Ceylon, in a paper read before the Indian section of the Royal Society of Arts on March 4. Mr. G. M. Gillett, M.P., Parliamentary Secretary to the Department of Overseas Trade, presided.

We were constantly being reminded, Mr. Ainscough said, in these days of unparalleled unemployment that the core of the problem is the revival of the export trade. Even in 1928 the Indian market absorbed £84,000,000 of British goods, or nearly £30,000,000 more than Australia, our next greatest market. It was obvious, therefore, that the prosperity—indeed, almost the very existence—of our basic industries depended directly upon the purchasing power of the 320,000,000 of our fellow subjects in India. Unfortunately we were faced with the disquieting fact that the United Kingdom's share of India's total imports had declined from an average of 63 per cent. in the last five pre-War years to less than 45 per cent. in the fiscal year 1928-29, almost all of the ground lost being in the "bazaar" trades, which included cotton and woollen piece-goods and the lower grades of metals, hardware, etc., and constituted some 60 per cent. of the total British trade with India. Moreover, the alarmist views of a section of the Press in this country had created a distinct sense of nervousness among certain manufacturers who were not conversant with the true state of affairs, and were not aware of the sound, steady and statesmanlike attitude which was being maintained by the leading organs of the European Press in India and by the leaders of the British commercial community on the spot.

After outlining the four main causes of the British setback, Mr. Ainscough said that he was firmly convinced that our difficulties sprang from purely economic causes. The remedies were those of nationalisation of production and marketing that could only be applied by the manufacturers and merchants themselves. The political situation in India introduced a gravely disturbing element which—inasmuch as it tended to impair confidence in the country—rendered the application of remedial economic measures more difficult, but the feeling of grave anxiety shown by many of our manufacturers was not warranted by the facts.

In conclusion, Mr. Ainscough appealed to British manufacturers, exporters and bankers to take a close and more active interest in India's progress and economic development. He did not underrate the difficulties of co-operation with certain Indian interests in the present state of racial and political tension, but he believed that the economic field offered greater prospects of early co-operation than almost any other. The interests of the two countries were bound up in the development of an economically strong and prosperous India as an integral part of the British Empire.

Opening the discussion, the Chairman said, from his experience, he believed that we were very fortunate in our trade representatives abroad, and one of the most distinguished was Mr. Ainscough. The position of British trade in India was very far from being satisfactory, he continued. But the problem was by no means confined to India alone. Countries to which we exported were anxious to develop their own industries, and for that reason they were putting up protective tariffs against any nation and against England as well. Quite a decline had taken place in our export trade in India, but if they looked at our export trade to other countries they would find exactly the same thing taking place.

He entirely endorsed Mr. Ainscough's regrets that there had been a newspaper campaign in this country which tended to exaggerate the seriousness of the political position in India. There was an intimate relationship between great political issues and the condition of industry. It was extremely important that those who were responsible for circulating news in the Press should seek to give sound and proper information free from exaggeration, in view of the prejudicial effect of false or highly coloured statements not only upon the relationship between different peoples, but also upon our industries.

India, he pointed out, was committed to the policy of discriminating protection, and during the past seven years fairly heavy protective duties had been imposed upon steel, fabricated steelwork, tinplates, paper and a few less important articles. It was gratifying to observe that the effect of those duties on the import trades had not been so restrictive as might have been expected.

Referring to the recent Budget proposals—namely, the enhancement of the import duty on cotton piece-goods from 11 per cent. to 15 per cent. and the proposed imposition of an additional surcharge of 5 per cent. upon all goods of non-British manufacture—Mr. Ainscough said it would be out of place to make a statement at this juncture beyond remarking upon the fact that this gesture was a most significant one, which all appreciated. He appealed to Lancashire interests particularly to suspend any strong expression of their views before the debate in the Legislative Assembly on the Bill which would in due course be introduced. Meanwhile, any expression of views from the purely British standpoint would do more harm

than good. It would stiffen the case of the opponents of the measure without in any way assisting the British side.

Mr. J. G. Nicholson, a director of Imperial Chemical Industries, said that from his own experience, such organisation as Mr. Ainscough had outlined was likely to be successful. He was sorry that more stress had not been laid upon the importance of manufacturers at home keeping stocks continually on hand. It was no good selling goods unless, having sold them, they could be augmented by further supplies. Mr. Ainscough had referred to the German competition in dyes, but since his firm had taken an active interest in dyes, he was glad to say that the Germans were not having it all their own way.

Sir William Larke, director of the National Federation of Iron and Steel Manufacturers, said Mr. Ainscough was quite right in recommending them to develop new lines which would not interfere with their old brands. The time would come when India would cease to be a price market and become a quality market. British finance could only be furnished to India and to other markets if British industry was not depressed. The depression was not due to failure to compete in India, it was due to the handicap placed on their competitive power due to post-War problems.

Other nations had realised that the only means of defeating us was by developing the art of technical salesmanship. We had not yet replied to their attacks. He could assure the speaker that the British iron and steel trade was taking steps to see that foreign competition was met by men who were capable of giving the requisite technical advice.

Among other speakers was Mr. G. E. Rowland, chairman of Agricultural and General Engineers, Ltd., who suggested that the department should be changed to a Ministry of Commerce. He hoped that some Government would render financial assistance to firms in bringing their plant and machinery up to date. So far as combined marketing was concerned, Mr. Ainscough, in his case, was speaking to the converted.

Speaking from the standpoint of an exporter of Indian produce, Mr. H. A. F. Lindsay, Indian Trade Commissioner in London, said that the force of the adage—where you buy you sell—was becoming more and more evident. He did not altogether agree with a previous speaker about the necessity for larger stocks. On the other hand, the fact that present-day stocks were much smaller probably accounted for the more serious fluctuations in prices and the resultant loss of confidence. He had particularly in mind the case of piece-goods, where the effect of any shortage was at once apparent, while an excess brought about an immediate drop in prices. A few years ago the equivalent of two and a-half years' supply was a general rule in the bazaars, and even one and a-half years' was considered to constitute a very small margin.

Signal tributes were paid by all the speakers to Mr. Ainscough's services to Indo-British trade and industry, Sir Walter Willson, a former representative in the Legislative Assembly of the Associated Chambers of Commerce of India and Ceylon, observing that nobody was consulted more by the mercantile community in India. Personally, he thought that the wider publicity the paper received the better, and he would like to see it reprinted in every trade and technical journal throughout the country. The only criticism he had to make was that Mr. Ainscough had omitted to mention one of the greatest handicaps to British trade—the extent to which costs of production were increased by the incidence of taxation in the United Kingdom—and he instanced particularly the case of the British salt industry.

Sir Walter Simpson, who followed the previous speaker in the Legislative Assembly, warmly endorsed Mr. Ainscough's appeal for greater co-operation between European and Indian merchants. Confessing to be a confirmed optimist in regard to India after 32 years in the country, he averred that investors who had been rash enough to throw away their holdings of India stocks during the recent depression would live to regret their foolishness.

Mr. D. S. Erulka, Chairman of the Indian Chamber of Commerce in Great Britain, took exception to Mr. Ainscough's suggestion that the leaders of Indian commercial opinion should enjoin "on their less sophisticated members the need for prompt and scrupulous fulfilment of their contractional obligations" and warmly repudiated the implication that Indian merchants stood in need of such advice any more than their European confrères.

Replying on the debate, Mr. Ainscough said that a speaker had referred to advertising, a subject with which he had not been able to deal in the paper, but one to which he had devoted a great deal of time and attention. Advertising, in his opinion, was still in its infancy in India and he was particularly pleased to see that two or three of the leading firms in the trade had recently established distributing agencies in the country.

Among others present were:—Sir Charles Armstrong, Sir Reginald Mant, Messrs. J. H. Rodier, Chairman, India Section, Manchester Chamber of Commerce, W. T. Coulton, F. H. Brown, A. M. Green, and H. J. Davies.

INDIA IN PARLIAMENT.

In reply to various Parliamentary questions regarding the probable date of publication of the Report of the Statutory Commission, Mr. Wedgwood Benn stated that the Chairman of the Commission has informed him that "The Commission would be very glad to find themselves able to put their Report in the Secretary of State's hands, for submission to the King, soon after Easter, and no time is being wasted; but the work is so laborious and the range of subjects so large that it is as yet impossible to make a definite statement."

Mr. Benn has informed Colonel Howard-Bury that the Government of India intend, subject to the assent of the Legislative Assembly, to purchase the property of the Indian Broadcasting Company and to carry on experimentally for a year the services hitherto offered by the company. Pending the result of that experience no new developments, the Secretary of State for India added, would be attempted, but the Government intended next year to appoint a Committee to examine the position in the light of the experience gained and the possibilities of further development.

It is officially announced that the Trade Commissioner's Department of the Office of the High Commissioner for India is now located at India House, Aldwych, London, W.C.2. The telephone number is: Temple Bar 8484, and telegraphic address: Zipporah, Estrand, London.

General Sir Joscelin Heneage Wodehouse, G.C.B., C.M.G., late Colonel Commandant, R.A., of Dormans, Greenhill Road, Farnham, Surrey, late in command of the Northern Army in India, who died on January 16, aged 77, left £35,878, with net personalty £35,695.

The Viceroy and Lady Irwin on March 3 flew to Meerut to witness matches in the inter-regimental polo tournament, which is an important feature of the annual week there. After tea they flew back to Delhi, arriving just before the Imperial Airways biplane with the English mails and passengers arrived. Among the passengers was Mr. Richard Maconachie, the new British Minister to Kabul.

Colonel Nathaniel Robert Radcliffe, C.I.E., D.S.O., who died suddenly at Villa Rafallo, Malta, on February 24, in his 60th year, joined the 1st Battalion, The Devonshire Regiment, in 1891, and served in Egypt and India. In 1895 he was Brigade Signalling Officer to the Chitral Relief Force, receiving the medal with clasp. On the outbreak of the Great War he was appointed to command the 6th Battalion, The Devonshire Regiment (T.F.). He took the battalion to India in October, 1914, and to Mesopotamia in December, 1915. He was again mentioned in dispatches, was gazetted C.I.E. in 1917, and was granted the Order of St. Stanislaus.

Lieutenant-Colonel George Hart Desmond Gimlette, C.I.E., late Indian Medical Service, died at Sandford House, Southsea, on March 7 at the age of 74. He was commissioned to the Indian Medical Service in March, 1879. He shared in the Egyptian campaign of 1882, being present at the engagements of Tel-el-Kebir and Zagazig. He remained in Egypt on special cholera work until the autumn of 1883, and then went to the remote Himalayan capital of Khatmandu as Residency Surgeon and *ex-officio* Assistant Resident. In 1891 he became Agency Surgeon in Baghelkhand; six years later he went to Indore in the same capacity, and from 1901 (when he was made a C.I.E.) to 1908 was at the Hyderabad Residency. During the Great War he served as P.M.O. of H.M. hospital ship Sicilia, and then in France, Egypt, and Gallipoli. In the summer of 1917 he was re-employed in the I.M.S. as Residency Surgeon, Mysore, but soon after returned to military duty in Mesopotamia.

ARAB-JEWISH ECONOMIC COLLABORATION.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—As a resident in Palestine for about twenty years, and as one who may, perhaps, claim to have played a not altogether negligible part in helping towards bringing about closer collaboration between Arabs and Jews in the field of economics, I have, of course, nothing but the fullest approval for the passage in your "Notes of the Week" of January 30 in which you write that: "What one would like to see, however, in addition to this question of the possibility of Arab-Jewish political collaboration, is more emphasis laid, more attention devoted to, the desirability and ways and means of Arab-Jewish collaboration in the economic sphere." I submit, however, that you are allowing yourself to become very unfair indeed when you go on to say that "it is beyond all doubt that that spirit of economic collaboration between Arabs and Jews which originally inhabited the minds of Zionists . . . has been departed from," and that "What the Jews have done for the Arabs in Palestine has been done, in the main, as a by-product, or willy-nilly." Whilst it is only natural that our first and principal thoughts should be for our own people, all those amongst us who play any part worth mentioning in the economic life of Palestine realise that the development of the country, agricultural and industrial as well as commercial, cannot progress satisfactorily unless there is a wide measure of collaboration in these matters between the various elements of the population. If I did not wish to avoid using up too much of your space I would gladly furnish you with concrete proofs of the numerous instances in which Jews, and Jews only, have striven to bring about such collaboration, sometimes meeting with response on the part of the Arab element, and sometimes without meeting such response; but in every single instance the initiative came from the Jews.

As regards your statement that "what the Jews have done for the Arabs in Palestine has been done, in the main, as a by-product, or willy-nilly," you seem to have forgotten, at the time of writing, the spirit of human solidarity displayed by the Jews, both of Palestine and of other countries, on the occasion of the earthquake of 1927. The victims of this cataclysm happened, by some curious freak of fate, to be almost exclusively Arabs; but in spite of this fact, whilst the Jews, from the very first minute, rushed to the assistance of the victims, the Arab population both in Palestine and the adjoining countries remained entirely passive and did very little to succour their stricken brethren. The earthquake occurred on the afternoon of July 11, 1927. Within a few hours fifteen first aid volunteers left Tel-Aviv for Ramleh to assist the wounded and to help in the removal of débris in search of survivors; in the course of this work one of the young Jews was wounded. The same evening, news having reached Tel-Aviv that Nablus was short of foodstuffs, the Town Council of Tel-Aviv ordered all the bakeries to work throughout the night to produce sufficient bread, and by 3 a.m. several trucks left for Nablus, where their contents were distributed in the early hours of the morning by the Nablus Municipality on behalf of the Tel-Aviv Council. On the 13th the Hebrew Press opened its columns to donations in favour of the sufferers of Nablus, Ramleh, Ludd, and so on. On the 14th the American Jewish philanthropist, Nathan Strauss, cabled £5,000 relief money. That same day, the Tel-Aviv Town Council having received from the Mayor of Nablus a telegraphic request for tents, immediate steps were taken to comply with this request. At the same time subscription lists were opened by the Jewish community of Tel-Aviv and Jaffa under the presidency of the Chief Rabbi, and similar action was taken by the Jewish community of Jerusalem and the Jewish National Council jointly. On the 15th the "Maccabi" Sports Organisation offered thirty volunteers for relief work in Nablus, the Voluntary Fire Brigade of Tel-Aviv offered twenty of its members for the same purpose, and the Association of Jewish Architects and Engineers offered two expert engineers to assist in the work. Petach-Tikvah also sent to Nablus an important convoy of bread. On the 17th, Mr. Dizengoff, the President of the Township of Tel-Aviv, visited Nablus, where hundreds of Arabs pressed around him to shake hands with him, asking him to thank on their behalf the Jews of Palestine for the help given. In the meantime until that same day, the 17th, i.e., fully six days after the calamity, in spite of appeals in the Arab Press, not a penny had as yet been subscribed by or received from any of the neighbouring Arab countries. On the 19th the Executive of the Zionist Organisation issued an appeal for a relief fund, the proceeds of which were placed at the disposal of the Palestine Government.

The Arab Press of those days is the best witness to the spirit displayed by the Jews on that occasion. The Jaffa *Falastin* of July 19, 1927, contrasted, in a leading article, the generous help given by the Jews with the lack of interest shown by the Mufti of Jerusalem, and paid tribute to the spirit of human solidarity shown by the Jews and to their generous help to all victims of the earthquake without distinction of race and creed. On the 21st and the 22nd all Arab papers without exception printed articles in the same sense. *Al Surat al Mustakkim*, of Jaffa, in an article entitled "Jewish Sympathy," contrasts the help in money, foodstuffs, medicines, helpers, given by Jews, individuals and institutions, with the apathy shown by the non-Jews. The Jaffa correspondent of the Damascus *Alif Ba* wrote: "It must be said that the Jews gave generous assistance to the victims; before even one single Jaffa Arab thought of sending help the Township of Tel-Aviv sent thousands of loaves of bread and 3,000 rottols of meat, doctors, nurses, medicines, and telegrams of sympathy." After mentioning the donations in money from the American Jewish philanthropist, Nathan Strauss, and from the Palestine Electric Corporation, he concludes: "All that the Jews have done, although much of it was done with political objects in view, are nevertheless acts of human kindness for which we do not know how we shall ever be able to repay them, especially as they happened at a time when to most Arabs the idea did not even occur of coming to the assistance of the sufferers; they only began to think of it after the Jews had given them the lead." On the 24th, *Maraat al-Sharq* in its turn pays tribute to the "noble feelings displayed by the Jews and the solidarity shown by them with the other descendants of Shem. None of the earthquake sufferers will ever forget these humane feelings on the part of a people whom they looked upon as opponents; they will consider these feelings as the first steps on the road of mutual understanding. . . ." An article of similar contents was published on the same day by the Cairo *Mokattam*.

It is always an unpleasant task to be compelled to recount one's own good deeds; but the obvious unfairness of the remarks contained in your article of January 30 last will, I hope, be considered as a sufficient justification for my reminding you, Sir, of one of the numerous instances in which the Jews of Palestine helped their Arab fellow-citizens in a spirit very different from the one described by you.—I am, etc.,

S. TOLKOWSKY.

Tel-Aviv. February 24.

[We gladly publish in full Mr. Tolkowsky's long letter. Recognition of the good intentions of many Zionists is a gratifying and urgent duty. He has, however, to some extent missed our point. We were discussing the possibility of economic co-operation with the Arabs, not the humanitarian feelings of the Jews. The considerable services which Mr. Nathan Strauss has rendered to the people of Palestine, as apart from Jews alone, we have

Digitized by Google

often applauded; nor does the long tale of Jewish activity at the time of the 1927 earthquake invalidate our contention that "what the Jews have done for the Arabs in Palestine has been done, in the main, as a by-product." What we were envisaging was systematic and constant, as opposed to incidental or occasional, help of the Arabs by the Jews, or rather, the systematic promotion of the material interests of the country that avoids any deliberate discrimination between Jews and Arabs, with the object of enabling Palestine the sooner to become a country of Palestinians.—ED.]

PERSONAL AND GENERAL

TO-DAY

March 13, 1930 (New Style).
February 28, 1930 (Old Style).
Shawall 12, 1348 A.H., of the Muslim Calendar.
Adar 13, 5690, of the Jewish Calendar.

Baroness de Goldsmid returned last week to 35, Chesham Place from Egypt and Italy.

Lord and Lady Carson will arrive at 5, Eaton Place to-morrow (Friday) from Egypt.

Sir Ian Malcolm returned to London on March 1 from Egypt.

Lady Evelyn Cobbold arrived at 9, Carlos Place on March 10 from Egypt.

Lady Worsley arrived at 8, Great Cumberland Place on March 8 from India.

The Hon. Mrs. Douglas Vickers returned to Chapel House, Charles Street, on March 2 from Egypt.

Captain and Mrs. Duncan McCallum arrived at the Continental Savoy, Hotel, Cairo, on February 25.

Lord and Lady Hawke will return to 10, Belgrave Square about the middle of the month from India.

Viscount Gage will return to 6, Buckingham Street at the end of March from India.

Zulfacar Khan, Counsellor to the Afghan Legation, returned to London last week from Berlin, where he has been on a special mission.

Dr. A. Zeminides, President of the London Cyprus Brotherhood, gave an Address on Cyprus, its history, people, economics and attractions, at Enfield on March 4.

Lord and Lady Hailsham arrived at Marseilles on March 7 in the P. and O. s.s. Viceroy of India on their way home from India.

Atta Amin Bey, Secretary of the Iraq Legation in London, left this week to take up the duties of Secretary at the Iraq Legation at Ankara. He is travelling direct to Turkey.

Husain Beg Afnan is arriving this week at the Iraq Legation, where he will carry on the duties of Chargé d'Affaires until the appointment of a new Minister to succeed Jafar Pasha al Askari, who is leavng London next week to take up his new appointment as Iraq's Minister Plenipotentiary to Persia.

Sir Robert Vansittart had the honour of being received by the King at Buckingham Palace upon his appointment as Permanent Under-Secretary of State for Foreign Affairs.

The King has given orders for the appointment of Mr. Samuel Fitzgerald Madden, O.B.E., Indian Educational Service, Principal Mayo College, Aymer, to Commander of the Order of the Indian Empire.

Mr. William Seeds, H.B.M. Ambassador-designate at Rio de Janeiro, whom the King has appointed to be a Knight Commander of the Order of St. Michael and St. George, and who entered the Diplomatic Service in 1904, has served among other places at Athens and in Albania.

Earl Peel, the Earl of Rosse, Viscount Younger, the Hon. George Younger, Lord and Lady Dunsany, Captain the Hon. Gerald Browne, Sir Robert Dunlop, and Sir Alexander Gibb were among the passengers arriving at Marseilles on March 7 in the P. and O. steamship Viceroy of India on their way home from India.

Sir Thomas Arnold, sometime head of the Muslim University at Aligarh, India, and now occupant of the Chair of Arabic at the University of London, is wintering at Helouan. On his arrival at Port Said at the end of February, he was met by Dr. Hassan Bey Ibrahim Hassan, Professor of History at the Egyptian University. Sir Thomas will deliver a series of lectures while in Egypt.

The Afghan Minister held a reception at the Afghan Legation on March 4 in celebration of "Id-ul-Fitr." Among those present were:—Mr. Arthur Henderson (accompanied by Mr. Oliphant and Mr. Selbie, of the Foreign Office), the Japanese Ambassador, the German Ambassador, the Soviet Ambassador, the Lithuanian Minister, the Persian Minister, the Minister for Iraq, the Polish Counsellor and other members of the Diplomatic Corps, Lord and Lady Headley, Sir Henry and Lady McMahon, Sir Louis and Lady Dane and Miss Dane, and the President of the Palestine Society.

Lady Newnes, who is Chairman and producer of the Egypt matinée to take place in May, in aid of the Flinders Petrie Excavation Fund, held the first of her evening committees at 55, Prince's Gate, on March 6, when Sir Flinders and Lady Petrie lectured on the Badarian Lands (10,000 B.C.), which is to be the subject of the first tableau in the matinée. The matinée will consist of a play and tableaux, stage-managed and produced by Lady Newnes, depicting scenes in Egyptian history from 10,000 B.C. to 30 B.C.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE Enquiries about scholarships or entrance to Trent College Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M L. Maxwell, Christchurch, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R. Deccan. Fees 40 guineas per term, including all necessary extras. with reductions for sons of Clergy and Officers. Supervised holidays arranged for boys from abroad, at seaside or elsewhere.

THE WEEK AT HOME

London, Tuesday Morning.

The "Two Kings of Brentford."

We can all breathe again. For the rivalry between the *Daily Mail* and the *Daily Express* has restarted. In other words, we have returned to normal in England. Lord Rothermere and Lord Beaverbrook no more pretend that they sit on one throne; they are no longer "united yet divided, twain at once."

Of course, it is all largely farce, this resounding reunion of one section of the new United Empire Party with the official Conservative Party. Mr. Baldwin appears to claim that he has made no advance upon his famous Coliseum speech, which was taken by everyone to meant that he was irrevocably opposed to the possibility of asking the country for the imposition of taxes on food; and Lord Beaverbrook insists that all his main points have been granted by the generosity of the Conservative leader. The blessed word "Referendum" has provided the surgical binding. And neither patient has given way!

The outsider's reading of the whole affair will probably be that both Mr. Baldwin and Lord Beaverbrook were a little alarmed at the prospect of division between Conservative and United Empire candidates, and that both during the last few weeks have been casting about for a face-saving device of effecting reconciliation. Lord Rothermere, however, whose antagonism to the Conservative leader has been comprehensive, will have none of this "eye-wash," and intends, apparently to keep his party in the field—at least so long as such a policy is justified by the circulation of his paper.

However this swallowing of one Jonah by the whale be looked at, we ought to be thankful that life has returned to the old feverish ways, in which "Net Sales" are of more importance than subscriptions to new party funds.

The Referendum.

The political device known as the referendum which Lord Beaverbrook is supposed to have suggested to Mr. Baldwin as a means of covering his own retreat and the ex-Prime Minister's advance has, of course, been academically discussed in *The Times* and elsewhere at once. It is a curious fact that those in favour of its application in this instance of food taxes appear to be mainly Conservatives, and those against it, members of the Labour Party and the Liberal Party. The first emphasise that the instrument is the quintessence of democracy, the latter that it is the negation of representative government. But whereas the first regard it as an inspired means of possibly achieving something now very dear to the Conservative Party, the second look upon it as a dodge hit upon as a way out of a party leader's difficulties.

This, however, is not the time to discuss the referendum and its intrinsic merits or demerits. The point upon which all writers, even those favourably disposed towards the Conservatives, have fastened, is whether in effect it would be possible to separate the fiscal issue from general politics. Scarcely anyone believes that the next election will not provide thousands of pictures of the "Dear Loaf," which will be inevitably connected with the party to which Mr. Baldwin and Lord Beaverbrook belong. The hypotheses which the Conservative leader stated as essential preliminaries to the introduction of taxes on foreign food will be forgotten. In short, if the Conservatives are forced at the next election to talk of food taxes, then, as a shrewd writer in the *Sunday Times* (a paper which has supported Mr. Baldwin very stoutly) has said: "The election will be the high fence, and the following referendum only a very moderate hurdle."

It may, of course, be possible to avoid all talk of food taxes at the next election (I believe that the Wafd in Egypt managed something of this sort, though, of course, the cases are by no means parallel, because Mahmoud Pasha had no following in the country), and if the issue has not in fact been made a party matter, well and good. But it rather looks as though the Conservatives will be obliged to stand or fall on this question. In any case, the prospect of its really troubling us seems infinitely remote. Already the subject is off the front pages of the newspapers. *Piano* is the order of the day—"And silence, like a poultice, comes to heal the blows of sound."

The Partlet.

Yet not quite: for the *Daily Mail* and its echoes throughout the country are without the newly-formed Baldwin-Beaverbrook pale. Not for it is any caving-in just because Mr. Baldwin has seen fit to adopt one of the ideals of the United Empire Party. No, ye Crusaders, we must press on with "undiminished vigour" to the attainments of four other main objects, three of which are "of even greater importance than the aim of Empire Free Trade." These are: the immediate imposition of high import duties on all manufactured goods, with adequate subsidies for farming: ruthless economy in public expenditure; no more surrenders in India; and no diplomatic relations with Moscow.

It is only fair to the newspaper magnate whose return to the Conservative Party has been hailed with such transports to say that this catalogue did not emanate from his brain, and that in fact he gave it no support whatever. Lord Beaverbrook has indeed renounced nothing whatever: it is Mr. Baldwin who has met him.

But what of the chances of the remainder of the United Empire Party? Very thin, I should say. There is, of course, a section in the Conservative Party which is die-hard, and which derives from the *Daily Mail* considerable nourishment. But whether the Conservative Party will ever officially incorporate the dogmas of Lord Rothermere's party seems extremely doubtful. To be identified with reactionaries may be an amusing pastime for the individual, but it is an expensive hobby for the party.

Dead Writers.

Writing of reactionaryism reminds one of Charles Whibley, who has just died, and who in *Blackwood's* made political reactionaryism appear to be one of the most fascinating philosophies. Thousands of men all over the world will miss the incomparable voice which mused without method.

About the merits of Whibley there can be no discussion. The man was visible, whole and round. One either shared his predilections or one did not. On D. H. Lawrence, on the other hand, who also has just died, there is acrid disagreement. I can say little, because since those pre-War books, such as "The White Peacock," and "Sons and Lovers," I have not read him. Those books, of course, were exhilaratingly potent to youth, but it seems that the intoxicating spirit who was their author considerably declined in later years. But it is without doubt that he reflected many of the feelings of his time, and that is presumably why he had so large an influence upon a certain type of writer, whose productions may or may not be ephemeral.

ALTER EGO.

The Simplon express to Athens was partly derailed on March 8 at Styrfaka, near Lamia. The engine overturned and the luggage van and one first-class coach were wrecked. One Post Office employee was killed, and the driver of the train and two other persons were injured. Communication with Salonika and Europe was interrupted for two days.

Book Reviews

THE DIDINGA OF THE SUDAN.

"THE PEOPLE OF THE SMALL ARROW." By J. H. Driberg. Illustrations by Pearl Binder (London: George Routledge & Sons, Ltd. 12s. 6d.)

Mr. Driberg is well known as an anthropologist. His work on the Lango, a people living north of Lake Victoria, is a substantial work; there is no other book on any of the southern Sudanese tribes so well informed. In the present book he sets out to interpret the life of a neighbouring tribe, the Didinga, a pastoral people, who with the Tapotha, Suk, and Turkana live on the west side of Lake Rudolf. In this series of imaginative studies we can be sure that we are in the hands of an author who knows what he is writing about. He can give us the clue which interprets these people's most casual habits, and, what is better, he is really familiar wih the structure and motives of their social life. Thus on sides of life to which we have no strict parallel, their devotion to their cattle, their extraordinary memory for their intricate cattle exchanges, their age grades and initiations, we can, through Mr. Driberg's help, win a new view of the variety of human experiments in social life.

Mr. Driberg has watched the natural background of native life with as much patience and affection as he has given to their manners and customs. This adds charm and depth to his pictures, and there are many descriptions of wild life and scenery which will delight travellers and hunters.

The author has tried to fuse all this deeply observed material into an artistic whole, and here he has not fully succeeded. His book would have been better for a simpler convention strictly followed. Further, these blemishes of manner do suggest doubts on the matter, or at least on its interpretation. For instance, are the songs of the Didinga really at all like passages from Greek choruses?

But this is not to say much more than that Mr. Driberg has not escaped the dangers of a romantic treatment of his subject. And such a treatment is much more sympathetic than the ignorant belittling of native culture which missionaries and anthropologists have in the last half century honourably laboured to dissipate. It seems hardly credible that Baker, writing in the 'sixties, could have spoken as he did of natives not two hundred miles from the Didinga: "Savages hold to their cows and their women; on a level with the brute all are ungrateful, thievish, idle, selfish, and cruel; can only be ruled by force or humbug"; and so on. The balance has swung the other way now, and there is more than a tendency to represent native life as the last remains of a golden age, uninfected by the virus of a sick civilization. Perhaps Mr. Driberg, who knows these people so well, and respects their culture so much, will some day give us his views on the practical problems raised by the Clash of Culture in Africa.

A REAL PROBLEM.

"THE EURASIAN PROBLEM CONSTRUCTIVELY APPROACHED." By Kenneth E. Wallace. (Calcutta: Thacker, Spink & Co. 3s. 9d. net)

Mr. Wallace presents the case of the race of mixed European descent in India in a manner which is both pathetic and courageous. It is pathetic because it contains most of the defects that can be justly urged against the community: a marked inferiority complex both towards the "foreign" Europeans (by whom he means the English in India generally) and the domiciled Europeans, and a somewhat vague and unpractical assertiveness as regards the future. It is courageous because it anticipates a bright future for the Eurasians in India, and exhorts them to rely on their own efforts.

We may cordially agree with the author's contention that the mixed community should be termed Eurasians

rather than Anglo-Indians; the latter being an unfortunate concession to vanity which, rejected with rightful sarcasm by Lord Curzon, was allowed by a later Viceroy. One of the reasons, however, given for the change, that foreign European nations have had a much larger share in the parentage of the community than the British, is hardly calculated to rouse sympathy, while it emphasises the essential humbleness of the origin of the class. It is useless to refer to the fact that in past years, when communication with Europe was difficult, children of mixed connexion were treated differently, and that Indian blood ran in the veins of a few, though really very few, distinguished soldiers and administrators. It seems unwise, therefore, to dissociate the Eurasian cause from that of the domiciled Europeans, who, according to the author, should be "kept away." The domiciled Europeans are, on an average, higher in origin, in manner of living, and in their Anglicised traditions than the average Eurasians, and it is mainly due to the presence of the former, that the cost of educating each Anglo-Indian child is 283 rupees annually, against the 22 rupees spent on each Indian pupil: a disproportion which, as the author admits, cannot be maintained in a self-governing India.

The author, moreover, treats somewhat lightly the danger of Christians of pure Indian descent classing themselves as Anglo-Indians: a process of old standing, since some of the distinguished Eurasians of the past referred to by the author were of entirely Indian blood. The danger is dismissed by the author because he believes the process to have been checked by the Indianisation of the Services, and because, if it continues, it widens the area of recruitment of Eurasians, and will prevent too close interbreeding. If this, however, is a sound reason, why should the Eurasians not amalgamate at once with the Indian Christians, and lead a community more formidable numerically?

It is more satisfactory to turn to the constructive proposals, and to notice the author's appeal to Eurasians to educate themselves, though his suggestion that they could easily raise half a crore of rupees annually by a small percentage cess on their incomes is fantastically incorrect. The author, himself obviously belonging to the "literate," is too contemptuous of technical schools, which in an improved condition, constitute the chief hope not only for the Eurasians, but also for the education of the Indian working classes in general. He rightly lays stress on the necessity for wider reading: he might well have suggested the foundation of a worker's educational association among the Eurasians. He is obviously too hopeful in thinking that, in the new India, "racial prejudices are practically unknown in making appointments." The Muhammadan and Non-Brahmans would hardly agree that this is so. But we may end up on the author's note of optimism that in a self-governing India there is a bright future for a Eurasia which identifies itself with local interests and aspirations. Whether the Eurasians will thereby be swamped or will survive depends, as the author sees, on their own efforts.

TOWN-PLANNING AND OLYMPIANS.

A public lecture was given at the Glasgow University on February 24 by Mr. W. H. McLean, Ph.D., M.Inst.C.E. (late Egyptian and Sudan Civil Services), who, under the title of "Cities and Olympians," gave his personal experiences in town planning the cities of Khartoum, Jerusalem and Alexandria, and told of his contact with the Olympians who had been intimately associated with the work.

Dr. McLean first recalled the thrilling incidents of that great and successful endeavour to uplift the people inhabiting the Sudan; the fall of Khartoum and the death of Gordon in 1885, the long years of the relapse into barbarism under the cruel Khalifa and, finally, the reconquest of the country by Lord Kitchener in 1898. This began the era of prosperity which was continued under Sir Reginald Wingate as Sirdar and Governor-General. The lecturer then described the new Khartoum and its plan of development, which he prepared under the personal direction of Lord Kitchener in 1912. Circumstances permitted this plan to be made on a generous and even monumental scale, which the subsequent great development, due to the prosperity of the country, has amply justified. Without Lord Kitchener this remarkable plan could not have been realised, for he had great vision and a wide knowledge of the technique of town-planning. Reference was made to Lord Kitchener's concern for the welfare of the natives, and this was illustrated by incidents in the personal experience of the lecturer.

The scheme for the protection of the Holy City of Jerusalem was next described. This was initiated as an urgent war measure owing to the state of disrepair in which Jerusalem was found when taken from the Turks in 1917. It was realised that the Old City and the Holy Places were, therefore, in grave danger of damage by uncontrolled building operations of repair, demolition or reconstruction, and the scheme of town-planning was designed to prevent this. The nature of the scheme and its protective zones and regulations were described, and it was remarked that the military authorities, in the persons of Lord Allenby (then Commander-in-Chief) and Sir Ronald Storrs (then Military Governor), were to be congratulated on their vision and wide interpretation of their responsibilities; and for so promptly adopting an effective scheme for the protection of the City and its amenities, which it would have been difficult to initiate in normal times without conflict with various interests. It was satisfactory to note that its principles continue to act as a guide up to this day.

Dr. McLean next referred to the creation of Alexandria by Alexander the Great in B.C. 332 and described the plan of the old city which, it is interesting to note, was of similar type to that of Khartoum. The history of this famous city of the ancient world, constructed of white marble, was traced through its rise and decay, and subsequent rise in modern times. Next he described the modern city and its future plan, showing a length of 23 miles designed to contain a future population of one million; that is, about the same as in the time of Cleopatra. The scheme was prepared in 1921, since when a great development has taken place and many of its important proposals have already been carried out. It is one of the most comprehensive and monumental schemes of town-planning ever prepared and adopted for a large city. The gracious personal interest in this scheme taken by King Fuad was referred to.

It was remarked in conclusion that the realisation of a generous scheme of city planning appears to need first the opportunity to plan on such a scale, and then the support of Olympians. The improvement of Paris and the creation of the Boulevards by Haussmann under Napoleon is the conspicuous example of this in France, while London missed a great opportunity after the Great Fire when the famous plan of reconstruction made by Wren was not adopted, presumably for lack of Olympian support. A congested central London is the penalty to-day and the cost of any remedy will be enormous.

It is announced that the Baghdad Cabinet under Naji Beg as-Suwaidi resigned on March 9. At the time of our going to Press the reasons for resignation are not definitely known.

About 150 Greek Communists forced an entry into a meeting of Conservative workers at Piræus on March 9 and tried to break up the meeting. A fight ensued, resulting in 32 persons being injured. Many Communists were arrested.

For personal reasons M. Ioanitescu, the second Under-Secretary for the Interior in the Roumanian Government, has handed in his resignation. M. C. Angelescu, Vice-President of the Chamber, has been appointed Under-Secretary for the Interior in place of M. Mirto, who has become Minister of Industry and Commerce.

NOTES AND NEWS

170, *Strand, London, W.C.2,*
Tuesday Morning.

The Lake Tana Dam Project.

The preliminary agreement concluded with Abyssinia in regard to the Lake Tana Dam Project, as a result of conversations between the Abyssinian Government, Mr. MacGregor, Irrigation Adviser to the Sudan Government, and Mr. Lardner, of the White Corporation, brings that important scheme within measurable distance of accomplishment. The value of the project to the Sudan and also to Egypt lies in the fact that at present the supply of water in the summer months needs to be supplemented if the requirements of the crops are to be met. Extensive developments in the Sudan, notably in the Gezira region, will also call for the regulation of the surplus water which is now unutilised. As things are at present Lake Tana makes its largest contribution to the Blue Nile when that river is amply supplied from other sources, and its outflow is least when the river is at its lowest level. It has been estimated that the total discharge of the lake is on the average about 3,500 million cubic metres, and it has been proposed to provide for the storage of 8,000 million cubic metres to provide for years when the supply of water falls below the average as is the case from time to time. The stage has now been reached when a detailed investigation of the engineering side of the undertaking is to be made by the engineers of the White Corporation, and when their report has been received the discussions for a final agreement are to be resumed. It will be a subject of regret in this country that British engineers, who have to their credit such wonderful undertakings in Egypt, the Sudan, and Iraq, will not have the opportunity of carrying out this notable irrigation work, but it would seem that local considerations have unfortunately placed that out of the question, and the great thing is to have the work completed without any further delay.

Ottoman Railway Preference Dividend.

While conditions in Turkey generally have been on the down grade in the past few months, as evidenced by the renewed depreciation of the piastre, it is clear from the dividend announcement of the Directors of the Ottoman Railway from Smyrna to Aidin that there has been an improvement in the position of the line, for it is now proposed to resume a distribution on the Preference shares, after an interval of sixteen years. Up to November, 1914, the Preference shareholders regularly received their 6 per cent. dividend, but after the War the railway was severely handicapped by the position in Asia Minor, and in 1924 the Preference shares were made non-cumulative, the rate of interest being raised to 9 per cent. in consideration of the cancellation of the arrears of dividend. The directors recommend the payment of further interest of 2 per cent. on the Second Debenture stock, making the interest the full 6 per cent. and after the allocation of £4,500 to a special reserve the balance remaining is sufficient to permit of a dividend of 2 per cent. on the Preference shares.

The Southern Punjab Railway.

A report of the last meeting of the Southern Punjab Railway, which comes to an end after a career of splendid success, will be found elsewhere in these columns. In his speech at the meeting, the Chairman, Mr. James Rendel, paid a great tribute to Mr. H. N. Gladstone and the firm of Ogilvy, Gillanders and Co., of which he is head, who originally founded the company. He pointed out that there were those who thought too sanguine hopes were entertained, but as it has turned out the progress of the railway has been such as to surpass expectations. Mr. Rendel dealt with the question of the distribution on the Ordinary stock, and estimated that, assuming the full premium on the Sutlej Valley line is payable, there should be sufficient to give the stockholders about £213 for every £100 of stock. Bearing in mind the life of the company it cannot but be admitted that that will constitute a very notable achievement.

Yugoslavia's Grain Exports.

As I have already pointed out, Yugoslavia had a favourable trade balance last year of about 327 million dinars as compared with an adverse balance of 1,391 millions in the previous year. This development was due to the excellent harvest, for although low prices have been obtained for the cereals (except for those sold in the early summer) the immense increase in the exports tended to outweigh the question of price. As regards wheat, for instance, the exports were the largest on record, and were more than double those of any previous year. The exports totalled 554,011 tons as against 162,279 tons for 1928, and the previous highest total of 297,285 tons for 1926. The value of the exports was 1,229,912 million dinars as against 410,102 million for 1928 and 846,094 million for 1926, from a comparison of which the incidence of lower prices last year can be seen. If prices had remained at a reasonable level the yield in 1929 would have been about 1,500,000 million dinars. It is significant of the importance of the wheat crop to Yugoslavia that last year's exports represented 15.52 per cent. of the total trade. Wheat was not the only cereal to show increased exports. Thus 166,936 tons of maize were exported of the value of 273 million dinars, whereas the exports in 1928 were valued at only 11 million dinars. The importance of a good harvest in the Balkans is aptly illustrated in the case of Yugolavia, and if only the fates are kind in the next summer or two it is clear that the position of the countries in South-Eastern Europe will undergo a great change for the better.

Suez Canal Traffic.

I have already given brief details of the Suez Canal traffic last year, when new records were again set up,

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms.
The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfers on all its Branches, at the exchange of the day.
The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.
Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches.
The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — **SOFIA** — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchase co-operatives, production and tobacco co-operatives.
The Bank transacts every description of banking operations.

Digitized by Google

despite the continuance of the trade depression. It is not without significance, in view of the existing conditions, that three of the highest monthly totals were recorded during the first four months of the year, and that only in October and December was the gross tonnage for a month again over four million tons. The fact that at the end of the year there was a tendency for the tonnage to rise will no doubt be regarded as an encouraging symptom of a trade revival, but before we build any undue hopes upon this development it will be advisable to wait and see what happens in the present three months. A notable feature of the Canal traffic in 1929 was the increase in the average tonnage of the shipping as compared with the previous year. Thus in 1929 thirty-nine vessels of over 20,000 tons transited the Canal as compared with 35, then there were seven of between 18,001 and 20,000 tons as against two, while for ships from 16,001 to 18,000 tons the transits numbered seventy-one as against sixty-seven. The total number of transits was 6,274 as against 6,084, and it is interesting to note that notwithstanding the increasing use made of the canal 54.6 per cent. of the transits were made in 14 hours or less.

Near East Markets for Motor Vehicles.

Details of the sales of motor cars, and lorries, etc., in Near Eastern countries in 1929 bring into clear relief the remarkable hold that America has on these markets as regards motor vehicles at the present time. Thus in Bulgaria out of an estimated total of 833 passenger cars sold 588 were American, in Greece of an estimated total of 2,200 motor cars 2,000 are put as American, in Roumania out of 7,100 6,550 are American, in Turkey the American share of 1,169 cars is 1,092, while in Yugoslavia America was responsible for 1,456 cars out of 2,081. The position was much the same with regard to the sales of motor lorries and omnibuses. I will only give the figures for two countries in this case, and it is immaterial which of the countries mentioned above is chosen. Roumania's purchases totalled 2,325, and of this total 2,100 were American. Then Turkey took 1,940 American vehicles as against 170 from other countries. When we come to motor cycles, however, the position is entirely different, and here it is satisfactory to know that British products have the lead. Out of Bulgaria's purchases of 124 motor cycles only the odd four were American, for instance, Greece took 205 motor cycles of which 30 were American, Roumania took 840, forty only being American, Turkey took 185, 15 being American, while of Yugoslavia's purchases of 1,160 only 170 were American. Of the balance of these motor cycles the great bulk were British, and I cannot help feeling that what our motor cycle manufacturers can accomplish can also be done by our motor firms provided they show the requisite enterprise and introduce to the Near East markets motors and lorries which are as suitable to the local conditions as the American products.

COMMENTATOR.

NEWS FROM ALL SOURCES.

It is anticipated that this year's opium crop in Turkey will be double that of 1929.

During the second half of 1929, 383 kilometres of new roads were constructed in Syria.

The Banque Commerciale Roumaine, of Bucharest, made net profits last year of 70,700,000 lei, as against 24,400,000 lei for 1928.

The authorities of the Roumanian State Railways have decided that in future only inland coal shall be used by the railways.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for February was 64,870 tons.

The Turkish Government has decided to provide export bounties with a view to increasing exports and improving the rate of the exchange.

A railway line is being constructed on the Burma railways from Taungwingwyi to Magwe and thence, on the opposite side of the Irrawaddy River, to Pakokku.

The total exports of oranges and lemons from Cyprus declined from 20,897,046 in 1928 to 15,675,151 last year, but the aggregate value was about the same as in 1928, £42,914 against £43,795.

The traffic receipts of the South Indian Railway Company for the week ended February 8 amounted to Rs.12,64,637, making the total from April 1 Rs.5,73,61,403, as compared with Rs.5,30,44,177 for the corresponding period of the previous twelve months.

The Associated Cotton Ginners of Egypt proposes to reduce the capital from £270,000, in 15s. shares, to £216,000, in 12s. shares, by returning to the holders 3s. per share. A meeting to consider this proposal is to be held at Alexandria on March 27.

The Royal Exchange Assurance announces that Sir Thomas Sivewright Catto, Bt., has been elected to a seat on the Court of Directors at head office. Sir Thomas Catto is deputy-chairman of the Mercantile Bank of India, and a director of Andrew Yule and Co. and Yule Catto and Co.

The Directors of the Hellenic and General Trust, Ltd., will recommend at the annual general meeting of the company the payment of a final dividend of 3½ per cent., less income tax, making with the interim dividend, 6½ per cent., less income tax, for the year ended January 31, 1930.

A Teheran message states that the Prime Minister has submitted a Bill to the Majlis for the formation of a new Ministry of Economics. The Finance Minister also has submitted a Bill for the conversion of the currency to a gold standard. It is proposed that the future monetary unit shall be the pahlevi, equal to one pound sterling, and divided into 20 rials. Tho toman and kran will cease to exist.

Grecian Mining and Development has been registered as a private company, with a nominal capital of £25,000 in £1 shares, to adopt an agreement with Capt. J. G. Bennett for the purchase of rights in certain mining concessions in Greece and to carry on the business of ironmasters, colliery proprietors, etc. The directors are Lt.-Gen. Sir Sydney T. B. Lawford (director of Power Farms, Ltd.), Sir Henry R. Bourne (director of L. S. D., Ltd.), W. Page-Edwards, Fairmead, Northwood (director of Abbey Road Building Society), I. H. Abelson, J. Douglas Henry, D.S.O. (director of Vulcan Brown Coal Company), and J. G. Bennett (chairman of Vulcan Brown Coal Company). The registered office is at 1, 2, 3, and 4, Morley House, Regent Street, W.1.

NOTES FROM GREECE.

The report of Hambros Bank, Ltd., for the week ended March 7 contains the following :—

The National Bank of Greece raised its dividend to 3,000 drs. per share, as against 2,600 drs, for 1928. Liberal allocations to reserves and depreciation items have been made. With the assistance of American and other interests, the National Bank of Greece has established in New York the Hellenic Bank Trust Company, an American company which is required to promote and assist Greek interests in the U.S.A.

The Bank of Athens is paying for 1929 55 drs. per share, which is the same as last year, but on a much increased capital. The Commercial Bank of Greece is paying 53 drs. per share, an increase of 1 dr. per share over the dividend paid during 1928. They also have made liberal allocations to reserves, dead stock, buildings, etc.

The Agricultural Bank started its operations with capital resources of 575,000,000 drs. The National Bank of Greece is placing at the disposal of the new bank 850,000,000 drs. from credits already granted by the National Bank of Greece for agricultural purposes. The loans to be granted by the Agricultural Bank are divided into three types: (a) Short loans from seven to twelve months; (b) loans for a longer period from two to five years; (c) loans for a still longer period from six to fifteen years. These last loans will be granted to the extent of 40-65 per cent. of the total expenditure required for particular works, and they will be under the supervision of local agricultural inspectors.

For the first nine months of the financial year to December 31 last, the total revenue collected amounted to 6,863,420,785 drs., against 8,087,315,482.15 drs. assessed. Compared with the revenue collected during the same period of 1928, this year's figures show an increase of 546,770,879.50 drs. Payments during the same period of 1929 amounted to 6,314,789,913.60 drs., against assumed liabilities of 9,681,645,809.70 drs. The amounts paid are 1,534,834,170.06 drs. higher than the amounts paid during 1928. In order to assist the expansion of the use of cheques, a Bill has been deposited exempting from stamp duty all cheques issued for local use. For cheques for use outside the local areas the stamp duty is maintained.

The requirements of wheat of the Greek market have been satisfied during 1929 by imports from the following countries (in tons) :—Canada, 143,499; Hungary, 33,048; Argentine, 56,098; British India, 302; Egypt, 1,408; Australia, 29,455; Bulgaria, 3,780; Yugoslavia, 14,875; U.S.A., 299,697; Roumania, 13,041; Russia, 2,060; Turkey, 15; other countries, 2,555. The values imported for 1927, 1928, and 1929 were as follows :—1927, 2,012,654,349 drs.; 1928, 2,364,768,779 drs.; 1929, 2,694,922,847 drs.

From the official statistical bulletin for the month of December, in which the total year export of tobacco is given, the figures are as follows (in kilos) :—Tobacco in leaf, 50,055,000 kilos; tobacco in cigarettes, 71,260 kilos; total, 50,126,260 kilos. Local consumption of cigarettes during 1929 amounted to 4,370,000,000, i.e., approximately 12 million per day, against 11,730,000 per day for 1928. Revenue collected from taxation on tobacco amounted to 1,474,955,893 drs., against 1,408,312,866 drs. for 1928 and 1,406,269,836 drs. for 1927.

CYPRUS CROPS.

The report on Cyprus crops for January gives the following particulars :—

Heavy rains, floods and water-logged land are adversely affecting the new wheat crop. Pending an improvement in weather conditions prospects are obscure. The market continues rather weak. Prices are 5s. to 6s. per bushed. There is a good stock in hand.

Germination of barley is very good, but is suffering owing to the heavy rains of the last two months. Offers are good, but the demand is poor. Prices are 1s. 11d. to 2s. 5d. per bushel.

The winter crop of potatoes is now stored, and is not up to expectation. There is no improvement in the market. Consignments during the month were chiefly to Palestine and Egypt. Prices are £5 10s. to £6 per ton.

The export of oranges from Famagusta during the first fortnight of this month approached a million. Prices were 40s. per 1,000 for Jaffa type and 15s. per 1,000 for round oranges.

The bulk of the crop of sweet lemons is already gathered. Demand is in excess of supply.

The preparation of new tobacco seed beds is in progress. Trade is slow and there is no improvement in prices. Cigarette leaf is 1s. 4d. per oke, with a downward tendency.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Britannia for Bombay (Birkenhead, March 27). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malancha for Calcutta (Glasgow, March 20; Birkenhead, March 27).

Bibby Line.—S.s. Shropshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, March 19).

British India Line.—S.s. Manela for Colombo, Madras, and Calcutta (London, March 22); s.s. Masula for Bombay (London, March 29).

Cunard Line.—S.s. Bothnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Corfu, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Gruz, and Ancona if sufficient inducement (Liverpool, March 15; Swansea, March 18); s.s. Bosnia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, March 27; Liverpool and Swansea, March 29).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 29); s.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 10).

P. and O. Line.—S.s. Perim for Calcutta (London, March 14); s.s. Morea for Bombay (London, March 14); s.s. Bangalore for Bombay and Calcutta (London, March 28) s.s. Viceroy of India for Bombay (London, March 28).

Prince Line.—S.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, March 19); s.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, April 2); s.s. Sailor Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus ports (London, April 9).

Ellerman and Papayanni Lines.—S.s. City of Lancaster for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 22); s.s. Roumelian for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 12; Swansea*, April 12); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, March 22); s.s. Volturno for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 29); s.s. Manchurian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, March 29; Swansea, April 3); s.s. Mardinian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 12; Swansea*, April 12). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to :—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

The production of the Attock Oil Company for February totalled 20,449 barrels.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 11.

The Stock Exchange has passed another quiet week. The investment sections, it is true, became steadily firmer as the week progressed, and the gilt-edged list was marked up all round on Thursday's reduction in Bank Rate to 4 per cent., the lowest figure since October 1925. Only a moderate amount of business was done, however, and in other sections, although cheaper money created a more cheerful tone, there was no accession of business and markets generally remain apathetic. Home Rails, which were marked ex-dividend, showed some improvement on the better traffic returns, but the cloud of the Budget continues to overshadow markets, the publication of the higher Civil Service Estimates serving to emphasise fears of increased taxation. The downward trend of security values of recent weeks appears to have been arrested, but lethargy persists, and there appears to be no prospect of any change in the immediate future.

Railway Accounts.

The extremely gratifying dividend declarations by the "big four" British railways led one to anticipate equally satisfactory accounts. Only one company, however, made any allocation to General Reserve. This was the L.N.E.R. which set aside £500,000 for this purpose. All four companies were able to show an increase in net revenue, amounting to £1,783,000 for the L.N.E.R.; £1,142,000 for the G.W.R.; £904,000 in the case of the L.M.S.R.; and £154,000 for the Southern. That this progress was largely a result of substantial all-round economies, effected without in any way impairing the general progressive policy, is shown by the fact that in all four cases expenses were reduced. In this respect the best return was made by the L.N.E.R., whose operating ratio was 77·9 per cent. against 80.08 per cent. in 1928. Another vital factor during the year was the expansion in the coal trade. As this was largely confined to the export section the greatest benefits were obtained by the L.N.E.R. whose receipts from consignments of coal and coke for the year amounted to about £14,044,000, against £12,512,000 in 1928. Receipts from total goods traffic increased in all cases. On the other hand, however, although the number of passengers carried actually increased for all groups except the L.M.S.R., receipts from this source decreased without exception. In view of the fact that the wages and salaries cut of 1928 expires in May, and uncertainty as to the effects of the Coal Bill, perhaps unwarranted, British railway junior stocks are somewhat unjustifiably depressed despite recent more favourable traffic returns and further economies to be anticipated in the course of the next year. Consequently Southern deferred, and L.N.E.R. preferred stocks, which yield about £8 15s. per cent. and £9 7s. per cent. respectively, have decided attractions at present prices.

International Nickel.

The International Nickel Company of Canada has increased its holdings during the last year, including the taking over of the Mond Nickel interests, so that comparison with previous years is rendered difficult. The combined balance-sheet of the company and its subsidiaries now totals almost 182 million Canadian dollars, or nearly double the figure of twelve months earlier, and the property account, for example, has increased from 76 million dollars to 156 million dollars. It is clear, however, that the earnings for the year may well be considered satisfactory. They have risen from 1.05 dollars per share for 1928 to 1.47 dollars per share in 1929. Dividends paid during the year amount in all to 7 dollars per share on the 100 dollars par value Preferred shares, and four payments of $8\frac{3}{4}$ cents on the 5 dollar par value Preferred. Two dividends of 20 cents and two dividends of 25 cents were paid on the no par value Common stock. The sales of nickel in all forms, including alloys, amounted to $125\frac{1}{2}$ million pounds. Copper sales, including copper sulphate, amounted to nearly 82 million pounds. During 1929 there were periods when sales were actually greater than production, but towards the end of the year there was a falling off in demand. The company is engaged in extensive improvements at some of its principal works both in the United Kingdom and in Canada. The ore reserves have been estimated to be plentiful, and the uses to which nickel, and to some extent copper, can be put, are increasing so that, in view of its semi-monopoly position, the outlook for the company's shareholders is promising.

THE "DAILY MAIL" IDEAL HOME EXHIBITION.

The 1930 *Daily Mail* Ideal Home Exhibition, which is to be held at Olympia from March 24 to April 17, will be on a much more elaborate scale than any of its predecessors. The new Empire Hall of Olympia, by providing considerably more space, will not only make the Exhibition the largest ever held, but will also permit the enlargement of certain important sections and make possible the inclusion of many new and highly interesting features. This year's exhibition will comprise no fewer than 600 features and exhibits. These will occupy about 10 acres of floor space, and the exhibition has been so carefully planned, with wide gangways and convenient open spaces, that every visitor will be able to see the whole exhibition under the most perfect conditions of comfort and convenience.

The Main Hall at Olympia will be devoted to the Furnishing, Music, Decoration, Sanitation, and Fuel and Heating sections. The whole of the setting, decoration, and illumination will be carried out on an "atmospheric" scheme, and Olympia will present one of the most beautiful spectacles ever created for the enjoyment of the public.

Some idea of the wide appeal which the 1930 Ideal Home Exhibition will make to people of all tastes may be gathered from the fact that there will be no fewer than eight special features—each an exhibition in itself. These include the "Garden of the Artists" in the annexe, the "Pavilion of Light" in the new Empire Hall, "Nurseries of the Nations" in the main hall gallery, the "Gallery of Art and Antiques," and the "Village of Ideal Homes" in the Small Hall.

The gardens have always provided one of the most popular features of the Ideal Home Exhibition. This year the "Garden of the Artists" will be found to have surpassed all predecessors. Inspiration has been found in pictures by a number of famous British artists such as Mr. Herbert Finn, Mr. George Sheringham, Mr. Charles Robinson, and Mr. Tom Mostyn, who are specially commissioned, and in famous paintings familiar to all lovers of art and the garden.

The last few years have witnessed a remarkable advance in the development of artistic lighting and heating in the home. As a result of a competition organised by the *Daily Mail* in conjunction with the General Electric Company, Ltd., the "Pavilion of Light" erected in the new Empire Hall will embody the very latest expression of modern art as applied to illumination.

In the Village of Ideal Homes in the Small Hall at Olympia will be found the "House that Jill Built." This remarkable house is the outcome of a competition for women organised by the *Daily Mail* and is based on the winning specification and rough sketch plans of the successful entrant. The "House that Jill Built," in the building of which the winner has collaborated with the Exhibition Architect, Mr. Douglas G. Tanner, F.R.I.B.A., will show the house which women really want and will reveal some original and daring features with regard to planning, construction, and fittings. When it is considered that this house has been selected out of some thousands of specifications and plans, sent in by women in all parts of the country, as the one which is not only the most original in conception but the most practicable having regard to the changed conditions of modern life, the "House that Jill Built" cannot fail to create a tremendous amount of curiosity and discussion among visitors to Olympia, and it is highly probable that this unique dwelling will develop an entirely new trend in house design. This house has been erected by the Universal Housing Company, Ltd., of Rickmansworth.

A number of other fine houses will be found in the village, each distinguished by certain special characteristics in respect of design and construction.

MICA AND ALL ELECTRICAL INSULATING MATERIALS

Contractors to the British, American, French and Italian Admiralty and War Office.

ATTWATER & SONS, PRESTON, England

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended March 1:—

The Danube has been declared officially open for navigation as from to-day. There is still no movement on this market, shippers being unable to effect sales at prices offered from abroad, whilst the practice of buying back continues. Parcels have been placed for March shipment at 12s. to 12s. 6d., but the amount of business has been very restricted. A prompt steamer has been fixed at 14s. 3d. Antwerp/Hamburg range full terms from up-river, and another from Sulina at 11s. 6d. Rates at Sulina remain nominally at 10s., with little or nothing done. No bookings of note were reported from Constantza during the week. The fears expressed at the beginning of February as to the condition of the maize have been dispelled by the recent exceptionally favourable weather, and it is now expected that the maize will be fit for shipment much earlier than was then thought possible.

Timber.—Absolute stagnation reigns, there being no steamer at present loading timber in the Danube. The market continues without any demand for prompt shipment, whilst in regard to any business for later positions, shippers anticipate seeing lower freight rates, and appear to be in no hurry to engage tonnage ahead.

Weather and Crops.—The weather remains very dry. The temperature in general has been a few degrees below freezing at night and about as much above during the middle of the day. It was colder during the first part of the week owing to the prevalence of strong N.E. winds, but the last few days the wind has been light or absent and, after the clearing of the morning mists, the shade temperature has risen to 10 or 12 degrees Centigrade above zero under the influence of bright sunshine. According to a Government report, published on February 24, the autumn sowings had not suffered actual damage from the sharp frosts which occurred during the third week of February, notwithstanding the absence of snow covering; but several districts are complaining of lack of sufficient moisture in the soil. Navigation in the Danube was hindered this morning by fog.

Sulina.—The bar depth is still officially 24 feet, though soundings have not been possible during the last ten days owing to strong north-easterly gales. There is no reason to anticipate any change in the depth when the next soundings are taken, although the water in the river is very muddy. Money has apparently at last been found to extend the north pier to its full length. Large stocks of fascines and stones have been accumulated on the north bank at the entrance, and a start will be made about the end of April to complete the work which the Danube Commission suspended during the last two years. The minimum depth of water in the river remains unchanged at 24 feet.

Constantza.—This week about 3,000 tons of grain arrived from the interior, and about 5,000 were exported in about equal quantities to Trieste, Marseilles, Barcelona and Hamburg. Nine vessels loaded over 46,000 tons petroleum products, and six took oil fuel for bunkers.

Bulgarian Report.

Bourgas, February 22.—Only a restricted amount of business has been effected. A few hundred tons of maize have been shipped for Rotterdam and Hamburg at 10s. Light frosts were experienced at night, but during the day the thermometer showed several degrees above zero. The sky has generally been overcast and very slight falls of snow, insufficient to cover the fields, are reported from most parts of Bulgaria.

THE ROUMANIAN MARKET FOR AGRICULTURAL MACHINERY.

Roumania possesses such vast areas of cultivated land that it necessarily furnishes an extensive market for agricultural implements (says the American Commercial Attaché at Bucharest, Mr. Sproull Fouche, in a recent report). The country has a total surface of 29,489,200 hectares, and during the years 1923 to 1927 there were 11,573,948 hectares actually seeded, in addition to which there were 613,657 hectares cultivated in fruits and vines and 341,856 hectares cultivated in oleaginous and fibre plants. There are also 4,219,421 hectares of grass lands used for pasturage and haying. The yield of grain during the year 1929 was estimated at 13,000,000 tons, with an exportable surplus of 5,250,000 tons.

Expropriation of the larger estates and the division of the lands among the peasants in small tracts has had an adverse effect upon the sale of improved machinery. The small holdings do not justify the purchase of expensive machinery, and the tendency of the peasants to hold to their primitive methods and antiquated implements is another deterrent. Further, hand cultivation is encouraged considerably because 80 per cent. of the population live on the land and farm labour is cheap. Community and partnership purchases of comparatively expensive machinery, such as binders, tractors, and seeders, so far have not proved practical.

The landowners, on the other hand, who have retained from 200 to 1,000 or more hectares of cultivable lands, are usually progressive in their ideas and are purchasers of the best type of machinery. The present Government is conducting an intense educational campaign among the peasant farmers, and is taking steps to finance purchases of better farming machinery and implements, and it is only a question of time when Roumania will be one of the great European markets for agricultural implements. The Director-General of the Union of Roumanian Chambers of Agriculture and one of the leading agricultural authorities of the country makes the following estimate as to Roumania's needs: One tractor for each 100 hectares, one plough for each 5 hectares, one seeding machine for each 20 hectares, and one harvesting machine for each 40 hectares.

An estimate based on figures furnished by the Minister of Agriculture shows 3,257 tractors in use in the country, although dealers state that there are about 6,000 in use. The number of ploughs in use is estimated by the Minister of Agriculture as 1,685,000, the number of seeding machines as 55,470. It is estimated by the Director-General that the number of machines that could be advantageously used in the country in addition to those already obtained include: 106,745 tractors, 515,000 ploughs, 507,562 seeding machines, and 219,530 harvesting machines.

The unsatisfactory condition of the Roumanian cereal market during the past two years has not encouraged the farmers to invest in agricultural machinery. However, the Government's activity in its educational compaign is resulting in a slow but steady increase in the demand for improved machinery. The planting of inferior seed, thereby causing a decided deterioration in the quality of the country's production, is receiving special attention from the Government also. The sum of 90,000,000 lei has been appropriated and is to be expended in the purchase of cleaners and grain drills to be sold to the farmers at 75 per cent. of cost, payable over a term of 10 years without interest.

Equipment Needed.

The imports of tractors into Roumania during 1929 were estimated at 1,080, and the countries of origin were approximately as follows: United States, 500; Canada, 21; Germany, 139; Italy, 7; and Czechoslovakia, 1. The wheel-type tractor is most popular, although some 50 American tractors of the crawler type were sold during 1929. The soil of the country is easily turned and disc ploughs are not imported. There is no local production of tractors. The most popular type of grain-cleaning machinery is that in which a perforated rotating cylinder is employed. These cleaners formerly came from Germany and Austria, but are now being imported principally from Austria. Consumption is estimated at 800 per annum. Hand-power fans for cleaning grain are extensively used. Consumption is estimated at 400 to 600 per annum, practically all being manufactured in the country.

Grain drills are rapidly coming into more general use on the larger estates, while the small farmers continue the hand-sowing method. Practically all grain drills are imported, the greater number of which come from Czechoslovakia, while a few still come from Germany. Annual consumption is estimated at 600 to 800. There is no demand for disc drills. The plough in almost universal use is of German design and was formerly imported almost exclusively from that country. However, local production at present amounts to 3,000 per annum. These ploughs are equipped with two small iron wheels to which the beam is attached. It would be difficult to introduce any other type of plough into Roumania. Consumption is estimated at 18,000 per annum. The demand for fertilizing machinery is negligible, owing largely to the extremely small quantity of fertilizer employed.

While the greater part of cultivation is still done with hand hoes, the demand for cultivators is increasing. The harrow type is most popular, and these are occasionally fitted with attachable blades, known as potato hillers. Local production of cultivators is estimated at 600 per annum. Those imported come principally from Czechoslovakia and Austria. Formerly, a few walking cultivators were imported. However, none is now being brought into the country. Harrows are in general use, but they are largely produced locally of wood fitted with iron teeth. A small number of metal harrows are imported for the Banat and Transylvania. Rollers are in

Digitized by Google

general use, but are produced locally and are of inferior construction. Horse-drawn rakes are used only on the larger estates, most of the hay being handled with hand rakes. Imports of horse-drawn rakes are negligible.

Threshing machines are in general use, the consumption being estimated at 400 to 500 per annum. Some 80 per cent. of the imports come from Hungary and are all of wood construction. Local consumption of corn shellers is estimated at 3,000 per annum, some 1,500 of which are produced locally and are of the hand-power type. Binders and reapers were in universal used on the large estates prior to the expropriation and the market was extensive, but for some reasons outlined above purchases were much smaller following the expropriation. However, their use is general in many sections, although much of the grain is still cut by hand. Consumption during 1929 was estimated at 1,400, and was made up of 800 machines from the United States, 300 from Canada, and 200 from Czechoslovakia, and 100 from Germany. Old-style reapers without the binding attachment are still in use, consumption of this type during 1929 being estimated at 300, all of which were imported, principally from Germany. Hullers for beans, peas, alfalfa, clover, rape and flaxseed are imported to a negligible extent only.

Internal-combustion engines up to 10 horsepower consumption are estimated at 400 per annum, 75 per cent. coming from Germany and a small quantity from England.. Prior to the advent of the gas engine, the use of windmills over the plain sections where fuel is scarce was universal for grinding. This method has fallen into disuse, but it seems probable that since local prices of gasoline and kerosene have recently doubled a market could be developed in Roumania for windmills for running grinding mills and for pumping purposes.

The Greek Minister of Finance has asked the Chamber to authorise the issue of a Six per Cent. Loan to the amount of £1,000,000.

The net profits of the Eastern Bank for 1929 amounted to £123,521, as against £124,118 for 1928. The dividend for the year is maintained at 9 per cent., and the allocation to reserve is £30,000, as against £25,000. No amount is this year written off premises account, but the carry-forward is increased from £44,470 to £47,991.

(By An Engineering Correspondent)

Firebars for Hand-Fired Boilers.

In connexion with steam generation in any type of boiler, and the operation of hand-fired furnaces in general, important is a new design of natural draught cast iron firebar known as the "Turnat," the invention of the Turbine Furnace Co., Ltd., of London, first shown at the recent Shipping and Engineering Exhibition, Olympia. The ideal practice for furnace grates is, of course, to have the air "diffused" or distributed as much as possible through the fuel bed, but in practice this cannot be achieved to any appreciable degree under ordinary conditions, because extremely thin firebars of great length, with many air spaces, would warp and melt up almost immediately by the heat. Consequently most firebars are at least 1 inch thick, constituting a great weight of solid metal, with say ¼ to ½ inch air space between, forming merely a small number of long slots. In many ways this arrangement is inefficient, since the air is not uniformly distributed to the fire above, being much too "localised," whilst unburnt or partially burnt fuel tends to fall through apertures of this character. In the well-known "Turbine" forced draught steam jet furnace for land practice the grate is made up of large longitudinal troughs fixed side by side, say five in number for a standard 3 feet wide grate, each of which has a steam jet to give a forced draught blast. Also the surface of the grate is composed of a large number of very small and short transverse interlocking slotted fire-bars or "elements" fixed across the top of the troughs, giving an effective distribution of the air to the furnace Thus for a standard 5 ft. 6 in. by 3 ft. grate each trough has 45 small transverse bars with 9 air spaces, correponding to 225 small bars and 2,025 spaces. Also these elements have below a sloping projecting portion like the blade of a turbine which dips down into the blast current of air and steam in the troughs below, diverting the correct small volume of air (and steam) corresponding to the particular aperture. In the new "Turnat" bar the same general principle has now been adopted for natural draught only, without steam jets, so as to give an effective distribution of the air combined with resistance to the heat equal to any ordinary cast iron bar. The design is intended for special conditions such as high class coal, boiler plants running under easy conditions and good draught.

The flat surface of the "Turnat" bar, made in standard lengths of 2 ft. 9 in., placed one behind the other as usual to give a 5 ft. 6 in. grate composed of 12 bars for a 3ft. width, is made deeply corrugated with projecting webs or blades underneath, which are inclined and divert the air to the fire. Also these bars, fixed side by side, interlock with one another to form a series of 11 long, sinuous, narrow slots up through which the air passes. The result is a much greater total air aperture in a standard 5 ft. 6 in. by 3 ft. 6 in. grate as compared with ordinary straight bars merely forming a few long wide slots or spaces. Further, the "Turnat" grate bar can be fitted with the long sectional cast iron smoke-preventing baffle bridge, built up of a series of triangular-shaped sections fixed side by side at the end of the grate, forming a hollow bridge containing on the face a very large number of small slots or perforations for the admission of secondary air to consume the smoke.

The total direct shipments of oranges from Palestine to the United Kingdom up to February 27 amounted to approximately 1,382,000 boxes, as compared with 911,000 boxes at the corresponding date last year. Total shipments to the Continent amounted to about 430,000 boxes, as compared with about 283,000 boxes shipped up to the corresponding date last year. Transhipments to the United Kingdom via Port Said up to February 22 totalled about 194,000 boxes, as compared with about 86,000 boxes at the corresponding date last season.

Company Meetings.

SOUTHERN PUNJAB RAILWAY.

Estimate of Distribution on Ordinary Stock.

Mr. James Rendel's Speech.

The ordinary general meeting of the Southern Punjab Railway Company, Ltd., was held on March 5 at 30, New Broad Street, London, E.C. Mr. James M. Rendel (the chairman) presided.

The Secretary (Mr. E. J. Shepherd) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—Ladies and Gentlemen,—We have come to the end of our journey, and we are here to-day to declare our final dividends, to make arrangements for the liquidation of the company, and to say good-bye to one another.

You will remember that rather more than three months ago we made known, by circular letter, sent to all concerned, the programme which we proposed to follow. In that circular we told you that in the case of the Ordinary stock we should recommend a dividend at the usual rate of £6 per cent. with a bonus of £4 per cent., making, with the interim dividend paid in the summer, a total distribution of £16 per cent., which we have come to regard as our usual rate of dividend. This, if you sanction it, will be paid at once. As regards the Preference stock, we also indicated that we should propose a distribution at the rate of £4 per cent. per annum, or £2 per cent. for the half-year ending the 31st of this month, to be paid on that date, and on the day when, as you know, the capital is to be repaid. To these proposals, as you will have seen in the report, we adhere.

As regards the liquidation, it has for practical purposes, though not yet in law, already begun. In virtue of the notice which the Secretary of State gave us some sixteen months ago, in the exercise of the right of purchase reserved to him under his contracts with us, our railways passed into his hands and became his property on January 1 last, and we have received from him a sufficient part of the purchase money to enable us to pay off the Debenture stock when it fell due for payment on December 31.

You know from the circular, to which I have just referred, of the arrangements which, after considerable discussion with the Secretary of State, enabled us to make this payment. Strictly speaking, he was entitled under the contract to keep us waiting for the whole of our money for four months, paying interest at the rate of 3 per cent. only in the meantime. We represented to him, however, that in the circumstances there were considerations of equity which justified us in asking him not to insist on a strict adherence to the letter of the contract, and we were so far successful that he agreed to what may be regarded as a not unreasonable compromise, under which he relieved us of all anxiety as to our Debenture stock by putting us in a position to pay it off at maturity, and undertook to pay on March 31 £2,300,000 to meet the claims of the Preference stockholders. Thus it has come about that the Debenture stock has already been paid off, or provided for, and that we are making arrangements in advance to pay off the Preference stock on March 31: that is, in other words, as soon as the money to do it with is received from the Secretary of State. On the other hand, we shall not be in a position to make a distribution on account of the Ordinary stock till the full four months have elapsed, that is till April 30.

You will naturally expect me to give you as close an estimate as I can of the amount which will then be distributable. I am not, of course, in the position to say anything that will bind the liquidators, or to make any promise on their behalf. But the main figures on which the calculation rests are now capable of being estimated to a very close degree of approximation. The only point, indeed, on which, as far as I can see at present, there is room for hesitation is the amount of the premium earned on the Sutlej Valley Railway capital. We believe that it has been earned in full and to spare, but until the audited figures for the last three months have been received, and the final adjustments agreed with the Secretary of State, it is not possible to speak with absolute certainty.

Assuming that the full premium on the Sutlej Valley line is payable—and even if it is not, the shortage cannot be very serious—I will hazard the estimate that after paying the dividends which we recommend, and providing for all liabilities and claims, the total assets of the company distributable amongst the Ordinary stockholders, including, of course, the receipts of the last three months' working, which are not yet known, should be sufficient to give them about £213 for every £100 of stock, or possibly a little more. No doubt it will be the desire of the liquidators to make on April 30, when the balance of the purchase money will be made, as large a distribution on account as possible, and to reserve no more for a second and final distribution than is in their judgment absolutely necessary. If then the above estimate turns out to be justified, it may be anticipated that the distribution on account to be made on April 30 will be somewhere about £210 for each £100 of stock. In any case, be the final amount to be distributed a little more or a little less, I think that you may look back on the history of this company with unmixed satisfaction.

And here let me very warmly congratulate my friend and colleague on the Board, Mr. H. N Gladstone, and the firm known far and wide in India of Ogilvy Gillanders and Co., of which he is the head, on the magnificent success of this company which he and they originally founded. I remember well, looking back over 35 years, that there were many at that time who thought he was over sanguine and very few who would have dared to prophesy such a result as has now been accomplished. To back your own judgmnet and find you are right is always delightful, but I am sure that he can have no greater pleasure to-day than to know that those who trusted him have never had the smallest reason to regret it.

Nor must I forget to mention here two men, on whose experience and technical knowledge Mr. Gladstone I know very largely relied and who are entitled to share with him the credit of carrying through this great enterprise. I mean Mr. Horace Bell and Sir Bradford Leslie. Mr. Horace Bell, who died many years ago, was our first consulting engineer in this country. Sir Bradford, as you know, was our Chairman here from the outset until he died full of years and honour in March, 1926, this being very nearly the fourth anniversary of his death. Jointly with Mr. Horace Bell he was responsible for the estimates on the strength of which the capital of this company was subscribed. That the actual cost of the finished line corresponded so closely with their forecast was not only a remarkable testimony to the thoroughness of their work but one of the main elements of its ultimate success.

The other thing I want to do is to express our appreciation of the manner in which during the currency of the contract we have been treated by the Government in this country and in India as well as by the administration of the North Western Railway, with whom as the working agency of our railway, we have been necessarily brought into very close relations. (Cheers.)

Sir Henry P. Burt, K.C.I.E., C.B.E. (deputy-chairman), seconded the resolution, and it was carried unanimously.

The proposed dividends were approved.

A resolution was unanimously passed expressing the thanks of the stockholders to the administration of the North Western Railway for the manner in which, as the agency charged with the working of the company's line, they had carried out the duties of that responsible trust.

Messrs. McAuliffe, Davis, and Hope were reappointed auditors.

Mr. James Mackenzie proposed that the stockholders present should recommend that a sum of £5,000 be paid to the directors of the company to mark their appreciation of the services of the board.

Mr. J. Angus seconded the resolution and it was carried unanimously amid cheers.

At a subsequent extraordinary general meeting the Chairman proposed that £5,000 should be added to the staff compensation reserve. In doing so he said that three years ago £25,000 was set aside for the staff to meet the emergency which had now arisen. That was not quite sufficiently to enable them to deal generously with the staff, and therefore they proposed the addition of the sum named. They owed a great deal to their staff, who were now to lose their jobs. They were particularly indebted to Mr. Shepherd, their secretary, whose knowledge of the contracts and the intelligence with which he had applied that knowledge had made him indispensable. (Hear, hear.)

This resolution was seconded by the Deputy-Chairman, supported by two stockholders, and unanimously passed.

The Secretary thanked the stockholders for what they had done on behalf of the staff.

A resolution was also unanimously passed for the voluntary winding up of the company and the appointment of liquidators.

THE AGRICULTURAL BANK OF EGYPT.

Incorporated in Egypt.

The Liability of the Members is Limited.

NOTICE IS HEREBY GIVEN that the TWENTY-SEVENTH ORDINARY GENERAL MEETING of The Agricultural Bank of Egypt will be held at the Head Office of the Bank in Cairo, on Wednesday, the 9th April, 1930, at 4 o'clock p.m. for the purpose, among other things of:

Receiving the Directors' Report;
Receiving the Auditors' Report;
Approving the Accounts for the period ended 31st January, 1930;
Declaration of Dividends;
Election of Directors;
Election of Auditors and fixing their remuneration;
And the transaction of the general business of the Ordinary General Meeting.

Every Shareholder holding a minimum of Five Shares has the right to attend the General Meeting, provided the Shares are deposited at least five days before the day of the Meeting (the last day for depositing the Shares in London is the 28th March, 1930), when Cards of Admission and Proxy Forms will be handed to them at one of the following places:—

In Egypt—At the National Bank of Egypt, Cairo.
At the National Bank of Egypt, Alexandria.
In London—At the National Bank of Egypt, 6 and 7, King William Street, E.C.4.

- B. HORNSBY,
Cairo, 13*th March*, 1930. *President.*

TRADE INDEMNITY COMPANY.

Satisfactory Progress.

The twelfth ordinary general meeting of the Trade Indemnity Company, Ltd., was held on March 11 at the Cannon Street Hotel, London, E.C.4. Mr. C. E. Heath, O.B.E., Chairman of the company, presided.

The Secretary (Lord Francis Hill) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—On this the twelfth year of the Company's existence, we have to report progress. It is still slow, but your Directors feel it is satisfactory. There is no doubt trade is bad, and that affects us in two ways. Not only is there less business to insure, but there is also extra need of caution, which in itself also tends to diminish our account.

Notwithstanding these drawbacks, our gross premiums, without allowing for returns or deducting brokerages, have risen from £202,000 to £234,000, an increase of about 17 per cent. on the previous year. The number of policies has grown from 3,463 to 3,760—an increase of nearly 10 per cent. Our net premiums do not show so large an increase, but they too are greater than the year before.

I have mentioned bad trade and the need for caution as factors in preventing more rapid expansion. In addition to those there has been competition. Not only has the Government Department been competing with us, but there has also been a certain amount of competition in other directions. The latter we must always expect, but as regards the Government competition, we have, I really think, some grounds for complaint. We have been told all along that when the insurances companies had taken up the business, the Government would be content to stand aside. We can now certainly claim to represent the bulk of the great insurance companies. I see our reinsurers' total funds amount to the very large sum of just about £400,000,000. Naturally a great deal of that money belongs to life insurance and is not available for our purposes—but this enormous sum is at least proof of the influential status of our supporters. The Committee which lately considered the matter, so far from recommending that the Government should now at all events work with us, has suggested a further prolongation of the Government experiment, and "experiment" is the Committee's own word. One would have thought, however, that the object of a Government should be to help and not compete. I must not, I suppose, call the experiment socialistic, but it would be quite true to call it a bureaucratic experiment. I am not sure, however, if there is much difference between the two.

The reason given is that credit insurance is still in an experimental stage. Well, gentemen, if it had been said that it is in an experimental stage from the Government point of view, that would be true enough, and I am afraid the country has paid rather dearly for the experiment. It will not be denied that it has cost the taxpayer well over a million, largely, I'm afraid, to the beneft of the foreigner. But it cannot be said that *our* business is experimental. Those who are conducting your affairs have had well over 25 years' experience of the subject, and we are long past the experimental stage. We go on improving our methods certainly, but that is a very different thing from experimenting.

We have insured one way or another last year something like £25,000,000 of transactions. Perhaps 40 per cent. of it can be reckoned as business which the Overseas Department is authorised to undertake. Of the remaining 60 per cent., a good part is connected with what eventually becomes export trade. All of it can certainly be said to promote employment, and it is done by carrying out our duty of making credit as good as cash. I really do hope that those at the head of affairs will take note of these facts, and give credit to the great insurance companies for what they have done. So far there has been no acknowledgment of this in official circles, though the much smaller and, judging from results, much less efficient efforts of the Government Department have been well advertised as deserving of merit.

This time last year I said that the results of 1928 looked as if they would be good. Those anticipations, so far as the underwriting results are concerned, have turned out to be correct. We are able to transfer £25,457 to profit and loss account, instead of £10,622. But unfortunately on December 31, as you know, the value of all investments had fallen very much. Last year we were congratulating ourselves on the fact that this item showed an appreciation of £5,000 over cost. Not only has that appreciation vanished, but we were £12,496 to the bad, as compared with what we paid for our investments. We have, therefore, written that depreciation off. At the present moment things are better, and out of that £12,496, £5,200 approximately has been recovered. We have also wiped off £900, the value of our office furniture, remaining in our balance-sheet. The net result of 1928 working is that we put £10,000 to reserve instead of £15,000, and pay the same dividend as last year. The carry-forward from 1928 to meet claims on it and on former years is less. But it is to be remembered that what we reserve in that respect is a definite figure made up of the amount which we think the known losses will cost us. Judging from the past, you can rely on that estimate being sufficient.

In respect to 1929 the result of the underwriting so far has not been so good. The ratio of losses, as compared with the same moment in 1928, has gone up, but they are not over the average, and we have every hope that the year will eventually prove to be satisfactory.

The resolution was carried unanimously.

ADVERTISING IN

"THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of ***all*** classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Requirements of Frontiers Administration.—The Director of Stores, Frontiers Administration, Alexandria, invites tenders for the supply within a period of twelve months commencing on May 1, 1930, of paints, varnishes, and other consumable stores. April 12. (D.O.T.)

Pumping Engine, etc.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for the supply and erection of a steam pumping engine for Kafr el Gamous Pumping Station, May 10; and for the supply, construction, and delivery of cast-iron sealed sewage and air mains in Zagazig. May 27.

Photographic Material.—The Survey of Egypt invites tenders for the supply of rolls of sensitive paper and photographic chemicals. May 3. (D.O.T.)

Damanhour and Kafr el Zayat Drainage.—The Ministry of Public Works (Main Drainage Department) invites tenders for the supply of air compressing plant (semi-Diesel) and auxiliary machinery. May 1. (D.O.T.)

Photocopic Papers.—The Ministry of Finance, Cairo, invites tenders for the supply of photocopic papers. March 31. (D.O.T.)

Various.—The Director-General of Prisons, Cairo, invites tenders for the supply within a period of twelve months commencing from May 1, 1930, of a variety of articles required by the Prisons Administration. The contract is divided into eleven sections, viz:—(1) Cotton, cloth, clothing, sacks, etc.; (2) buttons, eyelets, needles, threads, etc.; (3) blasting fuses, twines, cordage, miscellaneous enamelled articles, etc.; (4) paints, metal polish, boot blacking, heel balls, naphthaline, marking soap, acids, etc.; (5) leathers (native and English), oilcloth, etc.; (6) fibres (Indian and Mexican), cane rattan, crin vegetal, bristles, horsehair, bassine, bassat, split rattan, etc.; (7) lamps and electrical articles; (8) copper hardware; (9) tools, files, etc.; (10) nails, ironmongery, belting, mild steel, galvanised plates, steel, etc.; (11) dyeing of clothing and cloth. April 2. (D.O.T.)

Calico and Shash.—The Survey of Egypt invites tenders for the supply of calico and shash for map mounting. April 23. (D.O.T.)

Iron and Steel, Metals, etc.—The Ports and Lighthouses Administration invites tenders for the supply of iron and steel, metals, etc., required during 1930-31. April 15. (D.O.T.)

Requirements of the Ministry of Education.—The Central Stores Department of the Ministry of Education, Cairo, invites tenders for the supply during the school year 1930-1931 of linen, table requisites, cleaning materials, etc. March 22. (D.O.T.)

ROUMANIA.

Castor Oil.—The Air Inspectorate of the Ministry of the Army invites tenders for the supply of 75,000 kilogrammes of castor oil. March 21. (D.O.T.)

Pencils.—The Supplies Department of the Roumanian Post Office Administration invites tenders for the supply of a quantity of pencils. March 22. (D.O.T.)

ALBANIA.

Dredges.—The Albanian Government are considering the purchase of one or two dredges for use on Albanian rivers. (D.O.T.)

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended March 5:—

Egyptian Futures.

Sakel Contract.—The effects of the Egyptian Government's intervention are now beginning to be more acutely felt in the contract markets, and, as increasing quantities of cotton pass into official hands, trading will tend to become more and more restricted as the season matures. During the past week 420,750 kantars have been tendered in Alexandria, bringing the season's total up to 529,000 kantars. The decline in other varieties and the poor state of trade throughout the world since the stabilisation policy was formulated must now be causing those responsible considerable anxiety, and it now appears probable that a lengthy period will elapse before the normal laws of supply and demand can apply to the Sakel position. A turn round in the trade situation, more stability in the American markets, and the promise of a reduced new crop yield might gradually help the market on to an independent footing, but as, at the moment there are no signs of support from any of the above sources, it appears inevitable that the Government's holding will be further increased in the near future.

Features of local trading during the week have been furnished by the steady demand for near positions and heavy speculative selling of new crop deliveries. With regard to the former, our market stands so far below overseas values that business must eventually be attracted to the local stock, and on this account holders have preferred to transfer their hedges at a very small premium rather than risk being forced to tender. The pressure on distant positions has been encouraged by the decline in November Alexandria, following an announcement that a tax of seven cents per lb. on imports of staple cotton over 1¼ in. into the U.S.A. had passed the Senate. This measure has still to be ratified; in the meantime, it appears somewhat risky to us confidently to anticipate the result, as has been the case during to-day's session. Whilst there appears little in the outlook to encourage ideas of any material upswing, we consider that quite a fair-sized "short" account has recently been worked up, and on this account the market would probably react quickly should any covering orders come in.

Upper Contract.—This market continues to attract little outside interest, trading being confined to straddle and transfer operations. The relatively cheap locally-hedged cotton is gradually being absorbed, and, as we are running from 50 to 75 points below the Alexandria shipping basis, it is only a question of time before current differences readjust themselves. Trade reports continue to be depressing, although more inquiry has recently been in evidence. New crops in Alexandria appear to be working down to a reasonable difference with the American contracts.

Egyptian Spot.

The improvement in the general inquiry to which we drew attention last week has been maintained, but once more it has been uncertainty as to the course of American values which has destroyed confidence amongst buyers. A fillip to the situation has been provided by the U.S. Senate voting in favour of a 7 cents import tax on staple cotton. In the past, fears of similar tariffs have occasionally caused waves of semi-panic buying on the other side. Any such movement, even if only of short duration, would be most welcome at the present juncture, particularly since Liverpool is so much cheaper than Alexandria, and would probably reap a short-lived benefit therefrom. Conditions at the present time, however, are rather abnormal, and we have reason to believe that America is already holding quite a lot of Egyptian cotton which she has not yet been able to consume.

Sakels have been in better request, but so far sales have shown no very marked increase.

Uppers.—During the last few days particularly, the demand has been quite brisk and all grades have participated. Here again, however, results have not been commensurate with the inquiry.

Pilion.—There has been a limited demand for this cotton at around 11d. per lb.

Maarad has been in improved request, principally from foreign sources.

White.—The lower qualities have attracted more attention.

Nahda and Fouadi.—These growths appear to be out of favour at the moment.

Sudan Sakel.—Beyond queries regarding the new crop little interest has been shown.

Tokar Sakel has again suffered from neglect.

C.i.f. business.—No improvement to record.

Forwardings.—Last week's figures were returned as 11,622 bales Egyptian and 994 bales Sudan Sakel. Spot sales have been estimated at 1,500 bales Egyptian and 20 bales Sudan Sakel. Quotations of Sakel have been advanced 10 to 20 points. Uppers have been reduced 14 points and Pilion 10 points. F.G.F. Sakel to-day, 13.75d. F.G.F. Upper to-day, 10.02d. F.G.F. Pilion to-day, 10.70d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended February 27, state:—

Since we wrote a week ago there has been little change in the market. Prices are slightly lower on the week for new crops, but the tone at the close to-day was fairly steady. The week's summary of price movements is as follows:—Sakellaridis: March, 28.50 dollars, unchanged; May, 28.06 dollars, 0.38 dollars up; July, 27.34 dollars, 0.02 dollars up; November N.C., 25.73 dollars, 0.13 dollars down; January N.C., 26.03 dollars. Ashmouni: April, 19.42 dollars, 0.01 dollars down; June, 19.86 dollars, 0.38 dollars up; August, 19.15 dollars, 0.05 dollars up; October N.C., 18.58 dollars, 0.10 dollars down; December N.C., 18.89 dollars, 0.11 dollars down; February N.C., 19.21 dollars.

Sakel.—The Government decided on Sunday last to extend its buying also to May contracts. The price fixed for May is 28.00 dollars, against 27.50 dollars for March; as a consequence, May shows a rise of 38 points since last Thursday. New crops, on the other hand, are somewhat lower, in sympathy with the drop in New York. A feeling exists, however, that the Government will be

obliged also to make some arrangements for supporting new crops and local operators have become chary of selling November. Demand from spinners continues to be very small and the local stock shows an increase of 125,000 kantars. The arrivals have been on the heavy side, as a result of the merchants up-country sending down large quantities for tender to the Government on the 3rd prox. The quantity of March contracts in the hands of the Government stands at 180,000 kantars to-night, but they will probably have to take a considerable quantity to-morrow, for the banks and the merchants all seem desirous of lightening their stocks in view of the continued stagnation of the demand.

The Sakel Upper straddle (March April) this week stands at 808 points, against 807 points last week and 1,351 points at this time last year. The straddle remains practically stationary week after week, and is of little interest as it merely reflects the prices at which the Government is a buyer of the old crop positions. The new crop straddle (November October) is at 715 points, against 718 points last week and 1,385 points at this time last year.

Uppers.—This market has been very quiet. The price of June has been adjusted to the price fixed for this month by the Government (19.80 dollars), whilst October shows a slight decline on the week. There is no improvement in the demand from consuming centres, but with American prices still lower this is not surprising. The Ashmouni American straddle (April March) this week stands at 437 points, against 415 points last week and 284 points at this time last year. The new crop straddle (October/October) is at 282 points, against 278 points last week and 438 points at this time last year.

The week's receipts amount to 207,769 kantars, against exports 79,836 kantars; the stock in Alexandria stands at 3,676,951 kantars.

Spot.—The total turnover amounts to about 8,200 bales, of which we estimate 2,900 bales Sakellaridis, 4,700 bales Ashmouni and Zagora, 300 bales Pilion, and 300 bales other varieties.

Sakellaridis.—The small demand for tenderable cotton mentioned in our last week's report has been maintained, though holders do not appear to be quite so keen to part with their cotton.

Ashmouni and Zagora.—Holders of cotton are striving to keep up the premiums, but the demand has not been sufficiently active to justify their policy, hence a somewhat restricted turnover.

Pilion.—The situation is unchanged from last week.

Other Varieties.—There is only a poor interest in Nahda, and other varieties are entirely neglected.

Up-country.—There is very little real business going on in the Interior, and what cotton has changed hands has merely done so as a stage of its journey to the Government. Merchants up-country have this week, as mentioned above, sent down as much cotton as possible, for delivery against March contracts, seeing little hope of any improvement in prices.

Crop, 1930.—Sowing has commenced in the southern districts of Upper Egypt and will become general during the course of the next week. In Middle Egypt ploughing is finished and growers are only waiting for a slightly higher temperature to get on with the sowing. Ploughing and ridging in the districts of the South Delta are progressing rapidly; some of the larger growers have already sown part of their lands, but the present cool weather is not favourable to these early sowings. Field work in the North Delta is making progress and every effort is being made to push on and recover the delay caused by the rains at the beginning of the month.

Notes of the Week.

Yugoslavia and Bulgaria.

Nothing could illustrate better the change that has come over the relations between Yugoslavia and Bulgaria than the manner in which the fresh series of outrages in the Yugoslav marches is being handled by the two countries. The Yugoslav Government deserves full credit for the dignified restraint that it has shown in the representations made in Sofia, in marked contrast to the former launching of Notes calculated to humiliate the Bulgarian Government of the day rather than to facilitate measures for dealing with the evil. If it should be the case, as reported, that the Yugoslav Government contents itself with asking for the arrest and punishment of those responsible for the recent outrages and for the prevention of similar acts in the future, without specifying the form that such prevention should take, it is to be hoped that the Western Powers, who are interested in the maintenance of peace in the Balkans, will not hesitate to press for the only measures that can bring lasting peace to Macedonia. It is impossible to determine to what extent the actual perpetrators of these frontier outrages are free agents. The use of bombs in two different places affords fairly conclusive evidence of an organization behind the crimes, and enough is known of *komitaji* methods to suggest that the agents employed are likely to have been acting as much under duress as voluntarily. Even when they have been arrested and punished, the organization primarily responsible for their activities will remain in being, unless steps are taken to cope with it at the same time. Now that Great Britain and France, with or without the calculating co-operation of Italy, have again urged the Bulgarian Government to deal effectually with the trouble, it is to be hoped that they will carry their rôle of mediators to its logical conclusion and will formulate the only settlement which is likely to have permanent results. Bulgarian operations against the *komitaji* organization must be accompanied simultaneously by action on the part of Yugoslavia to meet the legitimate grievances of her Macedonian population, who are denied the use of their own language in schools and Churches, and even in private conversation where the suppression can be enforced. The difficulties with which any Bulgarian Government must be confronted in an attempt to deal effectually with the Macedonian Revolutionary Organization are known, and it is right that its hands should be strengthened by its being able to give the Bulgarian people the assurance that the crude disabilities under which their Macedonian kinsfolk have hitherto suffered will be at last removed.

Financial Crisis in Turkey.

It is not easy to discover what purpose it is hoped to serve in Turkey by the spreading of wholly erroneous reports regarding the Government's efforts to cope with the financial crisis through which the country is passing. The establishment of a State Bank has come to be regarded as a necessary measure, and very wisely the Ankara authorities have sought advice on the subject. They would naturally turn to, among others, the Ottoman Bank, and it was announced more than two months ago that there had been consultations in Ankara between the two parties. Why, however, it should have been reported that "negotiations" had been abruptly terminated, on the alleged ground that the Ottoman Bank had pressed for a measure of control to which the Turkish Government could not agree, is not clear. The statement was corrected nearly a week later by the announcement that no suggestion of the kind had been put forward by the Bank, but in the meantime the Turkish public can only have had its understanding of the situation still further befogged. The conversations at Ankara, as far as is known, were restricted to the general principles of a State Bank: there was nothing in the nature of negotiations. No doubt the advisability of employing the services of an expert in the formation of the State Bank was urged, but the Turkish Government had already had the advantage of a German expert's report on the whole question. It must be supposed that the Ottoman Bank's suggestions commended themselves as little as those of Dr. Müller to the Ankara authorities, as they would seem to have taken no steps to act upon them.

Palliatives or Remedy.

In the face of what must be supposed, in the absence of proof to the contrary, to have been unanimity on the foreign advice offered to it, the Turkish Government appears to have preferred measures of its own devising

Digitized by Google

for meeting a difficult situation. Among these is the summoning of a meeting of Banks, both foreign and Turkish, to consider a proposal for the formation of a "Consortium." The scheme contemplates contributions in sterling from the Banks to a fund, to which the Turkish Treasury will also contribute, for the purpose of steadying exchange. As the sum said to be involved is only £1,100,000—half a million pounds from the Treasury and the balance from the Banks—its effect on the Turkish exchange could not be of any lasting value, even if all the Banks were prepared to fall in with the Government's suggestion. On this latter point there may well be misgivings, if the Banks concerned set store on the permanent rehabilitation of Turkey and are free to act on their own judgment. The Consortium scheme, in common with the loans said to have been obtained from Italy and Soviet Russia and to be hoped for from the Swedish Match Trust, is at best a palliative and not part of a sound comprehensive policy for dealing with Turkey's financial crisis. Whatever immediate advantage is derived from these palliatives, each in turn renders more difficult the final solution of the problem, as it engages resources on which Turkey will have to rely for a big loan for reproductive purposes. In the meantime the formation of a State Bank seems to encounter the same difficulties, and the Government is said to have fallen back on the plan of finding all the capital in Turkey; but whether the results of this arrangement will justify national expectations remains to be seen. A disquieting feature in the situation is that the Government of Ismet Pasha would seem to be staking its reputation on the superiority of its own financial acumen over the experiences of foreign experts. Already this attitude has led it to the acceptance of help from Soviet Russia, which must run counter to Mustapha Kemal Pasha's instincts. Turkey is too heavily committed to the success and continued solidarity of the present régime to be able to contemplate without anxiety a complete collapse in the economic sphere, which could be adjusted only by radical changes in personnel.

'Now Ruz."

The year 1309 dawns for Persia with skies that are singularly clear, for the recent depression caused by the fall in the rate of exchange is obviously temporary and will surely be dispersed when the country attaches its financial system to the gold standard. It is an indication of the progress which Persia has made during the last year that, but for the rebellion in the south of the Kashgais and the Bakhtiaris, her story has been almost entirely lacking in sensational incident—the safest sign that economics are prevailing over politics. Outwardly perhaps the most remarkable symptom of the new spirit at work in the country is the progress made in the great railway project, progress which, however, has been somewhat more marked in the northern section than in the southern section. In the southern section, of course, the difficulties in the way of construction are very considerable, but it is believed that the recent visit of the Shah to Khuzistan will result in a speeding up of operations in this most important sphere. In the internal administration, also, significant strides have been made, particularly in the administration of Justice, in which, owing to the personal advice of the Shah, a special Court has been established to deal with officials guilty of embezzlement or misappropriation of public funds. In nothing is the greatness of Riza Shah more remarkable than in his determination to root out corruptibility from his people. Persia's foreign relations are, generally speaking, on a satisfactory basis, and will be even more so when a comprehensive treaty has been made with Iraq, which country, to the great pleasure of all people interested in the Middle East, she recently recognised. Persians may well start their New Year with good hope. They realise that they have much leeway to make up in such things as education, scientific training, general business methods, and so on, but the will to progress is manifest. The Persians are eager to learn, and they are surely learning, both by bringing European teachers to Persia, and by sending Persians to be taught in Europe.

The Iraq Cabinet.

No new Cabinet, at the time of writing, has been formed to succeed that of Naji Beg as Suwaidi, who offered to resign on March 9. His resignation, however, does not seem to have been accepted by King Faisal, and the position at the moment is a little obscure. Apparently Naji Beg wished to resign on account of differences with the British authorities in Iraq in respect of the expiry of contracts of certain British officials. The Iraq Cabinet desired, as it has been fairly obvious they would desire, to terminate the contracts of such Administrative Inspectors, police officers, and officers attached to the Iraq Army as had come, or were coming, to the end of their stipulated service with the Iraq nation. As soon as the proposal to admit Iraq into the League of Nations in 1932 was made public, the Iraq politicians made up their minds progressively to reduce, as opportunity arose, the number of Englishmen serving the Iraq Government. *Prima facie* it does seem just that, if Iraq is shortly to enter the League, Iraqi officials should increasingly be entrusted with responsibility: in other words, that the English advisers should gradually fade into the background. But equally it seems that there is a right way and a wrong way of bringing about this reduction, and in the absence of fuller details on the present reported difficulty, one must withhold comment. Often enough Iraqi internal politics influence a course of action which is attributed to difference of opinion with the British.

INDIAN NOTES.

The Bombay Budget.

The full reports of the speeches of the Governor of Bombay and of the Finance Member on the occasion of the introduction of the Budget do little to lessen the despondent nature of the information already cabled. It is true that a small balance was realised in the past year, thus ending a series of deficit years; but this result was only obtained by meeting some of the charges from the Famine Fund. For the coming year an infinitesimal balance on the right side is shown in the Budget, as the Government have, in the words of the Governor: "steeled their hearts and pared their estimates," with the result

MACEDONIAN OUTRAGES.

A fresh outbreak of outrages in Yugoslav territory not far from the Bulgarian frontier—there have been four in the last month—is too serious a matter to be dismissed as a mere symptom of the everlasting trouble associated with the Balkans. For the first time since the War a genuine and, seemingly, whole-hearted attempt had been made both by Yugoslavia and Bulgaria to compose their differences and to arrive at a workable plan for eliminating, as far as possible, friction along the frontier, and in any case for the smooth settlement of difficulties when they arose. The conclusion of this agreement appears to have served as a signal for the series of murderous attacks which must be devoid of any other purpose than terrorism. At Pirot and at Strumitza the bombs thrown into an hotel or café can have had no more definite mark than the indiscriminate slaughter of all who happened to be within their deadly reach. The simultaneous publication in the organ of the Macedonian Revolutionary Organisation of a warning that this body now considers itself compelled to have recourse to bullets and bombs in order to draw attention to the Macedonian question makes it almost impossible to dissociate the Organisation from these fresh outrages. Its actual complicity in any definite crime may be hard to prove, for in every case the perpetrators seem able to make good their escape; but, even if the discovery of bombs alleged to bear the Revolutionary Organisation's stamp does not supply absolutely convincing proof in a part of the world where evidence of this kind is readily forthcoming, the declaration of the Revolutionary organ of the intentions of the Organisation is sufficient to place that body outside the pale of the law. It is certainly unfortunate that even after the experience of so many years the Yugoslav authorities have not been able to bring their police or gendarmerie to an adequate standard of efficiency to prevent the commission with complete impunity of any crime, however bold in its conception. In view of the admitted dissatisfaction that exists in Yugoslavia itself it is inevitable that the attempt to fasten the sole complicity for all outrages on *komitajis* domiciled in Bulgaria should be countered on the Bulgarian side by the suggestion that the possibility of finding the culprits on Yugoslav soil must not be altogether overlooked.

In the circumstances it would seem better to abandon all efforts to make good the deficiencies of the Yugoslav police force and to fasten upon the declared policy of the Macedonian Revolutionary Organisation and the crimes for which it is responsible on Bulgarian soil. Here there is evidence enough to convict it of being an enemy of all law and order and of placing itself above the jurisdiction of the State. This is a condition of things which no civilised country ought to tolerate, and if the Bulgarian Government, for reasons that do not need to be specified, does not find itself strong enough to cope with the anomaly, it should not allow misplaced *amour propre* to prevent it from welcoming outside assistance. The Macedonian Internal Revolutionary Organisation must no longer be permitted to enjoy impunity by reason of any identification with the so-called Macedonian question. In so far as any case can be made out for the unsatisfactory treatment of a Macedonian or Bulgarian minority in Yugoslavia, the existence of this lawless Organisation constitutes an effective barrier to any practical remedy of the situation. The hands of the Western Powers are tied by *komitaji* excesses; the Yugoslav Government is unlikely to yield to intimidation. Any real sympathy with a community that complains of oppression must call for the elimination of a body that effectually prevents all possibility of relief for that community. This reading of the Macedonian situation has long been accepted in Western Europe, but conditions both in Yugoslavia and in Bulgaria have made it difficult to press the obvious solution. The improvement in the relations between the two countries affords a suitable opportunity. The seriousness of the position can hardly be lost on Bulgaria; the improvement in Yugoslav-Bulgarian relations suggest that Yugoslavia has begun to view the problem from a different angle. What would now seem to be required would be the co-operation of the two countries, under the auspices of Great Britain, France and Italy, in the forcible suppression of the Macedonian Internal Revolutionary Organisation.

The approval of the Western Powers is necessary as an earnest of their sympathy with Bulgaria in her anxiety for the fate of her nationals under Yugoslav jurisdiction. It should be made plain in Bulgaria that the action against the Macedonian extremists does not entail a cynical abandonment of Macedonians in Yugoslavia or indifference to their future lot, but is the fulfilment by Bulgaria of her part of a bargain, in return for which she secures the promise of better conditions for the Macedonians in Yugoslavia. The co-operation of the Yugoslav Government in dealing with the *komitajis* is rendered necessary by the difficulty of Bulgaria's task, the smallness of her army and the necessity of closing the frontier to any attempted escape into Yugoslavia. An opportunity to surrender must be given to the *komitajis*, but it is unlikely that Mikhailoff and his immediate followers would take advantage of it, as the Bulgarian Government might find it difficult to condone the crimes for which he has been held responsible during the last three or four years. In an ideal settlement of the problem the task of the Bulgarian Government would be further lightened by a definite undertaking on the part of Yugoslavia to modify her policy in the *banovine* of the Vardar and Morava. Places might be found elsewhere in the Kingdom for those officials who had become closely identified with the former régime of the iron hand. The harsh and unprofitable policy of suppressing schools and Churches, forbidding the use of the Bulgarian language and imposing the arbitrary change of name-endings from "off" to "itch" might be abandoned in favour of the more liberal treatment of a people who may yet prove loyal Yugoslav subjects without forswearing their national origin. It is only by such combined means that the Macedonian problem can be satisfactorily solved once and for all. Tinkering with the problem will bring only temporary, if any, improvement. As long as the Bulgarian Government allows the Macedonian leader Mikhailoff to set himself up as *imperium in imperio* and to be the sole judge of what constitutes suitable treatment of Macedonians in Yugoslavia, so long will Yugoslav-Bulgarian relations be at the mercy of his whim or of the necessity of his keeping in training a band of desperadoes, who reck naught of the interests of their people and country, however patriotic their motives may originally have been.

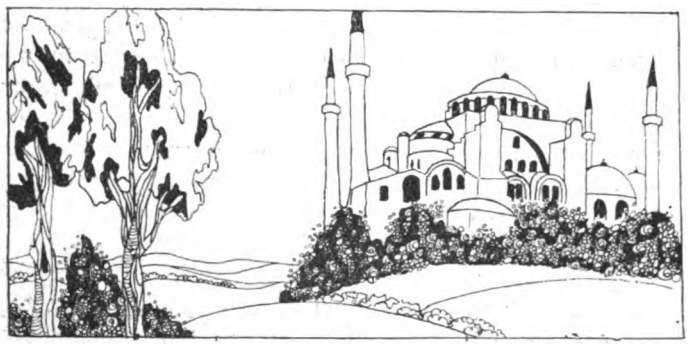
*The Near and Middle East

From Our Own Correspondents.



TURKEY.

Istanbul, March 12.

The Trial of Bedi Bey.

The trial came to an end yesterday in the Istanbul Criminal Court of Bedi Bey, charged with the attempted murder of his friend Hakki Tarik Bey, Member for Kerassund and Editor of the *Vakit*. The charge framed by the Public Prosecutor sought to establish premeditation, and the medical evidence went to show that the bullet which passed through the victim's jaw was fired at very close quarters—possibly at a distance of less than two feet. This estimate of doctors and surgeons, established on a summary examination of Hakki Bey's wound, is a probably correct one, seeing that on the evidence of the Deputy himself, he and his aggressor were engaged in a desperate struggle when the firearm went off.

On the count of premeditation, the Bench gave the accused the benefit of the doubt, but sentenced him to twelve months' imprisonment on the charge of attempted murder. This sentence, however, was increased to a term of sixteen months, the four months being added for the attempt by Bedi, an ex-'Varsity Don, to destroy the life, not of an ordinary individual, but of a member of the House of Representatives.

Greco-Turkish Relations.

If it be true that semi-inspired Press articles sometimes cast shadows of coming events, then it may be assumed that the protracted negotiations for the conclusion of a Pact of Amity between Turkey and Greece have at last entered upon their penultimate stage of procedure. If an illustration were needed to make the point clear, one need go no further than to analyse the reflexions of the local Press over the Greek naval manœuvres in the Ægean which are being carried out with M. Venizelos as an "observer" in one of the lighter craft.

The local Press which, a bare week or so ago, was publishing half-page photographs of the reconditioned Yavouz (ex-Goeben) with descriptive letter-press of that battle-cruiser's attainments and behaviour on her recent steam trials and calibrating practice in the Sea of Marmora, finds nothing unusual or astonishing in the almost simultaneous carrying out of Greek naval manœuvres on the other side of the Straits. This is all to the good, and all parties would be happy, if only this attitude could be relied upon to endure through days of stress and strain when the temper of both the diplomatist and the man in the street is apt to become ruffled and when recriminations are vigorously indulged in by the Athenian Press, if the Yavouz sets out on a cruise in the Marmora, and by the Turkish Press if the Greek Fleet leaves its base at Salamis.

Dr. Tewfik Rushdi Bey, who has been undergoing medical treatment in Istanbul, has returned hurriedly to Ankara, there to append his initials, by those of M. Polychroniades, the Greek Minister, to the Agreement which, it is expected, will be ready for this step by March 13. Outstanding differences which still divide the Turkish and Greek Cabinets have been wisely left for settlement to the arbitrament and the good offices generally of the neutral members of the Mixed Commission for the Exchange of Populations, a body of distinguished and disinterested foreigners who, having no axe to grind, can concentrate on the definite solution of the numerous problems engendered by the Ionic migration and the many complications which followed in the train of it.

It is as yet too early to forecast the probable effect of the signature of the Pact on the general trend of Greco-Turkish economic and commercial relations, but it is at least not improbable that a quite appreciable number of Greeks of Constantinople who, in the ordinary course, would not have been affected by the operation of the Exchange Act, will now get rid of their property in this city in order to seek elsewhere an outlet for that bent for mercantile pursuits which is so peculiarly their own.

An invitation is reported to have been addressed, through the usual diplomatic channels, to M. Venizelos to go to Ankara as the guest of the Turkish Government for the signature of the Pact. Whether the veteran Greek statesman will have leisure enough to undertake the journey to the Turkish capital, time alone will show.

Foreign Bondholders and the Turkish Treasury.

Amid so much which is bewildering to the lay mind in the matter of last-moment legislation calculated to preserve the Turkish circulating medium from further depreciation, it is no easy matter to detach one's mind completely from extraneous topics and conflicting notions so as to get at the very heart of the position which has arisen as a result of the Turkish Treasury's foreshadowed default over the next coupon instalment. M. de Closières and Mr. Wyatt, the French and British representatives of the foreign bondholders, have both arrived in Ankara, it is true, and they are reported to have had a two hours' interview with Sarajoglou Chukri Bey, Minister of Finance. They are to-day being received by Ismet Pasha, the Premier. But that, for the moment, represents the whole of the information available in connexion with a question which is not only in the very forefront of a highly complicated and critical situation, but one which may conceivably be found eventually to have constituted a turning point in the political and financial history of post-War Turkey.

Fresh light is being shed almost daily on the great straits to which the local money and exchange market has been reduced by the ever-increasing volume of laws, by-laws, rules and regulations conceived and framed with the (very laudable) theoretical object of bolstering up the Turkish lira, but which, in practice, have merely resulted in completely disorganising trade. Everything is being done, however, to find some form of financial apparatus calculated to *ménager la chèvre et le chou*—or, in other

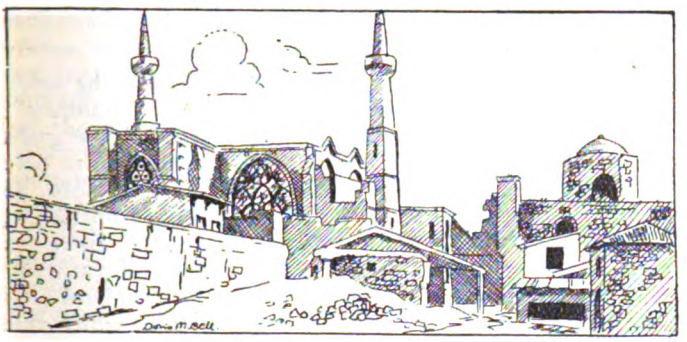
words, some form of machinery which would satisfy the requirements of the Treasury without unduly straining the resources of the exchange market to the detriment of the mercantile community.

At the instigation of the Ministry, the Istanbul and Ankara banks have been, or are being, converted into a Consortium or a joint-stock concern for the purpose of pooling their available resources in foreign exchange to the amount of one million pounds sterling, the major portion of which is to be contributed by the Turkish Treasury and banks. Unanimity, however, seems very far from attainment among establishments of such diverse nationalities and policies. The activities of foreign banks, in particular, must obviously be governed in such circumstances by the dictates and exigencies of their Continental or overseas Boards and Committees and no Captain cares to hand over the navigation of his vessel to strangers in times of storm and stress.



CYPRUS.

Nicosia, March 4.

The Deputation from Cyprus.

The reply of Lord Passfield, through Sir Ronald Storrs, to the memorial of the Archbishop and eight elected members of the Legislative Council, protesting against the Education Law, and his reply to the letter of Mr. Zeno Rossides in London, have been published in the papers. Perhaps the result of all the deputations, the memorials, and letters might be summed up in a few words of Lord Passfield's reply, viz., that the picture drawn by the memorialists is not a fair one, that the interchange of views is nevertheless valuable, and that it "should foster the spirit of co-operation." This is to be hoped for in the interests of the island.

Armenian Settlers.

In reply to the protest of the Greek Archbishop, regarding a report that a large number of Armenian refugees were to be brought to the island, with the approval of the local and Imperial Governments, the Governor has replied by letter, stating that there is no ground for the rumours. A hint is given that valuable time would be saved, if injurious reports, such as this, were brought to the notice of the Government as soon as they were circulated.

Centenary Celebrations in Greece.

Progress is being made by committees for the participation of Greeks in Cyprus in the centenary celebrations. M. Katalanos and Dr. Zannettos, who both had to leave Cyprus some years ago, and who settled in Athens, are actively engaged with that object. The memorial of Pentelic marble which is being prepared at Athens will bear appropriate symbolical representations of the part played by Cyprus engraved upon it. It is expected that a number of Greek Cypriots will proceed to Greece. In the programme of island events, celebrations will be arranged to coincide as far as possible with those in Greece. Pan-Cypriot Athletic Sports, which are to be held in Nicosia, will form part of the local celebrations. In the exhibition of agricultural and industrial exhibits which is to be held, it is hoped that Cypriot products will be admitted free of duty, and will be offered for sale.

The Rat Campaign.

The destruction of rats, by the method adopted, viz.,

of laying poisoned baits, has been interrupted by heavy rains: and there has been difficulty in obtaining adequate supplies of Red Squill. The rat destruction officers proceed to villages that apply for their services.

Cyprus Olives.

It is satisfactory to learn that the grafting of the island trees with shoots imported from Spain has given very good results. The improvement, both in size and quality, of the native fruit, which is so largely consumed, both in the berry and oil, is very much needed.

Turkish Progress.

It is interesting to note what progress is being made in the Turkish community, by both sexes, in this new era. Miss Jihan Rouzi Hassan, selected by the Government last year for training in the Sericultural School at Broussa, has returned to Cyprus, and is now a Sericulturist of the Agricultural Department. She now instructs Turkish women and girls, lectures at the Agricultural College, and visits schools. It is hoped that there will be a good development in production of cocoons, and connected work throughout the island.

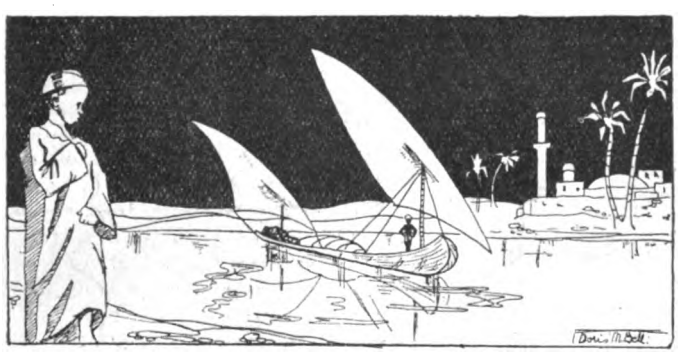
General News.

Faiz Bey, an Assistant Commandant of Police, has been called to the Bar in London, and has returned to Cyprus.

The Governor's prize for the best collection of specimens of Cyprus plants in 1929 has been awarded to a Turk, Hassan Djinkis.

A contribution of £150 is being made by the Government to the Nicosia Race Fund. Interest in horse-racing is rapidly declining. The grant is made to encourage horse breeding and improvement of the local breed.

The Agricultural and Industrial Exhibition for Cyprus and the Near East, which it was proposed to hold at Nicosia in 1930, is postponed until September, 1931. The notice was too short, and much more advertising is needed.



EGYPT.

Cairo, March 8.

The Sudan and the Negotiations.

The Governor-General of the Sudan, accompanied by Lady Maffey and Mr. MacMichael, Civil Secretary to the Sudan Government, arrived here to-day. Sir John Maffey has come to confer with the High Commissioner before the latter's departure next week for England in connexion with the forthcoming Anglo-Egyptian negotiations, and his visit has aroused considerable comment, certain people imagining that there is a question of making further concessions to Egypt in the matter of the Sudan. The Egyptian Delegation, when it leaves for London on the 20th instant, will be accompanied by the Editors of most of the leading Arabic papers. We shall, therefore, have a very full service of information during the negotiations.

Middle East Air Display.

The Middle East Air Force held their annual display in aid of air charities this week. It was attended by both the High Commissioner and King Fuad, and attracted a very large crowd. The programme contained the usual exhibition of aerobatics, which are now part of the normal training of pilots, and by the daring nature of some of the items as well as the perfect manner in which the concerted work was carried out admirably illustrated the efficiency of the Middle East Air Force. An interesting innovation was the participation for the first time of Egyptian pilots in the display, three officers of he Egyptian Army, who have just completed their course at Abusir, performing a series of evolutions in formation on 504N. Avros.

The Press of Egypt.

Last evening the Press of Egypt celebrated the second anniversary of its monthly luncheons by a banquet of ninety covers at the Continental-Savoy Hotel. The guests of honour were Count Apponyi, who, in addition to being a distinguished statesman is a writer of some note, and Countess Apponyi, while the other guests comprised the leading Government and Legation officials, who have dealings with the Press. It was a very successful gathering, the journalists present including the senior members of the staff of all the party organs. The continuity which these monthly gatherings have enjoyed provides a telling answer to those who, when the idea was first mooted two years ago, predicted that they would have a short life owing to the atmosphere of personal animosity and intrigue that had up to that time existed in Press circles. For a movement like this to survive two years and show as it did by last evening's brilliant and cordial gathering that it is to-day even more in favour than it was at the start with the members of the Egyptian Press, indicates that the spirit of confraternity is beginning to take hold on journalists here and to cause them to place their personal relations with one another on a plane above the petty differences of politics. The Press of Egypt is deserving of the warmest congratulations on this achievement.

Bonaparte in Egypt.

An interesting lecture was given at the Royal Geographical Society on Friday last by Colonel Elgood on the subject of "Bonaparte in Egypt." It was very well attended. The lecturer, speaking without notes, gave a very clear and at times humorous account of the incidents that led up to Napoleon's invasion of Egypt, what occurred during his sojourn here, and how he was forced to evacuate and return to France. Colonel Elgood, who has already acquired fame as a writer—his latest book on Egypt being the only real contribution to contemporary history of Egypt by any Englishman since Sir Valentine Chirol's work published in 1921—is, as the High Commissioner, who presided on Friday last, very rightly stated, fast becoming an historical authority. It is understood that he is writing a work on the subject of his lecture.

M. Venizelos intends to visit Ankara in April for the signature of the Greco-Turkish Agreement.

A report from Kabul states that 57 adherents of Bacha-i-Sakko, the usurper to the Afghan Throne, who was ousted and put to death by Nadir Shah last year, have been executed by Nadir's orders.

The King of the Belgians, who has been visiting Egypt with the Queen, left Heliopolis by an Imperial Airways aeroplane on March 15 to pay a visit to Iraq, where he will remain until March 23. He is staying at the Residency, and is making visits by air to Ur, Babylon, Mosul and Nineveh. Soon after his arrival, King Albert was visited by King Faisal.

HINDUS AND MUSLIMS IN INDIA.

(From a Correspondent.)

There is much that is of interest in the Report of the Indian Central Committee, and in the Minutes of Dissent which are attached to it. But unfortunately these documents are at the same time of a distinctly disquieting character, for they show only too clearly and conclusively how deep-seated and dangerous are the differences which separate the two great Indian communities, namely, the Hindus and the Muslims. It will be recalled that the Committee consisted of four members of the Council of State and five members of the Legislative Assembly. The members of the Council of State were nominated by the Council, and the members of the Assembly by the Viceroy as the Assembly refused to participate in the work of the Statutory Commission. The several communities—Hindus, Muslims, Europeans, Sikhs, and the so-called Depressed classes—were all adequately represented. In fact, the Committee was so constituted that, if it could have made unanimous recommendations on the main questions at issue, the cause of self-government for India would have been materially advanced. Valuable proposals have undoubtedly been made by the Committee, but it is obvious that the differences between the members on the all-important question of the representation of the Muslim community in the Legislatures are irreconcilable.

The majority recommend that the system of communal electorates, which is an outstanding feature of the existing scheme of government, should be abolished except in the case of Europeans in all provinces, Anglo-Indians and the Depressed Classes in Madras, and Karens and Indians in Burma. Under this recommendation the existing communal electorates for Muslims would disappear. The Hindu members of the Committee are most strongly opposed to the retention of these electorates. For example, one of them, Mr. Kikabhai Premchand, the well-known financier from Bombay, expresses the view that "in no circumstances whatever am I prepared to agree to the perpetuation of communal electorates, either for Muhammadans, or Europeans, or any other body, or to any extension of communal electorates at the present stage. . . . These separate electorates have become a menace to the State. They hinder national development by preventing the formation of a national consciousness. They are the negation of responsible government."

The Chairman of the Committee—Sir Sankaran Nair—in his minute of dissent (which is signed by two of his colleagues, one of whom, it is to be noted, is a Muslim) is equally strong on the subject. "Communal electorates and communalism in power have," he says, "now been tried for the last ten years, and the proof forthcoming from the provinces where these conditions have existed, i.e., Bombay, the Punjab, the United Provinces, and Bengal, is conclusive to show that communal electorates should be abolished, and communalism should be no longer installed in power." Again, in a later paragraph, the Chairman says: "This principle of communal representation is opposed to the fundamental principles of democracy. It compels a man to vote for one of his own community even though in his opinion he ought to vote for a member of a different community who might better represent his interests or national interests." And, again: "Unless separate electorates are now dispensed with we shall not be taking any steps towards our goal, but going away from it."

Another distinguished Hindu member, Sir Hari Singh Gour, says: "Since the Muslim Conference demanded the establishment of a democracy in India, we fail to understand upon what ground they are able to reconcile a demand for a separate electorate with the foundation of a democratic constitution. . . . We have failed to discover any case in which two or more large communities return their representatives to the National Parliament upon the basis of communal constituencies."

In the majority report it is stated to be "beyond question that the majority of the Muslims throughout India desire to retain separate electorates, and claim that in the provinces in which they are in a minority they should be granted representation over and above that to which the mere counting of heads might entitle them. On the other hand, we are convinced that until Muslims and Hindus are brought together in common electorates there is little prospect of the evolution of a spirit of common citizenship, without which the system of responsible government cannot satisfactorily develop. It is a matter for regret that on this important and highly controversial subject it has not been found possible to arrive at a unanimous conclusion. Some of us are strongly of the opinion that separate electorates, which now form part of the electorate system, should not be abolished except with the consent of the community concerned. The majority of us, however, have held that wider considerations should be allowed to override the wishes of particular communities."

The last sentence quoted above points clearly to coercion for the Muslims if they refuse to assent to the abolition of their separate electorates. And it would seem that the Depressed Classes would also have to be coerced, as they want separate electorates in all provinces, whereas the Committee have consented to such for Madras only. It would be, of course, as is pointed out by Sir Arthur Froom in his minute of dissent, "impracticable and a danger to progress to force upon minorities totalling together nearly half the population of British India—Muslims 70 millions, Depressed Clases 44 millions, a total of 114 millions out of 250 millions—a system which they are not prepared to adopt." Sir Arthur Froom accordingly holds that the present arrangement should be retained for Muslims and extended to the Depressed Classes.

Two of the three Muslim members of the Committee—Sir Zulfiqar Ali Khan and Dr. A. Suhrawardy—have stated the Muslim case in unmistakable terms in their minute of dissent. "The Muslims have," they say, "given proof of their unflinching loyalty to the British Government under extremely delicate and difficult conditions. They fought against their own co-religionists in spite of the proclamation of Jehad or Holy War by the Turks, and despite the injunctions of their sacred Scriptures. No sacrifice could be greater, and yet the reward they received was so meagre. It is perhaps an instance of poetical justice that they are threatened with the chances of being deprived of this special privilege. If the unexpected happens the whole of the Muslim world would ring with the stories of the Muslim cause in India being betrayed by the British people. During our tour in India not a single Muslim body or witness has asked for joint electorates, on the contrary there is a strange consensus of opinion in favour of separate electorates. This overwhelming unity of purpose and demand is irresistible. No parochial, self-interest or *arrière pensée* has been able to damage this unanimity. The 70 million of Muslims have no trust in the bona fides of the majority community. They fear that in a system of joint electorates their representatives will be merely the mandatories of the Hindus, and will not be competent enough to protect the interests of their own community. In the provinces like the Punjab and Bengal, where the Muslims are in a majority the voting strength of the Hindus is greater and therefore the men returned to the Councils will not be in proportion to their actual numbers, and they would, besides, be the nominees of the Hindus because the state of indebtedness of the rural classes is so hopeless that the creditors, who are all Hindus, will exercise a tremendous pressure on the Muslim voters, and only such men will be elected as are acceptable to Hindus. . . . The Muslims, at the dictates both of reason and necessity, oppose the idea of joint electorates. They find by bitter experience that their safety lies only in continuing to enjoy the right of separate and communal electorates." In a subsequent paragraph it is stated that "The Hindus constantly decry against the insistent demand of the Muslims for separate and communal electorates asserting that such a system

Digitized by Google

is an outrage against democratic principles. We have shown above that these pious platitudes are merely a mask to cover their deep-rooted design to destroy the Muslims in India. They use these catch phrases in order to justify their arguments to those who believe that India is immediately ready to assimilate all Western theories of democracy, and that its population is perfectly homogeneous."

It would be easily possible to give further extracts in the same strain, but enough has been said to show how lamentable the position is, as disclosed in the documents in question. To force joint electorates upon communities, numbering millions, who are unwilling to adopt them is obviously impracticable, as has been already pointed out. At the same time it may be admitted that communal electorates are more or less inconsistent with Western theories of democratic institutions. But India is not a Western nation, and it will not be possible to transform her many races into a homogeneous democracy merely by slavishly imitating Western models. The Hindu members of the Committee seem to think that everything will come out all right if they simply followed what has been done in the West. But the quotations which have been given above from their own report and its accompanying notes surely dispose effectually of any such idea. The problem of adapting democratic principles of government to Indian conditions remains unsolved unless the Statutory Commission has successfully tackled it.

INDIAN NOTES.

(Continued from page 310.)

that the demands of the departments have been pared to the bone, and all additional activities, however necessary, have been stopped. As the Governor pointed out, the Bombay Government is fatally handicapped by inherited commitments. The ill-starred Development Department has at last been terminated, but the interest on the Development Loan hangs on like a mill-stone, and can no longer be comfortably met out of borrowed funds. Meanwhile the chawls at Worli stand empty, and that extraordinary blunder, the Andheri Railway, will presumably be derelict, as the Great Indian Peninsula Railway declines any longer to work it. The goal of Prohibition, so lightly acclaimed by the preceeding Government, has caused much loss of revenue and an increasing amount of illegal distillation. More serious still is the shrinking of the resources of the Government. In three years the Famine Fund, built up by the carefulness of previous administrations, has fallen from 242 to 84 lakhs. As its statutory minimum is 75 lakhs, it can only be drawn upon in future to a very sparing extent. The equally serious failure to collect the full amount of Land Revenue is probably due to weakened executive control, and political trouble, actual or potential. The decrease in the receipts from Irrigation and from Stamps may be more largely due to depressed trade. It is undoubted that more money must, and could be, raised for educational and transport purposes by firm and bold taxation; but all the Finance Member ventures to propose is a renewal of the Stamp Duties, and an increased tax on motorists. The latter taxation is bound to be unpopular, with no guarantee that the money thus raised will be spent on roads: and the amount raised will hardly be sufficient to counterbalance the irritation. The Governor paid a well-deserved compliment to the elected members of the Legislative Council when he said that in no other Province of India had such members been more successful in working the spirit of the reformed constitution. Their virtue, however, does not go so far as to cover unpopular taxation: and, as the *Times of India* observes, it is difficult to see any sign of escape from the deadening financial stringency to which Bombay is succumbing. But at the moment the political situation is inevitably of major interest, and it is encouraging to find that the Bombay Government has responded promptly and with firmness to the challenge to its authority threatened by the march of the Gandhi volunteers.

The Indian Coastal Traffic Reservation Bill.

It would seem that at last the dangers which must attend on legislation such as the Indian Coastal Traffic Reservation Bill are beginning to be realised by thoughtful and educated Indians. It is certainly high time that Indian opinion condemned measures of this character, seeing that the ultimate effect of such must be inimical to the real interests of India. We are glad, therefore, to see that at a meeting held recently in Calcutta a resolution condemning the Bill was passed, and that speeches in support of the resolution were made by three such-well known and distinguished Indians as Mr. S. N. Mullick, C.I.E., who was until recently a member of the Secretary of State's Council, Sir Jadu Nath Sarkar, who was lately the Vice-Chancellor of Calcutta University, and the Labour leader Mr. K. C. Roy Choudhry. Mr. Mullick made it clear that in his opinion the only way by which India can become a self-respecting and consolidated nation is by her continuing to be a part of the British Empire. He said quite frankly that there are certain aspects of British rule that he does not like. But at the same time he recognises the advantages of the British connexion, and he consequently objects to a Bill which is, as he rightly said, founded exclusively on racial bitterness and antagonism. Furthermore, he pointed out that the interests of the buyers and the sellers of merchandise carried in coastal steamers are just as much entitled to consideration as are the interests of shipowners. "The fact," he went on to say, "that a few Bombay capitalists have got a few ships for coastal trade is of very little consequence. That fact may be a source of great hardship to the rest of India by allowing them to combine and create a monopoly, and thereby squeeze provinces like Bengal which has no ships of her own." Sir Jadu Nath Sarkar was equally strong in his remarks on the Bill. He said that no sane Indian patriot, and no student of experience of other countries could approve of such legislation based as it is on blind hatred of the foreigner. If injustice on a racial basis should be once pushed through the Legislature the new spirit so introduced would not stop, he added, with the coastal trade, nor would the European shipowners in India be the only people to suffer. "Underlying all the surface talk," he continued, "of one united Indian nation and the fraternisation of all Indians regardless of race or creed there is a surging tide of bitterest hatred, an alarming growth of localism of the worst type." Mr. Roy Choudhry was also emphatic in his condemnation of the Bill, regarding it from the point of view of the seamen. He believed, he said, that, if it were passed, the British Seaman's Union would demand the withdrawal of Indian lascars from British ships, which would be a most serious matter, seeing that it would mean loss of employment for about 60,000 Indians.

THE LATE MAHARAJA OF DARBHANGA.

The late Sir Rameshar Singh Bahadur, G.C.I.E., K.B.E., Maharajadhiraja of Darbhanga, one of the ablest and most influential of the great landlords of India, appreciative reference to whose outstanding services to India and Great Britain was made in the issue of The Near East and India of July 11, 1929, left personal estate in this country of the value of £167,804.

The Maharaja, who died intestate, was believed to be one of the wealthiest men in India and the separate English estate is, of course, quite apart from the value of his Indian property and effects, estimated at his death to exceed several crores of rupees.

An India Office *communiqué* states that the King has been pleased to approve the appointment of Khan Bahadur Captain Sardar Sikander Hyat Khan, M.B.E., to be a Member of the Executive Council of the Governor of the Punjab in the place of Khan Bahadur Mian Sir Fazl-i-Husain, K.C.I.E., appointed to be a Member of the Governor-General's Executive.

NEWS IN BRIEF.

Invitations have been issued to foreign Governments to send representatives to the Greek Centenary festivities which begin on March 25.

M. Saschemback, Secretary of the Second International, who is touring Greece, visited various workers' organisations at the Piræus and last week took the Chair at a meeting of the Workers' Confederation.

Mr. Burton Pearson, Traffic Manager, Egyptian State Railways, has been granted two months' leave, at the end of which he will retire from Egyptian Government service.

Military operations in Persian Baluchistan have ended with the defeat of the remaining refractory tribesmen, the capture of the town of Sarbaz, and the taking of many prisoners. The Government now controls almost the whole of the region.

An Athens message report that a Communist who on March 7 threw a bottle of black ink and three eggs at M. Albert Thomas (of the International Labour Office), when he was entering the Piræus Municipal Theatre, has been sentenced to three months' imprisonment.

M. Junian, Roumanian Minister of Justice, having tendered his resignation recently, and M. Aurel Vlad, Minister of Industry and Commerce, having also decided to retire, Dr. Voicu Nitescu, Minister without portfolio, and M. Mirto, Under-Secretary of the Interior, were, respectively, last week appointed to the vacant posts.

Mr. R. Marquand, Controller of the European Administration of the Ministry of Education in Egypt, has decided to retire from Government service. It is understood, says the *Sphinx*, that Mr. le Poer Trench, Director of the European office of the same Ministry, will be promoted to the post Mr. Marquand vacates. Mr. and Mrs. Marquand will be leaving Egypt in May.

Major C. F. Adams, who formerly belonged to the Queen's Own Royal West Kent Regiment, and was awarded the Serbian Order of the White Eagle for his work in connexion with the withdrawal of the Serbian troops from Russia, has been appointed to the General Purposes Committee of the National Executive Council of the British Legion.

The text of a convention between Great Britain, Iraq, and the United States, signed in London on January 9 last, is published as a White Paper (Cmd. 3503, price 1s. 6d.). By the terms of the convention the United States acquires in Iraq all the rights and benefits acquired in that country to members of the League of Nations.

Friends of Great Britain in Yugoslavia decided at a meeting recently of the Belgrade Anglo-Yugoslavia Club to form a new "Union of Friends of Great Britain and America," which will include all the Anglo-Yugoslav Clubs in the country. A managing committee for the new union was elected, with Bishop of Ohrid, Nikolai Velimirovitch, as President.

Major George Sinclair Stevenson, who arrived in Cairo last month with Mrs. Stevenson to spend the winter, has been appointed Secretary of the Turf Club, Cairo, on the resignation of Mr. McClure Speakman. Major and Mrs. Stevenson left for England on March 15, and the former will return about the middle of April to take up his new appointment.

It was announced from Jerusalem recently that the Supreme Court gave judgment in favour of Mrs. Ginsberg's right to become a full member of the Palestine Bar. Since 1922 objections have been raised on the ground that it was unbecoming for women to appear in the courts in Palestine. Mrs. Ginsberg is the daughter of the Hebrew writer, Moredechai Ben Hillel, and a daughter-in-law of the philosopher Achad Haam.

Sir Charles Hartopp, First Secretary to the British Legation at Teheran, died there on March 14 from blood-poisoning as the result of an operation. *The Times* states that Charles William Everard Cradock Hartopp was the only son of Mr. Alick William Cradock Hartopp, brother of the fifth baronet. He was born on September 4, 1893, and was educated at Wellington. He served throughout the War, and was mentioned in dispatches and promoted to major. Having passed an examination, he was appointed a Third Secretary in the Diplomatic Service and posted to Bucharest in July, 1919. Eighteen months later he was promoted to a Second Secretary, and in May, 1921, was transferred for service in the Foreign Office. In October, 1922, he was transferred to Athens, and in February, 1925, to Cairo. In the following June he was granted an allowance for knowledge of Arabic, and was promoted to be a First Secretary in April, 1926. Two years later he was transferred to Teheran. On the death of his uncle, the fifth baronet, on February 20, 1929, he succeeded to the title. He was unmarried, and is now succeeded by his uncle, Frederick, the third son of the fourth baronet.

The new Albanian Cabinet, under the Premiership of M. Pandeli Evangeli, was sworn in on March 11.

In a written reply to Mr. Marcus, Dr. Shiels, Under-Secretary of State for the Colonies, has stated that the Palestine police force was composed at the end of 1928 as follows:—Officers, 119; non-commissioned officers and men, 1,430; total, 1,549. By religion.—Officers—Christians, 62; Muslims, 41; Jews, 15; other religion, 1; non-commissioned officers and men—Christians, 369; Muslims, 840; Jews, 196; other religions, 5.

It was announced in the London Gazette recently that Major-General Lord Edward Gleichen, having attained the age limit of liability to recall, ceases to belong to the Reserve of Officers. Lord Edward is the only son of the late Admiral Prince Victor of Hohenlohe-Langenburg. Entering the Grenadier Guards in 1881, he attained the rank of Major-General in 1915. Early in his career he served in the Sudan War with the Guards' Camel Corps, and later with the Dongola Expedition of 1896. He was wounded in the South African War. During the Great War he commanded (1915-16) the 37th Division, having been previously in command of the 15th Infantry Brigade (1911-15). Subsequently (1917-18) he was Director of the Intelligence Bureau Department of Information.

Vice-Admiral A. P. Davidson, D.S.O., who died recently at his residence, Boat Close, Lyme Regis, at the age of 61, served with distinction in the Dardanelles campaign, and also showed great gallantry in saving life at sea on three occasions. Throughout the Dardanelles operations Captain Davidson was captain of the Cornwallis, and was landed on April 25, 1915, in charge of a party of seamen and marines to co-operate with the South Wales Borderers in seizing Tott's battery on the right flank of the 29th Division. He was in charge of the ships which covered the evacuation of Suvla Bay in December, 1915, and January, 1916, for which he was awarded the D.S.O. and mentioned in dispaches. In January, 1917, the Cornwallis was sunk by a submarine off Malta, and Captain Davidson was appointed to command the Hindustan, parent ship of the Zeebrugge expeditionary force. He married, in 1896, Ella J. Campbell, daughter of Mr. J. Andrews, and had two sons and three daughters.

The Rev. Agathangelos Moschovakis, Archimandrite of the Orthodox Greek Church, Bayswater, W., who died on December 23, aged 87, leaving £2,062, with net personalty £1,982, made the following bequests:—£50 to the Greek Church of Aghia Sofia, Moscow Road; £100 to the Greek Patriarchate of Jerusalem, that is to say, the Monastery of the Holy Sepulchre; £50 to the Church of the Resurrection of the said monastery; the income from the sum of 614 roubles deposited in 1878 with the Imperial Bank of Russia, Taranrog branch, to the Hospital of the Holy Sepulchre at Jerusalem; £50 and his religious books to the School of Theology of the Holy Cross, "as a token of gratitude for the education I received therein"; £50 each to the Green School for Girls at the village of Alatzata and the Green School for Boys, Alatzata; a silver-gilt cross mounted with diamonds and other precious stones to the Rev. G. N. Vassilakis for life, and then for the School of Theology of the Holy Cross; and a silver-gilt cross to the Convent of St. Nicholas at Alatzata.

EDUCATION IN THE SUDAN.

In the place of a few paragraphs in the General Report on the Finance, Administration and Conditions of the Sudan, the Education Department at Khartoum published last year a separate report dealing fully with education in the Sudan, which is to be followed in the future by annual reports. The subject is one that merits the attention not only of educationists, but also of a wider public that appreciates the importance that the educational system adopted must have in the development and ultimate destiny of a country such as the Sudan. A summary of the first annual report of the Education Department may, therefore, prove of considerable interest.

The educational system of the Sudan falls into two spheres—the Northern and the Southern. The former comprises the Provinces of Berber, Blue Nile, Darfur, Dongola, Fung, Halfa, Kassala, Khartoum, Kordofan, Red Sea, and White Nile. The indigenous population of this area is estimated at over three millions, all of whom are Muhammadans. The Southern sphere consists of the Provinces of the Bahr el Ghazal, Mongalla, and Upper Nile, the inhabitants of which, estimated at nearly two-and-a-half millions, are almost entirely pagans of negroid stock.

The Northern Sphere.

The educational system in the Northern sphere consists almost entirely of Government schools staffed by the Education Department. At the apex is the Gordon College, a Secondary School, the output of which has up to the present been entirely absorbed in Government service. The number of pupils in 1928 was 442. The course is four years in duration, and there are sections specialising in engineering, science, accountancy, clerical work, and the theory and practice of teaching, and a small section training Kadis for Muhammadan law courts Below the College come the Primary schools, of which there are eleven, situated in the chief towns of the Northern Sudan, with an attendance of nearly 1,300. The course is four years, and English is taught. A large proportion of the boys from the fourth year proceed to the Gordon College. The main object of the Primary schools and the Gordon College is to train boys for Government service and for certain posts chiefly commercial, in which a knowledge of English is required.

The next stage is that of Elementary Vernacular education and consists of eighty Elementary schools known as "Kuttabs," directly staffed by the Department, with an attendance of nearly 8,000, and 470 subsidised village schools, or "Khalwas," containing over 17,000 boys.

The chief object of the Kuttabs is to make the boys more useful members of the society in which they have been born, with due regard to the changed circumstances caused by the development of the country. A certain number of boys from these schools pass to the first year of the Primary schools, but the proportion is small and their real aim is as stated above. No English is taught in these schools.

The Khalwa, or Village school, is an old institution, and one or more of these schools is to be found in most large villages in charge of a Feki (religious teacher), who gives instruction in the Quran and the rudiments of reading and writing. It was decided in 1918 to improve these schools by giving a short period of training to the more suitable Fekis. A small salary is given, and the system has proved extremely popular and provides an elementary education at a minimum cost to a large number of boys.

Instructional Workshops.

There are three Instructional Workshops for boys, at which in 1928 the attendance was 368. These are the Gordon College Instructional Workshops, the Omdurman Technical School, and the Atbara Instructional Workshops. The first provide instruction in carpentry, and in addition to practical work each boy has nine hours a week in the classroom (Arithmetic, Drawing, Arabic, Religion, Technical Lecture). The Omdurman Technical School was originally started as a training centre for stonecutters and masons, but other sections have been added from time to time (bricklaying, pottery, blacksmith's work). At Atbara boys are trained as fitters and blacksmiths, and practically all are absorbed in the Railway Workshops.

Other forms of technical training in connexion with Government Departments (Public Works, Stores and Ordnance, etc.) embrace the following trades: Saddlers, Tailors, Fitters, Printers, Constructional Steelwork, Builders.

Education for girls received serious attention for the first time at the end of 1920, and there were in 1928 seventeen Girls' Elementary Vernacular schools, with an attendance of nearly 1,100.

There are a few Mission schools in the Northern Sudan, whose activities are mainly confined to the education of the children of the mixed Sudanese-Egyptian population and other nationalities. There are also some schools managed by the various European communities. The boys of school age in the Northern Sudan are estimated at about 300,000, and including all types of schools the total number of pupils just exceeds 31,000.

The Southern Sphere.

In the Southern sphere, which comprises the non-Muhammadan parts of the country, Mission stations have been in existence for many years, and schools have been attached to them since early days. Small and irregular grants-in-aid were given to these schools from time to time, but from 1926 onwards a system of regular grants was instituted, which are given subject to conditions of efficiency. Two Education Officers, resident in the Southern Sudan, are responsible for the inspection of these schools. The Missions concerned are the Church Missionary Society, Italian Catholic Mission of Verona, American Mission, and the Sudan United Mission. The system consists of three Intermediate schools and twenty-seven Elementary Vernacular schools. English is taught in the Intermediate schools. The total attendance at all the schools (Intermediate and Elementary) is at present nearly 1,600.

The object of the Intermediate schools is to train boys for Government employment as clerks and accountants and for medical and other services, and also to produce teachers for the Elementary Vernacular schools. Some boys from the Elementary Vernacular schools are required as clerks to Chiefs' Courts, dressers in hospitals, etc.; but the real aim of the schools is to produce a certain number of literate boys in areas where trade and communications are developing rapidly. In some areas there are a certain number of sub-grade, or "bush," schools in the country surrounding a Mission station.

Finally, there is the Research part of the Department, which consists of bacteriological, chemical, and entomological sections grouped under the Director of the Wellcome Tropical Research Laboratories, and carries out the medical and the greater portion of the agricultural research work required by the country.

The total expenditure on Education during 1928 may be put at a round figure of £E140,000 and Research and other Sections at about £E35,000.

Fees.

The fees charged at the Gordon College are £E25 per annum for a boarder and £E12 per annum for a day boy, with lunch provided. In 1928, 20.2 per cent. of the boys paid full fees, 33.3 per cent. paid reduced fees, and 46.5 per cent. were educated free. In the Primary schools, at which the fees are £E20 for a boarder and £E8 for a day boy, the limit of free places is 20 per cent. All Elementary Vernacular education provided by the Government for boys and girls is free. Special education rates are collected in a few towns and in the Gezira irrigation area, but apart from these the main direct taxes are held to include education rates.

THE STORY OF THE ASSASSINS.

Mr. H. C. Luke, Chief Secretary to the Government of Palestine, read a paper to the Near and Middle East Association on March 10, upon "The Story of the Assassins." The gathering, over which Sir Denison Ross presided, took place, by kind permission of the Dowager Lady Boyle, at 64, Queen's Gate, S.W.7.

Mr. Luke began his address, which was in the main historical, by referring to a visit he had made at the beginning of 1908 to a little known part of the North Syrian mountains in which were dwelling the Ismailieh, then looked upon by the Turks as heretical and traitorous vermin of the lowest sort. These Ismailieh were, in fact, the surviving remnant of the Assassins, that people "whose name struck terror into the heart of the mediæval East, Christian and Muslim alike." He then traced the story of the Assassins from their beginning, which was, in effect, a protest against the intellectual conquest of Persia by the Arabs.

Although Islam had been forcibly imposed upon the Persians, said Mr. Luke, for the first few centuries it was held by them but in a superficial form. This circumstance made easier the growth of a subtle plan to undermine the motive spring of Islam. The plan was initiated by Abdullah ibn Maimun, the descendant of a Magian family from Arabistan. He lived in the ninth century, and soon found friends to aim at the freeing of the Persian national consciousness. The secret society which Abdullah, Muhammad ibn Husain Zaidan, and others formed, based its machinery on the esoteric sect of the Ismailieh, an unorthodox division of Islam which incorporated fragments of non-Muslim beliefs and superstitions. Abdullah claimed descent from Ali, and by this and other means, gradually weaned the unsuspecting Muslim from a firm belief in his religion to a mysticism which contained practically no beliefs—in fact, "to an agnosticism, which emancipated the initiate from the trammels of doctrine and observance, enlightened him as to the superfluity of prophets and apostles, and encouraged him to believe nothing and to dare all."

After a time Abdullah ibn Maimun was forced to leave Persia. He settled in Syria, near Hama, whence he despatched his *dais*, his missionaries and emissaries, to propagate his designs throughout Islam. In time he and his descendants founded a vast association which, though nominally Ismailian and Shiah, had "no other object than to free Persia by the overthrow of the Abbasid Caliphate and the extermination of Islam." Of this association the Carmarthians, who carried off the Black Stone from Mecca, was one branch: another established in North Africa the Fatimite Caliphate.

Mr. Luke then jumped two and a half centuries, to explain the circumstances of the separation of Hasan ben Sabah from Nizam ul-Mulk and Omar Khayyam—quoting the famous words of the Vizier concerning the youthful and picturesque vow of these three men. This Hasan was by instinct a revolutionary, a destroyer, a Nihilist. He was readily embraced by the inner coterie of Ismailieh which held the secret principles of Ibn Maimun—these men now being most powerful in Egypt, where the Imam Mustansir was the reigning Fatimite Caliph—the grandson of Caliph Hakim who had founded and become the deity of the religion of the Druses. In Egypt, however, Hasan's intractable spirit made mischief. He supported the claims of Nizar, one of Mustansir's sons, to the ultimate succession in opposition to those of Mustali. He was banished from Egypt, but he took Nizar with him.

Then Hasan set about his nefarious work in earnest. First he appeared in Aleppo, then in Baghdad, finally in Persia, where he possessed himself of the stronghold of Alamut—"the Vulture's Nest"—in Gilan. Persian expeditions were sent against Alamut, but failed to take it. Malik Shah and the Vizier, Nizam ul Mulk, became genuinely alarmed—for the material resources of the strongest kingdom in Asia were being arrested by a force new in history, namely, "by the spiritual impulses of man directed scientifically and with consummate method into criminal channels." Hasan devised against the arms of the State the weapon of the dagger, of which his old school-friend, Nizam ul-Mulk, was the first victim in 1092. After this murder came a series of others, of so terrific a character as to associate murder for all time with the Order of the Assassins.

The lecturer then explained in some detail the organisation of Hasan. In addition to the *dais* (initiates) and *rafiqs* (undergoing initiation) he instituted a further class, the *fedais*, "devoted ones," who were to work with their hands, "in complete ignorance of the significance of their labours." These *fedais* were drawn from all countries: they were adventurers, in some respects like the Foreign Legion. But the *fedais* had not only physical courage, endurance, discipline, and so on, but also a blend of supreme religious exaltation with the most callous fatalism. What produced this spirit? Mr. Luke quoted Marco Polo's well-known passage on the "Opium-takers," pointing out that this opium was really a decoction of hashish, the Arabic name for Indian hemp (*Cannabis indica*), whence the *fedai* came to be known among Arabic-speaking peoples as *hashishi*, "the hemp-taker." Hence the European words "assassins." The appellation "Old Man of the Mountains" arose through the fact that Alamut and Hasan's neighbouring fortresses were in mountainous country. The Grand Master of the Assassins was, therefore, known as *Shaikh al-Jabal*, that is, "chief of the mountains." And as the primary meaning of the word *shaikh* is "old man," the inappropriate title was given, in Occidental literature, to Hasan and his successors, of "Old Man of the Mountains."

Hasan, who spent his last days in composing treatises on the domination of the human mind and the scientific corruption of consciences, died at Alamut in 1124. His successor, a *dai* of obscure origin named Kia Buzurg-Umid (Hasan had slain his own two sons) reigned for fourteen years and was succeeded by Muhammad I, during whose reign of twenty-five years many famous Princes in the East were assassinated. The Order now became an organisation of hired murderers. For instance, the Marquis of Montferrat was stabbed in 1192 by two "devoted ones"—just after he had been recognised as King of Jerusalem.

Muhammad I was succeeded by a famous Syrian, of Nusairi parentage, Rashid al-Din Sinan. This young man became a great friend of Muhammad's son, Hasan, who gave out that he was the grandson of Nizar, whom Hasan Sabah had carried away from Egypt. In time he actually claimed to be Caliph, and, by his pursuit of an anti-religious policy, gained a certain popularity. This policy was persisted in by succeeding Grand Masters, with the exception of Hasan II, who was acclaimed by his contemporaries as "the New Mussulman."

The Order in Persia was finally wiped out in 1256 by the Mongols under Hulagu, who sacked the castle of Alamut and burned the library of Hasan Sabah.

In Syria, however, where Rashid al-Din Sinan had built up a principality round the walled towns of Masyad and Qadmus, the Assassins lived on until 1270. Bibars, Mamluk Sultan of Egypt, finally finished off the Western Assassins. Ismailieh, however, were dispersed all over Western Asia, India, North and East Africa, and so on. For centuries they had no political organisation and little spiritual cohesion. In the nineteenth century, however, spiritual cohesion was restored in a remarkable way by the head of a family in Persia, descendants of the Imam Ismail, named Hasan Ali Shah, or the Aga Khan. The Aga Khan was forced in 1838 to leave Persia, and sought refuge in India. His grandson, the present Aga Khan, has done much to raise the condition of the scattered Ismailieh. The homage of his followers is extraordinary: even the poor remnant of the Assassins, living around Nasyad and Qadmus, sends one fifth of its revenues to its pontiff in Bombay.

The modern Assassins living round Masyad were on bad terms with their neighbours, the Nusairiyah, who put

Digitized by Google

about the story that the Assassins indulge in obscene rites centring around the person of a girl known as the *rodha*. It was probably true that a girl did still figure in the worship of the Assassins, but without any opprobrious interpretation.

After the lecture Sir Henry Sharpe, the author of a novel on the Assassins, spoke with enthusiasm of Mr. Luke's treatment of the subject. He drew a fascinating picture of the meeting of the three school friends, Nizam ul-Mulk, Omar Khayyam, and Hasan Sabah. He also referred to the extraordinarily close personal knowledge of his followers possessed by the Aga Khan. It was interesting to note that as early as the thirteenth century the Assassins were known by their present name, for William of Tyre speaks of *Assassinorum*.

Mr. Lockhart, who actually visited Alamut in 1928, dispelled the illusion of the famous schoolboys' meeting: the three participants, he said, lived at dates too far removed to make this possible. And he suggested that "The Eagle's Nest" might also be interpreted "The Eagle's Preaching."

Sir Denison Ross humourously pleaded that too unromantic a view of the Assassins, too scrupulous an adherence to chronology in Eastern history, was not to be encouraged! He was all for picturesque illusions. And for his part he could never understand what real connexion the followers of the Aga Khan had with the original Assassins. He also mentioned the fact that Benjamin of Tudela in the eleventh century referred to *Hashishin*.

PERSONAL AND GENERAL

TO-DAY

March 20, 1930 (New Style).
March 7, 1930 (Old Style).
Shawall 19, 1348 A.H., of the Muslim Calendar.
Adar 20, 5690, of the Jewish Calendar.
Esfand Mah 29, 1308, of the Persian Calendar.

Lord and Lady Hawke arrived at Marseilles from Bombay on March 15 in the P. and O. s.s. Maloja.

Lady Chetwode and Miss Chetwode arrived at Marseilles on March 14 on their way home from India.

Lt.-Com. C. B. Elbrow, R.N., has been appointed Assistant Port Officer, Iraq.

The Hon. Stephen Powys left Marseilles on March 14 in the Mooltan for Port Said.

Sir Graham and Lady Wood arrived at West Heath House, Hampstead, on March 16 from Egypt.

Lady Nelson arrived in England on March 14 from India.

Lord and Lady Carson returned to 5, Eaton Place from Egypt on March 14.

Sir George Clerk, British Ambassador to Turkey, arrived in Paris at the end of last week from Stamboul.

Earl Peel returned to 34, Holland Park on March 13 from India.

Lady Nuttall will return to Overdale, Sandiway, Cheshire, at the end of March from Egypt.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. L. Maxwell, Christchurch, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R. Deccan. Fees 40 guineas per term, including all necessary extras, with reductions for sons of Clergy and Officers. Supervised holidays arranged for boys from abroad, at seaside or elsewhere.

The Marchioness of Titchfield, who left for India on a visit to the Viceroy of India and Lady Irwin in January, will return to 16, Portman Square at the end of April.

The Sultan of Morocco has conferred on Gabriel Takla Bey, proprietor of the Egyptian paper *Al-Ahram*, the grade of Commander of the Order of Ouissam Alaouite.

Sir Montagu Butler was received in audience by the King at Buckingham Palace on March 5 and kissed hands upon his appointment as Governor of the Central Provinces, India.

On the occasion of the Anniversary of the Birthday of King Fuad, Dr. Hamed Mahmoud, Egyptian Chargé d'Affaires, is holding a Reception at the Legation on March 26 at 10 p.m.

Lady Maffey, wife of the Governor-General of the Sudan, embarked on the Messageries Maritimes s.s. Lotus at Alexandria on March 11 on a Mediterranean trip, and will visit Syria before proceeding to England.

Sir Frederic and Lady Gauntlett left London on March 13 to join the P. and O. s.s. Mooltan at Marseilles for Bombay. Sir Montagu and Lady Butler were among the passengers for Bombay, and Lady Blomfield for Port Said.

A dinner was held at the Forum Club on March 14 in honour of Commandant Mary Allen, of the Women's Auxiliary Service. Commandant Allen recently returned from a tour in Egypt, Greece, and Turkey to consider the question of police women in these countries.

Abdul Qadir Khan will lecture to the Central Asian Society, on March 26, at 5 p.m., upon "Central Asia under the Soviets." The lecture, which will describe a journey from the Khyber Pass to Tashkent, Samarkand, Bokhara and back to Chitral *via* the Pamirs, is to be given at Chatham House, 10, St. James's Square, S.W.1. It will be illustrated with lantern slides.

THE PERSIAN NEW YEAR.

To-morrow, March 21, the Persian Minister in London is holding a reception from 3.30 to 7 o'clock, at 11, Princes Gate, S.W.7, on the occasion of the Persian New Year. It may be noted that we take the opportunity afforded by *Now Ruz*, to insert, in our Calendar which is at the head of this "Personal and General" column, the date according to the Persian Calendar, the revision of which was sanctioned by the Majliss five years ago.

THE WEEK AT HOME

London, Tuesday Morning.

The Protectionist Debate.

Not even the defeat of the Government upon a clause of the Coal Bill made such exciting reading as did the debate last week upon Safeguarding generally. Mr. Baldwin led off with a very moderate statement of the Protectionist case, and he was supported by such exploding meteors as Mr. Churchill and such rising stars as Mr. Oliver Stanley; but the honours of the debate undoubtedly went to Mr. Philip Snowden, whose defence of Free Trade doctrines reached an almost religious height. Of course, the Chancellor of the Exchequer overstated his case—all fanatics, of whatever school, do that—but he scored debating point after debating point. He did not crush his opponent's case, it is true; all his runs were singles—but did not his compatriots, Rhodes and Hirst, once win a Test Match by singles?

For the man in the street the truth behind this Free Trade-Protectionist issue is as difficult as is the truth about religious persecutions in Russia to discover. For instance, great play is being made over the Chancellor's reticence over the question of the retention of the Safeguarding duties, so that one gets the impression that all industry is suffering from the uncertainty in this respect. Yet the total number of men engaged in the safeguarded industries is said to be only three per cent., and of those industries the two most important, silk and motors, prospered considerably when the duties were off. (But this, of course, may be very misleading). As for the rest of the safeguarded things, one has only to mention them to see that the Protectionists are making bread out of straw, for they include jews' harp, popguns, and mechanical donkeys.

It is supremely unfortunate that the ordinary man, who has no time to study this fiscal problem at all deeply, has so often to choose between the doctrinaire attitude of many Free Traders, who seldom have an intimate knowledge of the actual working of industry, and the selfish Protectionist, who sees clearly that Safeguarding would benefit his particular business, without worrying about the general effects of such safeguarding upon the public. As an example of how differently the thing appears to work in practice from what our theorists predict—it is, I believe, an axiom among Free Traders that a protected article must cost more, and it is an axiom among Protectionists that wages must go up under Protection. In the industries safeguarded in England neither prices nor wages have risen!

Distribution of National Wealth.

It is a complaint among many people other than Socialists that the distribution of wealth in this country is extremely inequitable. Much hot air, of course, is talked upon this subject, but the figures that have just been issued by the Inland Revenue Department are really remarkable.

For example, only 2,200,000 persons are chargeable, or, rather, were chargeable in the financial year 1927-28, with income tax. Possibly the number is even smaller now. This study of comparative wealth, together with that of comparative taxation, is one that fascinates many minds.

Statistics can be made to prove anything, and I must leave to the statisticians to prove what they like from the fact that the number of millionaires in Great Britain declined from 549 in 1923-24 to 497 in 1927-28; and that this 1927-28 year had 1,656 fewer people paying super-tax than had paid in the previous year. Whatever the real significance of these figures, one thing is certain: that the Socialist contention that the wealth of the country is still in the hands of the few is true.

The Referendum.

The referendum, having served its temporary purpose of joining Lord Beaverbrook once more to the Conservative Party, is rather falling out of popular political discussion. In the columns of the more serious papers, however, it is still being discussed. There are those who argue that it ought to be possible to separate this particular issue of food taxes from the general policy of the Conservative Party; but no one with any practical experience of elections or of political machinery seems to believe that such a separation is really practicable.

It is, I think, fairly generally recognised that the Conservative Party at the next election will have to go before the electors as a "Food Tax" Party. That is, of course, by no means the same thing as saying that the Conservatives will necessarily be defeated. Everything is now in a state of flux; temporary conditions are shaking life-long held convictions; and there is no more prejudice against the idea of Protection than, *pace* Mr. Snowden, there is a prejudice against the Socialist Party in office. But the English like to associate men with measures, and it is perfectly certain that food taxes are now irrevocably connected with the Conservative Party. They have made their bed, and they cannot get out of it by saying that they will not lie there, unless the great British public tucks them in like so many good little boys.

New Papers.

It is an excellent thing in these Trust-ridden days that new papers can be started. Last week began the *Week-end Review*, which is a magnificent answer by Mr. Gerald Barry to those who fain would treat an Editor as so much office furniture. The circumstances of Mr. Barry's leaving the *Saturday Review* are well known, but that they are not wholly to be lamented is evident from this first number of his new weekly. He has around him a body of really independent men, whose pens bite and smile and run in a way which is impossible with the "controlled" Press. One finds even the shrewdest judges predicting success to Mr. Barry.

Another paper, the *Daily Herald*, appeared in new guise yesterday. It is henceforth to be a full blown competitor to the "great" London morning papers. For good or ill, it is the more "popular" London paper which, in the technical sense, has been taken as model by this organ of the Labour movement. Thus we have the insurance schemes, the racing tips, the competitions, and the rest of it which are supposed to be essential to the life of a newspaper. To judge by the first number of this enlarged *Herald*, however (it is twenty pages), the transformation should be successful. An adequate circulation should be merely a matter of time, and, that being so, presumably the all-important advertisements will follow. There will be many anxious eyes to see how impartially its news will be presented.

The Long and the Short of it.

Women's fashions are always looked upon as interesting things, if only for the time-honoured jibe about their ceaseless change. In two things, however, the post-War women deserve (and will doubtless receive) commendation for unparallelled constancy, a virtue that in so many respects is unfashionable. One refers to the length of hair and skirts.

We are told, a year or two ago, that the return of long hair was certain, but outside the leisured classes those women who had their locks shorn have kept them so. We were similarly told, a few months ago, that the short skirt was no longer tolerable, but to this threatening prophecy only the slightest concession has been made in the matter of evening frocks. What, then, is impossible, if women can be persuaded to keep of one mind for years on end? Your Beaverbrooks and Rothermeres may well ask! What a phenomenon, by the way, if the United Empire Party, which has made a direct appeal to women, were to become powerful through the influence of those "flappers" whose enfranchisement the *Daily Mail* once thought the extreme of folly!

Book Review

A BALKAN FEDERATION.

"LES ETATS BALKANIQUES." By C. Evelpidi. (Paris: Rousseau and Cie. 40 fr.)

The idea of a Balkan Federation—or whatever name may be applied to a political and economic working agreement of the States of South-Eastern Europe—for which this Paper has written and striven with single-minded purpose for some eighteen years, has of late been recognized in many quarters to be approaching the domain of practical politics far more rapidly than seemed probable a few years ago. Its consummation will not be helped by any attempt to force the pace, for it is obvious that the only possible basis for a successful federation must rest on the endorsement of an overwhelming majority in each country. At present the suggestion meets with no response from official Roumania, which is inclined to resent identification with the Balkan Peninsula and to pin its hopes for the future of the country on co-operation with Central, rather than South-Eastern, Europe. The significance of M. Evelpidi's book lies in the fact that a Greek author has undertaken a comparative study of the political social, economic and financial conditions of the five countries with a view to showing how much they have in common instead of emphasising, as the majority of writers on Balkan affairs do, the points of difference and their antagonisms. He realizes that some of the new provinces both of Roumania and of Yugoslavia give these States a certain Central European orientation, but he finds a preponderating number of factors which link the two countries inseparably with the Balkan Peninsula. There has been no very great difference, he points out, in the development, whether political, social or economic, of the different States, and it is the economic development of nationalism that has been the common misfortune of the Balkan peoples. Foreign policy, or the realization of their national aspirations, has engrossed all their attention and occupied all their energy. Thus they have produced remarkable politicians, but can point to few administrators. Administrative incapacity in all the States has been aggravated by excessive centralisation. Another feature common to all the countries is the interference of the military in political affairs.

This "fourth power," secret and irresponsible, whose influence is enormous in all the Balkan States, drives the Governments into chauvinism. Soldiers, intellectuals, diplomatists and politicians, of course with a few exceptions, are the promoters of Balkan discord. On the other hand, the peasant masses, constituting the vast majority of the people, ask for nothing but to be allowed to work and to progress in peace.

The Balkan Peninsula, M. Evelpidi writes, has been endowed with the most beautiful gifts—an admirable geographical position, a varied climate, a surface rich in its undulations, a fertile soil, superb forests and pasture-lands, riches of sub-soil and its waters, natural facilities of communication by sea and river. It offers to its inhabitants all the possibilities of an easy life, of peaceful development. But it lacks one quality, without which all the others are sterile—geographical, national and political equilibrium—and to obviate this instability there is only one radical remedy, the establishment of a Balkan federation. Such a confederation, the author continues (using an argument that has often appeared in THE NEAR EAST AND INDIA), would have an area more than one and a half times as great as that of France, two and a half times that of Italy and three times that of Great Britain. The number of the population would be greater than that of France or Italy or England. A Balkan federation, therefore, he concludes, is not a Utopia, but an ideal easily enough attainable.

In support of this thesis, M. Evelpidi has compiled a synoptic treatise of the Balkan States, in which various aspects of their political, social, economic and financial life are dealt with. After tracing the origin of the different peoples who now inhabit the Peninsula, he points out that to-day they do not form races in the scientific sense of the word, but a mixture of races in which one has predominated without always impressing its anthropological character. Sometimes even the influence of the "predominant" race is entirely external, restricting itself to the introduction of its language, without modifying the morphological or psychological constitution of the race on which it has imprinted its name, as in the case of the Roumanians. The Turkish occupation, the author considers, had the effect of delivering the peoples of that time from the anarchy which was weakening them. It was the least barbarous of all the occupations that preceded it during the Middle Ages; "it introduced order, a rudimentary justice, a religious tolerance, exceptional for that time, and a certain spirit of social democracy. For social organization, and above all State organization, was then more advanced among the Turks than in Western countries which were still struggling in barbarism." As stepping-stones to a federation, M. Evelpidi recommends, in addition to the settlement of outstanding political questions, an economic and technical *rapprochement* by the creation of normal relations and regular intercourse, the conclusion of conventions on postal matters, railways and commerce, as well as the overhauling of the versions of Balkan history taught in the schools. The Church, too, he points out, might play its part in bringing the peoples together.

The greater part of the book is devoted to economic matter, and here the author provides a compromise between descriptive narrative and a statistical compendium. Tabular information is relegated to footnotes, but it is not always stated to what year the statistics refer. A few mistakes occur, which should be corrected in subsequent editions. Thus on page 7 the Struma River is in Greek Strymon, not Nestos, which is the present-day alternative name for the River Mesta; on page 43 the population of Roumania is given as thirteen millions instead of seventeen, unless the intention is to attempt to distinguish between Roumanians and minorities. The usefulness of the book would be greatly enhanced by an index, but M. Evelpidi has compiled a valuable and interesting work, which it is to be hoped will contribute to a better understanding by the peoples of South-Eastern Europe of their common interests.

MACEDONIAN OUTRAGES: A THREAT TO PEACE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Following close upon the bomb outrage at Pirot there has now taken place another such outrage at Strumitza, in both cases the work of Macedo-Bulgarian *komitajis* (members of the I.M.R.O.).

The obvious aim of these outrages is to undo the good work achieved by the recent Yugoslav-Bulgarian Conference at Sofia. At that Conference both the Yugoslav and Bulgarian Governments displayed a spirit of reasonableness and good will; and the Yugoslav Government went some way to meet the Bulgarian point of view. The result was a distinct improvement in the atmosphere of Yugoslav-Bulgarian relations.

Such an improvement is, of course, contrary to the interests of the I.M.R.O.—that *mauvais sujet* of the Balkans—and this organisation is now trying by terrorist methods to inflame passions anew and thus sabotage the new and welcome spirit of friendliness and accommodation between Belgrade and Sofia. For the Strumitza affair is the fourth of its kind since the signature of the Yugoslav-Bulgarian frontier agreement. The inference is therefore only too obvious.

The Yugoslav Government, it seems, has requested the intervention of Britain and France for the prevention of further outrages of this kind. Surely the time has arrived when something should be done to get under control these political brigands of the I.M.R.O., who time and time again seek to wreck the good-intentioned efforts of official Belgrade and official Sofia to arrive at a better understanding. Otherwise it is to be feared that Yugoslav-Bulgarian relations may again become as bitter as they were before the Sofia agreement, in which case a most lamentable step backwards will have been taken.

I therefore make this appeal, through your columns, on behalf of the interests of peace and amity in the Balkans.—I am, etc.,

J. MAHONEY-SHEA LAWLER.

7, Stanhope Terrace, Regent's Park,
London, N.W.1. March 11.

NEW SYRIAN STAMPS.

The Silk Congress, held at Beyrout in February, was the occasion for the issue of six Great Lebanon stamps, in a large horizontal form, according to the *Daily Telegraph*. They depict the career of the silk-worm in diagram, representing the worm feeding on the mulberry tree, the cocoon, and the moth. The French High Commissioner only acceded to the request of the Government of Great Lebanon for such stamps on February 8, and as the Congress opened on February 11 there was no opportunity to prepare stamps in the heliogravure process as hitherto used for Lebanon. So the design was prepared locally and printed by lithography in small sheets of 25 at Beyrout by the firm of Gédéon. The perforation is rather roughly done by a single-line cutter. There are six values, and 40,000 full sets were printed. The denominations are 4 piastres brown, 4½ p. red, 7½ p. blue, 10 p. violet, 15 p. green, and 25 p. claret. A 2 piastres on 1.25 piastre green stamp has been overprinted for provisional use as an air mail stamp for Syria, and a similar one has been provided for the State of the Alaouites.

At a Greek by-election at Itylo the Government candidate, M. Couloumvaki, was elected.

Miss A. Susan Lawrence, M. P. (Parliamentary Secretary to the Ministry of Health), was the guest of honour at a Supper given at the First Avenue Hotel on March 9 by the Central Committee of the Poale-Zion of Great Britain.

A Dinner in honour of Mr. M. M. Ussishkin, Chairman of the Board of Directors of the *Keren Kayemeth L'Israel*, Jerusalem, who arrived in London from Palestine on March 14, is being held this evening (Thursday) at the Savoy Hotel, when Dr. Chaim Weizmann will be in the chair.

"REPARATIONS" IN TURKEY.

The International Commission for the Assessment of Damage Suffered in Turkey, which was formed under the Convention signed in Paris on November 23, 1923, between Great Britain, France, Italy, and Japan to assess damage sustained in Turkey by nationals of the four signatories between August 1, 1914, and August 6, 1924, and to distribute as compensation certain moneys placed at the Commission's disposal for the purpose, came to the end of its official labours on March 15. The higher officials remain, after the departure of the Delegates, at the headquarters in Paris until the end of the month, in order to complete the few payments that have yet to be made.

By Article 58 of the Treaty of Lausanne Turkey and the other Contracting Powers reciprocally renounced all pecuniary claims for the loss and damage suffered respectively by Turkey and the said Powers and by their nationals between August 1, 1914, and the coming into force of the Treaty of Lausanne (August 6, 1924) as the result of acts of war, or measures of requisition, sequestration, disposal or confiscation. At the same time Turkey renounced in favour of the other Contracting Parties any right in the sums in gold transferred by Germany and Austria under Article 259 of the Treaty of Peace with Germany and Article 210 of the Treaty of Peace with Austria. Turkey also agreed not to claim from the British Government or its nationals the repayment of the sums paid for the warships ordered in England by the Ottoman Government which were requisitioned by the British Government in 1914, and renounced all claims in the matter. The Commission formed under the convention of November, 1923, comprised a British, a French, and an Italian Delegate. Roumania had been invited to sign the Convention provided that she did so before the Lausanne Treaty came into force, but did not accept the offer. At a later date she urged the claims of her nationals for compensation, and a sum of money was set aside by the Commission for the purpose—a development which inevitably prolonged the existence of the Commission and delayed the payment of compensation.

The actual sums placed at the disposal of the Commission were the amount in gold referred to in Article 58 of the Treaty of Lausanne—less than £5,000,000—and £846,100 Turkish Treasury Bonds 5 per cent. (1911), being the balance of unredeemed Turkish Treasury Bills (issued in connexion with the construction of the two Turkish battleships) which the British Government purchased from the holders in 1914. The value of the latter, it need hardly be said, could only be at any time nominal. In the end by judicious investment the amount actually exceeded £5,000,000 after the costs of the Commission had been defrayed.

More than 16,600 claims presented through the British, French, Italian and Japanese Delegations were examined, and over 8,800 were accepted. The awards actually made amounted in all to more than ten million Turkish gold pounds, and only 52½ per cent. of the amount allotted could be paid. A preliminary payment of 40 per cent. was begun in January, 1927, and the final payment of 12½ per cent. has now been completed.

The three Delegates were M. Gaston J. Curély (French), Sir Elliot Colvin, K.C.S.I. (British), and Commendatore Drego Tripepi (Italian). The General Secretary was M. Jean Giraudoux (French), and the Finance Officer Mr. Cyril M. Bell (British). There were also three Chief Assessors—Colonel C. B. Stokes, M. A. de Lens, and Commendatore Attilio Brizi.

Mr. A. Wright, the newly appointed American judge to Egypt, had the honour of being received by King Fuad on March 5 on his assumption of judicial functions at the Mixed Tribunals.

Mr. Hunkin, deputy general manager of the Sudan Government Railways and steamers, has retired from the Sudan service after twenty-three years. He embarked at Port Said for England on the s.s. Chitral.

NOTES AND NEWS

170, *Strand, London, W.C.2,*
Tuesday Morning.

The Ottoman Debt.

It would be idle to ignore the fact that the developments of Turkey's financial policy are such as justifiably occasion disquiet. With the ratification of the Ottoman Debt settlement at the end of 1928, it was naturally assumed that this question was settled once and for all, but it is now by no means certain that the settlement is so final as it appeared to be. As has been pointed out in these columns the general economic situation of Turkey has grown more serious in recent months, one contributory factor being the bad harvests, and faced with a financial stringency and adverse exchange movements the Ankara authorities have been exploring ways and means for meeting the position. Thus two months ago it was reported that the Government desired a five years' moratorium in respect of the Ottoman Debt payments, and as the Debt Council in Paris failed to obtain the desired reassuring statement it is reasonable to assume that the report was not very wide of the mark, and it was presumably allowed to gain currency with a view to seeing the nature of the reception it would receive. The reply the Debt Council did receive also contained an invitation to the Chairman of the Council to visit Ankara to discuss the situation, as a result of which Mr. S. C. Wyatt went to Ankara this month and last week entered into discussions with the Turkish Finance Minister. I do not in any way underestimate the financial difficulties with which Turkey is confronted, but postponement of the Debt payments so far from affording any permanent improvement can only intensify Turkey's problems by making it impossible for her to obtain assistance from foreign countries. And there is the very well grounded suspicion that in selecting the Debt payments as a medium for temporary economy Angora has received inspiration from a quarter which aims at estranging Turkey completely from Western Europe.

Turkey's Position.

There is, however, no getting away from Turkey's financial difficulties, and it is quite obvious that, failing an improvement in the situation which could only result from the adoption of a different policy by the Ankara authorities, Turkey might well find herself unable to meet her engagements. Unofficial reports from Ankara suggest that the Corporation of Foreign Bondholders will recommend the appointment of a foreign financial adviser, and it is hinted that Turkey will be willing to follow this course. But this expedient has been urged on Ankara possibly half-a-dozen times in the course of the past few years. With conditions changing for the worse, views in Turkey may be changing also, and if it should at last prove to be the case that Turkey is willing to accept an adviser it would be possible to anticipate with some confidence the solution of Turkey's financial and economic problems, but in view of the sweeping economies that an adviser would no doubt recommend, notably in respect of the large expenditure on war services, it is not to be anticipated that the Ankara authorities will show any great eagerness to accept this expedient. But in view of the situation they clearly cannot present a merely negative attitude to any reasonable proposals that may be advanced. It is to be hoped that the Ankara authorities will realise that the only desire of other countries is that once again Turkey should be prosperous and should be able to play her normal part in world affairs. It has clearly been shown that the policy pursued by Turkey in recent years, however admirably inspired, is insufficient to raise the country out of the depression into which it has sunk. Will Ankara consider a new line before it is too late?

Indian Banking Results.

While trade conditions during a large part of last year were unfavourable, the reports of the Eastern banks which have so far appeared all show improved results. Thus the Chartered Bank of India, Australia and China returns net profits of £661,598 as against £627,263 for the previous year. The operations of this bank cover a wide area, and no doubt compensation was found in other directions for the adverse position in India. Powers are now being sought by the Directors to obtain a supplemental and consolidating charter which will remove the existing restrictions on the conduct of banking business in the United Kingdom. The report of the Mercantile Bank of India also makes a satisfactory showing, the net profit being £257,459 as compared with £250,201 for the previous year. Both these banks are making the same distribution as in recent years.

The Syrmna-Aidin Railway.

The details given in the report of the Ottoman Railway, which runs from Smyrna to Aidin (not Aden, as an evening newspaper seems to think), show that the results obtained in the past half year represented a considerable

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roser is made under the control of the Bank in all rose-growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

Digitized by Google

improvement on those of the corresponding period of 1928, owing principally to the reduction in expenditure. The receipts amounted to £257,365 as against £254,486, while the expenditure was £115,272 as against £123,990, the balance being £142,093 as against £130,496. For the whole year the receipts amounted to £430,699 as against £423,152, while the expenditure was £230,930 as against £246,770, the balance being thus £199,769 as against £176,382. The increase in the receipts in the second half of last year is a hopeful indication for the future of the line. A point in the report of special interest is the reference to motor competition which has been affecting the coaching receipts. This factor is affecting most railways to-day to a greater or lesser degree, and it is significant of the progress that has been made in the modernisation of Turkey that the cult of the motor there has advanced sufficiently to make it a serious competitor with a railway.

The Tariff Truce.

The Tariff Truce Conference has continued to pursue its weary course although it has long been evident that it is impossible to expect any useful result from it. The chief event of the past week has been the declaration of Austria that she will not be able to contiue her existing commercial treaties. The new French Minister of Commerce, M. Flandin, brought a refreshing sense of reality to the proceedings by his suggestion that the idea of general freedom of trade is not realizable in practice. He also made the point that a European preferential system would lead to economic opposition between the old world and the new. Despite its futility the Conference will not have been a complete failure, for it will, at any rate, have served to show that in present conditions any idea of a tariff truce is impracticable.

COMMENTATOR.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 18.

Although the volume of business has not expanded to any appreciable extent during the past week, the tone of the Stock Markets has been distinctly better. Gilt-edged stocks have been consistently firm, an additional fillip being given by the announcement of the result of the recent issue of 4½ per cent. Conversion Loan, which was better than had been anticipated. The scrip opened at a premium and 3½ per cent. Conversion Loan and Funding Loan were particularly strong, the favourable money position being improved by the lowering of the New York Federal Reserve Bank's rate to 3½ per cent. on Thursday. International stocks displayed a moderate amount of activity, and there was a slight upward trend in home industrial shares. A sharp recovery in the price of tin stimulated prices, but there was some reaction towards the end of the week.

Argentine Bonds.

The financial and commercial relations between Great Britain and Argentina are of considerable importance to the two countries. An important form of British exports to Argentina has been that of capital, and the largest British investments in Argentina have been by way of loans and capital to both the Government and the great railways of that South American Republic. The outstanding factor of Argentina's economic system is her great dependence on sales of cereals abroad, which make up about 65 per cent. of her exports. Any fall in the general level of world prices, such as is happening now, and any prolonged adverse climatic conditions, hit the whole nation severely. Such vicissitudes are reflected in the value of Argentine stocks, and investors should always be prepared for these fluctuations from one year to another. Last December the decision of the Government to stop payment in gold on presentation of paper money at the Conversion Office also reacted adversely on the value of Argentine securities. The finances of the country are, however, on a sound basis, although relying rather heavily on indirect taxation, only 10 per cent. being raised by direct taxes. The external debt has advanced considerably, and has, in fact, doubled in six years. However, both the high taxation and the heavy debt are only significant in relation to the productive purposes to which they have been used. In this respect investors have no serious cause for complaint, although the near future has yet to show how fully the Government is using the money at its disposal to develop the national wealth of the country. Given the present depression, investors should view Argentine stocks with caution; but, taking the long view, such stocks as yield more than £5 10s. per cent. may now be well worth buying. In this class are the 5 per cent. Internal Gold Loan 1946, and the 4 per cent. Bonds 1954, among others.

Paint Profits.

In comparison with the general depressed condition of British trade it is extremely gratifying to note the steady progress made by the leading paint and varnish manufacturers. Pinchin, Johnson and Co. recently announced profits for 1929 at £462,349, an advance on 1928 of £40,000. Part of this business can be ascribed to income from Australian and Indian subsidiaries acquired in the previous year, but it should also be borne in mind that earnings from two other companies in which the main firm became interested in 1929 are not included. In spite of the increase of capital by a bonus issue last year, as for many years previously a full dividend of 30 per cent. was again paid, together with a bonus issue, out of reserves, of one for every ten ordinary shares held. A further £20,000 was placed to reserves, which now total £898,413, while the carry forward amounts to a further £84,446. The liquid resources of the company are also considerable, cash and Government securities being shown at £816,300 in the last balance-sheet. Another concern in the same industry, which announced last Friday a considerable advance during the past year, is the International Paint and Compositions Company. Net profits for 1929 amounted to £104,813, an increase of £28,234 on the 1928 figure. A full dividend of 10 per cent. has been paid on the increased capital, against 9 per

cent. last year, while £30,000, £10,000 more than a year ago, has been placed to reserves. The shares of such sound and prosperous and progressive firms as these have considerable attractions for the investor. Making due allowance for the bonus issue, Pinchin, Johnson and Co. 10s. ordinary shares yield about £6 17s. per cent.

The Fall in Metals.

Just recently the prices of several of the most important non-ferrous metals fell to low levels. Tin went well under £160 per ton—the lowest for nearly eight years; lead fell to £18 10s., the worst since 1921; and zinc to under £10, a level not touched for about a quarter of a century. Silver, also, has been as weak as 18⅜d. per oz., a record for all time. From these some recovery has occurred, but it is partial and not fully maintained. In connexion with the publication by the Tin Producers' Association of impressive figures relative to restriction of output, tin bounded up to nearly £167, but quickly lost the bulk of the improvement. Trade statistics from America show a marked falling off in industrial activity, particularly as regards manufacturers of motor cars; and it is a question whether the curtailment of tin production will do more than counterbalance the decline in consumption. Organised attempts to support lead and zinc have proved unsuccessful. Silver, which is in many cases more or less a by-product, has now almost lost the status of a precious metal. Obviously holders of shares in companies whose revenue is derived from these commodities must prepare themselves for a lean period. As regards the most important of these metals to the general investor—tin—there is no reason to take a very pessimistic view of the more distant future. Tin-consuming industries are amongst the most progressive, and when the recession in America is passed, consumption should again take an upward turn. It may be pointed out that in 1929 consumption rose by 10.3 per cent., while the advance in production was only 6.7 per cent. European consumption was 8 per cent. higher than in 1928. Nevertheless, the immediate future is clouded by the large accumulated stocks.

Messrs. Ransomes and Rapier, Ipswich, have secured the contract for the supply of sluice gates for the heightened Assuan dam.

The Yugoslavian Union Bank made net profits of 23,600,000 dinars in 1929, as against 22,600,000 dinare in the previous year.

Vickers-Armstrongs have received an order for a first-class passenger liner for Furness Withy and Co., London.

The proposed Greek Medical Association Exhibition in Athens has been postponed indefinitely owing to the impossibility of finding proper accommodation.

The production of crude oil in Roumania in January amounted to 448,238 metric tons, as compared with 438,202 metric tons in the previous month, and 305,285 metric tons in January, 1929. The output of the principal producing districts in January was as follows (in tons):—Prahova, 328,170; Dambovitza, 105,808; Buzau, 7,265; Bacau, 6,995.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Rails, etc.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of rails and angle irons for 1930-1931. June 28.

Calico and Shash.—The Survey of Egypt invites tenders for the supply of calico and shash for map mounting. April 23. (D.O.T.)

Iron and Steel, Metals, etc.—The Ports and Lighthouses Administration invites tenders for the supply of iron and steel, metals, etc., required during 1930-31. April 15. (D.O.T.)

Requirements of Frontiers Administration.—The Director of Stores, Frontiers Administration, Alexandria, invites tenders for the supply within a period of twelve months commencing on May 1, 1930, of paints, varnishes, and other consumable stores. April 12. (D.O.T.)

Pumping Engine, etc.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for the supply and erection of a steam pumping engine for Kafr el Gamous Pumping Station, May 10; and for the supply, construction, and delivery of cast-iron sealed sewage and air mains in Zagazig. May 27.

INDIA.

Cab Tyre Sheathed Cables.—The Indian Stores Department, New Delhi, invites tenders for the supply and delivery of cab tyre sheathed cables required during the year from June 1, 1930, to May 31, 1931. March 24. (D.O.T.)

ROUMANIA.

Refrigerating Plant.—H.M. Consul at Cluj reports that a local Municipality is calling for tenders for the supply and installation of refrigerating machinery at the town's municipal slaughter-house. March 26. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Britannia for Bombay (Birkenhead, March 27); s.s. Tarantia for Bombay (Birkenhead, April 18). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malancha for Calcutta (Birkenhead, March 27); s.s. Mathura for Calcutta (Glasgow, April 3; Birkenhead, April 10).

Bibby Line.—S.s. Oxfordshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, April 2).

British India Line.—S.s. Manela for Colombo, Madras, and Calcutta (London, March 22); s.s. Masula for Bombay (London, March 29); s.s. Merkara for Colombo, Madras, and Calcutta (London, April 5).

Cunard Line.—S.s. Bosnia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement Glasgow, March 27; Liverpool and Swansea, March 29); s.s. Bantria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, April 12; Swansea, April 15).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 29); s.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 10).

P. and O. Line.—S.s. Bangalore for Bombay and Calcutta (London, March 28); s.s. Viceroy of India for Bombay (London, March 28); s.s. Behar for Calcutta (London, April 11); s.s. Kaisar-i-Hind for Bombay, London, April 11).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, April 2); s.s. Sailor Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus ports (London, April 9); s.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, April 15).

Ellerman and Papayanni Lines.—S.s. City of Lancaster for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 22); Glasgow, March 21, per coaster from Glasgow to connect at Liverpool); s.s. Roumelian for Gibraltar*, Algiers, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, March 22; Swansea, March 12); s.s. Volturno for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 29); s.s. Manchurian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, March 29; Swansea, April 3); s.s. Mardinian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 12; Swansea*, April 12). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to :—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Power Gas from Sewage.

A few days ago, in an address before the members of an engineering institution, Mr. Francis, the engineer and surveyor of the Dagenham Council, made it clear that efforts were about to be made to produce power gas commercially from the sewage of the district. He recounted many experiences he had had whilst in Germany, examining various methods of obtaining this gas and of making due and profitable use of it, and showed that so far from this being a faddist scheme, it was really one which offered a prospect of appreciable profit. The gas can be used for many purposes; it can be used in gas engines to supply power to the sewage disposal works, or it can be used for heating purposes, or it can be sold in bulk to the local gas undertaking for mixing with town gas, or it can be compressed into containers and sold as pure methane to various manufacturers who use that gas.

The methods described bring to mind those proposed about twenty years ago for using garbage, street sweepings, sawdust, dried sewage sludge, peat, house refuse, and other waste material containing an appreciable amount of carbon. Even agricultural waste, it was claimed, could be treated with this plant. The refuse matter was spread out on shallow troughs and sprinkled with a solution of soda, and there were many pointed but unanswered questions asked at the time as to the part these alkaline solutions played. The garbage, sprinkled, was then placed in a retort and brought to a temperature of about 1,200 deg. Fahr. The gases given off during the decomposition of the waste material were passed through superheated chambers and then through condensers, scrubbers, and purifiers into a gasometer. The gas was said to have a high illuminating power, estimated at about twice that of ordinary coal or water gas, and contained all the requisites of a high-grade power gas. It was stated by those who tried the process that about 15,000 cubic feet of gas per ton of refuse could be obtained on an average, and that the manufacture of the gas could be carried out far more quickly than when coal was used. Ten gallons of the alkaline chemical mixture had to be added to each ton of refuse, and the cost of this somewhat mysterious compound was stated to be about 2s. per gallon, from which one might gather that it was in a fairly concentrated condition. The time required to produce a given volume of gas was said, as a matter of fact, to be about half the time it would take to produce an equal quantity from coal or coal refuse, and by means of the chemicals, and through the agency of the process employed, the final distillation is held back so that, contrary to the usual experience, the final run produced a better gas than was produced at the first stages of the treatment.

After the gas had been extracted, the residue, much of which would be in the form of clinker, and which amounted to about 10 per cent. of the original charge, this percentage varying, of course, with the character of the charge, was ground up for fertiliser, and an analysis conducted over dozens of samples showed that it contained adequate quantities of potash and other constituents of first-class fertilising value. During the distillation, a large amount of tar oils and ammonia were also obtained, both of which had good commercial value. So far as the fuel cost is concerned, it was shown that the plant would use, in twenty-four hours, 1,500 lb. of coke for fuel and would deal with 10,800 lb. of refuse, producing gas at the rate of 15,000 c.f. per ton of 2,000 lb. Roughly, the yield would be about 48,000 cu. ft. from one retort per twenty-four hours, and an actual plant in operation gave the following results, from 24 hours' working: Coke used, 1,500 lb.; refuse dealt with, 31,200 lb.; gas produced, 252,000 cubic feet. With six or eight retorts at work, the cost of fuel would be reduced appreciably, as sufficient heat could be obtained from a consumption of about one-quarter of the gas produced to heat up all the retorts to the required figure. It is possibly this process or some modification of it which will be used at the Ford works at Dagenham for dealing with the refuse in the dumps in the vicinity.

Servicing of Private Cars.

To be handled adequately, experience indicates that the servicing of private cars must be isolated from servicing industrial vehicles, says a writer in the *Accessory*, and most private car owners will be disposed to agree with him. To provide this isolation, however, does not mean independent premises and staffs; it rather implies, especially when most of the vehicles dealt with are of popular makes, with chassis mainly identical for lay-out and type, a better continuity of work and all-round cheaper handling of the business. The makers of the popular ranges of car and light van chassis have special service tools and rigs which are suitable for both types of chassis. This is obviously an advantage and enables flat rates and scheduled prices and time costs to be worked to without trouble and with profit at what at first glance look like very low rates. The servicing of private cars is now well featured, and its limits and remunerative possibilities fairly well indicated. Hence the path of the caterers after servicing similar types of light industrial vehicles is much easier and safer than it was. At the same time, a good deal of the plant and rigs which have been devised and improved upon during recent years can be used for other types of vehicle. It is only in regard to such factors as difference of weight and tare and height and girth of the car versus the van, that special plant may be necessary for industrial servicing.

The Standard "Moth" Engine.

With reference to some recent notes concerning light aeroplanes, it may be mentioned that the standard "Moth" is now fitted with a D.H. "Gipsy" engine, developing 90 h.p. at 1,900 revs. per minute, and a maximum

of 100 h.p. at 2,100 r.p.m. This engine is attached direct to the fuselage side frames, but in the case of the metal fuselage, special rubber shock-absorbing mountings are employed to damp out vibration. The engine cowling has been designed with a view to providing an air flow velocity past the cylinders and cylinder-heads to such an extent that the temperature of these units is as uniform as possible. So far as the petrol supply system is concerned, a streamline fuel tank of 19 gals. capacity is carried in the top centre section of the wing structure, and supplies the carburettor by gravity feed through a large filter attached to the fireproof bulkhead. A simple float-operated gauge is fitted to the tank within easy view of the pilot. Auxiliary fuel tanks ranging from 10 to 20 gals. capacity can be fitted inside the forward cockpit if desired.

Water Purification.

The purification of polluted water has recently been receiving a good deal of technical attention, and it has been found that any and every form of pollution, when put into ordinary water, is immediately attacked by bacilli which are so small that a couple of million could be put on the point of a pin. These bacteria find any form of pollution excellent food, and they not only devour it rapidly but multiply at an amazing rate so as to be ready for the next treat! By this feeding process all oxygen dissolved in the water is used up, and the pollution is transformed into harmless bodies and by-products which are not decayable. As an immediate result of this discovery it was thought that, once the water was properly purified, it would be so high in bacteria content that any putrifiable matter which gained admission would at once be destroyed, but it was found that this was not the case. It seems that the bacteria multiply and feed on the putrescent matter until a certain limit of population is reached, after which the bacteria die off as quickly as they come into existence and the matter is consequently not completely destroyed. The point is that as soon as that level is reached, protozoa are called into existence at an increasing rate, and as their chief food is bacteria, Nature maintains, in this as in all other things, a satisfactory level. The destruction, by the protozoa, of the bacteria means that the limiting level is not reached, and the bacteria again feed on the decaying matter. They again increase in numbers, calling more and more protozoa to work, and before long the water is relatively pure again.

An Outstanding Feed Water Regulator.

In steam generation practice the advantages of automatic feed water regulators are now generally recognised for the industrial as well as the power station field. Unfortunately many of the types of regulator that are, or have been, on the market suffer from various disadvantages. These include unreliability, due to complicated design, and failure to achieve the desired object, that is, continuous automatic maintenance of the water level in the boiler within desired limits, irrespective of the rate of evaporation.

However, in this connexion a British design of feed water regulator, the Hopkinson "Duo," is of considerable interest, operating on the thermostatic tube principle, but embodying many new features which are claimed to have overcome the above troubles. The name "Hopkinson of Huddersfield" has always stood for the very highest grade in steam fittings, and the regulator is no exception. As indicated the controlling force is the expansion of inclined metal tubes in circuit with the boiler, approximately the lower half being filled with water, and the upper with steam, according to the water level in the boiler drum. As a result the steam portion of the tubes are much hotter than the water portion, the latter being locally not much over 150 degrees F., the tube being, of course, exposed to the air, and as the water level rises or falls the expansion varies accordingly, actuating a sensitive feed control valve. One of the main features of the design is that two oppositely inclined cross expansion tubes are used, which not only gives the same range of regulation as one very long tube, a one inch difference in the boiler being equal to 12 inches in the two tubes together, that is 6 inches for each tube, but has also other practical advantages. Thus instead of a long unsightly tube arrangement, there is a neat and strong framework, much smaller in size, with a "double" action on the control valve and increased radiation effect for the water portion.

The apparatus consists of a horizontal steel tubular base pipe, with bronze or steel elbows, which form the connexion to the water end of the boiler, while if necessary, brackets are provided to fix the whole apparatus to a wall or to the boiler setting. The cross inclined expansion tubes are made of special non-corrodible metal with a high co-efficient of expansion with connexion at the top leading to a central connexion piece forming the steam inlet to the boiler. Also one of the connexions is coupled by lever to the left end of the horizontal tie bars, while the other connexion is attached to the short arm of an actuating bell crank level. This latter is always moving according to the level of the water in the boiler, and operates directly a boiler feed pipe control valve which is of special construction embodying of course all the firm's well-known refinements. The design is of the balanced "ported piston" or "lantern" type, sliding in renewable seatings of high-grade non-corrodible "Platnam" hydraulically pressed into the body, with a weighted lever to give the balancing effect, and deep stuffing box with special packing to reduce friction. Another of the most important points is that the flow of the feed water is practically constant in relation to the degree of the opening of the valve, whilst springs, floats, needle valve, pistons, diaphragms, liquid reservoirs, and other complications have been eliminated.

ROUMANIA'S NATURAL-GAS INDUSTRY.

[*A recent issue of the United States "Commerce Reports" contains an interesting review of Roumania's natural gas industry by the American Assistant Trade Commissioner at Bucharest, Mr. C. Clarence Frick. We give the following extracts.*]

Roumania, richly endowed with natural resources, numbers among its most important assets rich natural-gas basins. Because of the lack of adequate supplies of coal suitable for coking, the economic growth of such industries as iron and steel, glass, ceramics, and cement depend largely on the rational development and extended use of these gas deposits.

The known gas resources of Roumania are located in two separate and distinct areas—in Transylvania and in the oil fields of the Old Kingdom. The Transylvanian fields are of primary importance because of the richness and potential volume of the gas, and their location in an area well suited to, and already under, industrial development. These fields were discovered by accident in 1908, when the Hungarian Government was exploring the Sarmasul Mare region (Department of Cojocna) for potassium salts. Then commenced serious drilling, and, on April 22, 1909, in Sarmasul, at a depth of 302 metres, a rich pocket was struck, from which gas flowed at an initial pressure of 41 atmospheres with an approximate volume of 1,000,000 cubic metres per 24 hours. The Hungarian Government immediately took steps to have a complete survey made, from which developed an industry operated as a State monopoly. At the close of the War when Tranysivania become Roumanian territory, the control and operation of the gas fields were transferred from Hungarian interests to the Roumanian State.

According to a survey made by an American geologist in 1919, at the request of the Roumanian Government, the Transylvanian basin extends over an area of 515 square kilometres, and is naturally divided by anticlinal and syclinal formations into 36 districts. Six of these districts are now under exploitation and have a total area of 115 square kilometres. According to this geologist's estimate the potential volume of the entire basin probably approximates 72,100,000,000 cubic metres, and deeper borings may bring in additional pockets. Another American geologist computed the gas volume at 140,000,000 cubic metres per square kilometre while a Roumanian authority considers this estimate too low and believes that some of the districts have a volume at least five times greater.

Transylvanian natural gas is one of the richest in methane, varying between 99.25 per cent. and 97 per cent., with a nearly constant composition, which naturally adds considerably to its industrial value. The comparative methane percentage in other gas-producing countries is as follows: United States 99.54; Germany, 97.68; Galicia, 88.65; Italy, 78.67; Caucasus, 97.52; Roumania (Old Kingdom), 97.61; Wales, 98.80.

Until 1926 the distribution of gas in the Transylvanian fields was effected by a company known as the Prima Societatea Transilvaneana pentru Conductul Gazului Metan. To all intents and purposes it was little more than a co-operative movement on the part of the principal consumers to assure themselves of an adequate supply of gas, and was organised originally for the construction and maintenance of pipe lines. Up to this time the Roumanian Government had sold the gas at the well head, and had taken no active interest in its distribution. In 1926, however, the "Societatea Nationala de Gaz Metan" (known as the Sonametan) was formed at the instance of the Ministry of Industry and Commerce, acting under authority of the law of 1924 for the organisation of State property on a commercial basis. The capital stock of the company was fixed at 160,000,000 lei, the State participating to the extent of 125,000,000 lei.

One of the first acts of the Sonametan after its formation was to take over the assets of the Prima Societatea Transilvaniana pentru Conductul Gasului Metan, effecting an improvement in service and a considerable saving to the consumers, as under the old system all transmission losses, amounting to about 14 per cent., were borne by them. The company installed the latest-type meters and, by repairing the various lines, reduced the losses to about 4 per cent.

There are now three main pipe lines connecting the gas fields with the industrial centres—the Sarmasel-Turda-Uieara, Sarosul-Diciosanmartin, and Bazna-Medias. The Sarmasel-Turda-Uieara pipe line has a total length of 72 kilometres and a daily capacity of 600,000 cubic metres. During 1928, 133,984,320 cubic metres of gas were distributed through it. It serves the cement mills, caustic soda works, and breweries of Turda, as well as the lime kilns, brick kilns, and a number of small mills located in the towns of Ghiris and Uiroara. The town of Turda also uses considerable gas for heat and illumination. The Sarosul-Diciosanmartin pipe line is 11 kilometres long and has a daily capacity of 2,000,000 cubic metres. During 1928, the last year for which statistics are available, 89,229,738 cubic metres of gas were distributed through it. The main consumers were the nitrogen works and roofing-tile kilns of Diciosanmartin. The town also uses gas for illumination and heating. The Bazna-Medias pipe line is 5.6 kilometres long. During 1928 it distributed 48,862,322 cubic metres of methane gas. The chief consumers were the town of Medias, for heat and light, and a number of small industries.

Two central distribution stations were installed by the Sonametan during 1927 and 1928, at Turda and Campia-Turzii, at a cost of 3,200,000 lei. These installations consisted of three double-compressor units having a 1co-horsepower gas engine on each side of the unit, and are capable of compressing 10,000 cubic metres per hour at a pressure of 7 to 19 atmospheres, or 20,000 cubic metres

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to the Secretary

WESTMINSTER BANK
LIMITED
HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

Digitized by Google

at a pressure ranging from 12 to 19 atmospheres. The Sonametan has drilled seven new wells since its inception in 1926, one of which will shortly be in production. In July, 1929, a new gas horizon, No. 5 was penetrated and has an initial pressure exceeding 48 atmospheres. Since the discovery of gas in Transylvania only 25 wells have been drilled, of which 17 are now in production. These wells range in depth from 120 to 550 metres.

Transylvania's Gas Consumption.

The use of gas in Transylvania is steadily increasing, as is shown by the following figures for consumption from 1925 to 1928, inclusive: 1925, 225,077,000 cubic metres; 1926, 242,041,761; 1927, 252,011,768; 1928, 272,576,440. The proportion of the gas used for domestic and industrial purposes was as follows: 1925, 166,460,000 cubic metres for industrial purposes and 58,617,000 for domestic use; 1926, industrial, 213,667,000, and domestic 28,174,000; 1927, industrial, 217,517,000, and domestic, 34,795,000; and 1928 industrial 234,556,400, and domestic 38,020,040.

While there has been a steady increase in the amount of gas used for industrial purposes, the total consumption falls far short of the supply available. The company, consequently, is making every effort to encourage the establishment of new industries, and the conversion of others to gas fuel. The amount of gas used for domestic purposes is subject to considerable fluctuation, depending upon the severity of the winter. The company has been furnishing gas on a contract basis estimated on potential consumption. These contracts have always been to the advantage of the household consumer. The Ministry of Industry and Commerce, however, has just authorised the company to install meters in all homes, the cost to be borne by the individual, and payment to be made over a period of years. This instruction cancels all existing contracts except those with towns which are supplied with gas for illumination. After the expiration of these contracts gas will be furnished for illumination by metered measurement.

While a large volume of gas is available in the petroleum fields of the Old Kingdom, a large proportion of it is lost in the extraction of gasoline. It is, however, becoming the principal fuel used in the plants of the various oil companies, the aggregate of which amounts to almost 40 per cent. of all the methane gas produced in the country, based on an average of production and consumption during the past four years. Consumption of gas in the petroleum fields, according to category, for the years 1925 to 1928 inclusive, was as follows: 1925, 128,631,000 cubic metres for industrial and 16,112,000 for domestic use; 1926, industrial, 133,950,000, and domestic, 1,195,000; 1927, industrial, 184,107,000, and domestic, 2,618,000; and 1928, industrial, 334,792,257, and domestic, 6,154,925.

The considerable increase in the industrial use of gas in the petroleum area during 1928 is a result of a more stringent conservation policy on the part of the Government. Whereas formerly it was the practice of many companies to extract gasoline and allow the gas to blow into the air it being more economical to burn oil in the plants than to lay gas lines and install new burner equipment—the Government now compels the capping of many wells brought in with a high gas pressure unless the gas is to be used.

The installation of a new pipe line from an immediately adjoining petroleum field to the town of Ploesti accounts for the advance in household consumption in 1928. During 1925 and for several years previously, the homes of employees of the various oil companies were heated by gas, but after that year central steam-heating stations were erected in the various areas, which resulted in a decided drop in domestic consumption.

Considering the vast potentialities of methane gas and its strategic location in industrial and population centres, its possibilities are practically unlimited. The city of Bucharest, for example, with nearly a million population, is situated only a few miles from the centre of the petroleum fields yet uses wood almost exclusively for cooking and heating. A number of important industries, just out of range of gas pipe lines, are forced to import coal from Poland and adjacent countries. New industries which require cheap fuel could be brought into existence. There are rich gypsum deposits at Turda which might supply the raw material for the manufacture of sulphur. The growing textile industry will use an increasing amount of chlor derivatives of methane. The use of hydrogen in the oil-extracting plans of Bessarabia would increase the output and reduce the price of the finished product. The iron deposits of the country could be exploited better by the use of gas-burning open-hearth furnaces.

The Egyptian State Railways have given a contract to Champion, Druce and Co., Ltd., 6, Laurence Pountney Hill, London, E.C.4, for white lead.

The Egyptian Public Works Department have given a contract for cast-iron pipes to the Staveley Coal and Iron Company, Staveley Works, near Chesterfield.

The Imperial Bank of Persia announce that Mr. S. F. Rogers has retired from the post of manager at the London Office but will retain his seat on the Board. Mr. E. M. Eldrid, the sub-manager, has been appointed manager, and Mr. F. Hale sub-manager.

Yugoslavia's exports of dried plums in 1929 only amounted to 13,136 tons, as against 24,366 tons for the previous year, 32,283 tons for 1927, and 47,184 tons for 1926. This decline in the export of one of Yugoslavia's staple products is due to serious attacks on the plum trees by a pest. Energetic measures have been taken by the authorities to deal with the pest, and it is anticipated that there will be a marked improvement in the exports this year. The exports of fresh fruit attained the record level last year of 49,487 tons, which compares with 40,884 tons for 1928, 41,028 tons for 1927, and 38,640 tons for 1926. The fresh fruit trade consists chiefly of plums and apples, but small quantities of pears, grapes, cherries, and apricots are also exported.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended March 8:—

Grain.—The general depression on grain markets continues to rule the position, and although prices here have fallen it is still practically impossible for any volume of business to develop. Tonnage fixed earlier in the year is now beginning to arrive, and this, together with the liners due, is ample for the requirements. Rates have fallen to the neighbourhood of 11s., and the prospects for the near future are anything but bright. A steamer which has brought cargo to the Danube, and is therefore already committed to the E.C.D. Dues, has accepted 13s. 3d. East Coast U.K./Antwerp-Hamburg range, and a 6,500 tonner has been fixed at 18s. 6d. for five ports Denmark. At Sulina cargo has been booked at 9s. 3d., whilst 8s. to 8s. 6d. has been done at Constantza.

Timber.—The market continues inactive, owing to lack of demand for March shipment, for which period there has only been some inquiry for Naples; several small parcels have been booked for this port at rates varying between £8 and £8 10s. per waggon. In the absence of more remunerative employment a spot 3,000 tonner has been obliged to accept timber for five ports Italy, including one port Sardinia. A parcel of timber left over in Galatz yards from last year has been booked for Rotterdam at £9, and this is considered a comparatively good rate under the present circumstances. There do not appear to be any prospects of an immediate revival in the timber trade.

Weather and Crops.—The dry weather continues and complaints are increasing of insufficient moisture for the autumn sowings which were hitherto in excellent condition. Brilliant and calm weather prevailed during the first half of the week, with the day temperatures rising to between 15 and 20 degrees Centigrade; then northerly winds brought lower temperatures and some heavy clouds, which sprinkled an insignificant quantity of rain or snow in Eastern and Central districts; after which the weather again turned bright and dry but remained colder than at the beginning of the week, with light frosts at night. During the last few weeks the peasants have been actively burning off maize stalks and other dry stuff remaining from last autumn, and they are now waiting for a little rain to soften the ground sufficiently to make ploughing by oxen practicable—blissfully ignorant that they are dissipating in smoke what might be turned into a valuable manure, and that mechanical tractors would do the ploughing without delay, thus saving much time which should be valuable. The Government is doing what it can to remedy the backward conditions of agriculture.

Sulina.—Bar depth, 24 feet, and prospects remain good. River depth also minimum 24 feet.

Constantza.—Exports of grain aggregated about 4,500 tons, most of which was shipped to German ports. Two steamers are loading under the elevators for Rotterdam, Liverpool, and Glasgow, and several vessels are waiting. Eleven vessels loaded over 34,500 tons petroleum products and three took oil fuel for bunkers. Over 5,000 tons of timber were shipped to Levant ports.

Bulgarian Report.

Bourgas, March 1.—The market remains quiet and only a restricted amount of business has been effected. The temperature at nights was below freezing point, and there have been light falls of snow in most parts of the country. According to latest reports the autumn sowings continue to be in a good condition, and work of preparing fields for spring sowing progresses satisfactorily.

THE ANGLO-TURKISH COMMERCIAL TREATY.

The following summary of the more important provisions of the Treaty of Commerce and Navigation between the United Kingdom and Turkey which was signed at Angora on Saturday, March 1, and will come into force after the exchange of ratifications, is taken from the *Board of Trade Journal*.

National treatment is accorded in matters of commerce and navigation to the subjects of the one Party in the territories of the other. The subjects or citizens of either of the Parties are given the right to enter, travel, and reside in the territories of the other, provided they satisfy the general regulations applicable to all foreigners. National treatment is given in respect of the legal and judicial protection of property, rights, and interests.

Each Party affords to the ships and subjects of the other most-favoured-nation treatment in all matters relating to commerce, navigation, and industry, the carrying on of business and the exercise of professions or occupations. The right, however, is reserved to confine to their own nationals such trades and professions as the Parties may think fit. National treatment is accorded to the subjects or citizens of each Party in matters of taxation, Customs duties, etc., in respect of their property, rights, and interests or their commerce, industry, profession, occupation, trade, or any other matter.

Liberty to acquire or possess every description of property, movable or immovable, which the subjects or citizens of any other foreign country may acquire or possess is prescribed. National treatment is accorded in regard to the disposal of property, to acquisition by inheritance, and to the taxation of property when so disposed of or acquired. Free access to the Courts of Justice is granted to the subjects or citizens of both Parties, but the question of free legal assistance and the deposit of security for costs will be determined by local legislation pending the conclusion of special conventions. The Treaty provides for exemption from all military service and all judicial, administrative, and municipal functions whatsoever. Exemption is also granted from all kinds of contributions imposed as an equivalent for such service. In all these matters national treatment is accorded.

Most-favoured-nation treatment is accorded to the companies of either of the High Contracting Parties desiring to enter into business in the territory of the other. So far as taxation is concerned, national treatment will be granted, but in respect of fees relating to the issue of permits to foreign companies and to their registration and to the deposit of security required by law, most-favoured-nation treatment will be granted. Any exemptions from taxation which may be granted to undertakings established by the State or to concessionaires of a public utility service are specifically excepted from the scope of national treatment. Detailed provisions are included in the Treaty as to the taxation of branches or agencies of companies operating in the territories of one Party but controlled by subjects or citizens of the other Party who are resident outside the territories of the first Party. These provisions are, briefly, that taxation on capital will be levied only on capital actually employed within those territories, and taxation levied on profits will be calculated inside the territories of the first Party. Taxation levied on the volume of business will be calculated only on the business carried on or controlled within those territories. Also companies are permitted to acquire any kind of movable or immovable property subject to compliance with the laws of the country, and provided that the acquisition of immovable property is not the object of the company. In all other matters companies receive most-favoured-nation treatment. In a Protocol it is provided that foreign companies may not concentrate their principal operations, as defined in their Articles, on Turkish territory, but must apply for and obtain Turkish nationality.

In matters of import or export duties and prohibitions the goods of both countries will receive most-favoured-nation treatment. The Protocol contains a reservation with regard to goods which are the subject of export bounties or subsidies. National treatment is provided in respect of internal duties levied in the territory of one Party on the goods of the other.

The usual provisions relating to transit by rail or waterway are

MICA AND ALL ELECTRICAL INSULATING MATERIALS

Contractors to the British, American, French and Italian Admiralty and War Office.

ATTWATER & SONS, PRESTON, England

included in the Treaty. These provisions lay down that no distinction shall be made in regard to transit based on the nationality of the persons, the flag of vessels, the place of origin, departure, entry, exit, or destination or any circumstances regarding the ownership of the goods or vessels or other means of transport. Neither Party, however, will be bound to afford transit for passengers whose admission into its territories is forbidden or for goods of a kind of which the importation or exportation is prohibited in accordance with the Prohibitions Article of the Treaty.

In matters of shipping the following provisions are made:—(1) National treatment is accorded in all that concerns stationing, loading, and unloading of vessels in ports, docks, roadsteads, and harbours. (2) National treatment is accorded in all tonnage, harbour, pilotage, lighthouse, quarantine and other analogous dues, and provision is made for the proper publication of the dues in force. (3) The coasting trade, fishing in territorial waters and maritime services at ports, roadsteads and beaches and, in particular, towage, pilotage, life saving and salvage, in so far as those operations are performed inside territorial waters or the Sea of Marmora, are excluded from the scope of national treatment. The Parties also reserve the right to extend support in the form of bonuses or subsidies to their national mercantile marine and also to State-owned vessels administered either directly or by a company in which the State is interested. In a Protocol dealing with the Coasting Trade it is provided that British and Turkish vessels may in any case proceed from a port in the territories of one Party to one or more ports in the territories of the same Party for the purpose either of landing the whole or a part of their cargo or passengers brought from abroad, or of making up or completing their cargo or embarking passengers for a foreign destination. In the minutes of the final meeting at which the Treaty was signed the Turkish Delegation, in reply to a request from H.M. Ambassador, assured him that it was in no way the intention of the Turkish Government to permit the services reserved above to fall into the hands of foreign nationals, and that they would be kept entirely under the Turkish flag and in the hands of Turkish nationals. (4) The usual provisions regarding ships of the one Party wrecked in the territories of the other are also included.

Provision is made for the appointment of Consuls and for the carrying out of their functions; also for the protection of rights in inventions, trade marks and designs, and for the prevention of false trade marks and descriptions.

Provision is made for the furnishing of certificates of origin in cases where the Parties require it. These certificates of origin will be issued either by the Chamber of Commerce or Industry to which the consignor belongs or by the Customs authorities of the exporting country or by an authority or association which may be accepted for the purpose by the country of destination. The Government of the country of destination may require the certificates to be legalised by their diplomatic or consular representatives.

Parcel post packages will be exempt from the requirement of a certificate of origin if the country of distination recognises that no transaction of a commercial character is involved, and that the value of the package does not exceed £T50 for importation into Turkey or, if the case should arise, a corresponding amount for importation into British territories.

The Treaty provides that most-favoured-nation treatment shall not be held to include (1) privileges granted for frontier traffic within a zone of 15 kilometres on each side of the frontier, (2) special favours arising out of a Customs Union, and (3) special advantages or favours which may be arranged in Customs matters between Turkey and countries which were detached from the Ottoman Empire in 1923.

The Residence Convention which was signed at Lausanne on July 24, 1923, and which is due to expire on August 6, 1931, will cease to be operative as from the date of the entry into force of the Treaty.

Provision is included for applying the Treaty to any British Colony, Protectorate, or Mandated area, and also for accession to the Treaty on the part of any of the self-governing Dominions and India. In an Exchange of Notes attached to the Treaty the Turkish Delegates state that the Government of Turkey will give favourable consideration to a request that most-favoured-nation treatment should be extended, on the basis of reciprocity, to articles produced or manufactured in British Colonies to which the Treaty does not apply.

The Treaty will come into force immediately on the exchange of ratifications. It will be binding for a period of five years from the date of its coming into force, and thereafter will remain in force until the expiration of one year from the date on which notice of denunciation is given.

The Eastern Telegraph Company, Ltd., announce the payment on April 15 next of a dividend at the rate of 3½ per cent., less income tax, on the Preference stock of the company for the quarter ending March 31, 1930.

It is reported that negotiations are in progress between the French Schneider-Creusot concern and the Skoda Works and the Yugoslav Government for the erection of a shipyard and an armament factory in Yugoslavia.

A Cairo mesage states that the Ministry of Communications has received thirteen tenders from Great Britain and the Continent for the construction of the new Kasr-El-Nil bridge at Cairo. The lowest tender, of £E213,629, was received from Dorman Long and Co., whose tender for an alternative scheme was £E250,775.

COMPANY NOTES AND REPORTS.

CHARTERED BANK.

The report of the Chartered Bank of India, Australia and China for the year ended December 31 last states that the net profit, after providing for all bad and doubtful debts, amounted to £848,254 9s. 11d., inclusive of £186,656 3s. 9d. brought forward from the previous year. The interim dividend at the rate of fourteen per cent. per annum paid in September last absorbed £210,000. The amount now available is therefore £638,254 9s. 11d., and the Directors propose to pay a final dividend at the rate of fourteen per cent. per annum, together with a bonus of six shillings and threepence per share, making twenty and a quarter per cent. per annum for the whole year, free of income tax; to set aside £50,000 on account of contingencies, and to carry forward the balance of £190,754 9s. 11d.

HELLENIC AND GENERAL TRUST.

The report of the Hellenic and General Trust, Ltd., for the year ended January 31 states that the balance of the authorised capital was issued in the course of the past year, bringing the issued capital up to £1,000,000. The new capital was only received in the second half of the financial year, and the average issued capital employed for the whole period was £639,500. The issued shares are to be subdivided and subsequently converted into 5 per cent. Preference stock and Ordinary stock. An extraordinary general meeting is to be held immediately after the annual general meeting for the purpose of passing a special resolution to bring this sub-division and conversion into effect.

After making allowance for all expenses and other charges, including Directors' remuneration, and making provision for income tax, the net profit, for the year ended January 31 amounts to £40,351 9s. 5d. Adding the balance brought forward from the previous year, namely, £15,773 5s. 3d., and deducting the 3 per cent. interim dividend (less tax) already paid, namely, £12,000, there is an available balance of £44,124 14s. 8d. The Directors propose to pay a final dividend of 3½ per cent. (less tax) on the 155,800 shares entitled to participate, requiring £21,812, and to carry forward the balance of £22,312 14s. 8d. The Directors again wish to record their great appreciation of the co-operation and help afforded to them by the Greek Committee, and also of the most valuable co-operation of the National Bank of Greece.

SMYRNA-AIDIN RAILWAY.

The report of the Ottoman Railway from Smyrna to Aidin for the half-year ended December 31 last states that the profit on working for the half-year amounted to £142,093 2s. 8d., to which must be added interest on investments, etc., £11,906 14s. 8d.—£153,999 17s. 4d. Deduct interest on 5 per cent. Debenture stock and other charges, £57,367 5s. 1d.; balance, £96,632 12s. 3d.; deduct debit balance from previous half-year, £20,600 3s. 11d., leaving a balance of £76,032 8s. 4d., which is sufficient to pay a further 4 per cent. interest (making 6 per cent. for the year) on the Second Debenture stock, £65,182 13s. 10d., and to leave a balance of £10,849 14s. 6d. It is proposed to allocate this balance as follows:—To rolling stock renewals reserve (special allocation), £4,500; to payment of 2 per cent. (8s. per share) on the Preference shares, £6,000; to be carried forward to the Preference shareholders' account, £349 14s. 6d.—£10,849 14s. 6d.

With regard to agriculture, crops in many cases failed to come up to expectations, owing to adverse climatic conditions. The winter of 1928-9 was unusually severe and grain crops in the highlands of Anatolia suffered in consequence. There was also a large mortality among flocks and herds. Fortunately, in the districts served by the line the later sowings turned out fairly well and gave traffic during the latter part of the year. The fig crop, which had promised well, was severely damaged by several days of heavy rain at the time when drying operations were in progress. The all-important exchange factor has been a constant source of anxiety throughout the period under review. The rate for conversion of piastres to sterling rose early in December last to the unprecedented rate of 1,120 to the £ and the position became serious. The prompt measures taken by the Government, however, resulted in an immediate improvement and the rate quickly fell to about 1,050. Lately, however, a serious rise has occurred and receipts must continue to be affected as long as these adverse conditions obtain. The Government have lately imposed severe restrictions on the buying and selling of exchange.

The company is still precluded from raising its rates in accordance with the terms of the Reparations Agreement of 1927. Representations continue to be made to the authorities and it is hoped that eventually the necessity for a revision of rates will be recognised. It is possible that a fresh Rates Commission may be set up to consider the matter and report. It should be noted that when the question of rates was being considered in November, 1927, the exchange rate was in the neighbourhood of 925. The lower gold value of the piastre is responsible for a part of the decrease in working expenses, but the Council desire to record their appreciation of the efforts of the management to keep the expenditure at the lowest economical level. All things considered, the results for the year 1929 may be considered satisfactory and they demonstrate that some progress is being made towards regaining the prosperity which was enjoyed before the War. It is quite evident, however, that under present conditions and without more latitude regarding rates the company is precluded from receiving a return on its capital which is commensurate with the transport facilities which it affords and the benefits on the community in general which it confers.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended March 12:—

Egyptian Futures.

Sakel Contract.—Further declines in the American markets encouraged those working on the "short" side in this contract to add to their commitments during the earlier days of the week, and this, at one period, caused prices to break into fresh low records for the season. As the May position approached 12.50, or 3 dollars below the Government's basis in Alexandria, the market began to enlist more support, and, with a healthier inquiry in evidence from trade sources, signs of a recovery became apparent. This in turn induced a moderate amount of covering, which found little cotton offering, and, as since American values have hardened somewhat, most of the ground lost previously has been regained, to-night's close being irregular with near positions 17 points down to 5 points up, and distant months unchanged to 24 points lower since we last wrote. Trade reports continue to show a depressing state of affairs, and although, as mentioned, the inquiry has been on a healthier scale, the recent decline has been so persistent that spinners hesitate to place actual orders. The point now to be determined is whether a series of steady markets would bring out business. Buying of actual has been on such a reduced scale for so long that we feel mill stocks must have run down, and, even if only a partial trade revival takes place, old crop positions here would rapidly reflect the improvement, as only a comparatively moderate amount of cotton stands in the way of a partial readjustment with Alexandria values. Advices have been received to-day showing that the Egyptian Government have taken a further 98,750 kantars, so that they are well on the way to holding the bulk of the tenderable cotton in stock at the other side. With this in mind we certainly consider those operating confidently on the short side in our market are running a considerable risk. Even without support from trade or outside sources, it is difficult to foresee values here declining materially from the ruling level; on the other hand, should anything crop up to alter the outlook, it is conceivable that a decided shortage of contracts might be experienced. During the past two days, new crop positions in Alexandria have advanced sharply, due, we understand, to more reassuring views regarding the proposed American tariff on imports of stapled cotton into that country. It is now anticipated that the measure will not be ratified.

Upper Contract.—This market has enlisted rather more support during the past week, and, whilst at times Continental liquidation has been a feature, we finish the week with a healthier undertone in evidence. The fact that our stock is very reasonably priced is becoming more realised, and, as a result, a good deal of business is being diverted here that in the normal course of events would go to Alexandria. So far this month, no tenders have been made, and, rather than part with their cotton some import houses have been forced to switch on their hedges at much reduced premiums. Given any encouragement from the American markets, we think values would develop a gradually hardening tendency.

Egyptian Spot.

In spite of the weakness displayed on the American side, the inquiry for Egyptian has again shown improvement. The better demand which last week was noticed from Continental sources has failed to produce much in the way of actual results, but the home trade has certainly materialised. It is rather curious that the demand should come in like this on a falling market, but it may be explained by the fact that Egyptian cotton has shown a tendency of late to widen out with American contracts, and there is little doubt that the very abnormal parity at which we have been standing with Alexandria has tempted consumers. There have even been instances of Alexandria making inquiries in the Liverpool market with a view to repurchase. Provided that there is no further sensational break in American contracts, we have every hope that the improved conditions will be maintained, and again we would advise our spinner friends who desire to take advantage of the relatively cheap cotton lying in Liverpool to be early in the field.

Sakels have been in better request all round, but sales still leave much to be desired.

Uppers have been in very good demand, particularly for the cotton at round 25 points on March contracts, and in this quality a good business has been done. The lower qualities this week, i.e., "off" cotton, have been rather neglected, but at the other end of the scale the Good to Fine qualities have again aroused interest, though not to the same extent as the medium.

Pilion has been in fair request, but inquiries have seldom gone beyond the 11d. mark, and there does not appear to be a great deal of cotton available with which to meet buyers. The better qualities are still suffering from neglect.

Maarad.—There has been a better inquiry for this cotton, but buyers have been hard to meet and no extravagant prices have been paid.

White, Nahda, and Fuadi.—Very little business has been reported in these growths, although a spasmodic inquiry has been seen.

Sudan Sakel.—Very little business has been transacted.

Tokar Sakel.—Slightly more inquiry has been witnessed, but sales have been negligible, so far as we can ascertain.

C.i.f. business.—No improvement to record. Forwardings were returned as 4,688 bales Egyptian and 1,386 bales Sudan Sakel. Spot sales.—2,300 bales Egyptian and 30 bales Sudan Sakel. Quotations of Sakel show a reduction on the week of 15 to 40 points, Uppers unchanged, and Pilion a rise of 5 points. F.G.F. Sakel to-day, 13.60d. F.G.F. Upper to-day, 10.02d. F.G.F. Pilion to-day, 10.75d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended March 6, state:—

The market during the past week has been weak and prices show a considerable decline from Thursday last. The week's summary of price movements is as follows:—Sakellaridis: March, 27.50 dollars, unchanged; May, 28.07 dollars, 0.01 dollars up; July, 27.25 dollars, 0.09 dollars down; November N.C., 24.85 dollars, 0.88 dollars down; January N.C., 25.23 dollars, 0.80 dollars down. Ashmouni: April, 19.41 dollars, 0.01 dollars down; June, 19.85 dollars, 0.01 dollars down; August, 18.38 dollars, 0.77 dollars down; October N.C., 17.70 dollars, 0.88 dollars down; December N.C., 18.02 dollars, 0.87 dollars down; February N.C., 18.36 dollars, 0.85 dollars down.

Sakel.—Old crop months, with the exception of July, being pegged down, present no interest, and any remarks would accordingly be superfluous. July has not attracted much attention, but prices have been more or less maintained on the impression that the Government will eventually extend its intervention also to that delivery. New crop months, on the other hand, have been continuously sold, with a decline on the week of nearly a dollar. The feeling in evidence

Digitized by Google

last week has disappeared completely, or perhaps it is nothing more than a realisation that the idea of Government intervention in new crops, on which prices were sustained last week, is without any foundation. The first March tender turned out to be even larger than expected, being 420,750 kantars. This is the heaviest tender ever experienced in this market, and it must have been a shock for the Government to see that, in spite of the extension of intervention also to May delivery, they were called upon to receive such an enormous quantity. There has been no improvement in the demand from spinners, and, with the Sudan crop just appearing, the prospect is not alluring. It rather looks as if we shall have this condition throughout the rest of the season. The Sakel/Uppers new crop straddle (November/October) this week stands at 715 points, against 715 points last week and 1,407 points at this time last year. We give below the statistical position of Sakel in Egypt, as at the end of February:—Stock Alexandria, 1,531,000 kantars; stock up-country (about) 595,000 kantars; total, 2,126,000 kantars. At the same date last year, the stock of Sakel in Egypt was about 1,779,000 kantars. We would add, for purposes of comparison, that exports of Sakel for the period March/August last season amounted to about 1,031,000 kantars.

Uppers.—This variety has experienced no better demand than Sakel. There have been inquiries, but very little business has materialised, buyers' ideas of price being below actual cost. The new crop positions show a heavy decline on the week, not so much on selling pressure as in sympathy with the drop in America. The Ashmouni/American new crop straddle (October/October) this week stands at 256 points, against 282 points last week and 451 points at this time last year. We give below the statistical position of Ashmouni and Zagora in Egypt, as at the end of February:—Stock Alexandria, 1,587,000 kantars; stock up-country (about) 800,000 kantars; total, 2,387,000 kantars. At the same date last year the stock of Ashmouni and Zagora in Egypt was about 2,222,000 kantars. We would add, for purposes of comparison, that exports of Ashmouni and Zagora for the period March/August last season amounted to about 1,918,000 kantars.

The week's receipts amount to 139,183 kantars, against exports 80,017 kantars; the stock in Alexandria stands at 3,736,117 kantars.

Spot.—The market was closed on Monday last for the national Bairam holiday. This week's sessions have been very quiet, the total turnover amounting to only 4,500 bales, of which we estimate 1,500 bales Sakellaridis, 2,500 bales Ashmouni and Zagora, 100 bales Pilion, and 400 bales other varieties.

Sakellaridis.—Owing to the huge quantity of cotton taken off the market by the Government on the March tender, the spot differences for the tenderable grades have slightly stiffened. There has been a small demand for low grades cotton.

Ashmouni and Zagora.—The demand has been very poor for these varieties, and spot differences have eased slightly all round.

Pilion is still neglected and premiums remain unchanged.

Other Varieties.—There has been a small business in White grading Fully Good Fair to Fully Good Fair/Good.

Up-country.—There is nothing new to report on business in the interior. Ideas of holders are based on the Government's prices, and with the almost complete absence of demand there is no competition amongst merchants, business being confined to purchases for eventual delivery against contracts.

Crop, 1930.—Field work and sowing are progressing well everywhere, but the crop in the Delta may be said to be about 8 days late. Germination is, so far, very fair, but temperatures are still rather on the cool side. The Assuan Reservoir is quite full and the prospects for the summer water supply are good.

Why not visit
The SUDAN
this Winter?

KHARTOUM can be reached either via Egypt or direct by steamer to Port Sudan and thence by train-de-luxe. The social life of Khartoum during the season (December to March), the scenes of Wild Life on the Southern reaches of the White Nile, or interesting short trips organised by the Sudan Government Railways and Steamers from Khartoum, offer a unique variety of experiences to those in search of something out of the ordinary. It is also a new route to or from UGANDA and KENYA, involving neither difficulty nor discomfort. To the Sportsman it is Paradise.

Notes of the Week.

King Fuad.

The coincidence that the anniversary of King Fuad's birthday should synchronize with the arrival in London of the Egyptian Delegation that has come to negotiate an Anglo-Egyptian treaty will prove, we may hope, of happy augury for the satisfactory adjustment of the relations between Egypt and Great Britain, in regard to which King Fuad necessarily constitutes an important factor. Handicapped by the limitations of his constitutional status, King Fuad is precluded from giving any definite lead in political affairs to his country; but by his tours abroad, in particular by his presence in England last year he has used his opportunities to prepare the way for Egypt's occupation of the position to which the conclusion of a treaty with Great Britain will entitle her in the councils of the nations. In the past, it may be, Egyptians have been too engrossed with one aspect of their international relations to appreciate at its true value the possession of a Sovereign who can worthily uphold the dignity of the country in spheres where personality and intellect count for more than mere numerical or financial strength. In the world of science and art Egypt during the thirteen years of King Fuad's reign has successfully bridged the geographical distance that separates her from Europe, and has become, under the stimulus that His Majesty has provided, an important member in a number of international literary and scientific conferences. Quite recently Geneva has provided the spectacle of Egypt's taking the lead in a world campaign against the social evils of the drug habit. The fact that the spokesman on that occasion was an Englishman in no way diminished the prestige that Egypt derived from the incident; rather did it emphasize Egyptain potentialities under a judicious co-operation of Throne, people and advisers.

The Greek Centenary.

If the celebration of the Centenary of Greek Independence has met with certain difficulties, these need be little regretted provided that they serve to remind the Greeks of to-day of the arduous nature of the struggle that their forebears had to undergo to found modern Greece. The standard of revolt was raised on April 6, 1821, but the spring of 1921 found the Greeks with old scores against Turkey still unliquidated and with a new Turkish war on their hands. The War of Independence dragged on for nine years and was not formally concluded until the Treaty of Adrianople in September 1829. Last year also produced good reasons for the belief that 1930, the anniversary of the London Protocol of February 3, 1830, which rounded off the recognition of the Independence of Greece, would be a more convenient year for the Centenary Celebrations, and events have fully justified the postponement. The Turkish Government has now made known its decision to be officially represented at the Greek Celebrations, which at once acquire a significance that raises them from the level of a national occasion to an event of much wider significance. Turkey's participation can hardly fail to mean that the long outstanding difficulties that have beclouded Greco-Turkish relations can now be regarded as finally overcome, and that under statesmanlike guidance the two countries should be able to look forward to a new era of friendly co-operation to their mutual advantage and to the benefit of the whole region of the Eastern Mediterranean. As is befitting, the Celebrations, which will be formally inaugurated this week, are to embody a varied programme extending over a large part of the year. Next month there will be a sports meeting in Athens, the Delphi Festival is fixed for the first fortnight in May, and there is to be a Pan-Hellenic exhibition in the autumn. One item that is calculated particularly to stir the national imagination will be the Naval Display fixed for April 6. Now that Turkey is to take part in other items of the programme, it would be a graceful act on the Greek Government's part, and an apt illustration of the Prime Minister's declared policy not to indulge in a rivalry of naval armaments with the Turks, if an invitation were extended to the most formidable unit of the Turkish fleet, the Yavouz, to be present at New Phaleron on the occasion of the Greek Naval Display, or at least to pay an official visit to Greek waters in connexion with the Celebrations.

The Censorship in Yugoslavia.

It is satisfactory to learn on the authority of our Belgrade Correspondent that there has been a distinct relaxation on the part of the Yugoslav censorship. As a general principle—war conditions always excepted—a drastic Press censorship can be relied upon to defeat its

Digitized by Google

own ends. The mere fact that it is imposed is calculated to give rise to reports, which will be believed, of greater prejudice to the Government and country than the kind of information which it is sought to suppress. In Yugoslavia the censorship has had the unsatisfactory effect of helping to justify Vienna as a news centre for the Balkans. Most of the false reports on Balkan affairs emanate from that centre, with a tendency for Yugoslavia to be the worst sufferer. The rather intensive censorship that has been practised of late has so handicapped foreign correspondents that there was a danger of newspapers, which expect their representatives to send them news for publication, withdrawing their correspondents from Belgrade and relying on Vienna to supply them with news regarding Yugoslavia. The relaxation has, accordingly, come at an opportune moment in Yugoslavia's own interests. As often happens, the censorship in practice proves worse than the intentions of its originators, owing to the reluctance of subordinates to assume responsibility. This would seem to have been Yugoslavia's experience, as an inevitable result of the fate of the official who saw no harm in allowing the Press to record what the Government had sanctioned in connexion with the erection of the memorial to the assassin, Prinzip.

Politics in Bulgaria.

The political waters of Bulgaria have been subjected to much agitation for some time past, and radical changes in the Government have been confidently predicted. Sofia, however , has shown that it is capable of producing the unexpected as effectually as Whitehall. In normal circumstances, when political circles in Bulgaria show signs of tiring of the Government in power, the King makes a point of sounding the leaders, and if he is able to discover a reasonable prospect of a new Cabinet's being able to maintain itself in power, he will call upon the most suitable politician to form it. According to the rules of the Bulgarian political game, M. Liaptcheff's Ministry has outlived its fair span of life, and as there is no Opposition strong enough to replace it, the desire for a change has found expression within the ranks of the coalition which keeps the Government in power. This novelty in the political situation has relieved both King Boris and M. Liaptcheff of the necessity of adhering slavishly to precedent. The former has not felt called upon to take action, while the latter has thrown out a challenge to M. Tsankoff, his rival for the support of the Democratic Entente, by summoning a council of that body, which, without any great show of enthusiasm, has bidden the Prime Minister to "carry on." The Government, accordingly, holds its ground for the time being, and it may well be in the interests of Bulgaria that there should be no radical change of Ministry at the present moment, in order that the marked improvement in Yugoslav-Bulgarian relations should have an opportunity of becoming in some measure consolidated. There can be little doubt that M. Liaptcheff's tenure of office has inspired among Bulgaria's neighbours a confidence that was not felt in the previous Government, and it would be unfortunate, if political changes, for which there was no urgent reason, should disturb the satisfactory atmosphere that is now beginning to manifest itself in the Balkans.

Jaafar Pasha's Departure.

It is a striking commentary on the scarcity in Iraq of men of proved worth that General Jaafar Pasha al Askari, who, as we announced recently, had been appointed to represent Iraq in Persia, should have been called away from London at the beginning of this week to Baghdad, apparently to join, as Minister of Defence, a Cabinet formed by Nouri Pasha as Said, in succession to Naji Beg as Suwaidi, who, it will be recalled, tendered his resignation to King Faisal on March 9. That the Iraq Minister in England should have consented at once to re-enter the political lists from which he has been happy enough to be absent for two years, in an endeavour to smooth over the differences which are reported to have arisen between the Iraqi authorities and the British authorities, is eloquent testimony to the sense of patriotism and to devotion to the cause of King Faisal which Jaafar Pasha has displayed ever since the days of the War. It is abundantly evident, indeed, that Jaafar Pasha is convinced that the Arab cause stands or falls with King Faisal, that that scion of the Sharifian family is the pattern for all Arabs who would fain model their country somewhat on the lines of the West, and that he must, if Iraq is to progress in the desired way, be implicitly obeyed. At the moment of writing it is obviously impossible to speculate upon the chances of Nouri Pasha as Said's new Cabinet. It may be that new elections are called for; on the other hand, it may be that the present Majliss and public opinion in Iraq would welcome the appointment of such non-party men as Jaafar Pasha to a new Cabinet. One thing appears certain, namely, that Jaafar Pasha is seized of, and understands, the British point of view as fully as any Iraqi public man, and it is to be hoped that, with the experience of Great Britain which he has acquired by his many visits to and his long stay in this country, he will succeed in effecting a marked improvement in Anglo-Iraqi relations. In other words, we may hope that what is London's certain loss—for Jaafar Pasha was very generally esteemed here—is Baghdad's great gain.

Hope of a Settlement.

It would be pleasant, indeed, to think that Nouri Pasha might lead a Cabinet which would last long enough to have the honour of seeing Iraq enter the League of Nations under its auspices. But realism must be preserved when discussing this matter of Iraq's admittance into the League. Good will towards Iraq, as Jaafar Pasha, who has, we suppose, been in as close touch with official circles in this country as any Iraqi, well knows, exists in abundance. Yet Iraqis in general must realise that it is contemplated nowhere in Europe that by 1932 the Iraqis will be so advanced as to be able entirely to dispense with British advice. It is doubtful, indeed, whether the League would be willing to admit Iraq to membership unless the continuance of some form of British advice were guaranteed. There must, therefore, be formulated a strict definition of what are essential British interests in Iraq, or, as we would prefer to call them, world interests. In this lies no question of British control of Iraq in purely selfish interest, but solely one of a guarantee of security. Of the necessity of order in Iraq, and of the urgent need for the exploitation of the natural resources of Iraq (exploitation which cannot wholly be carried out by Iraqis themselves), no one is better aware than the gallant Arab who until this week was Iraq Minister in London. For the present we need say no more than that hope is considerable of an amicable settlement being arrived at, that is, of the conclusion of an Anglo-Iraqi Treaty which shall satisfy at once Iraq, Great Britain, and the League of Nations. The main difficulty may arise once more over the question of Defence. It seems obvious that the new Iraqi Cabinet will come out boldly in favour of conscription.

The Balfour Declaration.

Those who looked upon the late Lord Balfour as the author of a Declaration which should give to the Jewish people their freedom, and as the highest type of non-Jewish sympathiser with the Jews, are sincerely mourning the death of a singularly disinterested statesman; nor will any harsh words be indulged in at this moment by those who regard the Balfour Declaration, which, indeed, was not so much the work of one man as a statement of policy dictated by the British Government in 1917, as mainly responsible, because of its studied vagueness, for many of the post-War troubles in Palestine. There is no question that Lord Balfour was moved by the finest motives in issuing his famous Declaration, though it may well be that his slightly disdainful spirit thought in terms rather of culture, or of spirituality, than of racial sentiment or of politics. He profoundly admired the Jewish genius, and he thought that, by its freeing and full development in Palestine, benefit would be bestowed not

Digitized by Google

only on the Jewish people, but also on the world as a whole. It is probably true that he knew little of the Arab people, whom, in fact, he appeared to regard sometimes as a reactionary obstacle to the inspired processes of civilisation. At least this, however, can be said of him: that in his support of the Zionist cause he tired not nor fainted by the way: in this matter a sense of opportunism or of tactics seems to have been wholly lacking. Zionists are apt to declare, not unnaturally, that the Declaration is his surest claim to fame. To those people who have produced no Prophets this may not appear so certain. Already, indeed, the Declaration has been superseded by another document, the Churchill Memorandum of 1922, and it is possible that the end of interpretations of the original promise to the Jewish people has not yet been reached. For idealism that is conceived or stated both in times of war and in conditions of partial ignorance of the facts must surely be modified with the passage of years. Nor need it be supposed that Lord Balfour would necessarily have been opposed to what is called the "whittling down of the Declaration." He distrusted enthusiasm deeply, and, if one may hazard a guess of what he really meant by Zionism, it was much more the quiet cultural development of perhaps the most gifted people in the world than any noisy assertion of "rights." This he hoped for, and to this he consistently and courageously gave his distinguished blessing.

The Arabs in Syria.

It is not always realised how closely connected are the interests of the French in Syria and of the Zionists in Palestine. But quite apart from other considerations, there is a factor common to both, and that is the resistance of certain claims of the Arabs. When, therefore, sympathy is expressed by Arabs in Palestine with those in Syria, or *vice versa*, there may be a common wave of sympathy passing through Frenchman and Zionist. French administration of Syria is by no means condemned by the ordinary Zionist, as it is by many people, for being hostile to the implications of the mandatory system; on the contrary, he applauds a policy that effects so admirable a development of Syria's economic resources. Both naturally, therefore, and for special reasons, Zionists have taken umbrage at a letter recently written by the Grand Mufti of Palestine to the President of the Muslim Council in Beyrout, a letter which was recently reproduced in a letter from two Members of Parliament to *The Times*. The object of these two Englishmen was, of course, to show that the Grand Mufti whom Sir Herbert Samuel selected, wisely or unwisely, as President of the Supreme Muslim Council in Palestine, was an unworthy person to serve in the administration of Palestine. But it is difficult to discover in this letter anything that might not have been well known to Messrs. Cazalet and Kingsley Griffith had they taken the trouble to study even cursorily the recent history of Palestine and of its personalities. Haj Amin is a strong Arab Nationalist, and he has never taken any pains to conceal the fact. His attitude towards Muslims of other countries is perfectly well known to the British authorities. Nor is this letter to which exception is taken any startling new sidelight upon his real intentions or attitude. It is, indeed, a harmless document, in the sense of arousing alarm among the French authorities in Syria, or of provoking disturbance there. Perhaps the most interesting aspect of this affair is the attempt to drive a wedge in between the Muslim and the Christian Arabs of Palestine and Syria. No doubt that aspect will receive close attention from those most concerned.

INDIAN NOTES.

A Fine Exploit.

The achievement of the two young Karachi Parsees, Mr. R. M. Chawla and Mr. Engineer, in completing the first air flight conducted wholly by Indians between India and England, will be rightly acclaimed in both countries. One is glad to recognise also the unwonted promptitude of the Government of India in making a grant of 7,500 rupees, to the successful pilot, and the action of the Secretary of State in receiving the two airmen and presenting them to the Members of the India Council. It is curious how the ancient and the modern always mingle in things Indian. It was seriously suggested in a "Nationalist" paper, edited moreover by a lady, that the failure of the first machine piloted by an Indian was due to its having been "christened" by a widow, the Maharani of Cooch-Behar. The suggestion became almost a certainty when a second machine christened by the same lady also failed. Perhaps, however, Mr. Chawla's machine had nothing to do with widows, so their inauspicious influence in the air has yet to be disproved.

The Banking Inquiry.

The action of Mr. Kikabhai Premchand in presenting to the Delhi University all the allowances he has received as a member of the Legislative Assembly and of the Indian Central Committee, amounting to 22,000 rupees, towards the establishment of a part-time readership in economics is a characteristic gesture which will be warmly applauded and as widely, we hope, emulated. As the Viceroy observed in acknowledging the gift in his address to the Convocation last week, "to such benefactors universities and culture in all lands and ages have owed an inestimable debt," and in the special circumstances of education in India the purpose to which the money is to be applied is especially noteworthy. As senior partner of the well-known Bombay firm of financiers, Premchand Roychand and Sons, whose Annual Review is discussed elsewhere in this issue, the donor has done a great deal to promote the study of economics in India and, in particular, to give the instruction a more practical bias. A lucid and informing commentary on the progress of the banking inquiry, in the institution of which Mr. Premchand played a not unimportant part, is a notable feature of the Review. As is known to readers of The Near East and India, this inquiry is on a most extensive scale. It is being conducted by a Central Committee with ten Provincial Committees. The latter are looking into agricultural finance, the financing of small industries, indigenous banking, the investment habit, and the attraction of capital. All the other branches of the subject will be directly investigated by the Central Committee, to which body the Provincial Committees are expected to report by the end of the financial year 1929-30. The Central Committee will report to the Government of India by March or April, 1931. Before it formulates its conclusion this Committee will be helped by a small body of experts, selected by the Government of India, from England and other countries with well-developed systems of rural credit and industrial banking. The inquiry is not to be restricted to British India only. The Indian States are also being encouraged to undertake similar investigations in their territories; and the Government of India have promised them the assistance of the Central Committee and of the Committee of Foreign Experts. In their remarks on the Inquiry, Messrs. Premchand Roychand express the opinion that the procedure adopted has its advantages although it may perhaps be considered in some quarters to be cumbrous. A single committee could not, they fear, have undertaken within a reasonable time to investigate problems so numerous and so intricate. And the scheme also has the advantage of utilising local knowledge and experience. Messrs. Premchand Roychand hope that, as a result of the inquiry, the Indian banking system may be welded into an organic whole. It consists at present, as they say, of a number of disconnected parts, each jealous of the other, and none entirely capable of taking a wide outlook on India's financial problems. They strongly favour the establishment of a Central Bank on the lines proposed by Sir Basil Blackett. They would also seriously consider the regulation by law of Indian banking on sound and proper lines; and they deplore the fact that indigenous banks are still few and far between—"the last link in a weak chain."

THURSDAY, MARCH 27, 1930.

THE ANGLO-EGYPTIAN NEGOTIATIONS.

The arrival this week in London of the Egyptian Prime Minister, Nahas Pasha, and the other members of the Delegation, who have come, with the authority of the Egyptian Chamber, to negotiate a treaty with Great Britain on the basis of the proposals made last year, is an event of first-rate significance in the history of Anglo-Egyptian relations. In both countries the result of the negotiations is being awaited with the keenest possible interest, and it would be no exaggeration to say that, in spite of the importance of certain world issues that are in the balance at the present time, the eyes of the world at large will be directed for the next few weeks on the proceedings in London. More than a dozen countries can claim to be directly affected by the course of the negotiations, in so far as the contemplated treaty between Egypt and Great Britain is a necessary preliminary to the modification of the capitulatory rights possessed in Egypt by a number of Powers; while, indirectly the final rounding-off of Egyptian independence cannot fail in time to influence the destinies of wide territories in Asia and, possibly, also in Africa. The audience, therefore, before which the two Governments will carry on their negotiations is by no means restricted to their respective countries, and the issues at stake are in some respects the concern of the world as a whole. If it is in the spirit engendered by this knowledge that the parties approach the task before them, their sense of responsibility will be correspondingly great. Petty questions that loom large in the atmosphere of party strife, can be safely ignored, and the real issues can be faced with a mutual tolerance and sympathy born of statesmanship. Both Governments, it so happens, can find something in common in the attitude of the peoples on whose behalf they will be negotiating. In Egypt there has been no lack of encouragement for insistence upon terms that, it is well known, no British Government can accept. In Great Britain a not-unimportant section of the community is genuinely alarmed at the prospect of a treaty which, as far as its present judgment and vision inform it, promises grave difficulties, if not actual disaster, for the British Empire. If, therefore, the negotiations break down, there will be no lack of satisfaction in either country, and it will certainly call for no diplomatic skill to render the conference abortive. Fortunately, both Governments have given an earnest of their desire for a successful issue to the negotiations: the British in the fact that it has pressed its proposals on the acceptance of the Egyptian people, the Egyptian in seeking formal authority from Parliament to negotiate a treaty. This attitude, there is reason to suppose, corresponds with the sentiments of the majority of the people in both countries.

One essential to the success of the negotiations between the Egyptian and British Governments is that neither should shut its eyes to the difficulties of the other's position. It may be taken for granted that Nahas Pasha and his fellow-Delegates have not undertaken the journey to England merely to append their signatures to a document that might have been drafted and signed in Cairo. The proposals made last year to Egypt do not wholly satisfy the Egyptian Government, and in the circumstances it is natural and fitting that it should have the opportunity of exploring the ground covered by the proposals and of understanding the conditions and policy underlying them. The reasons that have determined the precise character of the proposals, it may be hoped, will prove as cogent this year as they were nine months ago, and nothing but good need result from their restatement by the Secretary of State for Foreign Affairs and from their careful consideration by Nahas Pasha and his colleagues. The last thing that the British Government desired was any hole-and-corner arrangement; and it was on this ground that Mr. Henderson stipulated that the proposals formulated by him should be considered freely and fully by the Egyptian people. Circumstances in Egypt preclude the consideration by the electorate contemplated by the British Government; but Nahas Pasha has come with the form of mandate that commends itself to Egyptian public opinion, and there can be no question of his ability to secure the endorsement by the present Egyptian Parliament of any decision that he and his colleagues may take in London. It is open to them, therefore, after all the ground for an Anglo-Egyptian treaty has been thoroughly explored, to state boldly and authoritatively that they too realize that there is an extreme limit beyond which the British Government cannot be expected to go. On the other hand, they can, with equal confidence in the support of the present Egyptian Parliament, ignore the arguments by which the proposals that are to form the basis of the negotiations were reached last year and prevent the materialization of the treaty. The British Government, for its part, can be relied upon to appreciate any real difficulties inherent in the position of Nahas Pasha and his colleagues, and if any arguments can be brought to bear on the subject that did not occur to the negotiators a year ago, it is certain that these will be discussed in a friendly and conciliatory spirit.

Not the least useful feature of the negotiations that are about to be inaugurated is that they will compel the consideration of the question of Anglo-Egyptian relations from all possible angles by another set of Egyptian politicians. The attempt was made to compress the proposals for a treaty between Egypt and Great Britain into sixteen Articles, but it was found necessary to amplify these Articles by explanatory matter three or four times as long. In any public discussion of the proposed terms it is inevitable that one point or another should receive emphasis to the exclusion of a large number of qualifying considerations, and, as far as last year's proposals have been the subject of comment in Egypt, this drawback has been most noticeable. In the first place too little attention has been paid to the point that any treaty is to be subject to reconsideration at the end of a fixed period. Twenty-five years was proposed, and even if that term were not shortened, it would mean a very small space of time in the life of a nation, which would have every inducement to qualify for a complete revision of the terms at the end of it. Again, it may be taken for granted that in any public discussion in Egypt of the proposed terms more stress has been laid on the points in which they may have fallen short of Egyptian aspirations than on the necessity for Egypt to be able to command British support in a variety of directions. There can be little doubt that, without Great Britain's wholehearted and single-minded backing, Egypt will experience insuperable difficulty in securing the modifications that she desires in the Capitulatory system. The proposed arrangement in regard to the Egyptian police can easily be criticized, but it has yet to be shown whether by any other means foreign opinion can be sufficiently reassured to overcome all scruples regarding the modification of the Capitulations. Similarly it may be expected that many other matters will assume in England a different complexion from that which they wore in the pellucid atmosphere of Egypt, and the negotiations, we may hope, will not only result in the conclusion of a treaty, but will also consolidate a permanent understanding and good fellowship between the two countries.

*The Near and Middle East

From Our Own Correspondents.

Belgrade, March 20.

Relations with Bulgaria.

It would appear that really serious attempts are being made by the Yugoslav and Bulgarian Governments, aided by the diplomatic representatives of the Great Powers, to find a solution of the difficult problems raised by the outrages committed in Yugoslav Macedonia by people who are shown, according to the report made after careful investigation by the joint Yugoslav-Bulgarian Frontier Commission, to have come from Bulgaria. It is true that in the report a rather vague word, which can be translated either as "indicate" or "prove" that the authors of the crimes came from Bulgaria, was used; probably purposely, so as to leave a way out for the delegates of both countries on their return home; but in diplomatic circles in Belgrade it is considered proved that these outrages are the work of the Macedonian *komitajis*, whose organisation is well known to exist in Bulgaria and to exercise there tremendous influence. In fact it is generally believed that the Bulgarian Government is too weak to undertake any really drastic step to prevent the recurrence of such incidents by suppressing the *komitajis*. The Yugoslav Government must, however, protect its population and would, therefore, it is understood, welcome the intervention of the Great Powers to insure their safety. It is believed that France and Great Britain are prepared to support such action, if necessary.

Economics v. Politics.

The speech of M. Malinoff in the Sobranye in support of the ratification of the Pirot Conventions made a good impression in Belgrade. His view that Yugoslav-Bulgarian friendship is essential to the prosperity of both countries has powerful supporters here. Recent expressions of opinion on this matter by persons of great authority show that it is fully realised in Belgrade that the greatest need for Yugoslavia is a long period of peace with her neighbours, in which to solve her internal problems and develop her natural wealth. While the population of her provinces must be protected, the greatest care will be taken to avoid, as far as possible, disturbing relations with neighbouring States in the process.

An article in to-day's *Politika* shows that this attitude is to be taken also with regard to relations with Hungary. The writer points out the tendency in Hungary for a small but growing party to demand peace with her neighbours, in order to develop economic prosperity. He claims that such a proposition would meet with the warmest response in Yugoslavia. Thus economic need is gradually breaking down the barriers of political hatred and giving some little hope that Balkan affairs will not be for ever turbulent and unsettled.

Relaxation of the Censorship.

Journalists are greatly relieved to hear that new orders have been issued by the Government giving considerably greater freedom to the Press of Yugoslavia than has been allowed for the last year. The censorship has indeed tended to get stronger and more unreasonable, largely because no official was prepared to take responsibility for allowing even the least doubtful news to pass, as it was always safer for him to cut it out. Quite recently an important Belgrade paper, in which every item had already been passed by the Censor, was nevertheless confiscated as soon as it was printed, and often important news was held up for hours and even days. This state of affairs led to protests, especially from the representatives of the foreign Press, and it is probably as a result of these that the change is being tried. Greater freedom of the Press should lead to less rumour-mongering and so to greater confidence among the general public, which always tends to get restless when ill-informed in regard to what is happening.

Croat and Serb.

Following on the visits of Croat Peasants to Belgrade some months ago, a large party of peasants from the Shumadia, around Krushevatz, are now visiting Croatia, and have been given a most hearty welcome in Zagreb and the surrounding villages. It is stated that a large deputation of Croat peasants, mostly members of the former Croat Peasant Party, are preparing to come to Belgrade to pay homage to King Alexander and to put before him directly their desires and aspirations.

The Yugoslav Y.M.C.A.

The great progress which the Y.M.C.A. has made in Yugoslavia, with the aid of the British Y. M.C.A., is shown by the increasing number of delegates and distinguished guests who attend its annual banquet. This year the attendance reached 180, and the places of honour were taken by Prince Paul of Serbia and Princess Olga. Mr. P. H. Sitters, Organiser for Yugoslavia, in the course of his report, stated that the number of members had grown in the last two years from 400 to over 2,000, the number of centres from four to 22, largely as the result of the interest shown in the movement by the Yugoslav Royal Family and the help given by members of the Government.

BULGARIA.

Sofia, March 17.

The Governmental Crisis.

We have recently witnessed the complete check to all attempts to settle the Governmental crisis without provoking a ministerial crisis, and without involving, as a consequence, the normal political consultations which are engaged in such cases between the King and the heads of the different parties and parliamentary groups.

M. Liaptcheff tried first of all to remodel his Cabinet by a "triple entente" with M. Tsankoff, President of the Sobranye, and M. Bouroff, Minister of Foreign Affairs, who are, like himself, both heads of groups within the Governmental group of the Democratic Entente. He

did not succeed, M. Tsankoff refusing to enter a Cabinet of which M. Liaptcheff was the head, and thinking—he has said so publicly and clearly—that the gravity of the situation and especially of the economic crisis demanded a radical change in the Government of the country. This refusal still further strained the relationship between the President of the Sobranye and the President of the Council, and so, in a discussion on an interpellation on the economic crisis and the measures it involves, thirty-five members of the Governmental majority, with M. Tsankoff at the head, voted against the Government, which had made the matter a vote of confidence. Since that time, there has been an open rupture. But M. Tsankoff and his friends had not the courage to draw the logical conclusion of their vote—separation from the parliamentary group of the Democratic Entente—but preferred despite everything to remain within. The situation became very delicate. M. Liaptcheff, in an attempt to clear it up, summoned the Central Committee of the Democratic Entente, in which were present all the notabilities of the Party.

The Committee assembled: it listened to all opinions, first those of the three chiefs, then those of their friends, and after a deliberation which lasted a fortnight and which was at times very heated, it thought fit to close its session by the adoption of a resolution in which there is neither an expression of confidence, nor one of distrust, but in which the unity of the Party is, in appearance, restored. Actually, things remain as they were, and the Tsankovists insist on an entirely new Cabinet, the Bourovists want a reconstructed Cabinet, and the Liaptchevists, who are no longer absolutely hostile to the idea of ministerial reconstruction, rage against all those who wish to displace their chief. M. Liaptcheff, for his part, holds to his decision, made before the assembling of the Central Committee, namely, that he will attempt no change before the vote on the Budget, and that if Parliament disapproves of his policy, he must alter it.

The real reason why M. Liaptcheff postpones indefinitely the reconstruction of the Cabinet is that it is impossible in the present state of relations between the different groups and sections of the Democratic Entente.

The Government remains, then, always at the mercy of a surprise in the Sobranye.

The Bulgarian Church and Rome.

The Holy Synod of the Bulgarian Church, under the signature of its President, Mgr. Clement, Metropolitan of Vratza, has addressed the following message to the Secretariat of the League of Nations and to the Archbishop of Canterbury, on the subject of religious persecution in Soviet Russia:—

"The cultural and academic organisations of the capital of Bulgaria learn with profound grief of the persecutions to which Christianity and religion in general are submitted in Russia. They are disgusted at the inhuman action which seeks to destroy all freedom of conscience and to impose on all atheism and impiety, annihilating even the morality which constitutes the basis of all human society. The said organisations, in complete accord with the prelates of the Orthodox Bulgarian Church, unreservedly condemn the impious activities of the Soviet Government, in the hope that the love of religion and in general the freedom of conscience in all civilised countries will impel their respective authorities not to remain passive but to do all to obtain, by peaceful means, the cessation of the horrible extermination of believers and of the practice of religious faith in Russia. We hope for that, especially from the League of Nations and from all the heads of religious communities to whom we address ourselves most respectfully, urging them to take the necessary steps to this end."

The Macedonian Revolutionaries.

The last fortnight has been marked by notable incidents in the relations between Bulgaria and Yugoslavia.

A series of outrages have been made in Yugoslav towns near the Bulgarian frontier, notably at Kotchani, Kriva-Palanka, Pirot, and Strumitza, where fifty people have been wounded or killed. In consequence of these attacks the Yugoslav Government has informed the Bulgarian Government of its demand for the summoning of the Permanent Mixed Commission provided for by the recent Bulgaro-Yugoslav agreement to settle frontier incidents; then, the Commission having assembled at Tsaribrod, the Yugoslav delegates set before the Bulgarian delegates evidence to the effect that the authors of all these attacks had come from Bulgaria and were still in Bulgaria.

A *procès-verbal* was signed condemning the attacks and imposing on the Bulgarian Government the duty of proceeding to a minute inquiry on its territory and of displaying energy against the guilty and in general against the disturbers of order. This accusatory *procès-verbal* caused great commotion in Bulgaria, where one did not fail to observe that the Mixed Commission had overstepped its rights. The Bulgarians saw with astonishment that the Yugoslavs and notably the Serbs sought to exploit the application of the Bulgaro-Yugoslav agreements against the revolutionary Macedonians, and this tendency was emphasised by speeches of many responsible statesmen in Belgrade, asserting, for the first time since the War, that Yugoslavia had nothing against Bulgaria and that she believed implicity in the good faith of the Bulgarian Government, but that the Revolutionary Macedonian Organisation was in a case by itself, and that she hoped that all necessary measures would be taken at Sofia against this Organisation, in which she solicited also the moral aid of the two great disinterested Powers, namely, Great Britain and France. This was a plain setting of the Bulgarians against the Macedonians.

M. Liaptcheff, who is a Macedonian by birth, understood the manœuvre, and, not stopping at sentimental considerations, so strongly in evidence in the heart of the parliamentary committee for foreign affairs, he took the initiative, and, without waiting for Yugoslav *démarches*, soon followed by an Anglo-Franch *démarche*, he laid down a programme of energetic measures designed to master the revolutionary Macedonians and, if necessary, to apply the necessary sanctions against the guilty in the event of their being found on Bulgarian territory. These measures are very severe; they exceed all that has been done in this sphere up to the present. So that, when M. Neshitch, Yugoslav Minister, came to present the *démarche* with which he was charged by his Government, pursuit of the criminals had already been undertaken by a spontaneous act of the Bulgarian Government. Moreover, the representatives of Great Britain and France, Mr. Waterlow and Baron Guy de Fain, who had received from their Governments their instructions to support M. Neshitch's demands, already very moderate in tone and simply envisaging the arrest of the criminals who had taken refuge in Bulgaria and the taking of all dispositions wished for to prevent in future a recurrence of the sad events which constituted the attacks and aggressions in the frontier regions—these two representatives had no longer to interview M. Bouroff, Minister for Foreign Affairs, on the general situation between Bulgaria and Yugoslavia and on the best policy to be followed by each of the Balkan Powers with a view to general normalisation and pacification.

But one of the essential elements in this pacification and of this normalisation is the cessation of the exceptional régime applied to the Bulgarians of Macedonia and the giving to the population its rights and liberties as a minority, the sole means of dispersing all revolutionary activity.

There is reason to believe that the representatives of France and of Great Britain have told the Yugoslav authorities in the course of the *démarches* which they have had to make at Belgrade to counsel moderation and to stifle manifestations of Serbian chauvinism.

In any case, one can say without fear of contradiction that the new Bulgaro-Yugoslav crisis has been rapidly and completely conjured away.

THE PERSIAN GULF.

Bahrain, March 4.

The Pearl Market.

According to the latest news from Paris and Bombay the pearl market is still extremely dull. The reason is attributed in Paris to the absence of American buyers who have failed to come owing to the recent financial crisis in New York, and also partly to the increased production of cultured pearls. The Bahrain Government has laid down most stringent rules to prevent the import of cultured pearls, and in a test case, which excited considerable attention last year, a local merchant was fined Rs.3,000 and was forbidden to trade in Bahrain for two years on account of introducing two cultured pearls. Only two or three of the Bahrain merchants have sold their pearls this year, the remainder have sent their stock to Bombay and are still waiting to sell, though the market there has deteriorated instead of improving since the close of the season.

Electric Light.

The electrification of Manama, the capital of the Bahrain Islands, is nearing completion. It is expected to be in working order by the beginning of May. Electric fans and luxuries such as refrigerators will make a very great difference to the comfort of Bahrain during the summer time. The climate, though not quite the worst in the Gulf, is extremely unpleasant in the summer, excessively damp with scarcely any difference in temperature between night and day. The electric light is being installed by Callenders Cable Company, who have also obtained the contract for the electrification of Shiraz. A few local telephones have been put in, for the first time in Bahrain. The inhabitants are fairly sophisticated and many of them have met telephones abroad, but the *Badawin* from the mainland, who constantly come across to Bahrain, view this new invention with horrified curiosity.

Sea Road.

The two principal towns in Bahrain, Manama and Muharrak, both containing about 50,000 inhabitants, are situated on two different islands separated by a mile and a half of sea which becomes dry land, except for a deep narrow channel, at low tide. Work has recently been started on the construction of a causeway connecting the two islands. Eventually there is intended to be a ferry across the channel. The undertaking is a large one and will take several years to complete. The material used consists of various kinds of coral stone, which is cut off from the reefs that surround the islands. The people of the two towns, especially of Muharrak, have for many years desired this road.

Discoveries at Dareen.

The English flying men who are employed by King Ibn Saoud for new aeroplanes are at present quartered on Dareen Island off the Hassa coast, opposite Bahrain. Recently when clearing the ground for an aerodrome they unearthed a number of ancient funeral urns which contained human bones, broken earthenware, and in some cases bronze statuettes representing human figures. From the size and shape of the urns it appears that the bones were inserted separately, as the mouths of the vessels were too narrow to admit whole bodies. It is possible that these discoveries may provide another clue to the origin of the countless sepulchral mounds for which Bahrain is famous. Their date has never been definitely established, although it is commonly stated that they are of Phœnician origin.

Visit of King Ibn Saoud.

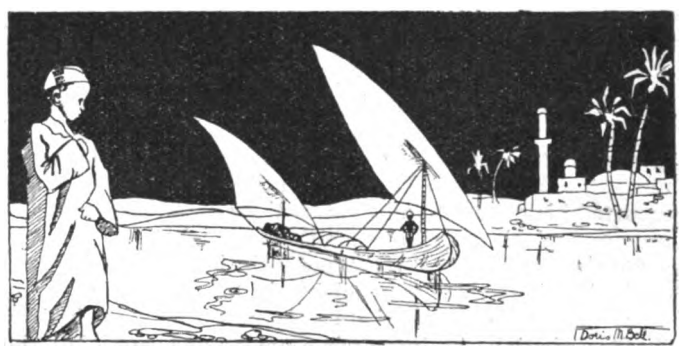
On February 25 King Ibn Saoud paid an unexpected private visit to Bahrain on his way back from his meeting with King Faisal of Iraq. He landed at Manama at noon, visited the venerable Shaikh Isa bin Ali, and then motored across the island to one of the coast villages, calling at Shaikh Hamed's country house on the way, and crossed to Ojair by motor launch. His visit was such a fleeting one that by the time that most people were aware of his arrival he had left Bahrain. Among the State officials who accompanied him was Shaikh Hafidh Wahba, lately appointed as his representative at the Court of St. James, who was formerly a master in one of the Bahrain schools. A distant relationship exists between the Khalifa Shaikhs, the ruling family of Bahrain, and the Al Saoud family. Some years ago, before the War, Ibn Saoud was a frequent visitor to Bahrain, where he received much kindness at the hands of Shaikh Isa and his family.

General News.

The *Id al Fitr* was celebrated on March 2 by Shiahs and Sunnis alike. During recent years there has been a difference of opinion between the two sects on the date of this festival, and the Sunnis have kept it one day earlier than the Shiahs—a distraction which caused considerable complications during the rest of the year. This year visibility was bad, and it was quite impossible to see the new moon on the first of March. The *Id* is regarded as a social occasion, and the paying of calls extends over a whole week.

The election for the Municipal Council of Muharrak took place at the end of Ramadhan and the Manama Municipal elections take place as soon as the *Id* is over. The public take considerable interest in the election and seats on the councils are very keenly contested.

Bahrain has been afflicted by an unusually large number of locust swarms this winer. They are said to have exceeded in quantities anything that has been known for the last fifty years, and a great deal of damage has been caused by them. Thousands of locusts perished in the sea, and for days the shore was lined with long brown mounds of dead locusts.



EGYPT.

Cairo, March 15.

The King and Queen of the Belgians.

The State visit to Egypt of the King and Queen of the Belgians has been a splendid success. From the time they landed from the Esperia in Alexandria to the moment they entered their special train to join at Beni Suef the Royal River Yacht Kassid Kheir, on which the Queen is paying a short visit to Upper Egypt, they have had a most enthusiastic reception from the people wherever they have appeared, a reception which has been as gratifying to their host as it has been to them.

The Belgian Sovereigns were received at Alexandria by Prince Omar Toussoun, as senior member of the Royal

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

Family representing King Fuad, by Yehia Pasha Ibrahim, the ex-Premier, and by Madame Yussef Aslan Cattaoui Pasha, both specially attached to their suite during the official visit. They were welcomed on arrival in Cairo at the station by King Fuad, the Ministers and the members of the Royal Family, and proceeded in a most picturesque State procession consisting of the full Bodyguard and open royal landaus—which, by the way, had only just arrived from Europe—through the city to Abdin Palace.

On the evening of their first day King Fuad gave a banquet followed by a reception, the brilliance of which could not be marred even by the unfortunate *contretemps* caused by a short-circuit which compelled the rest of the evening to be spent under the light of candles placed in improvised candle-sticks. (Your readers will probably remember that a similar *contretemps* took place at Bute House on the occasion of the banquet given two years ago by King Fuad to King George, but that on that occasion it was possible to repair very quickly the failure of the electric light.)

Next day the royal guests spent the morning at the Royal Library and the Arabic Museum, and the afternoon at the Horticultural Show and the Pyramids, where they took tea in the royal kiosk. On their return to the Palace they received the Belgian community, and in the evening were the guests of Wassif Pasha Ghali, Minister of Foreign Affairs, at dinner at the Zaafaran Palace, which had been wonderfully decorated for the occasion. Afterwards they were present at a gala performance of "Turandot" at the Royal Opera House.

The third day they visited the Museum and in the afternoon, while the King went to the Zoo, Queen Elisabeth drove out to Kubba Palace to call on Queen Nazli. She was received by Her Majesty, surrounded by the Princesses of the royal family, who each saluted her in the picturesque Turkish style. In the evening King Albert and Queen Elisabeth entertained King Fuad to dinner at the Belgian Legation, thus inaugurating in royal manner the new premises which have been built for that Legation. The banquet was followed by a reception which was very brilliant. With that the State visit concluded.

It is noteworthy that during the three days of their stay as his guests King Fuad accompanied the King and Queen of the Belgians everywhere. This was because, when the King of Egypt visited Brussels, King Albert escorted his guests to all the functions at which they were present and all the sights which they visited.

On the conclusion of the State visit the King and Queen of the Belgians went by special train to Alexandria, where they were the guests for two days of the Municipality. Besides visiting the interesting points and receiving the Belgian community, their Majesties attended a garden-party at Nuzha Gardens and a banquet given in their honour by the Municipality.

Their Majesties then proceeded by special train to Cairo, where King Albert left in order to proceed to-day by air on a short visit to Iraq. The Queen continued her journey to Beni Suef, where she embarked on the Kassid Kheir. On his return from Baghdad the King will rejoin the Queen in Upper Egypt, and at the conclusion of their tour Her Majesty will remain on in Cairo for a few days in order, amongst other things, to revisit the Cairo Museum.

The Queen is deeply interested in Egyptian antiquities. It may be remembered that, when the news of the discovery of the tomb of Tutankhamen was announced, Queen Elisabeth, accompanied by the Duke of Brabant, hastened out to Egypt in order to be present at the piercing of the wall concealing the sarcophagus chamber. In commemoration of her visit on that occasion and in recognition of her interest in Egyptology leading Belgians in Egypt subscribed for the creation of what is known as the "Fondation Egyptologique Reine Elisabeth" for the furtherance of research in the subject under the direction of Dr. Jean Capart, Conservateur of the Musées Royaux du Cinquantenaire in Brussels, where an excellent Egyptian section has been organised. Dr. Capart, who accompanied the Queen when she went to Luxor for the Tutankhamen ceremony in 1923, has been specially attached to the suite of their Majesties during their visit to Egypt.

The High Commissioner's Departure.

The High Commissioner, accompanied by the Hon. Cecil Campbell and Mr. Patrick Scrivener, left here this week for London in order to attend the forthcoming negotiations. Before his departure he conferred with the Governor-General of the Sudan, who, with Mr. MacMichael, Civil Secretary, came specially from Khartoum for four days for the purpose.

The Egyptian Delegation.

It is now definitely decided that the Egyptian Delegation will consist of Mustapha Nahas Pasha, Premier, Wassif Pasha Ghali, Minister for Foreign Affairs, Osman Moharram Pasha, Minister for Public Works, and William Makram Ebeid Effendi, Minister of Finance. It will be accompanied by Dr. Ahmed Maher, Chairman of the Parliamentary Finance Committee, as Financial Adviser, Mahmoud Bey Hassan, Royal Counsellor, as Legal Adviser, and Mustapha Bey El Sadek, Secretary to the Council of Ministers, as Secretary. The delegation will sail on the 20th by the Ausonia, and, spending a day in Paris, will reach London on the 26th. It is to be received by the Secretary of State for Foreign Affairs on March 27.

Y.M.C.A. IN YUGOSLAVIA.

The Annual Meeting and Dinner of the Y.M.C.A. in Yugoslavia, which was held this year in Belgrade on Tuesday, March 18, brought together some 180 members and friends from all parts of the country. Prince Paul, National President of the movement, and Princess Olga, President of the Women's Auxiliary, were present; also the British Minister, Mr. Nevile Henderson, the American Minister, Dr. Prince, and Mrs. Prince, Dr. Dindecker, German Chargé d'Affaires, and Dr. Strandtman, Russian Emigrés' Minister. The Prime Minister had hoped to attend, but was detained by State business. The Government was represented by Dr. Srskitch, Minister of Justice, who was accompanied by Dr. Bakotitch, Assistant Minister of Foreign Affairs, Dr. Matkovitch and Dr. Perovitch, Assistant Ministers of the Interior, and Mr. S. Hodjera, Chef de Cabinet. Amongst other guests were Bishop Dositey of Nish, Bishop Mardarije, Orthodox Bishop in America and Canada, Bishop Kalodjera of the Old Catholic Church, Rev. Nadsenior Agostom of the Reformed Presbyterian Churches, Dr. Thomas, President of the Y.M.C.A. in Zagreb, the President of the Municipality of Nish, and Mlle. M. Gruitch, Lady-in-Waiting to the Queen. A large number of University students were also present.

The proceedings were opened by the singing of the National Hymn, and Grace was said by Bishop Dositey. After dinner, Mr. P. H. Sitters, the National Advisory Director of the Y.M.C.A. in Yugoslavia, welcomed the Royal Guests and spoke of their practical interest in the work and of its rapid growth since their Royal Highnesses had become associated with it. He also spoke of the support given by the King and Queen to the Y.M.C.A., of which the Crown Prince Peter is the much-beloved Patron. Loud applause greeted his references to the Royal Family, which was repeated when he referred to the sympathetic and helpful attitude of the Prime Minister, General Zhivkovitch, and the Government and local authorities. Mention was made of the action of the Minister of Education in issuing instructions to school teachers to encourage their pupils to join the Y.M.C.A. The statistics showed that in two years the number of centres had grown from four to twenty-two, and the membership from four hundred to over two thousand. Requests for branches to be opened were constantly being received from all parts of the country, and provision was being made for training leaders who would be able to respond to these calls and help to extend the work.

Prince Paul, in a speech in which he referred to the value and importance of the Y.M.C.A., spoke of the great pleasure it gave both to him and to the Princess to welcome so many delegates from the different centres in Yugoslavia and of their keen interest in the development of the movement.

Speeches followed from delegates from Belgrade, Zagreb, Nish, and the Voivodina, and telegrams of loyal greetings were sent to the King and the Crown Prince. The lights were then lowered and the solemn and impressive Y.M.C.A. ceremony of "The Act of Union of Members" was carried out. The candles representing the five continents in which the Young Men's Christian Association is working were lighted by the Prince, who also lit the candles representing the 22 centres in Yugoslavia.

Mr. Arthur Sherburne Hardy, formerly United States Minister to Greece and Roumania, among other countries, died at Woodstock, Connecticut, on March 13.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, March 6.

Mr. Gandhi.

One might have the day's work to do in the Editor's room of a newspaper, in a bank, or elsewhere, and, having done it, go to a theatre, and witness a fantastic play, a skiey thing, some fabulous tree without roots in the earth. Our newspapers, this week, with their contrasts between the Finance Member's speech in presenting the Budget, and the subsequent debates, and the news of Mr. Gandhi's latest purposes and proceedings have presented just such a contrast as that one between the real day's work and the play at the theatre. Even had there not been that most striking of contrasts—the contrast between the spectacle of the highest legislative body in the country, bending all its intellectual energies to establish India's finances on a basis that will provide for the largest possible measure of constructive work throughout India, and the spectable of a man spinning out fantasticalities—there would have been others. There have been Princes discussing real problems in the Chamber of Princes, leaders of Parties in conference in Delhi over the thorniest of all India's problems—the communal question and the safeguarding of the interests of the minority communities; and in the speech of the President of the Upper India Chamber of Commerce there has been matter for real study. All the while Mr. Gandhi, just as if all India had no one else to watch, has been rehearsing his fantastic programme.

Act I, Scene 1.

"In the first scene of Act I," a professor of literature might say to a class a little inattentive on account of the sultriness of the weather, "an Englishman will be seen in the parade bearing a mysterious letter that might just as well have been sent to the Viceroy by registered post for 3 annas. 'What do you imagine is in Gandhi's letter?'—that is the question that the parade was intended to stimulate. A is to ask that of B, and C. to ask it of D. The dramatist a little fails here of his intended effect, inasmuch as A, B, C, and D think that they already know pretty well what was in the letter. At all events they would have been as inquisitive about any letter of Mr. Gandhi's sent to that address by the post. In the rest of this scene," the professor might go on, "Mr. Gandhi is seen leaving the *Satyagraha* Ashram on foot, his body as naked as usual. His devoted followers walk behind. They are all to walk across country. The dramatist's purpose here is to show what methods of political propaganda were in vogue in India in those old days."

The Chamber of Princes.

The debates in the Chamber of Princes came before the Budget speeches in point of time, so that there is that reason in their being dealt with first here. Inasmuch, too, as they are concerned with the relations between the Indian States and the Crown, between the Indian States and British India, which are much more enduring things than any tariff proposals dictated by the present condition of the textile industry, or any need to balance this year's Budget, the Princes' speeches are more important than the Budget debates. They make unusually interesting reading; they should be read in full. They deal with the most vexed of all the questions that have been before the Princes—the dictum of the Butler Report regarding paramountcy. How vexed a question that is this quotation from my newspaper will show: "The Nawab of Bhopal moved a resolution expressing the opinion that the grant of a *sanad* by the Paramount Power, confirming to a State the right which inherently belonged to it, did not entitle the Paramount Power to claim that it had created that right in exercise of its paramountcy, and that no *sanad* imposed by the Paramount Power could supersede previously existing treaties or engagements between itself and the State."

The Constitution of the Chamber.

In another resolution the opinion was expressed that the time has come to revise the constitution of the Chamber, with a view to enlarging its functions and powers. So far it has been a purely advisory body. It is held that it has more than justified its existence. As the Nawab of Bhopal, the mover of the resolution, pointed out, "by whatever criterion it might be judged, whether by the number and importance of its achievements, or the variety of its interests, or the help it had rendered to the Government of India, the success of the Chamber could not be denied, and the record of the past nine years justified the proposal that the powers and functions of the Chamber be enlarged." The question of the reconstruction of the Chamber is bound to come before the Round Table Conference.

Intervention.

The matter about which the Princes feel most keenly is the exercise of the right of the Paramount Power to intervene in the internal affairs of the States. I am not sure that there was not a misleading suppression or suggestion, marring the debate. The motion of the Maharaja of Bikanir was for "joint consultation on the question of intervention." The Viceroy said in one part of his speech: "It is commonly said that intervention should be closely defined and should be, as far as possible, divested of any discretionary element. With that as an academic principle many might be disposed to agree; but I would ask Your Highnesses to bear in mind that the kind of case that we all have in mind, or have before us—that of extreme misgovernment, or extreme financial embarrassment leading to misgovernment—that any of these cases do ultimately involve—and it is as well that this should be recognised—discretionary action." Those two read together do suggest that the subject of the debate was the exercise of the right of intervention by the Paramount Power in extreme cases only.

"Loggerheads."

I cannot help thinking, not only from things that were said in the course of the debate, as one by the Viceroy himself that I will presently quote, but also from my private communications with officials in two or three of the Indian States, that the Princes, in actual fact, had other instances of intervention in their minds. If it was so, that should have been made more clear. What the Viceroy said—the thing I was thinking of a moment ago—was: ". . . I could not help thinking that the implication of a part of the Maharaja's speech . . . would be that Political Officers and Rulers are perpetually at loggerheads. I need hardly say that I myself am proof against such misconception. I am only seeking to protect the public who might be left to wonder how any system, open to such difficulties, could work at all. I am sure that none of Your Highnesses would contest the statement that the relations of the Rulers with Political Officers and the relations of Political Officers with the Rulers had been in the main one of mutual respect and mutual friendship, and that each Officer and the Ruler with whom he served had probably a long period of friendship to their credit." None of their Highnesses would contest that statement? I am not sure myself that they would not *all* contest it. What one wants, I have made out, is for the Viceroy to distrust his Political Officers more, or their subordinates, and put his foot down upon them oftener; for the Viceroy, to see, more clearly than many have done, that British India is big and strong, and could afford to be more generous to the Indian States. It would *pay*, too.

The Budget.

It has been growing more and more apparent that I should have little or no space left in which to deal with the Budget. The actual detailed proposals regarding taxation will have been cabled to your side, and those specially interested in the matter will already be familiar with them. My part would be to collect opinion as to the economic principles involved, and to let you know what

Digitized by Google

they were. Those I have already asked have hesitated to say anything. They have said they must have more time to think over things. The anxiety of those whom the new Budget has made anxious is as to the extent to which it provides the Congress with powder for its malign propaganda. One view that I have heard expressed is that it provides mountains of it. Another view—this was the view, too, of the Commissioner of a Division; a senior official, that is—is that it provides very little. Where such a diversity of opinion is possible, men are to be expected not to want to express themselves too soon.

RURAL UPLIFT IN INDIA.

The preference of educated persons in India for an urban life and the growing demand for more rapid industrial development tend to draw the attention of distant observers from the rural areas and create a danger that the interests of nine-tenths of the population, who live in villages, and the 75 per cent. who are directly supported by agriculture may be seriously overlooked. It is not necessary to dwell at length on the defects of the rural situation to admit their existence and their gravity. For the most part limited in their outlook and unprogressive, burdened by debt and without a real aspiration to shake it off and hampered through their lives by both an inherited and an acquired weakness of health, the villager's primary needs, as Mr. C. F. Strickland, late Registrar of Co-operative Societies in the Punjab, rightly recalled in a paper read before the East India Association last week, on "What India Really Needs," are threefold. A higher standard of living, in respect of both physical and social requirements, is necessary to urge him to increase his income and his moral demands on life; a longer economic view alone can show him that real improvement (better crops, better cattle and freedom from debt) are possible if he will make an effort; and thirdly, a truer balance of character, proceeding from a wider education and knowledge, will render him a better and more intelligent citizen of his country.

"Several departments of Government," Mr. Strickland continued," are doing their best to help the villager forward and upward, and in recent years unofficial bodies have taken a more prominent part in the work. What is needed is a new organization of the village, a bond which the people will recognize as uniting them for common action, not compulsory as by law but voluntarily because they recognize its value. Without it the progress of rural India will continue to be slow, and many things will never be done because it will be too late, but in face of the swift changes which have swept over the country and are yet to come, I believe that the village community can be drawn together for its own good and for the advantage of all India, if Co-operation became the frame in which the professional and domestic life of the peasant is set."

Before referring to the several novel forms in which the co-operative idea had been expressed in India, and he emphasised that the movement was inevitably of wider scope and less directly economic than in Europe and America, the lecturer said that critics were struck, and sometimes unfavourably, by the fact that 90 per cent. of the Indian societies had credit as their sole or primary object. The fact was that in India few villages were ready to dispense with credit. The ordinary cultivator, whether owner or tenant, is already indebted to money-lenders, or is driven to them from time to time by crop failures and urgent ceremonial expenditure, and may suffer severely before he succeeds, if ever, in repaying what he has borrowed. In normal circumstances the peasant who becomes indebted to a money-lender for a sum equal to half a year's crop cannot hope to clear himself without sale of his land or without extraneous income from a son in service. He is a permanent debtor. By negligence or intention, through necessity or extravagance, the small landowner has entangled himself to such a degree with his creditors that he cannot escape by his own endeavours; and the essential point to note was that, so long as he remains thus afflicted, he will make little effort to improve his agriculture, will see no advantage in education for his sons unless to make them clerks in an office (and no advantage at all in education for his daughters) and will lack the spirit to keep those personal and domestic rules which, simple as they are, would make an enormous difference to his health. He does not care; why should he? He is in debt as his father was and as his son will be; no increase in the produce of his six acres can clear off the mass of principal and accumulated interest, so any extra income from extra labour or intelligence will only pass into his creditor's lands and will mean nothing to himself. Perhaps the greatest service which the co-operative credit societies, where they had functioned efficiently, had done to India was to alter this point of view.

From credit the road led forward to co-operation for the improvement of agriculture and cattle rearing; to the promotion of adult education and compulsory juvenile education; to compulsory arbitration; and to health work. "Better Living Societies" bound their members to comply with any rule laid down by the general meeting in respect of sanitation, thrift, or moral and social reform. Co-operation was the only means by which the peasants could be grouped and taught for their own benefit and for the making of India a nation.

Lord Linlithgow, who presided, called attention to the valuable efforts for rural betterment that were being made in several of the Indian States, notably in Mysore. He was firmly persuaded that co-operation was the best hope of rural India. He was confident also the "one-purpose" credit society must for many years remain the chief instrument for extending co-operation and for teaching its principles. It was impossible to overstress the importance of the educative function of co-operation and, therefore, the extent to which its virtue depended upon the health of the primary society. Quality, not numbers, was what counted; the basis of co-operative credit was character. He found weak spots when he was in India as chairman of the Royal Commission on Agriculture; and probably there were weak spots to-day. But these should not discourage fresh effort or shake confidence in the future of the movement. It was important to gain the sympathic interest and support of all in the public life of India.

Sir Selwyn Fremantle, Sir James MacKenna, Mr. H. A. F. Lindsay (Indian Trade Commissioner), Mr. O. Hayter, Professor R. K. Sorabji, Sir Louis Dane, and Sir Henry Lawrence also spoke.

SIR STANLEY JACKSON'S LEAVE.

The Secretary of State for India in Council has granted the Rt. Hon. Sir Francis Stanley Jackson, G.C.I.E., Governor of Bengal, leave of absence for urgent reasons of health and of private affairs for four months with effect from May 10, 1930, or such subsequent date as he may avail himself of it.

The King has been pleased to approve that Sir Hugh Lansdowne Stephenson, K.C.S.I., K.C.I.E., Indian Civil Service, Governor of Bihar and Orissa, shall act as Governor of Bengal during Sir Stanley Jackson's absence.

The King has also been pleased to approve that Mr. James David Sifton, C.S.I., C.I.E., Indian Civil Service, Member of the Executive Council of the Governor of Bihar and Orissa, shall act as Governor of Bihar and Orissa during Sir Hugh Stevenson's absence while acting as Governor of Bengal.

THE NEAR EAST AND INDIA understands that Sir James Crerar, Home Member of the Government of India, is shortly proceeding on six months' leave of absence out of India.

INDIA IN 1929.

For a long time past Messrs. Premchand Roychand and Sons, the well-known Bombay firm of financiers, have published yearly a well-arranged and comprehensive review of Indian commercial, financial and industrial affairs. The issue for 1929 is, we notice, well up to the high standard of previous issues, giving as it does a more or less complete and interesting summary of the principal events of the year. Messrs. Premchand Roychand look at these events strictly from the standpoint of finance and commerce. They avoid politics; and their review is in no sense of the word a political pamphlet.

As was to be anticipated in a Bombay publication the cotton industry and its troubles come in for a good deal of attention. The authors summarise the labour difficulties with which the industry had to struggle last year; and they express a hope that the work of the Whitley Commission, the Chairman and members of which are on their way back from their first visit, may ultimately tend to bring about a permanent improvement in the relations between employer and employed. But they emphasise their view that labour is not the only disease afflicting the cotton industry. They would give an increased measure of protection by raising the duties on foreign cloth—a proposal which is of course now before the Indian Central Legislature. And they have some hard things to say about that much-talked-of method of company management which is popular in India, and which is known as the managing-agency system. The leading features of this method of controlling joint-stock companies have been explained in previous issues of THE NEAR EAST AND INDIA, and they need not therefore be repeated here. It will be sufficient to say that in Bombay, as in Calcutta and the other Indian industrial centres, this system prevails in respect of all classes of companies. Messrs. Premchand Roychand are very definitely of opinion that, as a system, it stands condemned, and that it should be forthwith abolished. They comment with some severity on the recent sale to an American syndicate —without the consent of the ordinary shareholders—of a half share in the managing agency of a big group of well-known Bombay industrial concerns. They say that managing agents can raise their rate of commission, can promote new companies, and can buy their shares and debentures through the votes of preference shareholders. It is their opinion that what is wanted is an amendment of the Indian Companies Act designed to protect the rights of the ordinary shareholders; and they believe that such an amendment will be found to be incompatible with the managing agency system which will consequently have to go.

We note that the other side of this picture was presented by Mr. H. P. Mody, the Chairman of the Bombay Millowners' Association at the annual meeting of that body on February 25. Mr. Mody admitted that few people had much that was good to say of managing agents. Nevertheless he claimed that in the Bombay cotton industry managing agents had voluntarily given up Rs.18 lakhs by way of commission, and had incurred personal losses of Rs.85 lakhs as a direct result of financing the mills under their control; and that they were faced with a further loss of Rs.34 lakhs. Furthermore, Rs.2 crores which had been advanced by managing agents had had to be converted into capital as a result of reconstruction schemes. And all this was, he added, apart from the fact that a large number of agency firms had advanced considerable sums at or below Bank Rate, and in a few cases without any interest. In his opinion these figures show that managing agents have their uses, and that they are not quite the parasites on the industry which in many quarters they are represented to be.

As we have already remarked, the managing agency system is general throughout India, and obviously therefore other commercial centres besides Bombay would have to be considered before any amendment of the Indian Companies Act could be taken in hand. In Calcutta, Rangoon, Madras and elsewhere, all classes of companies are controlled on the managing agency principle; and, so far as is known to us, there has never been any very serious cause for complaint. There has been criticism, of course, mostly on the ground that the system leads to a complexity of interests being made subject to a single control. But, on the whole, it may be justly claimed, we think, that the system has worked well, and has given good results. It must be remembered that Indian industries are still in an early stage of development; and it certainly seems to be the case that many of them would never have been started at all but for the existence of the managing agency system. Messrs. Premchand Roychand may of course be right in their contention that the system has now outlived its purpose. But this point clearly cannot be established except by an exhaustive inquiry extending over the whole country.

Messrs. Premchand Roychand strongly, and rightly, condemn the recent Lahore Congress for its foolish "repudiation" proposal. As they put it: "the idea of repudiation always appeals to half-baked, or ignorant minds. The declaration of certain politicians at Lahore in favour of repudiating the National Debt, and the efforts of some people to expropriate, under the guise of legislation, established industries led to a feeling of insecurity such as we have not previously witnessed in India in our time." The firm have also a wise word or two to say on the question of building up a mercantile marine for India. There is, they mention, general agreement that in due season the coastal trade should be reserved to companies with a rupee capital, with their headquarters in India, with an Indian share of the management, and an outlet for Indian seamen in the manning of the ships. But they wisely go on to say that "this must be reached through the development of an Indian mercantile marine, not by the expropriation of those who have carried on these services for three-quarters of a century. Credit and confidence are very delicate plants; they cannot be uprooted without prejudice to every stable interest in the country."

INDIA'S POLITICAL CRISIS.*

An unbiased non-partisan study of the political situation in India, such as this book professes itself to be, by an American Professor, ought to have considerable value as well as interest. Early doubts as to the competence of the claims thus made are aroused when we find a still recent Indian Viceroy referred to as "Lord George Curzon," and his administration equally travestied by being described as "his destruction of Calcutta's municipal government, and his attempts upon that of Bombay and Madras: his restriction of higher education in the Universities: his partition of Bengal to throw a sop to the Muslim supporters." The trend of the writer's prejudices is shown by his reference to "India's sister republics," and by his constant comparisons of the Congress with the early conventions in the American Revolution. It is not quite clear whether Mahatma Gandhi or Motilal Nehru is, in his opinion, nearest the character of Washington: but he has no difficulty in finding Indian orators of the type of Patrick Henry. The book is, in effect, an account of the meetings of the National Congress, and of all its attendant conventions and committees in December 1929 at Calcutta. Small mistakes of fact are not unnaturally numerous. A more serious defect is his apparent acceptance of the fully representative nature of the assemblies. He seems to assume that the 6,000 members of the Congress were as democratically elected as the Fathers of the American Revolution, though he indicates that the sole qualification was the payment of one rupee per head. While he states that the champions of States Rights

* "India's Political Crisis." By William I. Hull. (Baltimore: The John Hopkins Press. London: Humphrey Milford. 9s.)

Digitized by Google

were fully represented, he seems to refer to those who passed mild resolutions in favour of the subjects of Indian States. No mention is made that the Rulers of these States were entirely absent, or that the great mass of the Muhammadans held equally aloof. The author seems in fact to have been deeply impressed, if not overcome, by the sound and fury of the Congress. Though his account of the daily discussions indicates clearly enough the irreconcilable divisions that underlay the resolutions, he makes no attempt to examine the practical effect and applicability of these resolutions. It would, for example, be interesting to find the effect which has, in the past year, been given to the resolutions enthusiastically passed for the abolition of caste, the removal of untouchability, and, above all, for the voluntary contribution by every supporter of the Congress of five per cent. of his income. Still less does the author attempt to inquire into the fitness of Indians immediately to take over the entire government, including defence, without danger or dislocation. His forecast of the future seems to include a violent attainment of independence, if self-government is not immediately granted. The book is, doubtless, intended principally for American readers. It seems a pity that the problem should have been set out for them in the terms of the American Revolution, instead of being examined critically, though with all possible sympathy, in the conditions of actuality. P. R. C.

"INDIAN AFFAIRS."

"Indian Affairs," the first number of which makes its appearance this month, has come into existence because of "the absolute necessity of India's connexion with India for her orderly progress and advancement, and also of the need for presenting every shade of Indian thought to those in Europe and America, and specially in the United Kingdom, who take a genuine interest in the advance of India in the path of full responsible government, and in all her endeavours in the field of science, literature, art, industries, social nd civic welfare." If it assists public opinion outside India to a fuller and more correct appreciation of responsible Indian thought and sentiment, and a more sustained and intelligent interest in Indian affairs as a whole the review will have more than justified its existence.

The first number of the new quarterly shows that the aim of its distinguished founder and Editor to present the predominantly Indian view of present-day problems soberly and without political bias or prejudice has been faithfully preserved. Sir Albion Banerji himself contributes an interesting article on "Reorientation of Indian Politics," in which he contends that the administration of British India, by pursuing the rigid idea of efficiency and following principles and ideas which were applicable more than a hundred years ago, has now become in many respects unsuited to existing conditions.

Sir Phiroze Sethna deals with two vital questions affecting Dominion Status—namely, the Indian States and defence. Looking forward with confidence to the day when the two Indias will form a strong and progressive Federation carrying out a common national destiny in the spirit of perfect union and co-operation he does not think that any objection can reasonably be take to the conditions which the Princes naturally and rightly regard as essential to their co-operation. While admitting the force of the contention that if India wants Dominion Status she must be prepared to assume the responsibility for her national defence he considers that the grant of responsible government, not the adequacy or efficiency of national defence, should be the first consideration.

Other interesting contributions include articles by Sir Hari Singh Gour on "Marriage Reform in India"; by Professor P. J. Thomas, on the "Readjustment of the Indian Financial System"; by Mr. M. E. Watts, lately Prime Minister of Travancore; and by Mrs. Hensman on Women's Education in India.

CORRESPONDENCE

"INDIGENOUS RULE IN INDIA."

To the Editor of THE NEAR EAST AND INDIA.

Sir, While I should like to thank your reviewer, P. R. C. for his remarks upon the political aspects of my brochure (in your issue of February 6), I must enter a protest against his criticism of its historical foundations. Indian history is no mere hobby of mine: I am a professional historian: and I think it due to your readers to correct some of the errors into which P. R. C. has unwittingly fallen.

He writes: "Mr. Rushbrook Williams himself admits that the village was a Dravidian and perhaps also a Kolarean institution entirely foreign to Aryan ideas." I made no admission, I merely stated facts; but I certainly never said that the village was a foreign conception to the Aryan-speaking peoples. He continues: "The village system, *therefore* (my italics) has retained its strength only in the Dravidian South, and even there its continuance has been largely due to the absence of strong government." At such reasoning, Sir, I can only "stare and gasp." Does P. R. C. think that Dravidian culture has been confined always to the South? Does he seriously contend that the village community is stronger in the South than in Central and Northern India? Surely, he himself supplies the answer to his own rash statement in his confession that the Bombay Government has failed, where the Punjab Government has succeeded,in reviving the Panchayat system. The facts are precisely contrary to his allegations. The village community is more alive in the North than in the South: just as it is stronger in most Indian States than in British India. The explanation has nothing to do with strong or weak government: as a matter of history governments have usually been "stronger" (if by strong, P. R. C. means effective) in the peaceful South than in the harried North. It is a question of administrative centralisation, not of strength. We British have nearly killed the village as a unit of local government: the Indian States have not.

This brings me to another point. P. R. C. has fallen into the modern error of imagining that the Indian States were merely constituted out of fragments of the Mughal Empire. It would be more correct to say that the Mughal Empire was constituted out of the Indian States. Can we allege that modern Europe consists merely of fragments of the Holy Roman Empire? In each case, many of the constituent units were antecedent to the Imperial régime, and in each case, with certain modifications, they survived its dissolution. The Mughal Empire was in essence a kind of federation, held together by armed force at the top. The Emperors were not "lords of the soil" except, in a restricted sense, of the Khalsa lands. What we loosely call the Mughal Empire consisted first of directly administered areas—a very small population of the whole; secondly, of assignments; and thirdly of the territories of the chiefs who owed tribute, fidelity, and military service. The "soil" did not interest the Emperors; they were concerned only with the revenues. They exercised, through their local representatives, a general supervision over the second category of territory; and a somewhat more detailed control over tne first. But over the third category they neither claimed nor exercised any right of interference at all, so long as the agreed obligations were discharged by the chief. When Auranzeb was induced by religious intolerance to destroy certain of his constituent kingdoms, he laid an axe to the root of the whole fabric, which shortly crashed into ruin. But this process did not create the majority of the Indian States; it merely snapped the tie between them. Many of the existing States can trace an unbroken continuity, as units of administration, to the Middle Ages; and it is significant that Hyderabad and the great Maratha States (which are really incipient empires in a condition of arrested growth) are agglomerations of more ancient units which still preserve a distinguishable identity.—I am, Sir,

L. F. RUSHBROOK WILLIAMS.

PERSONAL AND GENERAL

TO-DAY

March 27, 1930 (New Style).
March 14, 1930 (Old Style).
Shawall 26, 1348 A.H., of the Muslim Calendar.
Adar 27, 5690, of the Jewish Calendar.
Farvardin 7, 1309, of the Persian Calendar.

Lord and Lady Melchett returned to 35, Lowndes Square on March 24 from South Africa.

The Earl and Countess of Munster left England on March 20 for Egypt until the end of April.

Sir Anton Bertram gave a lecture at the Forum Club on March 21 on "Cyprus."

Sir Percy Loraine arrived at the Carlton Hotel on March 19 from Paris.

Lord Ruthven arrived at Marseilles on March 21 in the P. and O. s.s. Kaisar-i-Hind from Bombay.

Lord and Lady Stanley will return to Holwood Park, Keston, Kent, on March 29, from India.

Viscount Gage returned to 6, Buckingham Street on March 25 from India.

Lady Lovat left London last week for Greece, and will be absent from England for about three weeks.

Sir John and Lady Stavridi, who left London recently for abroad, will return after Easter.

Mr. and Mrs. Ernest Farquhar returned last week to 55, Eaton Square from Egypt and Rome.

Field-Marshal Viscount Plumer and Viscountess Plumer are expected at 22, Ennismore Gardens at the end of this week from Santa Margherita.

Owing to ill-health, Miralai T. Chetwynd Bey, of the Egyptian Frontiers Administration, left Port Said on March 9 by the P. and O. s.s. Maloja for three months' Home leave.

Lady Chetwode and Miss Penelope Chetwode arrived at 44, Grove End Road last week from India. General Sir Philip Chetwode, Chief of the General Staff, India, will join them in May.

Sir George and Lady Anderson, Sir Laurence and Lady Philipps, Sir Edward Barry and Lady Rutledge arrived at Marseilles on March 21 in the P. and O. s.s. Kaisar-i-Hind from Bombay.

Prof. L. F. Rushbrook Williams, who attended the recent session of the Chamber of Princes held in Delhi, India, arrived at Marseilles on March 21 in the P. and O. s.s. Kaisar-i-Hind, and returned to 32, St. James's Court, Buckingham Gate, on March 23.

Mr. P. S. Scrivener, who left Cairo on March 13 with the High Commissioner in order to attend the negotiations regarding the proposed Anglo-Egyptian Treaty in London, has been appointed Second Secretary to the British Legation in Budapest, which appointment he will take up as soon as he is able to leave England. Mrs. Scrivener also left Egypt the same day en route for London.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M L. Maxwell, Christchurch, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R. Deccan. Fees 40 guineas per term, including all necessary extras with reductions for sons of Clergy and Officers. Supervised holidays arranged for boys from abroad, at seaside or elsewhere.

Major Gilmour, President of the Quarantine Board, left Egypt in the middle of this month for London, where he is representing Egypt at the International Congress of Aviation, when the question of arrivals and departure of aeroplanes and seaplanes at and from suspended towns will be discussed.

JAAFAR PASHA'S DEPARTURE.

Jaafar Pasha al Askari, Iraq Minister in Great Britain, left London on March 24 to take up his new appointment as Minister of Defence in the Cabinet of Nouri Pasha al Said. He is travelling *via* Constantinople, Aleppo, Nisibin, and Mosul.

Among those who were present at Victoria Station to bid him farewell were Dr. Drummond Shiels, Sir Samuel Wilson, Sir John Shuckburgh, Lt.-Col. H. V. B. de Satgé, Sir Arnold Wilson and other personal friends, both English and Iraqi.

THE EGYPTIAN DELEGATION.

Mustapha Pasha Nahas, Prime Minister of Egypt, accompanied by Wassef Pasha Ghali, Minister of Foreign Affairs, Osman Pasha Moharram, Minister of Public Works and Makram Effendi Ebeid, Minister of Finance, is due to arrive in London on the evening of March 26 (at a time when this issue of THE NEAR EAST AND INDIA will be in the hands of the printers). The Egyptian Delegation will stay at the Hyde Park Hotel. By a happy coincidence the Egyptian Ministers reach London on the anniversary of King Fuad's birthday, and will, it is hoped, be able to attend the reception given in the evening of March 26 at the Royal Egyptian Legation by the Chargé d'Affaires, Dr. Hamed Mahmoud.

YUGOSLAV PAINTING AND SCULPTURE.

An exhibition of Yugoslav Painting and Sculpture will be held at the National Gallery, Millbank, from April 10 to May 31. It has been arranged by the Yugoslav Society of Great Britain and the Anglo-Yugoslav Society in Yugoslavia. Last year, it may be remembered, exhibitions of British art were held in Yugoslavia.

GENERAL PANGALOS.

The trial of General Pangalos and of M. Vogopoulos, Under-Secretary of State for the Interior in the Dictator's Government, was begun in Athens on March 17 before a Committee of the Greek Senate. M. Vogopoulos is charged with having accepted on February 11, 1926, a tender of 3,925,000 drachmæ for the lease of a casino at Eleusis, when another firm offered seven million drachmæ. General Pangalos is accused of having influenced M. Vogopoulos in the commission of this offence.

Where to stay in the East

THE WEEK AT HOME

London, Tuesday Morning.

The Death of Lord Balfour.

The death of Lord Balfour last week overshadowed almost everything, even the Liberal-Labour pact and the crisis in the Naval Conference giving way to it. This ceding in public interest was in itself an indication of the stature of the man.

And yet—what did the present generation think of Lord Balfour? Admiration, of course, he received, and from some a sentiment of reverence. But did he really mark the age, did he make permanent impression? The general answer seems to be: No. It is commonly said that he was too ineffectual, too dilettante, too *récherché*, if you like. Courage he had in abundance, yet he was no typical fighter. Convictions he appeared to entertain, but his career would suggest that these were not difficult to overcome. On his intellectual power there is, happily, no disagreement; it was very considerable. One likes the final appreciation of Mr. Baldwin in the House—that Lord Balfour was "the last of the Athenians."

One might say that he was charming to the individual—as what man whose favourite composers were Handel, Bach, and Beethoven could fail to be?—but that as a publicist he may be remembered as the most clever of all the ineffective men who have graced the House. This thing and that thing he did and did supremely well, but can it be said that his career was all of a piece? The honest homespun of, say, Mr. Asquith or of Mr. Baldwin, was remote from him; the quick opportunism of, say, Mr. Lloyd George or of Mr. Ramsay MacDonald, must have been distasteful, though he did not violently oppose it; perhaps it was the dialectics of your Churchills and your Birkenheads which most pleased him. For one felt that, however comprehensive his grasp of any given problem was, it was not so much the problem as the parliamentary game played around that problem which fascinated him.

All these meandering words, however, may merely mean that he was so many-sided that it is impossible yet to "place" him. And as he would certainly deprecate, with infinite courtesy and grace, any attempt to do so, perhaps one had better leave it at that.

Progressive Politics.

But a few weeks ago all tongues that had (I was just going to say!) time on their hands were wagging with talk of an early General Election. Forecasts were already being made, although everybody seemed to be agreed that no party was really ready for an election. But as the Liberals appeared to be determined to defeat the Government on the Coal Bill, an election seemed imminent.

But whatever the Liberals may be, they are not fools. And so a compromise has been reached between them and the Government. They are not going to oppose what one had supposed they considered an iniquitous measure (putting up the price of domestic coal), but are, on the contrary, to support the Government by abstaining from voting! Why this *volte-face?*

The conditions of the compromise are not yet known. It is usually supposed that Mr. Lloyd George made some stipulation for electoral reform, but the agreement may be merely the result of wishing to preserve a united front with the Labour Party on the fiscal question. If, it is argued, the next election is to be fought on the question of Protection, it is absolutely essential for the Labour and Liberal Parties to come to an understanding. And so the Liberals have become the allies of the Labour Party.

How long this strangely-arrived-at pact will survive it is impossible to say. The personal relations between Mr. MacDonald and Mr. Lloyd George have never, in the public estimate, been marked by any degree of cordiality, but if the present saving of the Government' position does not soften the Prime Minister's heart, he must, indeed, be a man of steel. In any case, the guns of the Conservatives are spiked by the manœuvre; yet quite conceivably they are not sorry that prospects of an election have been postponed for another two years.

The Naval Conference.

I have not touched upon the Naval Conference before in these Notes, because it is mainly a foreign matter which does not yet greatly affect our domestic affairs. But there is now such unanimity of feeling upon its probable failure that a word or two can properly be devoted to it. No one appears to be disposed to blame the Government for the unhappy result of stirring up fresh distrust between the nations; in fact, everyone, I think, except a few fanatics, is sorry that the Conference looks like petering out.

Of course everyone has his different scapegoat for the failure of the Conference, but that sort of complaining leads nowhere. It is particularly unfortunate that the French-Italian rivalry cannot be omitted from consideration, because a three-Power agreement which left the two Latin nations out would actually result, not in the reduction of armaments here, but merely in their limitation, and would mean an increase in America!

Depression and Hope.

There is now a curious mixture of depression and hope in the air. On the one hand, you may see the awful figures of unemployment rising, rising, rising: last week they were 1,563,800. You can hear everywhere dismal tales of lack of confidence, lack of money, lack of prospects of trade. Hopes that had been reposed on the ability of a Labour Government to do something radical to improve the position seem to be dissipating, and (in the minds of these pessimists) there is hardening a conviction that time alone will cure our difficulties.

On the other hand, there is a chorus of delight at the existence of cheap money. The dropping of the Bank Rate last week had a most heartening effect. People began to take their money out of their deposit accounts, and to invest again in Government securities, and there is a belief, at any rate among financial circles, that in a few months people will be putting their money into industrials again. In the opinion of these optimists we have turned the tide.

I do not remember before such a striking opposition of two currents of thought. Without pretending to any deep knowledge of these things, I should discount the first, depressing view, as being, in the main, that of industrialists pure and simple, and also that of the second, encouraging view, as being in the main that of financiers pure and simple.

BRITISH SCHOOL IN IRAQ. GERTRUDE BELL MEMORIAL.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—We would ask your permission to announce in your columns the result of the Appeal which was issued last autumn for the British School of Archæology in Iraq (Gertrude Bell Memorial) Appeal Fund.

So far the Appeal has brought in a total sum of £8,433. This includes, besides donations received in cash, a gift of Stock, and promises of donations payable by instalments, and is in addition to the legacy of £6,000 bequeathed by the late Gertrude Bell to the Trustees of the British Museum and held by them upon trust to pay the income to the School when it was established.

While we are grateful to the numerous donors for the considerable measure of success which has already been achieved, the Fund is still short by £5,567 of the total £20,000 which, as announced at the public meeting held on November 8, is the minimum required.

There must be many people who are interested in Iraq or in archæology or who are admirers of the late Gertrude Bell and whom we have not been able to approach. With your permission we accordingly renew our Appeal for further donations to make up at least the £5,567 required to enable the School to be started.

We would remind your readers that the Scheme was originated by the late Gertrude Bell, and has the approval of the Trustees of the British Museum, the High Commissioner for Iraq and the Iraq Government. The Royal Asiatic Society, the Central Asian Society and the Royal Geographical Society have not only expressed their approval of the scheme but have also supported it by their donations.

Donations should be made payable to the British School of Archæology in Iraq (Gertrude Bell Memorial) Appeal Fund, and addressed to the Honorary Secretary at 17, Radnor Place, London, W.2.—We are, etc.,

P. Z. COX, *Chairman.*
H. O. MANCE, *Hon. Treasurer.*
E. BONHAM-CARTER, *Hon. Secretary.*

March 22, 1930.

NEW IRAQI CABINET.

A new Cabinet was formed in Baghdad on March 23. It is as follows:—

General Nouri Pasha as Said ...	Prime Minister and Foreign Affairs.
Jamil Beg Madfaie	Interior.
Ali Jawdat Beg	Finance.
Jamil Beg Baban	Justice.
General Jaafar Pasha al Askari	Defence.
Jamil Pasha ar Rawi	Communications and Public Works.
Hajji Abdul Husain al Chalaby	Education.

NOTES AND NEWS

170, *Strand, London, W.C.2,*
Tuesday Morning.

Fertilisers in Cyprus.

It is significant of the efforts that are being made to improve agriculture in Cyprus that in the past five years there has been a great expansion in the use of chemical fertilisers. From 1907 to 1919 the imports of fertilisers ranged from nothing to 19,400 cwt. An improvement set in in 1920, and then in 1925 the imports rose to 182,967 cwt. of the value of £48,134. Last year they were 308,963 cwt. of the value of £83,103. The British share of the trade is, unfortunately, small; being in 1929 no more than 14 cwt. of the value of £11 as against 932 cwt. of the value of £635 in 1928. Greece is the chief exporter to Cyprus, and indeed has a vital monopoly of the trade, but America, Roumania, Bulgaria, France, Germany and Holland all had totals for 1929 which put the meagre exports from Great Britain completely in the shade. Obviously with the expanding demand for fertilisers the Cyprus market deserves special attention, and it is to be hoped that in future years the British share of the trade will become much more substantial.

The Sudan's Trade in 1929.

The statistics of the Sudan's trade last year via the Red Sea ports and Wadi Halfa make a very satisfactory showing, particularly when account is taken of the depression from which most of the markets have been suffering. With the exception of re-exports, which are slightly down, every one of the principal trade headings shows a more or less substantial increase, and the volume of trade at £E13,729,522 is up by £E1,259,810. Admittedly a trade totalling thirteen millions is small, but for its significance to be appreciated the total must be compared with the trade of the Sudan only a few years ago. The tendency since the War has been for the total to mount steadily upwards, and the increase that has taken place in the past decade is at once the measure of the improvement in the general economic position and an indication of the extremely hopeful outlook for the future. It would be going too far to say that cotton has made the Sudan, but the present trade figures undoubtedly reflect the extent to which the country is at present dependent on this valuable crop. As the country develops it is to be hoped that the basis of its economic structure will be broadened by the addition of other important crops, for, however satisfactory the prospect may be at the moment it must be realised that there are risks attaching to undue dependence on one crop, especially on one so subject to price fluctuations as cotton.

Features of Commerce.

Some points in the year's trade calls for comment. Both Government and public imports show an increase, Governments imports being £E40,439, up at £E2,085,367 while public imports are £E316,646 up at £E4,520,968. The explanation of the rise in Government imports is to be found in the increase in the value of the imports of machinery, which totalled £E365,505 or £E105,853 more than in the previous year. Machinery for the Gebel Aulia Dam, locomotives, and aeroplanes provided substantial contributions to this total. For the time being the Gebel Aulia project is in a state of suspense, but as soon as political developments make it possible to proceed with the work further important requirements in the way of machinery will no doubt help to swell the import total. In public imports a significant feature was the substantial increase in the figures for cotton piece-goods, the imports of which were valued at £E1,229,579 as against £E985,810 for the previous year, or an increase of 24.7 per cent. Another interesting feature was the further increase in the imports of motor cars, cycles, etc., the value of the trade being £E196,125, or an increase of £E20,919. With the steady progress in road construction that is going on in the Sudan the imports of motor vehicles may be expected to show an increase for some time to come. Out of the total export trade of £E6,499,425 it is to be noted that cotton and cotton seed represented £E4,989,510, or roughly 76 per cent. That indicates very plainly the importance of the cotton crop to the country at the present time. The only other aspect of the export trade of outstanding interest was the large increase in the price of gum. Thus the approximate unit value of hashab was £E43.2 per ton as against £E32.4, bleached being £E88.8 as against £E56.1, and talh £E27.5 as against £E22.1. The effect of this was that while there was a fall of 5,990 tons in the exports of gum the difference in value was no more than £E36,697.

A Banker on Tariffs.

At the meeting of the Eastern Bank, the Chairman, Mr. Haskell, dealt with the general outlook with a refreshing frankness which is not always forthcoming at bank meetings. Referring to recent tariff developments in India and Australia he pointed out that the policy of the protection of local industries is going on all over the world. In the circumstances he expressed the opinion that the policy of Free Trade pursued by the United Kingdom, must be questioned, and said that it is becoming imperative that the world example should be followed and that our industries should be protected to the utmost. He gave figures showing the enormous drain on our resources entailed by the imports of foodstuffs, and declared that there was no doubt that we are living on our capital, a development which must not be allowed to continue. The dear food slogan, he explained, was a mere bogey, but unfortunately it will be difficult to bring that fact home to the mass of the electorate in whom the spirit of Cobdenism is still very strong. Still, if economic conditions continue as they are at present it may be that the stress of circumstances will force home the advisability of a change of policy.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 25.

Business in the Stock Markets this week has been largely monopolised by gilt-edged stocks which have risen with great rapidity, thanks to the further cheapening of money rates. The reduction in Bank Rate on Thursday, to 3½ per cent. makes the sixth change in as many months, and it is not beyond the bounds of possibility that before very long a 3 per cent. rate will be in force, seeing that the margin between the official minimum and the market rate of discount for three months' bills is still over 1 per cent. A period of cheap money will, of course, be very favourable for the Chancellor of the Exchequer, but rumours that he intends at an early date to undertake a big operation for conversion of some of the £2,000 millions of outstanding 5 per cent. War Loan may be regarded as premature.

As the week progressed the boom in gilt-edged stocks cast a reflection upon other sections and foreign bonds, Home Rails, and domestic industrial prior charges all advanced appreciably. Activity however did not spread to the more speculative sections.

Strength of the Funds.

A strong and maintained upward movement was the chief feature in the Stock Markets last week as in the preceding. While at first dealings were almost entirely professional, the rises in many leaders attracted the general public also last week, and dealings became brisker than for a very long time past. As the week progressed, moreover, the rate of appreciation accelerated, many stocks showing more rapid advances than at any time in the last seven years. Interest spread from the market in British Government securities to such sections as Home Rails prior charges, and Home Corporation stocks. Cheaper money is the chief cause for this revival, and with Bankers' Deposit Rate down to 1½ per cent., the unattractiveness of leaving money on deposit account will be accentuated. Moreover, there is an accumulation of funds awaiting an outlet after the depression which has ruled since the Hatry collapse, and whose holders still lack sufficient confidence to invest in any but the safest of industrial issues. A third factor, accounting especially for the rise in British Government stocks, is the expectation of an early 5 per cent. War Loan Conversion operation. Success in such an operation would, of course, improve quotations throughout the whole market for the existence of some £2,000 million of this stock has been a potent factor in delaying any rise in British credit above a five per cent. basis, but it remains to be seen when the attempt will be made.

Building Societies.

Recently published figures have shown that the average investment of shareholders in five selected leading Building Societies amounted to £228 per head. This clearly shows that it is not only the "small investor" who favours this class of investment. Indeed the popularity of building society shares is growing and deservedly so. Between 1919 and 1928 the assets of the British societies have in fact increased from £77 million to £268 million. Of the thousand odd societies in Britain, forty have assets exceeding £1,000,000. The largest is the Halifax, with assets amounting to about £59 million and the second largest the Abbey Road, with assets of £19 million. The soundness of this class of business is demonstrated not only by its rapid expansion since the War, but also by the extremely low percentage of "bad debts." In the case of the two leading societies there are no cases of borrowings on mortgage being as much as twelve months in arrears. Building societies, moreover, may only invest their money in first mortgages or in trustee securities. For these reasons, besides their well-known sound management, the best societies offer an investment as "safe as houses." The fact that a yield of 5 per cent. is usually obtainable, compared with the 1½ per cent. now generally paid on Bankers Deposits, that the shares may be converted into cash withdrawal without loss and there are no fees or commissions to pay further adds to the attractiveness of building society shares.

P.C.T.

Last week were published the accounts of the Provincial Cinematograph Theatres, Ltd., which owns or controls 113 picture theatres, dance halls and restaurants. They showed an increase in net profits of £68,000, compared with the year before. The ordinary dividend remains unchanged at 15 per cent. and absorbs £75,000, the same as last year. The carry-forward at £110,483 is nearly £5,000 more than the amount brought in. Depreciation reserves receive £9,000 more than a year ago, and general reserves nearly £2,000 more. The expenses in connexion with the First Mortgage Debenture stock are written off to the extent of £45,000. These are very satisfactory accounts, and it is interesting for investors to watch the growth and continued prosperity of this business during a period which for the major national industries is one of severe depression. Of course there is a certain amount of speculative element in the cinematograph business in which constant adaptations, frequently involving considerable expense, are necessary to meet the new requirements. Investors may therefore prefer in place of the ordinary shares, such shares as the 7½ per cent. cumulative participating preferred ordinary. These shares have always received their dividend in full and they now yield about £9 8s. per cent.

The Persian Government has submitted to the Majliss the Budget for 1930-31. Revenue is estimated at 353,374,827 krans (£5,889,580), exclusive of royalties due from the Anglo-Persian Oil Company, which go to the reserve fund. Expenditure is estimated at 352,987,776 krans, or £5,883,130.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended March 15:—

Grain.—The week under review has, we think, been one of the worst on our market for many years past. Grain prices reached an unprecedented low level, but in spite of this fresh business was extremely difficult to combine, owing to the absence of buyers. Grain holders have suffered severely, and in many cases were compelled to part with their winter stocks at prices hardly exceeding half their original value. The check in the fall of grain prices reported yesterday has relieved the tension to some extent, and it is hoped that it may be an indication that the worst is over and a revival in business may be anticipated shortly. Chartering under the circumstances came almost to a complete standstill and freights dropped to 9s. 6d. to 10s. Hamburg/Weser for which ports a little cargo has been booked, Antwerp/Rotterdam being entirely neglected. Hardly any loading is being effected on steamers already berthed, and considerable delay is therefore expected, besides which there is still a good deal of tonnage due shortly which will have to be provided for. At Constantza the situation has not improved, as steamers already berthed are having great difficulty in finding their completions.

Timber.—The lack of demand from Western markets continues, and the Near East also shows a slackening tendency, scarcely any fresh sales having been reported. Charterers are naturally discouraged and are abstaining from taking up tonnage in advance of cargo engagements. A few spot parcels have been booked for Naples at rates as low as £6 15s., and for South France at £7 10s. per wagon. There are also some parcels in the market for North African ports, but shippers are holding out for exceedingly low freights which offer no inducement to shipowners.

Weather and Crops.—A little rain was reported in the Banat on Sunday last, and on Monday in a few southern districts, but in general the weather remained dry, mild, and calm till Wednesday, when it became very stormy and light rain or snow fell throughout the country, varying from about a tenth of an inch of rain in the south to nearly an inch at Cahul in Bessarabia, with an average of about half an inch. There have been some further light snowfalls in Transylvania and the Carpathians According to a report of the Ministry of Agriculture, up to Monday, March 10, the condition of the crops was still satisfactory, although the need of rain was felt in all districts. The precipitations of the last few days have brought great relief in many districts but a good general rain is needed.

Sulina.—Bar depth 24 feet, and no change expected. River minimum 24 feet.

Constantza.—About 11,000 tons of grain were exported during the week mostly to the Rotterdam/Wesser range. Ten vessels loaded nearly 44,000 tons of petroleum products and four ships took oil fuel for bunkers. Some wood still continues to be shipped from Constantza, one steamer leaving with about 350 wagons for Alexandria and another with 130 wagons for Beyrout.

Bulgarian Report.

Bourgas, March 8.—The market remains quiet. About 1,200 tons of grain were shipped for Antwerp/Rotterdam/Bremen and Hamburg, the rates varying from 10s. to 10s. 6d., and about 700 tons of oilcake have been loaded for Liverpool and Hamburg. A Bill has been brought in for a reduction of export taxes on cereals to a merely nominal figure, and it is hoped that it will pass through Parliament in the course of next week. It has generally been fine with slight frosts at night and a few degrees above freezing point during the day, but Wednesday and Thursday mornings were foggy and light general rain fell from Thursday afternoon till daybreak on Friday.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

CYPRUS TRADE.

The report on the trade of Cyprus for January states that though below the figures for the corresponding period of 1929, the value of imports for the month was well above the average for the five years 1925 to 1929. The total was £144,147, and the principal items accounting for the decrease as compared with last year were:—Flour (—£13,952); machinery (—£5,577); and motor cars (—£6,210).

Exports at £92,244 were lower than the average, due mainly to smaller exports of minerals, cotton, and potatoes; but carobs and wine show respectively increases of £8,464 and £3,181.

During the month 27 steamers called at Larnaca, 34 at Limassol, and 24 at Famagusta, as against an average of 24, 27, and 20, respectively.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Tarantia for Bombay (Birkenhead, April 18). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mathura for Calcutta (Glasgow, April 3; Birkenhead, April 10); s.s. Maidan for Calcutta (Birkenhead, April 24).

Bibby Line.—S.s. Oxfordshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, April 2).

British India Line.—S.s. Masula for Bombay (London, March 29); s.s. Merkara for Colombo, Madras, and Calcutta (London, April 5).

Cunard Line.—S.s. Bosnia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement Glasgow, March 27; Liverpool and Swansea, March 29); s.s. Bantria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, April 12; Swansea, April 15).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 29); s.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 10).

P. and O. Line.—S.s. Bangalore for Bombay and Calcutta (London, March 28); s.s. Viceroy of India for Bombay (London, March 28); s.s. Behar for Calcutta (London, April 11); s.s. Kaisar-i-Hind for Bombay, London, April 11).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, April 2); s.s. Sailor Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus ports (London, April 9); s.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, April 15).

Ellerman and Papayanni Lines.—S.s. Manchurian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, March 29; Swansea, April 3) s.s. Mardinian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 12; Swansea*, April 12); s.s. Dido for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, April 16); s.s. Oporto for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 26; Swansea*, April 26). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Motors and Motoring.

(By Our Motoring Correspondent)

The Road Traffic Bill.

There is no need here to say anything about the Road Traffic Bill, as almost every motoring journalist has been expressing his or her views on it during the past few days. As a matter of fact, we motorists have been treated much more lightly than we expected. There was something said a few days ago by the Minister of Transport regarding motor-cycle police. Well, the sooner they are put on the road, the more they are in number and the wider the power they are given, the better will all real motorists be pleased. The non-stop, careless and reckless type of driver is a pest, and the sooner he is dealt with or eliminated, the better.

A Motor Racing Rumour.

It is not easy to imagine how the rumour that motor racing was to be allowed this summer on certain Scottish roads arose, but it can be taken as certain that nothing of the kind is either contemplated or likely to happen. The Perth-Inverness road, a fine stretch of new road, no doubt eminently suitable for the purpose, has been mentioned as being the road on which the races would take place. I am in a position to deny, emphatically, that any road races have been arranged or will be allowed on the Perth-Inverness road or any other Scottish road this summer. There is no accessible and suitable part of Scotland where roads could be closed down without causing traffic inconvenience, and the Scots are not so enamoured of motors as to permit that. Another road mentioned is the Glasgow-Edinburgh road, but a system of omnibuses use that road with a well-arranged time table and no interference with this popular form of transport would be tolerated. A further point to be borne in mind is that in the present stage of motor development a road race in Scotland—or anywhere else for that matter—would serve no useful purpose. The roadster has about reached finality as well as approached closely to saturation point, and there is neither rhyme nor reason in makers going to any great expense in any form of competition work. At one time, hill climbs, track races and endurance contests were a means to an end; the public interest was kept alive and the weak points in engine and chassis design were found and duly strengthened. But not now; things have gone about as far as they will or as far as it is necessary for them to go, and there is no inclination on the part of manufacturers to spend money unless they can see an adequate and fairly immediate return.

Traffic Congestion.

In a recent issue of a contemporary a correspondent writes on the subject of traffic congestion. He makes the suggestion that in London and other large towns there are far too many buses about and says: "Except during the rush hours a drastic reduction in the number of motor omnibuses on the road should be made. . . and in the congested areas should be forbidden to pass one another." The 'buses cater for a number of people; even those which are running "half empty" are carrying a dozen or more individuals and, in addition, they are rendering a great service in being on the spot just when some one wishes to become a 'bus passenger. These 'buses are to be curtailed in number or taken off the road or forbidden to do this, that or the other, merely because some driver of a two-seater feels they are in his way. The traffic congester of to-day; the person who is not only not wanted on the streets of a big town, but who is a nuisance there, is the driver of the small private car. It is he who should be forbidden to use the streets during rush hours, not the vehicle which, taking up very little more road room carries a very much larger number of people. The correspondent referred to goes on to suggest that no taxi-cabs should be allowed to crawl about plying for hire, that no horse-drawn vehicle should be allowed in the streets after 9 a.m.,—he does not say what should happen to the driver who started his journey a little late and was unable to finish before the clock struck—and that commercial motors should not be allowed to remain stationary in congested areas, omitting to say what is to be done with a business man, who owning a motor van, proposes either to load it with produce or unload it as the case might be. It is only fair to say that he proposes, on the other hand, that private motorists who, according to him should have the right to leave their cars anywhere, should not leave them unattended in a congested area for more than ten minutes. Presumably a private car does not block the traffic quite as much if there is someone sitting in it as it does when it is unattended. He also proposes the abolition of theatre queus, but as that could have no possible effect on traffic congestion during rush hours, the proposal need not be considered seriously.

The "Silver Bullet."

I am asked to say that each of the two carburettors fitted to the "Silver Bullet" is an Amal, built on standard Amal lines, and has two main jets of 1,200 cubic centimetres, two main jets of 1,300 c.c., one slow-running jet of 360 c.c. and one slow-running et of 3400 c.c. The diameter of the choke is 3¼ inches. Some idea of the amount of work imposed on these carburettors may be realised from the following figures: In one hour's running the amount of petrol passed by the above jets under the conditions of the full power run would be sufficient to take a 10 h.p. Rover a distance of 5,443 miles. It would also take the most economical British light-weight motor cycle, if fitted with an Amal carburettor, a distance of 53,760 miles. The Amal is made by the Amalgamated Carburettors, Ltd., of Birmingham.

ECONOMIC CONDITIONS IN BULGARIA.

[The following notes are taken from the bulletin of the British Chamber of Comerce (of Bulgaria), dated February 28.]

As was anticipated in business circles, the settlement of the Reparations issue is, for the present, having only a psychological effect on business and credit.

There are some symptoms of improvement in the market congestion so far as certain kinds of iron, chemicals, and Colonial goods are concerned. The leather market is also a shade better than two months ago. But the position as a whole remains much the same. Shortage of liquid money and credit accommodation is as acute as at the close of 1929. Peasant purchases of manufactured goods continue to be very poor. Bills and other business commitments are being met with difficulty. However, banks and creditors in general appear to have become less nervous and extensions of maturities are granted more liberally. But there is certainly a great reduction in the volume of business transacted; especially in imports of foreign goods there is almost a complete deadlock. This circumstance would have a favourable effect on the position of foreign trade if exports were more active. The continued fall in world prices for wheat, maize, tobacco, wool, eggs, and other products affects Bulgaria, and is a serious obstacle to the normal development of exports. In this connexion there is little probability of a change for the better in the near future. The opinion prevailing in business and financial quarters appears to be pointing towards a policy of prudent reserve. Many of the better organised local firms have reduced their business to a minimum, and the almost generally reserved attitude of credit-giving institutions is in accordance with this policy.

The crisis, will, however, have some salutary effects on trade, industry, credit, and, perhaps, much more on the present commercial legislation of this country. Important changes of the laws dealing with bankruptcy, suspension of payments, enforcement of creditors' claims, etc., are about to be submitted to Parliament. The texts of the projected amendments have been studied by competent business men, financiers, and lawyers, much attention having been paid to the practical side of the legislation concerned. When completed, these reforms will be of great help to everybody concerned, but more especially to foreign firms trading with Bulgaria.

Another effect of the crisis has been the growing evidence of the local industrial defects. It is probable that the general attitude of the authorities with regard to granting or extending industrial protection will undergo a change.

In consequence of the general shrinkage in business and especially of consumption, the Budget revenues are expected to be substantially under the estimated figures. The last three months reveal the first symptoms of this state of things. According to information from official quarters, serious measures are under consideration for cutting down expenditure in a drastic manner in order to maintain the equilibrium of the Budget in 1930.

Weather conditions have up to the present been exceptionally favourable for the crops. This circumstance may perhaps account for the more optimistic spirit prevailing amongst the peasants almost everywhere in the country. It is probable that as soon as the prospects for a good harvest are more certain a quickening up of peasant purchases will set in, with the ultimate result of a substantial relief for a number of trades.

THE BRITISH LEGION.

We are indebted to Captain W. G. Willcox, Organising Secretary of the British Legion, for pointing out a mistake in our last issue in connexion with a recent appointment of Major C. F. Adams. Major Adams, who was awarded the Serbian Order of White Eagle for work in connexion with the withdrawal of Serbian Troops from Russia after the Revolution, has been appointed as Organising Secretary of the Metropolitan Area of the British Legion.

Major Willcox also sends us the following particulars of the Empire Fair which is to be held at the Royal Albert Hall for four days, ending on Empire Day, May 24.

Plans have been made to transform the Royal Albert Hall into a vast market, where East and West will meet in a spectacular combination of their infinite variety of merchandise.

This unique scene will be an Empire Fair, which is so designed not only to display Empire products in a particularly novel way, but also to show in an interesting manner specimens of the fine work of all kinds which is being done by disabled ex-Service men.

Every country under the Union Jack will be represented by its productions in a characteristic setting, and visitors will be able to buy almost every sort of goods manufactured or produced within the Empire. One of the special features of the Fair—which is to be opened by Prince and Princess Arthur of Connaught on May 21, will be an elaborate representation of an Eastern bazaar. Another will be a street of fascinating little shops formed of the 36 boxes on the ground floor of the hall.

Manufacturers in all parts of the kingdom and everywhere overseas are being invited to contribute to the Fair. Large numbers of them have already promised gifts of their products which, together with everything else exhibited, will be sold for the benefit of the general fund of the British Legion. The money will be used to finance various British Legion activities, with special reference to migration within the Empire of ex-Service men and their families, and assisting widows and War orphans.

The 3,442 men's branches and 700 women's branches of the British Legion are being relied on to contribute gifts of all manner of articles to be offered for sale, and it is confidently hoped, too, that the public generally will help similarly.

The Fair is being organised jointly by the British Legion and the British Empire Service League.

Donations and gifts would gratefully be received by Captain W. G. Willcox, M.B.E., British Legion Appeal Department, 18, South Street, Park Lane, W.1.

The Empire Fair will be followed by an Empire Pageant and Ball at the Royal Albert Hall on Monday, May 26.

THE LATE SIR VINCENT CAILLARD.

Sir Vincent Caillard, whose death took place last week in Paris at the age of 73, was best known for his work in connexion with the firm of Vickers, of which he was a Director for 27 years and from 1906 to 1927 Financial Director. Born in 1856, he was educated at Eton and Woolwich, and joined the Royal Engineers in 1875. Four years later he was appointed assistant to the British Commission for the delimitation of the Montenegrin frontier, and in the following October for the Arab Tabia Bridge Commission. He rejoined the Montenegrin Commission in March, 1880, and in the following July he was sent on special political duty to Epirus to report on the Berlin Congress. In August, 1882, he was attached to the headquarter staff during the Egyptian campaign, for which he received the medal and bronze star and the Medjidieh and Osmanieh orders. He was appointed in 1883 President of the Ottoman Public Debt Council, and financial representative of England, Holland, and Belgium in Constantinople. He resigned in May, 1898, to join the board of Vickers. He was an ardent supporter of Mr. Joseph Chamberlain in his tariff reform campaign, and contested East Bradford as Unionist and Tariff Reformer in 1906. He was one of the founders of the Federation of British Industries, and was its third President in 1919. He was knighted in 1896.

Lord Lloyd will preside at the complimentary luncheon to be given by the Empire Economic Union to its President, Lord Melchett, on the occasion of his return from South Africa. The luncheon will take place at Merchant Taylors' Hall, Threadneedle Street, E.C., on April 3. The following have accepted invitations to be present:—The Earl of Lisburne, the Earl of Limerick, Viscount Chaplin, Lord Desborough, Lord Greenwood, Lord Inverforth, Lord Waring, the Hon. Henry Mond, M.P., Mr. L. S. Amery, M.P., Colonel Wilfrid Ashley, M.P., Brigadier-General Sir H. Page Croft, M.P., Sir Frederick Mills, Sir Harry McGowan, Sir Gilbert Garnsey, Sir James Cooper, Sir Basil Blackett, Sir Benjamin Morgan, Sir William Larke, and the High Commissioners for Canada, Australia, and New Zealand.

Company Meetings.

THE EASTERN BANK.

Year's Satisfactory Results.

Position in India and Iraq.

British Fiscal Policy.

Mr. J. S. Haskell's Speech.

The twentieth annual general meeting of the Eastern Bank, Limited, was held on March 19 at the office of the bank, 2 and 3, Crosby Square, London, E.C. Mr. J. S. Haskell (chairman of the bank) presided.

The Secretary (Mr. R. Carter) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—The profits for the year, including the amount brought forward, total £107,990 15s. 5d., and, after carrying £30,000 to the reserve fund, thereby increasing it to £480,000, we are able to recommend a final dividend of 5s. per share, which with the interim of 4s. paid in October last is equal to a distribution of 9 per cent. for the year, less tax, the rate maintained during each of the eight preceding periods. This will leave a balance of £47,990 15s. 5d. to be carried forward, an increase of £3,520 15s. 0d. Last year the amount carried to reserve was £25,000 and £5,000 was allocated to buildings account.

I feel that the result will be as gratifying to you as it is to your directors. It could not have been achieved without unremitting labour and watchfulness on the part of the managers and staffs here and abroad, to whom I would here express the thanks and gratitude of the board for their unstinted efforts.

Turning to the balance-sheet, there is no important variation as compared with the previous year calling for special notice, except that our securities at or under market prices current on December 31 last are lower by £870,000. This variation is due partly to repayment in full of short-dated bonds amounting to £287,000 and partly to sales effected with little or no loss when the Bank rate was on the rise.

Indian Trade Figures.

The imports and exports of merchandise during 1929 amounted to £186,600,000 and £246,000,000, against £180,000,000 and £253,500,000 in 1928. The imports of gold and silver in 1929 amounted to £13,300,000 and £7,600,000, against £15,800,000 and £10,800,000 in 1928. There was thus a visible balance of trade in favour of India of £38,500,000 in 1929, against £40,900,000 in 1928. In the above figures of imports for 1929 British manufactures show a decrease of £5,700,000, of which £4,300,000 is accounted for by Lancashire piece-goods; the decrease is largely attributable to increased competition by Japan and other foreign countries. China has now become a serious competitor with the Indian mills in the Indian market, whereas formerly she used to import from India to the extent of several millions a year.

A Disappointing Year.

The past year, far from showing any improvement in business, has been very disappointing. The depression was general almost everywhere and was accentuated by dear money at home, over-production in raw material and manufactures, and a heavy drop in silver. Piece-goods were affected by the steady fall in raw cotton, and commodity prices everywhere fell to a very low level, the London averages being the lowest for years. This fall not only affected our export trade, but led to goods being dumped in this country from the Continent and elsewhere in large quantities regardless of price. In India proposals have been made in the Budget to increase the general import duty on cotton goods from 11 per cent. to 15 per cent., with 5 per cent. extra on non-British goods. This step is considered to be the only way of saving a local industry which was on the verge of bankruptcy from foreign competition. It will also have been noticed that in Australia tariffs were raised immediately on the advent of the new Labour Government, and this policy of protection of local industries is going on all over the world.

Protection of Industries Imperative.

Under these conditions it is evident that the policy of free trade pursued in the United Kingdom must be questioned as affecting the welfare and prosperity of this country. To continue to drift without change in our economic policy would appear to be courting disaster. It is becoming imperative that we should follow the world example and protect our industries to the utmost. (Hear, hear.) By a comprehensive scheme of safeguarding, manufacturers will be enabled to work to greater capacity, reduce their costs of production, and so compete in overseas markets.

When the late Joseph Chamberlain first launched his policy of tariff reform the imports of manufactured goods into the United Kingdom amounted to about £100,000,000 annually, and as our exports were large and expanding, the import figure was considered to be negligible by the advocates of free trade and not worth the radical change involved in a scheme of tariff reform. By 1929 these figures had grown to £334,000,000, while imports of foodstuffs likewise increased to no less than £536,000,000, resulting in a visible balance of trade against this country of £382,000,000, which promises to increase if nothing is done to counteract it. Is it at all surprising that unemployment is so rife in the country? Road-making and relief works, propaganda to buy British goods, the marking of British eggs, and such-like schemes merely deal with the fringe of this grave matter.

At the time Cobden and his party instituted their free trade policy circumstances were totally different. They had no such difficult problems to contend with as confront us to-day. Their chief concern was for low wages and cheap manufactures. Great Britain was then in the unique position of supplying the world with the products of her factories without any serious rival. It seems never to have been contemplated that the time might come when other nations would manufacture for themselves and not only capture the oversea markets but flood the United Kingdom with cheaper goods than could be produced in Great Britain.

Food for Reflexion.

I would like here to read to you an extract from an American prospectus of a trading company requiring fresh capital. It says: "When the Wall Street crash (October, 1929) came the public in America became aware of the fact of over-production and alive to the possibilities of the oversea marketing enterprise. It is proposed that the excess over-production be marketed in Europe and the Near East through the agencies already established. Thus American industry can be maintained at 100 per cent.; cost of production would be reduced sufficiently to allow the United States of America to import their goods into all countries irrespective of import duties." Here is food for reflexion. Other countries will be able to take care of their industries by raising their tariff walls still higher, a course which will in turn react against us. We, being an open country shackled with the fetish of free trade, have no means of protecting our industries.

The colossal sum of £536,000,000 for foodstuffs, which, as I have pointed out, is needed annually for our subsistence, is a serious drain on our resources, and the fact cannot be disguised that we are living on our capital. This must not and cannot be allowed to continue.

Dear Food Slogan.

The agricultural industry should therefore be taken earnestly and energetically in hand; a duty on cereals cannot materially affect the cost of living. The slogan "Your food will cost you more" is a mere bogy. Take, for instance, wheat, the staple food of the people. The price of No. 2 Manitoba in mid-July, 1929, in New York was 1 dollar 77⅝ cents per 60 lb., while the price of the quartern loaf in England was 8½d. On March 11 of this year the price of No. 2 Manitoba had dropped to 1 dollar 15¾ cents, while the price of the loaf in England remained at 8½d. There is thus ample margin to permit of a substantial duty without affecting the price to the consumer.

By rehabilitating agriculture and our manufacturing industries through safeguarding we should gain considerably by the absorption of a great number of the unemployed; many millions of the amount now remitted abroad every year for food alone would be saved to the country, while the revenue derived from the duties would go a long

Digitized by Google

way towards meeting our rising expenditure. Having once re-established our manufacturing and agricultural industries, freer trade within the Empire would become possible by mutual agreements with the Dominions, India, and the Colonies.

Increasing Cost of Social Services.

Another serious handicap to trade is the high taxation entailed by the amounts spent on pensions and social services, which have risen from £75,000,000 before the War to £375,000,000 to the end of the last financial year and are still increasing. No country in the world, however rich, can afford it. Any increase in the income-tax will not only further penalise trade, but will result in further exports of capital. British people returning home from the Dominions and Dependencies are placing their money in foreign securities, and many are making their homes on the Continent. Foreign and Dominion funds which used to come here for investment in securities or to be placed on fixed deposit with banks are likewise seriously reduced on account of the income-tax deduction. The United States of America, with a view to stimulating their trade, have since the slump made further reductions in their income-tax. It will be deplorable in the extreme if in this country there is to be a further increase of the tax in the coming Budget.

To meet the death duties alone securities in one form or another to the value of £80,000,000 have to be realised each year, and this means that industry is deprived of this amount of capital and the money is treated as income by the Government and spent as such. The millionaires and lesser so-called capitalists, on whom Chancellors of the Exchequer turn their eyes when finding a difficulty in balancing their Budgets, will at this rate soon disappear, with none to take their places, as the high income and super taxes will make it increasingly difficult to allow of great or even moderate fortunes being accumulated.

Conditions in Iraq.

In Iraq trade conditions have shown no improvement, the fall in silver and consequent depreciation of the kran having badly hit merchants trading with Persia. Imports show some increase in machinery, building materials, motor-cars, and cotton goods. The increase in industrial machinery is noteworthy. An Iraqi cotton ginnery is in course of erection, and a woollen spinning and weaving factory is already at work producing yarn and cloth of good quality. Exports, on the other hand, have been disappointing. The cotton crop yielded only 50 per cent. The date crop, owing to a disastrous gale in August, was 50 per cent. less than had been confidently anticipated. Grain came up to expectations, but the fall in prices in European markets made it impossible for the exporter to work at a profit, and large stocks are lying in store in the towns and up-country. Local prices of wheat and barley show a decline of 50 per cent. Wool and skins have been satisfactory and shipments up to the average.

On the political side we have to deplore the death of the late Sir Gilbert Clayton, the High Commissioner. During the few short months he spent there he succeeded in smoothing over the difficulties between the British and Iraqi Governments and laid down the basis of a new and lasting treaty which is now in course of negotiation, and which it is hoped will establish the country politically on a firm basis and lead to a prosperous future. In the new High Commissioner, Sir Francis Humphrys, we have an able successor who can be depended upon to cement further the friendship between the two countries. Iraq has also suffered another great loss by the death of its Prime Minister, Sir Abdul Mushim Bey, an able and high-minded statesman, which is much to be regretted.

The Indian Situation.

The political situation in India is causing a great deal of anxiety and it is impossible to forecast what the future has in store for that country; but I cannot imagine that the Government will allow the situation to get out of hand. Our policy is to conserve our resources and exercise great caution in the conduct of the affairs of the bank, and thus be prepared for any emergency. I do not, however, wish it to be understood that I am pessimistic. If nothing unforeseen happens I am confident that we shall be able to maintain our position as hitherto.

I hope I have not trespassed too long on your patience. Economic questions concern bankers, merchants, and manufacturers alike. If I have dwelt more fully on them than is customary at our general meeting I beg you to believe that I do so not from any partisan spirit, as here we are not concerned with politics, but from a deep conviction that conditions urgently call for a radical change of policy in place of tinkering and patchwork methods which have had little effect upon the situation. (Cheers.)

The Chairman concluded by moving the adoption of the report and accounts and the adoption of the dividend recommended.

Sir James Leigh-Wood, K.B.E., C.B., C.M.G. (deputy chairman), seconded the motion, which was carried unanimously.

Mr. J. S. Haskell and Mr. G. Bromley-Martin were re-elected directors, and the auditors (Messrs. Turquand, Youngs and Co. and Messrs. Lowe, Bingham and Matthews) were reappointed.

Mr. Wardlaw-Milne's Remarks.

Mr. J. S. Wardlaw-Milne, M.P., in proposing a hearty vote of thanks to the chairman, directors, and staff, said:—We have listened to-day to a most interesting address from the chairman, and I need only say that I agree with practically every word of it. You will not expect me here to deal with any political matter—indeed, I have other opportunities and there are other times when I have to do that—but I should like to say that, in my opinion, the position of this country at the present moment is an extremely serious one, and the chairman has done great service by publicly calling attention to it. (Hear, hear.) Anyone who examines the position must fully realise, I think, that the conditions which govern business in industrial affairs in this country to-day are such that we cannot any longer continue a system of taxation which is so disastrous for everyone who is engaged in industry. We are continuing a burden of taxation which is having an ever-increasing effect, and, indeed, the danger point has probably already been reached.

The system by which we take our national capital into the Exchequer by means of death duties and use it, not for the purpose of paying off our National Debt—or not entirely for that purpose—but partly for social and other services, is one which must lead to a crisis in this country if it is continued indefinitely. The position of the bankers, particularly, to-day must be one of anxiety, and the responsibilities which they enjoy and which they exercise make it essential, in my view, that those who have so large a control of our industrial progress should be certain that they are working on the very best possible lines under the new and changed conditions of to-day.

The Currency Problem.

The extent to which our currency problem, for example, affects our prosperity is little understood, and, as these matters are largely such as are left to experts, it is the more necessary that those who have a thorough acquaintance with the problems should not hesitate to make their views public, and help the country to evolve a system which will re-establish our industrial prosperity in the future. Our return to the gold standard has not been carried out without serious effects upon industry and difficult periods for all concerned. We cannot claim that we are by any means out of the wood yet. Our own lending power has been greatly limited, and the best brains connected with banking and finance must, in my view, be exercised upon the difficult and intricate problem of how to ration the nations of the world in gold so as to maintain stability in prices, to assist in maintaining, and even in improving if possible, our standard of living, and to prevent that scramble for the precious metal which would have serious effects in this and other countries. Unemployment is a world-wide problem to-day, but the difference between the problem in this country and abroad is that in this country it appears to be a permanent problem, whereas within the borders of our greatest competitors the present distressful conditions appear to point only to temporary difficulties. Our ever-increasing imports must be counter-balanced by such a volume of exports as arise from a revived and prosperous industry, which alone can give us full employment and that increased purchasing power so essential for the people of this country.

Uncertain Situation in the East.

The whole situation in the East, and particularly in India, is one in which uncertainty and difficulty have had to be faced, and we have the more reason, therefore, to be grateful to our representatives abroad and to appreciate the work they have done in the interests of the bank. (Hear, hear.) India awaits, as those of us who are specially interested do here at home, the report of the Commission, which I believe will be found to show that the gentlemen composing it have worked with the greatest care in the interests not only of India but of this country, under the very able guidance of Sir John Simon. We can only hope that when that report is public, and when we have had time to examine the recommendations and the advice which it offers upon them, the round-table conference which is to follow will bring about peace and good will in India and lead to increased security and confidence in the minds of the Indian people themselves, and also, I hope, in the minds of all those whose services or whose occupations bring them into touch with that great Dependency.

It is perhaps little realised how important India is to this country, and it is not everyone connected with our trade and industry who knows or realises that she is still far and away our best customer. On the other hand, the record of our own rule there, and the immense work which has been done by our people in the last 150 years for the benefit of India in the development of roads, railways, irrigation, and the like, and the steady raising of the standard of national life, has made her financially one of the soundest countries in the world, and probably one of the richest.

I suggest to you, gentlemen, that we owe a very deep debt of gratitude to the gentlemen both here and abroad who have looked after our interests during the past year, in very difficult times, and I ask you to give them a very hearty vote of thanks. (Cheers.)

The vote was unanimously accorded, and after a brief acknowledgment by the Chairman the proceedings terminated.

NATIONAL BANK OF EGYPT.

Position in Egypt and the Sudan.

Sir Bertram Hornsby's Speech.

The thirtieth annual general meeting of the shareholders in the National Bank of Egypt was held on March 20 at the Head Office of the Bank in Cairo. Sir Bertram Hornsby, C.B.E. (the Governor), presided.

The Governor, addressing the shareholders, said:—Gentlemen,—From the report of the board, which is in your hands, you will see that the gross profit for the year 1929 was £1,099,870. From this have to be deducted the expenses amounting to £478,184, leaving a net profit of £621,686. Your directors propose to allocate £75,000 to the special reserve fund and to pay a dividend at the rate of 18 per cent., requiring £540,000, the balance of £6,686 being added to the carry-forward.

Our net profits have decreased by about £30,000 as against last year. Contrary to general opinion, your bank has not benefited by the high rates of interest which prevailed in the principal financial centres of the world during the last quarter of the year. The higher rates we had to pay on our deposits were not compensated by the increased rates on our advances; for, as you may see from the balance-sheet, the latter form less than half our assets, the larger proportion of which is invested in Government securities bearing a fixed rate of interest. Our special situation as bankers to the Egyptian and the Sudan Governments, and as having the privilege of issuing notes, necessitates the maintenance of a very liquid position, which these holdings of easily realisable securities provide.

As regards the figures of the balance-sheet, there are several differences from last year which reflect both the lower value of cotton and the decrease in the quantity exported. Advances on merchandise are £1,700,000 lower, and bills of exchange are down by £1,778,000, whilst on the liabilities side there is a decrease in deposits from the public of £808,000, despite the fact that the number of accounts continues to show a steady expansion.

Note Issue.

The note issue has followed the usual seasonal variations, but, though in the early months the amount was higher than in the corresponding period of 1928, the average for the whole year was over £540,000 lower. The usual statement of the maximum and minimum for the last five years is appended.

1925	£E41,900,000 ...	£E28,700,000
1926	£E35,300,000 ...	£E25,300,000
1927	£E33,000,000 ...	£E24,400,000
1928	£E33,000,000 ...	£E22,300,000
1929	£E31,000,000 ...	£E22,000,000

I also append the totals of imports and exports for the same period, reminding you once again that in order to make them synchronise with the cotton crop we take the 12 months from September 1 to August 31. Under the influence of the price at which the 1928-29 crop was realised there was last year a favourable trade balance of, roughly, £2,500,000. It is probable that the current year will show less favourable results.

September 1 to August 31.	Imports.	Exports (including re-exports).
1924-1925 ...	£E56,257,511 ...	£E67,952,808
1925-1926 ...	£E55,073,075 ...	£E52,855,630
1926-1927 ...	£E48,230,223 ...	£E45,823,035
1927-1928 ...	£E51,505,388 ...	£E54,310,983
1928-1929 ...	£E54,730,378 ...	£E57,195,388

Towards the end of the year 1928 the Banks in Cairo established a Clearing House for the exchange of cheques, and their example was followed in Alexandria a few months later. The records show that for the whole year the total amount cleared in Cairo was over £E75 millions, whilst in Alexandria the total for seven months was over £E30½ millions. The actual number of cheques passing over the Cairo Clearing is considerably greater than in Alexandria, whilst in the latter town the average amount per cheque is much higher. In the course of time the records of the two Clearing Houses will afford a valuable index to the commercial and financial activities of the country.

The Situation in Egypt.

In my remarks last year I expressed myself in a somewhat optimistic vein regarding the country's prosperity. In the interval several factors have arisen to modify the situation, though I still maintain the view that it is fundamentally sound. In the first place, the crisis in New York, coupled with higher rates for money, could not fail to have a repercussion here, of which one indication was the fall in the market price of local securities. Fortunately, these securities on the whole are in strong hands, and the market was but little affected by such liquidations as took place.

Further, the increase in the Customs tariff which came into force last month led to the importation of goods on a scale well beyond the country's normal needs. It is possible that the absorption of these surplus stocks may give rise to some difficulty, especially when they have been obtained purely as a speculation with borrowed money. The prudent attitude adopted by the banks for some time past leads me to consider that the difficulties may not be so great as some people anticipate.

Fall in Cotton Prices.

Finally and most important, the price of cotton has fallen to a level which no longer corresponds to the conditions to which the economic life of the country has adapted itself. In an endeavour to arrest the decline, the Government has again intervened and has fixed minimum prices at which it will buy futures or take up any cotton tendered against contracts. As a result, the Government had, up till a few days ago, become the owner of 125,000 bales of cotton, to which must be added the 29,000 bales it still possesses as the result of its intervention in 1925-26. The action of the Government in this respect, though it may momentarily relieve the situation, will throw a burden on the whole country unless it proves possible in the course of time to unload these stocks at satisfactory prices.

It is a curious phenomenon that throughout the world the price of agricultural products has fallen—as witness the case of wheat, wool, coffee, sugar, and rubber. It would seem that in time the situation should result in a fall in the cost of manufactured goods which would to some extent compensate the agriculturist. But even so there can be little doubt that if cotton prices should become stabilised round about their present level there will have to be considerable readjustment in the economic life of Egypt.

Improvement in the Sudan.

Reports from the Sudan indicate that the general financial situation has improved. Last year's Gezira cotton crop gave satisfactory results both as to yield and to price: the outlook for the current season is less promising owing to attacks of parasites and the lower value of cotton. Good rains were responsible for an exceptionally heavy crop of dura, so that it was possible to remove the embargo on exportation. Owing to low prices obtainable abroad little has been exported, and the bulk of the crop has remained in the country and forms a reserve of food supply against possible crop failure in the near future.

The following table of imports and exports shows that compared with 1928 the latter increased by about £1,000,000, represented largely by cotton, and the former by about £400,000, chiefly in the form of piece-goods.

—	Imports.	Exports (including re-exports).
1925	£E5,437,727 ...	£E4,168,364
1926	£E5,574,401 ...	£E5,190,505
1927	£E6,155,314 ...	£E5,229,419
1928	£E6,463,206 ...	£E5,947,026
1929	£E6,856,114 ...	£E6,809,122

In the course of the year H.E. Adly Pasha Yeghen, yielding to an imperious need, assumed the position of Prime Minister and resigned

from the Board. Having successfully accomplished the duty he was called on to perform, Adly Pasha Yeghen was able to resume his collaboration in our affairs, and we submit his re-election to your confirmation. We also ask you to confirm the appointment of H.E. Aly Pasha Maher, whom we were pleased to welcome as a colleague in the month of January. Mr. John Home retires by rotation at this meeting, and we submit his name for re-election.

Your interests continued to be served by a loyal and devoted staff, to whom our thanks are due for their service during the past year.

YUGOSLAV UNION BANK.

The following is a summary of the report of the Board of Directors of the Yugoslav Union Bank for the year ended December 31 last, presented at the annual general meeting held at Zagreb on March 15:—

The report states that owing to the consolidation that has taken place and to the more judicious exploitation of the natural riches of the country and its economic resources the general economic situation in Yugoslavia has made great progress. The State finances show a balanced Budget: considerable fiscal surpluses were recorded during the year, the yield of taxes showing a marked improvement.

The harvest of 1929 was excellent; wheat and maize in particular gave a good yield, and there is no question that this development has been of great direct benefit to the farmers, who form 85 per cent. of the population of Yugoslavia. The proof is to be found in the notable increase in the consumption of industrial products by this class; the consequence is an indirect profit for commerce and industry. The good harvest has rendered possible the export of considerable quantities of wheat; with the exports of minerals, timber, and industrial products the total for the exports approximates more and more to that of the imports, so much so that it can be considered that the equilibrium of the two movements has been attained, and the trade balance which was heavily adverse in 1927 and 1928 became favourable by the end of 1929.

The favourable economic conditions have helped the National Bank of Yugoslavia to pursue its exchange policy, with the object of maintaining and safeguarding the stability of the dinar; thus the bank notes in circulation have at present a covering of nearly 50 per cent. at the issuing bank. All these circumstances give hope that the national currency will soon be legally stabilised, all the preliminary conditions having already been realised. The internal organisation now being completed, the Yugoslav Union Bank has its principal offices at Zagreb and Belgrade; it has established branches in all the most important towns throughout Yugoslavia, and has permanent agencies and correspondents both in the country and abroad, where it is linked up with important groups. The Bank is also in direct contact with groups disposing of large capital in the West, which enable the Bank to interest foreign markets in financial operations in Yugoslavia.

The Yugoslav Union Bank has for the time being finished its amalgamation of financial establishments, after having realised in the course of the years 1928 and 1929 the amalgamation of the following banks:—Banque Hypothécaire de Croatie et Slavonie, Zagreb (established in 1892), Banque Croate d'Escompte, Zagreb (established in 1868), Banque de Bosnie S.A., Belgrade (established in 1912), Banque Agraire et Commerciale, Serayevo (established in 1909), and the Banque Agraire et Industrielle S.A., Belgrade (established in 1923). By the taking over of the assets and liabilities of these various establishments the Yugoslav Union Bank now disposes of a total capital and reserves of 241,255,697.45 dinars.

During the past year the transactions of the Yugoslav Union Bank have developed favourably and the results obtained are satisfactory, for they show a marked progress. In fact the Bank, having succeeded in completely absorbing the business of all these united establishments, by dividing judiciously their various branches of activity and reducing as far as possible the general administrative expenses, is able to assure the profitable management of the whole of its enterprises. During 1929 the Bank transacted business to the value of about 127 milliards of dinars, thus exceeding by about 21 milliards the figures for 1928.

The net profits for 1929 amounted to 24,395,570.88 dinars. The general meeting, on the proposal of the Council of Administration, decided on the following division:—For a dividend of 5 per cent. and a supplementary dividend of 5 per cent., 18,500,000 dinars; reserve fund, 1,439,304.72; statutory percentage to the Council of Administration and appropriations to the Commissioners of accounts, 2,402,887.55; staff pensions fund, 1,000,000; benevolent works, 125,000; carrying forward for 1930, 928,378.61 dinars. These proposals having been accepted, the dividend is payable as from March 17, 1930, on the basis of 10 per cent., i.e., 20 dinars for each share of the nominal value of 200 dinars.

The offices of the Economic Board of Palestine have been removed from 7, Queen Square, W.C.1, to 38, Great Ormond Street, W.C.1. Tel.: Holborn 2449.

Provisional commercial agreements, providing mutual most-favoured-nation treatment for periods of less than one year, have been signed by the Egyptian Government with Austria, Czechoslovakia, Yugoslavia, and the French Eastern mandated territories.

The Royal Exchange Assurance announces that Mr. Alexander MacDonald has been appointed joint secretary with Mr. E. de M. Rudolf as from March 25. Mr. Charles Stuart Malcolm, who at present represents the Motor Union and the United British in Canada, has also been appointed manager for that Dominion of the Royal Exchange Assurance and the other companies of the group operating in Canada.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended March 19:—

Egyptian Futures.

Sakel Contract.—The recovery from the season's low levels which commenced last week has been further consolidated during the period under review, a moderate amount of short covering, somewhat better trade support, and improving conditions in the American markets combining to encourage more confidence in the outlook. As mentioned in our recent reports, it is rather difficult to foresee any sustained pressure on near cotton at this side as long as we continue to run at such a heavy discount with the stabilised Alexandria market. The demand for actual has been so poor for some time that the limited amount of tenderable cotton held at this side has been rather obscured by closer "bearish" factors, and it appears to us that any improvement in spinners' business might lead to a covering movement, the result of which would be to lift values to a closer difference with the overseas market. The stability displayed during recent sessions already appears to have had a beneficial effect on the trade outlook, and Manchester reports have been somewhat better; the inquiry has been broadened, and whilst the volume is yet small, more Sakel has been purchased than for several weeks past. New crop months in Alexandria have moved in an erratic fashion, but on balance show a fair advance on the week. Considerable importance appears to have been attached to reports and rumours regarding the proposed import tariff on stapled cotton by the U.S.A. This measure has still to pass Congress and be confirmed by the President. Whilst the general impression is that the Bill will be vetoed, conflicting views will probably cause unwarranted fluctuations until the final decision is made public. On the whole, we are inclined to anticipate a further moderate advance, but those entering into commitments at the present level have to bear in mind that they are anticipating a favourable turn in trade developments and a period of stability in the American markets.

Upper Contract.—This market has reacted in a poor manner to the strength displayed by American values during the past week, continued liquidation of "old" long cotton limiting the advance since our last report to 11 to 16 points for near and 20 to 31 points for distant positions. In view of the fact that the Liverpool stock is moving off in a satisfactory manner and cannot be replaced unless differences with Alexandria close up about ⅛d. per lb., the present tendency is difficult to explain. In our opinion, old crop months will show considerable strength in the near future, speculative liquidation already appears to have run its course and a continuation of the present demand may readily reveal a tight contract position.

Egyptian Spot.

There has again been a very good inquiry for spot Egyptians, and the gradual rise in values has resulted in more actual business being put through. On one occasion, the sales for the day reached the welcome total of 1,000 bales of Egyptian cotton and 1,250 bales of Sudan Sakel, figures we have not seen reached for some considerable time past. Apart from this there have been no special features to report, but trade up country has shown signs of improvement and the Continent has again been showing interest. All we need now is a period of comparative steadiness or gradual advances, starting on the American side, and we feel sure that our trade will continue to expand.

Sakels have again been in better demand and sales have undoubtedly shown improvement. The inquiry has been most noticeable for cotton at from pass to 100 on March contracts. The better cotton has been in moderate request only, but even there some slight improvement has to be recorded. The lower qualities have been rather neglected this week.

Uppers have been in good demand again and the 1,000 bales referred to above was said to be composed largely of Upper cotton. Practically all qualities, from the lowest to the best, have shared in the inquiry, but the bulk of the sales have been in the 10 to 25 on cotton. This appears to be a standard feature to report each week.

Pilion has been in improved request at from 10½d. to 11d., and rather more business has been put through. The local stock at this range is only a small one. The better qualities have attracted no attention.

Maarad.—Only a very moderate inquiry has been witnessed this week and sales have been insignificant.

White, Nahda, and Fouadi.—A little business has been done in White, but the other two growths have been neglected and seem to be going completely out of fashion on this market.

Sudan Sakel.—An improved business has taken place and much more interest has been shown by spinners generally, both in old crop and new. The basis for the old crop has been reduced some 50 points, and at this revised price the cotton appears very attractive. The bulk of the old crop now consists of SS, and SSS, XSS, and XSSS. The new crop is not yet available on the market.

Tokar Sakel.—Merely a flicker of an inquiry has been met with here and there, and we have not heard of any sales.

C.i.f. Business.—Possibly some slight improvement has taken place in the lower qualities. There has been a disposition lately for shippers in Alexandria to bring their offers more into line with Liverpool, but they still have a long way to go before being in a position to compete with the local stock. Forwardings were returned as 3,535 bales Egyptians and 3,644 bales Sudan. Spot sales.—2,800 bales Egyptian and 1,380 bales Sudan Sakel. Quotations of Sakel show an advance of 5 points on the week; Upper and Pilion have been advanced 15 points during the same period. F.G.F. Sakel to-day, 13.65d. F.G.F. Upper to-day, 10.17d. F.G.F. Pilion to-day, 10.90d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended March 13, state:—

The market during the past week has been moderately active; the tone at the close to-day was fairly good. The week's summary of price movements is as follows:—Sakellaridis: March, 27.50 dollars, unchanged; May, 28.05 dollars, 0.02 dollars down; July, 27.55 dollars, 0.30 dollars up; November N.C., 25.32 dollars, 0.47 dollars up; January N.C., 25.62 dollars, 0.39 dollars up. Ashmouni: April, 19.40 dollars, 0.01 dollars down; June, 19.85 dollars, unchanged; August, 18.53 dollars, 0.15 dollars up; October N.C., 17.48 dollars, 0.22 dollars down; December N.C., 17.85 dollars, 0.17 dollars down; February N.C., 18.18 dollars, 0.18 dollars down.

Sakel.—There has been a fair volume of transactions in new crop months and, on the week, prices show an advance of about 45 points. There is no reason for the improvement except that the market had become oversold. The impression that the Government will eventually extend its support also to July is steadily gaining ground as evidenced by the narrowing of the discount under May by 30 points on the week. With the demand so poor, we ourselves think that the Government will come in also on July, but there is just the possibility that they may not think it worth while bothering themselves with the small quantity which will be left undelivered after the May tender. The demand from abroad has again been almost negligible. Even in new crops we cannot find that much of the inquiry has been converted into actual business. Against the second March tender, dockets for 98,750 kantars were issued, bringing the total so far this month up to 519,500 kantars. The Sakel/Upper new crop straddle (November/October) this week stands at 784 points, against 715 points last week and 1,381 points at this time last year.

Uppers.—This market has likewise shown a certain volume of business in new crops, but sellers have predominated, and the result is a decline in prices on the week of about 20 points. The selling has been on the belief that the next crop will be a record one owing to the tendency of more of the Delta growers to switch over to Zagora. Demand from the consuming centres has been very poor indeed. There is even practically no inquiry for new crop cotton, and it seems that spinners are quite decided that prices are still on the top side. Until more is known of the American acreage, this is impossible to say, but the present difference between Uppers and American does not seem unreasonable. The Ashmouni-American new crop straddle (October/October) this week stands at 254 points, against 256 points last week and 427 points at this time last year.

The week's receipts amount to 131,330 kantars, against exports 153,531 kantars; the stock in Alexandria stands at 3,713,619 kantars.

Spot.—We have again had a week of very quiet sessions, the total turnover amounting to about 4,000 bales, of which we estimate 1,200 bales Sakellaridis, 2,400 bales Ashmouni and Zagora, 100 bales Pilion, and 300 bales other varieties.

Sakellaridis.—Tenderable cotton is becoming scarcer daily and good style in these grades is difficult to find, hence spot differences have hardened somewhat. Good Fair and under has not been very much in demand.

JOHNSTON LINE

Digitized by Google

Ashmouni and Zagora.—These varieties are still neglected and sellers are finding great difficulty in disposing of their stocks. Spot differences have eased all round.

Pilion is neglected.

Other Varieties.—Some small business has been done in Nahda and White at unchanged prices.

Crop, 1930.—In the southern districts of Upper Egypt, sowing is terminated. Germination is, on the whole, satisfactory, although about 20 per cent. of the extra early sowings have had to be resown owing to the cold snap in late February. Sowing in Middle Egypt is also nearing completion and should be finished within the next ten days. In the Delta, planting is in full swing. The weather is favourable, and, except in the North, considerable areas have been sown. Germination of the early sown fields is satisfactory. Temperature is higher and, failing any further cold winds, the crop looks like getting a fairly successful start.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Loose Leaf Post Binders.—The Survey of Egypt invites tenders for the supply of 3,500 loose leaf post binders. May 19. (D.O.T.)

Metal Cabinets and Safes.—The Survey of Egypt, Ministry of Finance, Cairo, invites tenders for the supply of metal cabinets and safes. May 24. (D.O.T.)

Photographic Material.—The Survey of Egypt invites tenders for the supply of rolls of sensitive paper and photographic chemicals. May 3. (D.O.T.)

Pumping Engine, etc.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for the supply and erection of a steam pumping engine for Kafr el Gamous Pumping Station, May 10; and for the supply, construction, and delivery of cast-iron sealed sewage and air mains in Zagazig. May 27.

Rails, etc.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of rails and angle irons for 1930-1931. June 28.

Calico and Shash.—The Survey of Egypt invites tenders for the supply of calico and shash for map mounting. April 23. (D.O.T.)

Iron and Steel, Metals, etc.—The Ports and Lighthouses Administration invites tenders for the supply of iron and steel, metals, etc., required during 1930-31. April 15. (D.O.T.)

Requirements of Frontiers Administration.—The Director of Stores, Frontiers Administration, Alexandria, invites tenders for the supply within a period of twelve months commencing on May 1, 1930, of paints, varnishes, and other consumable stores. April 12. (D.O.T.)

INDIA.

Oil Engine driven D.C. Generating Sets.—The Indian Stores Department, New Delhi, invites tenders for the supply and delivery of oil engine driven D.C. generating sets for the Manzai Power Station of the Military Engineering Service. April 8. (D.O.T.)

Why not visit
The SUDAN
this Winter?
KHARTOUM can be reached either via Egypt or direct by steamer to Port Sudan and thence by train-de-luxe. The social life of Khartoum during the season (December to March), the scenes of Wild Life on the Southern reaches of the White Nile, or interesting short trips organised by the Sudan Government Railways and Steamers from Khartoum, offer a unique variety of experiences to those in search of something out of the ordinary. It is also a new route to or from UGANDA and KENYA, involving neither difficulty nor discomfort. To the Sportsman it is Paradise.

Notes of the Week.

The Anglo-Egyptian Negotiations.

The Anglo-Egyptian Conference opened on March 31 with all the formalities suitable to an historic occasion. The stage was set in the Locarno Room of the Foreign Office, and appropriate references were made to the good augury of that circumstance. It was not to be expected that the inaugural speeches would amount to more than an exchange of friendly messages and pious aspirations. The British proposals lie on the Conference table. They have been, as Mr. Henderson remarked, the subject of friendly declarations on the part of the Egyptian Prime Minister, and the latter's expression of his conviction that the Conference will succeed in its task of concluding a treaty satisfactory to both peoples may well be related to the obvious fact that only his signature is required to conclude the negotiations. It is all to the good, however, that the Anglo-Egyptian relations should be discussed in their widest ramifications by the two Governments. More ground can be covered than need be set out in the actual terms of the treaty, and it is to be hoped that a frank exchange of views will lead to the clearing away of the misunderstandings that have been responsible for past failures to arrive at a friendly settlement between the two countries. Given sincerity, intellectual as well as moral, on both sides, agreement cannot fail to be reached. A treaty signed without sincerity and conviction could be only a disaster, as it would never be carried into effect whole-heartedly, and pin-pricks on one side or the other must inevitably prejudice Anglo-Egyptian relations and may provoke catastrophe in Egypt.

Report of the Palestine Commission.

The Report of the Parliamentary Commission on the Palestine Disturbances of August, 1929, which is just published as we go to press (Cmd. 3530), will, presumably, please no one who is a propagandist in the problem of Palestine. We cannot analyse the Report here; next week we shall hope to deal with it more fully. Three things in it, however, seem to call for immediate notice. The first is that, *pace* the Prime Minister in a speech made soon after the August disturbances, racial animosity *was* at the bottom of the trouble—though Mr. Snell, at one with his political leader in this, thinks that the causes were temporary, not fundamental. Next, that the Arabs were immediately responsible for the murders last August, even though apprehension of Zionist designs and Zionist provocation may have been considerable. And thirdly, and most important, that there should be a fresh definition of British policy in Palestine. The Report particularly suggests the laying down of explicit directions on "such vital issues as land and immigration." On the whole, this Report, unnecessarily verbose though it be, does cover most of the main points in the Palestine problem, and the conclusions which it reaches, which can scarcely be said to be modified in a really serious manner by the reservations of Mr. Snell—are witness of its comprehensive impartiality. We hope profoundly that it may command general acceptance, although that prospect, because of the inevitable way in which questions of major policy have been touched upon, is remote. It was, however, always absurd to suppose that major policy could actually be divorced from the Commission's duties, which appear to have been accomplished with zeal, conscientiousness and openness of mind.

A Palestinian Atmosphere.

With the publication this week of the Report of the Parliamentary Commission of Inquiry, with the arrival of the Arab Delegation in London, and with the meeting of the Jewish Agency here, the atmosphere can be said to be distinctly Palestinian. There are also a hundred other events showing the diverse currents affecting the life of Palestine. One that we would here like to emphasise, as being calculated to render easier the attainment of the one thing that matters in Palestine, namely, the friendly co-operation of Arab and Jew, is the proposal which recently emanated from Professor Einstein. This German genius in all his public utterances on Palestine has stressed the all-important factor of collaboration between the peoples of Palestine. In a letter to the English edition of *Falastin* he has adumbrated a plan which, if it could be realised, would doubtless tend to lessen the strife between Arab and Jew. He proposes the formation of a Secret Council, to be composed of four Arabs and four Jews who will be independent of any political body. These would consist on each side of one physician elected by the medical body, one jurist elected by the lawyers, one workers' representative elected by the Unions, and one clerical man elected

Digitized by Google

by the ecclesiastical body. These eight people, the German Professor goes on, would meet once a week. They would undertake to act, as representatives not of their professions or of their nations, but of all the inhabitants of Palestine. Their discussions would be kept absolutely secret. In time this scheme would result in the dispersal of differences and in the formation of a section of men able to represent the interests of the country *vis-à-vis* the Mandatory Power.

The Existence of Good Will.

It was not, perhaps, to be expected that such a dispassionate proposal would be welcomed with any great enthusiasm by either Arab or Jew, who have become, unfortunately, too soaked in the sterile atmosphere of politics. But it is at least heartening to note that the *Falastin* itself is impressed with Professor Einstein's sincerity, and that the *Davar*, the Jewish Labour paper, discusses it in a serious and by no means a hostile manner. Both these journals point out, what is very evident, namely, the fact that nearly everyone in Palestine is a potential politician. The *Davar* doubts, indeed, whether anyone who is not connected with a political organisation would be in a position to "deliver the goods." The reservations by these two papers would appear to be very justifiably made. But Professor Einstein, even though his knowledge of the actual daily routine of life in Palestime may not be so profound as that of other Zionist leaders, must have been well aware of the disastrous extent to which politics do affect the welfare of the country, and it is in spite of that fact that he has made this striking suggestion. It may be that it is destined to be still-born, but at least it should be welcomed wholeheartedly by all men of good will, not because of its details, but because of its evident aim of raising the whole tone of Arab-Jewish relations. The Einstein of the mathematical world cannot be followed except with the extremest difficulty and with the aid of unusual intelligence: the Einstein of the Arab-Jewish world ought to be followed in spirit (though possibly not in particular) by all men in the land from which came the doctrine of good will to mankind.

Another Suggestion.

By many Zionists, however, Professor Einstein is looked on as a "Defeatist," as one who is suffering from what has been called in the Zionist Press "Magnesia"—as being something in the nature of the proposals which recently were published by Dr. J. L. Magnes (Chancellor of the Jerusalem University) for the co-operation of Arabs and Jews in Palestine. It is, in their view, both derogatory and wrong to themselves to seek at this juncture Arab friendship at any cost, and they deplore the spirit of concession which the Jewish "Defeatists" are said by them to be sedulously cultivating. Something, however, must be done, and we hope that we shall not be accused of being anti-Zionist if we suggest that a beginning would best come from the Zionists, if only because of their wider knowledge of the world. The Zionist Organisation is criticised in an interesting article contained in the *Jewish Chronicle* of March 28, in which Dr. Ariel Bension lays it down that in reality, far from the rosy picture of Arab-Jewish co-operation drawn by propagandists, Arabs and Jews have increasingly failed to understand each other. "Our optimists," he says, "have grown apace in the last ten years. . . . According to them, we were becoming *persona grata* with our neighbours because of all the benefits we were bringing them. . . . In reality, we have grown further apart. The barriers between us have grown more rigid, harder to break down. The contacts between Jew and Arab are only of the most superficial kind, brought on by necessity." Much of this tragedy, Dr. Bension thinks, is traceable to the fact that Oriental Jewry has been neglected, and he suggests that the first step in improving Arab-Jewish relations must be to mobilise the forces of Oriental Jewry, to explain to the Muslims the real meaning of the Jewish National Home, because Oriental Jewry alone understands Arab mentality. There is doubtless considerable force in Dr. Bension's analysis, but we doubt whether his hopes of attracting to the Zionist ideal the Jews in Muslim countries of Asia and Africa are as well founded as he would have them. Yet it is a contribution to set out, as unequivocally as he has done, that much of the trouble in Palestine has come about through attempting to impose a largely Western conception upon an Eastern people.

Order in Palestine.

Although it has been decided by the High Commissioner of Palestine that publication of the Report of the Shaw Commission of Inquiry should precede the usual festivals about the time of Easter, it is obvious that tension in Palestine is still high, and that fanatical outbreaks are most closely to be guarded against. In a recent order the police were given authority to arrest without warrant any persons refusing to disperse, or in possession of any weapon carried for the purpose of being used in a disturbance, or acting in a manner calculated to provoke disorder. This precaution is eminently sound, and anything short of it would enable the critic to say that the Government was failing in its prime duty of governing. It is to be feared, even by the most hopeful, that tempers may run high within the next few weeks, and the severe measures enacted are a welcome indication that normal bounds should not be surpassed. In this critical month, it might be thought that all men of good intention would support the Government in its actions to tide over an emergency, and it is distinctly unfortunate, in this connexion, that differences between Arabs and Jews are reported to have broken out in Jerusalem as a result of the Government's appointment of an Arab Christian (Yacub Farraj) to act as Mayor of the Holy City while the Mayor himself, Ragheb Nashashibi Bey, is away with the Arab Delegation in London. The Jewish members of the Municipal Council assert, apparently, that since the majority of the population in Jerusalem consists of Jews, a Jewish Mayor should have been appointed in Ragheb Bey's place. It is a little difficult at this distance from Jerusalem to see why this alleged objection on the part of the four Jewish members of the municipal council does not hold good also for Ragheb Bey's appointment as Mayor, but in any case this affair is but one more example of the kind of petty but very real difficulty with which the British Administration in Palestine has to contend.

The Political Struggle in Roumania.

The intensity of the political feeling between the Government and the Opposition in Roumania cannot fail to be a matter for regret to all friends of the country. As far as can be gauged from a distance, the battle *à outrance* is now set between the two parties, with little consideration for the probable effect upon Roumania's credit abroad. While General Averescu fulminates against the Cabinet and his followers call upon him to upset the Government at all costs, "if necessary, with force," the latter finds itself obliged to introduce emergency legislation into Parliament to cope with a more subtle form of attack. With the view, it is alleged, of undermining the credit of the country, the organs of the National-Liberal Party had spread the report that the Government were contemplating the re-valorization of the leu at 2,200 to the pound sterling, instead of 813 lei to the pound at which exchange is now stabilized. At the same time sinister rumours regarding the situation in Bessarabia were being given credence. The Minister of Finance in introducing a Bill for the defence of the country's credit and tranquillity was at no pains to disguise the seriousness with which the Government viewed the tactics of the Opposition. On the principle that the doctrine of liberty was not applicable to Communists, who had no regard for the public liberty, he declared that principles applied to Communism were also applicable to others who showed that they had no respect for the liberties and rights of citizens. There can be no question

Digitized by Google

that the Opposition tactics have "rattled" Dr. Maniu's Government, and that the latter feels compelled to meet its adversaries on their own ground. The situation is complicated by the existence of a Regency, which cannot hope to succeed where even the Crown sometimes failed, in providing a court of appeal entirely remote from party politics, and a new element is being introduced into Roumanian public affairs by the frequent clashes between Prince Nicholas, one of the Regents, and the public, as a result of the Prince's partiality for motoring at a rapid rate through Bucharest's crowded thoroughfares. It must not be overlooked, however, that political feeling in South-Eastern Europe indulges in heights and depths to which there is no counterpart in the West, and a too close examination of the party arena is apt to engender more pessimism abroad than the position may be found in the long run to warrant.

Allied War Losses Suffered in Turkey.

It was not to be expected that British nationals who suffered losses in Turkey as a result of the participation of the Turks in the War would be satisfied with the payment that they have received from the International Commission for the Assessment of Damage Suffered in Turkey. In the first place there was a very careful scrutiny of all British claims before they were submitted to the Commission—a combing-out process, it may be supposed, that was carried out more rigorously by the British authorities than by those of the other countries concerned. Then the Commission examined each claim still more minutely, and placed its own assessment upon it. Finally, only fifty-two-and-a-half per cent. of the amount at which the claim was assessed was paid to the claimant, who will have had to wait, it may be, some fifteen years in all for the inadequate compensation received. British nationals find a special grievance in the fact that the amount fixed for Turkish compensation was restricted to the sum deposited by the Turks in Berlin and Vienna as security for their loans, and took no count of the value of the Turkish battleships seized by Great Britain at the outbreak of the War, for which Turkey had handed over the purchase money to the shipbuilding firms. It is argued that, as this sum of money, amounting to six million pounds, was legally due to Turkey, because the ships were taken over while she was still neutral, it ought to be used for compensating British nationals who suffered losses in Turkey as a result of the War. Successive British Governments have argued that the money in question is more equitably dealt with by being put to the credit of the British taxpayer, to defray part of the cost of the campaign against Turkey, than by being utilized for the sole benefit of a relatively small number of British nationals, who may not have been taxpayers in Great Britain before the War. The official attitude on this point will probably be supported by the electorate as a whole, however much sympathy may be felt with the British community in Turkey that suffered heavily by the outbreak of the War. The claimants, therefore, are well advised to shift the basis of their claim to clauses in the Treaty of Versailles which are interpreted to make Germany liable for losses suffered as a result of the acts of Germany "or her allies," and to press for the payment of the balance of the compensation due to them on their assessed claims out of the proceeds of German property sequestrated in Great Britain. The whole question is, no doubt, hedged about by legal subtleties, but there would seem to be no reason why the claim should not be carefully and sympathically examined. It should not be merely dismissed on the ground that the matter is closed now that the International Commission that has been sitting in Paris for five years has come to an end.

Commerce and the Indian Reforms.

Once again a recognised leader of the European non-official community in India has pointed out how essential it is that the European firms of merchants established in the country should take an active part in public affairs. Speaking at the last annual meeting of the Bengal Chamber of Commerce at the end of February, the Hon. Mr. J. H. Fyfe, the retiring President, made a strong appeal in this connexion. "The great handicap," he said, "from which we as a community suffer from the point of view of our taking our proper part in political life is the absence of a leisured class on whom we might be able to call. But the fact that we are thus handicapped makes it all the more important that we should realise our responsibilities. The appeal for a more generous public spirit has been made in this room often enough, but it cannot be too often pressed, and I again urge that there should be a wider recognition of existing necessities by firms that look askance on public work." It is not to the credit of the European firms in Calcutta that at this time of day there should still be some of them who maintain the old attitude. But, as apparently there still are such, it cannot be too often repeated that the days when politics could be safely ignored by the non-official European have gone. The old attitude of indifference must be definitely abandoned, and public work must be recognised as an essential part of the life of the European merchant in India. If a leisured class of Europeans could be called into existence the problem would undoubtedly be simplified. But there can be no such class, and it follows that the burden must be taken up by those who are actively engaged in commercial work. There is no choice in the matter. And surely nobody who is acquainted with present-day political conditions in India can doubt that there is great need for political activity on the part of the Europeans. There is a marked tendency on the part of the Indians towards discriminatory and confiscatory legislation. This must be of course strenuously resisted, and it must be made clear beyond question, as Mr. Fyfe said that "whatever argument there may be about India's political destiny, whatever disputation there may be as to the meaning of Dominion Status," the claim of the Europeans to continue their peaceful trading is just and inalienable. The Europeans do not ask for any monopoly or for any special privileges. But, "we do ask and we claim that we are entitled on the most elementary principles of justice to ask that it shall not be lawful for any future government of this country to stand aside and allow our property to be taken from us, and the results of our toil and our capital combined ruthlessly appropriated by others."

The King last week sent a telegram to the President of the Greek Republic on the occasion of the celebration of the centenary of the Greek War of Independence (March 25). His Majesty recalled the part played by Great Britain in assisting Greece to become independent. The President sent a telegram in reply the following day.

THURSDAY, APRIL 3, 1930.

ALBANIA AT WORK.

Few countries can illustrate more clearly than Albania the soundness of the saying that connects happiness with the absence of "history." Left to themselves, the Albanians very properly find at the present time that the task of laying satisfactory foundations for the future prosperity of their State absorbs their whole attention, and they are modest enough to believe that the humdrum story of a routine existence has little of interest for the outside world. It is reserved for the megaphonic attentions of their neighbours to convert a difference of opinion between two people into a revolution or the headache from which the Sovereign may be suffering one day into a fatal illness. In common, however, with the rest of the Balkan States, Albania is benefiting from the atmosphere of "Live and let live," which quite recently has settled upon the Peninsula, and promises to be proof against even the activities of Communists and the Macedonian Internal Organization. For some three months the country has been more or less free from the sensation-mongering of Vienna and Belgrade; the lurid colouring of the picture representing conditions in Albania at that time has faded, and the only piece of definite Albanian news—a change of Government—has been too matter-of-fact to lend itself to the embellishment that Balkan propaganda would formerly have considered essential to the subject. All parties are to be congratulated upon this happy state of affairs. The output of Vienna news agencies concerns only public opinion outside the Balkans; it is unfortunate for the cause of truth and in the interests of history that misrepresentation should be carried to such a fine art; but its effect on Balkan affairs is negligible. This is, however, not the case in respect of misrepresentations emanating from one or other of the Balkan capitals, for not only are the statements eagerly absorbed and believed in the country of origin, but they are also deeply resented by the people to whose prejudice they are circulated, and they serve to embitter still more the relations between the different countries. Whether as the result of some *mot d'ordre* or for the even healthier reason that common sense is beginning to permeate the Balkan Press without the intervention of the censorship, the affairs of neighbouring countries are being referred to more objectively and used less as a text for misdirected propaganda.

No country promises to react more favourably to this freedom from outside intrigue than Albania. Here State-building has had to be undertaken from the very beginning, and for many years to come must of necessity be carried out slowly. The progress that will be associated with King Zog's name must come gradually, both because the slender resources of Albania are a handicap to any rapidity of movement, and for the more compelling reason that real progress, if it is to prove permanent, should not advance beyond the capacity of the people and must, therefore, keep pace with the change in the national mentality. The first essential was the introduction of order and stability. Neither of these virtues is indigenous to the Balkans, and King Zog has not unwisely relied on foreign assistance to implant them in Albania. His alliance with Italy discourages attempts at disorder from without; the establishment of an army and gendarmerie, both "foreign-trained," makes for the maintenance of peace within, and has introduced a degree of security for persons and property not previously attained by Albania. On this foundation it is possible to build a modern State. Although Albania is small in area, the configuration of the country endows it with an inaccessibility out of all proportion to its size. Communications, therefore, are a prime necessity. Roads are being built, motor services connect the capital with other parts of the country, and a railway line from the main port, Durazzo, to Tirana is in process of construction. Albania, again, must have started on her new course having to cope with a higher degree of illiteracy than most countries. To-day there are some six hundred schools in the country, with thirty-three thousand pupils, or one child at school to every twenty-six of the population as compared with one to every sixteen in the case of her neighbours, who are in the fortunate position of being able to celebrate the fiftieth or the hundredth anniversary of their emancipation from Turkish rule. The existence of three or four newspapers, with as many periodicals, is no mean achievement for a small nation whose written language was suppressed until two decades ago.

The recent ministerial crisis, that led to the formation of a new Cabinet under M. Pandeli Evangeli, is believed to have been due to differences of opinion on the subject of the Budget. Albania offers no exception to the general rule that calls for strict economy in public finance at a time when the whole of Europe is suffering from financial stringency; but her problem is, no doubt, intensified by the multiplicity of the calls that are made on her slender treasury by a comprehensive programme of reform. So far Albanian politics have been freed, under the directing hand of King Zog, from the bitter conflicts that partisan feeling has introduced into the public life of other countries. The retiring Prime Minister, M. Kosta Kotta, not only received the King's thanks for the work done by his Cabinet, but also had the satisfaction of knowing that the new Government proposes to introduce few, if any, changes in the programme that he laid down. Albania will know how to take advantage of the new spirit abroad in the Balkans. She has already gone far towards reassuring her land neighbours that she has no intention to allow financial dependence upon others to affect her political independence. She will do well at the same time to make it clear that her interest in the fate of her nationals under foreign jurisdiction is free from all taint of irredentism. That less has been heard of Albanian communities in other countries than of other minorities may be due to a variety of reasons, but the fact does not imply less genuine concern on the part of the Albanian Government. The Albanians are in the position of having more of their race outside the frontiers of Albania than within it. This anomaly suggests caution in any action regarding their nationals abroad, and they have chosen the wiser course in not kicking against the pricks imposed by treaties, but in concentrating their attention on making the most of the territory they have got. Albania has little chance at this time of obtaining any rectification of her frontiers; she certainly does not want to be overrun by refugees. It is probable that the country could be made to support a population three times as large as that which it now has; but to this end agriculture must be improved and production, both agricultural and industrial, largely increased. The question of agrarian reform is now being tentatively handled; it is one of considerable difficulty, intensified by the fact that many of the more important feudal landlords derive a special sense of solidarity from being grouped together in one part of the country. In regard to this, as well as to other reforms, Albania's policy is slow, but steady progress, and it is to be hoped that King Zog will be able to count upon the good will of all neighbouring countries in his efforts to bring Albania to, and keep her at, the cultural and economic level of the Balkan States.

*The Near and Middle East

From Our Own Correspondents.

THE HIJAZ.

Jidda, March 11.

The King's Absence.

The Fast of Ramadhan came to an end with the last day of February, after which four days of complete holiday intervened before the resumption of the normal life of the country, which may now be said to be in full swing again in spite of the continued absence of the King, who is scarcely likely to be back much before the end of April, and of the Foreign Minister, who is understood to be in Syria on leave of absence for the celebration of his marriage. Little news of the results achieved at the conferences at Kuwait and at sea has so far filtered through to Jidda; but doubtless an announcement will be made in due course. The King's representatives at Kuwait were the Foreign Minister, Shaikh Hafidh Wahba (Minister Designate to London) and Shaikh Ibrahim ibn Muammar. It is understood that they were charged to discuss all outstanding questions with the representatives of the Iraq Government and that an understanding of a satisfactory nature was duly arrived at. The burning question of the Iraq frontier forts appears, however, to have been reserved for the meeting between the two Kings, which took place on a British warship in the Persian Gulf on February 20. It is much to be hoped that when the results of these conferences are published they will be found to have achieved a lasting settlement of all matters which for the past ten years have militated against peace in the frontier tract.

Foreign Representatives in the Hijaz.

It may be assumed with confidence that the Iraq Government will proceed forthwith to the establishment of a Legation at Jidda; and the first Iraqi Minister may be sure of a more than cordial reception in the Hijaz, where he will be a symbol of that Arab unity for which all true friends of Arabia have hitherto looked in vain.

Meanwhile it may be hoped that Shaikh Hafidh Wahba's visit to Egypt will result in the restoration of diplomatic relations between that country and this as the second step in the establishment of harmony between the various branches of the Arab race.

We still await with patience the arrival of Sir Andrew Ryan to take up the post of British Minister at Jidda, though perhaps he will defer his arrival till the King's return to the Hijaz. Meanwhile the Union of Soviet Republics appears to have staked out a claim to the doyenship of the Diplomatic Corps, which its representative has held for some time past, as Nadhir Bey Toracoloff on February 27 presented to the Amir Faisal at Mecca his credentials as Minister Plenipotentiary and Envoy Extraordinary of the Soviet Union. The Persian and Turkish Legations are still without their permanent incumbents, though both are expected in the near future.

Numbers of Pilgrims.

The climate of the Hijaz still maintains its extraordinary mildness, though signs are not wanting of an early return to the normal. Meanwhile the pilgrims already in the country have profited by an unusually long spell of cold weather, and the health bill of the country is on the whole excellent. The pilgrims to date number 38,386 as against 35,904 at the same period last year; but the Javanese visitation must now be very near its end, and now all eyes will be turned expectantly to India, Morocco, Egypt and elsewhere for the numbers required to maintain the record proportions of the present pilgrimage.

Later (March 13.)

Iraq and Hijaz-Nejd.

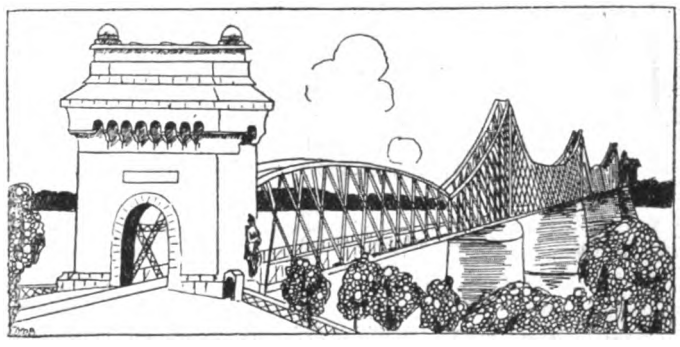
An official *communiqué* was issued yesterday, announcing the signature of a Treaty of Friendship at Baghdad on March 10 between the Governments of Iraq and Hijaz-Najd. The text is not, of course, available, and will presumably not be published until the treaty has been ratified by the Kings of the respective countries. The restoration of diplomatic relations between the two countries is, however, an accomplished fact and one to be welcomed without reserve. And all those who have played a part in the historic development of the past few months are to be heartily congratulated. Even Faisal al Duwish and Sultan ibn Bijad and their fellows in prison at Riyadh may call themselves blessed for the good that has come of their evil.

General News.

The Amir Faisal arrived at Jidda from Mecca this afternoon for a sojourn of some days, during which he will doubtless have many local problems to look into, as he has not been able to visit Jidda since the beginning of January, when he came down for the celebration of the King's Accession Day anniversary.

Another visitor of distinction shortly expected is Abdul Rahman Al Qusaibi, the well-known pearl merchant of Bahrain, who is due to arrive by the Khedivial Mail of the 15th. Mention must also be made of the recent visit of Mr. Ralph Chesbrough, the American Automotive Trade Commissioner for the Near East, from Cairo *via* the Sudan.

It is now definitely known that the Khedivial Mail Line Company has again secured the contract for the carriage of the Egyptian pilgrims to the Hijaz. The arrangements contemplated by the Banque Misr group in this connexion are scarcely likely to mature before the season of 1923.



ROUMANIA.

Bucharest, March 21.

The Political Situation.

The internal political situation is still unchanged in spite of recurring alarms, started apparently by the Opposition Press, that the Government is about to resign. M. Maniu has definitely stated that he has no intention

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

Digitized by Google

of resigning, and the Opposition probably have no great ambition to take over the reins of Government just now when so much distress exists throughout the country. Their policy appears to be to continue to harass the Government and to mark time in the hope that the latter will ultimately lose some of its popularity, owing to the heavy burden of taxation imposed upon the population. The Opposition would then expect to step in as the saviours of the country, that is to say, after the policy of their predecessors and the taxation imposed have re-established to some extent the financial situation and the beginning of a revival of trade and industry is about to set in. In the meantime the results of the recent Communal elections have sufficiently proved that the Government has still retained its majority in the country. The following give approximately the total number of Municipal or Communal seats secured by the different parties: National-Peasant (Government) 2,181; Liberals 796; Citizen group, 150; Hungarians, 93; Jews, 62; Communists, 58; Socialists, 41; Averescans, 36; Minorities, 22; Lupists, 7. The number of Communists and Socialists is notable. They appear to be concentrated, as usual, in the industrial districts, such as Petroshani and Timishoara (Temesvar), where there are large coal mines, while in Bessarabia, the supposed hotbed of Bolshevism, there is not one Bolshevist elected.

Miscellaneous News.

The disaster which has overtaken the inhabitants of the Rhone and Garonne valleys has made a deep impression on the Roumanian people, and a subscription list has been started by the *Argus* for the benefit of the homeless victims of the inundations. Subscriptions had reached a total of about 340,000 lei on March 18.

On St. Joseph's Day, March 19, the Roman Catholic Church in Bucharest organised a great demonstration to protest against the persecution of religion and the destruction of Churches by the Bolshevists. Processions of Catholic and Uniate peasants from the villages marched through the streets, headed by their priests carrying Cross and Banners, and an impressive service was held at St. Joseph's Cathedral.

As a result, no doubt, of the unseasonably mild winter a number of epidemics have broken out. Scarlet fever is very prevalent in Bucharest, and cases of typhus have been recorded in several towns, but only one in Bucharest. The most numerous cases are reported from Tighina, Orhei and other towns on or near the Russian frontier.

The weather continues fine and dry, very little rain having fallen in the Bucharest district. During the past week the temperature has risen to almost summer heat, and no fires are required in dwelling houses.

No bulletin of the agricultural situation has been published for some time by the Ministry of Agriculture. On all hands fears are expressed that, unless abundant rain falls soon, the winter crops, which suffered last year from unusually severe frost, will be lost this season on account of drought. The ground is too hard for ploughing by oxen and the peasants have not yet learned the use of tractors.

CYPRUS.

Nicosia, March 18.

More Ancient Sites for Protection.

The temple (remains) on the acropolis of Idalium, at the village Dali, where excavations took place not long ago, has been declared an ancient monument under protection. Idalium was sacred to Aphrodite—Venus—one of whose surnames was consequently Idalia. Dali is eleven miles from Nicosia. Another declared monument is the palace and temple of Aepia at Vouni (Loutros village) near Soli, where excavations have been recently carried out. It is a question whether this Soli was built by advice of Solon, when he visited Cyprus, or by a native prince. Also, it is doubtful whether the term Solecism was applied to the corrupt Greek dialect spoken by the inhabitants of this city, or those of Soli (Pompeiopolis) on the opposite coast of Asia Minor.

PALESTINE RAILWAYS

Instruction in Agriculture.

An important step has now been taken towards providing that school teachers shall possess some knowledge of agriculture. At a meeting at Nicosia, on March 10, convened by Canon Newham, Director of Education, the Colonial Secretary, Mr. Henniker Heaton, Mr. Dawe, Director of Agriculture, and other officials took part. A number of matters were discussed. Ninety-four of the new schoolmasters, and fifty-eight school mistresses will attend a half-yearly course of instruction. Mornings will be devoted to lectures and theoretical study, and the afternoons to practical work in land belonging to the Kykkou Monastery at Nicosia. Meetings are held in a theatre kindly lent by the owner, M. N. Kyprianos, until an agricultural College is opened at Morphou.

Greek Cypriots of Egypt.

British nationality has been granted to about 100 of the numerous Cypriot Greek residents who have been arriving from Egypt. Many others hope that their applications, now under consideration, will be favourably received. During a recent visit of the Greek Foreign Minister, M. Mikalakopoulos, to Egypt, the Mayor of Famagusta telegraphed to him, inviting him, in the name of the Greeks of that town, to visit it. The Minister replied the same day, regretting that he was unable, owing to lack of time, to do so.

"A Chronology of Cyprus."

A work under this title by Sir Ronald Storrs, has been printed at the Government Press (price 2s.) It should be of considerable value to students and others. It covers the period from B.C. 3000 to the present time. Sir Ronald acknowledges help received from Sir Thomas Arnold, Prof. Myres, Mr. G. Jeffrey, the Bishop of Kition, Mr. Gunnis, Mr. S. Gaselee, and others.

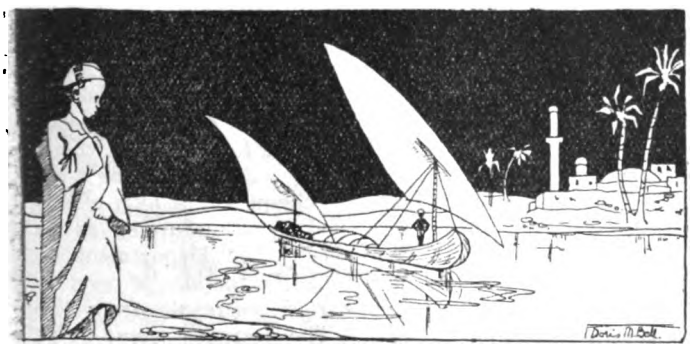
General News.

The Attorney-General, Mr. C. C. Gerahty, and the Puisne Judge, Mr. J. A. Lucie Smith, are both taking up appointments in Trinidad.

The Greek Archbishop has telegraphed to the League of Nations in the name of the Autocephalous Greek Church, and the Orthodox Christian people of Cyprus, protesting against the barbarous persecution of the Russian Church by the Soviet, and praying that it will exert all its influence on behalf of the Orthodox Christian people.

A football match has been arranged to take place between the troops at Polemidia Camp, Limassol, and a strong Cypriot team at Nicosia.

It is understood that Sir Ronald Storrs will proceed to England this summer on leave and partly, probably, on duty in connexion with coming Colonial Conferences.



EGYPT.

Cairo, March 22.

The Negotiations.

The official Delegation, which is to negotiate the proposed treaty with the British Government, left on March 20, and its departure was made the occasion for a popular demonstration which would have reminded one of similar spectacles on the occasion of the departure of the late Saad Zaghloul Pasha on a similar mission just under six years ago, if it had not given rise to disorderly scenes which considerably marred the occasion.

A certain amount of apprehension exists in British and foreign circles in connexion with the proposals with regard to the transfer to the Mixed Tribunals of the jurisdiction over foreigners hitherto enjoyed by the Consular courts. It is pointed out in many quarters that there is no one on the British side having any practical experience of the working of the Mixed jurisdiction and of the needs of the foreign communities, while on the Egyptian side the one man who is generally recognised as having unrivalled knowledge of the legal side both of the Anglo-Egyptian question in general and the Mixed Tribunals in particular, Abdel Hamid Pasha Badawi, has been left behind. It is felt that it is exceedingly dangerous for the British Government in such circumstances to engage in discussions on a subject which is as complicated as it is fraught with serious consequences to the very considerable foreign interests vested in Egypt.

The Provincial Councils.

General elections will be held on April 26 for the Provincial Councils under the new law, which lays down that election shall take place by direct suffrage instead of, as previously, by two degrees, and that each constituency which sends a deputy to Parliament shall have two representatives on the Provincial Council of its Province. It is, indeed, high time that these elections took place. The last were held some years ago, and in the interval, owing to the chopping and changing that has taken place in the electoral system, the machinery for replacing vacancies has become so dislocated that nothing could be done until the new law was passed to fill the Provincial Councillorships vacated by death, resignation, or transfer, with the result that, except for the ex-officio members, in some instances no council exists at all to-day.

The Queen of Roumania.

Since the departure of King Albert for Baghdad, whence he returned by the Imperial Airways mail last night, and of the Queen of the Belgians for Luxor, the centre of the scene has been held by Queen Marie of Roumania, who, with her daughter, Princess Ileana, is staying at the Semiramis Hotel. Soon after her arrival from Upper Egypt, King Fuad paid her an official visit, and in the evening a State banquet was given in her honour at Abdin Palace. Since then the royal visitors have been exceedingly busy both with official engagements and sight-seeing. There have been a visit to Queen Nazli at Kubbah Palace, an afternoon entertainment by Princess Omar Toussoun, luncheon with Prince Youssouf Kemal and with Sir Robert Greg, at present British Commissioner on the Public Debt Commission, and formerly British Minister at Bucharest, an evening entertainment arranged at the Pyramids by the Ministry of Foreign Affairs, where Arab horsemen gave an exhibition of their prowess in the moonlight, and a very brilliant reception, followed by a dance at the Semiramis Hotel, by the Roumanian Minister and Mme. Lahovary in honour of Queen Marie.

ANGLO-EGYPTIAN COMMITTEE.

It is announced that the following men have consented to serve as members of the Anglo-Egyptian Committee, of which Mr. J. S. Wardlaw-Milne, M.P., is Chairman:—Mr. M. W. Beaumont, M.P., Sir Philip Dawson, Mr. Samuel Samuel, M.P., and Mr. Philip Middlemas (representing Sir Edmund Wyldbore-Smith).

The other members of the Commitee are: Sir A. Shirley Benn, Sir E. A. Wallis Budge, Major W. H. Carver, M.P., Captain Anthony Eden, M.P., Mr. H. E. Garle, and Lieut.-Colonel C. K. Howard-Bury, M.P.

The Committee was constituted at a meeting of the House of Commons on March 24, and in a statement subsequently issued it was announced that its first function would be "to watch carefully the progress of the forthcoming negotiations between the British Government and the Egyptian Delegation at present in this country."

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, March 13.

The Salt Duty.

As the Salt Duty has been made Mr. Gandhi's weapon against the established Government in India (before I come to his letter to the Viceroy, which was published at the end of last week, and has naturally been the subject most in our minds ever since), I should like to call attention to a passage in a speech of Sir Maneckji Dadabhoy in the Assembly, reported on the same day on which we were given Mr. Gandhi's letter to read. Sir Maneckji's speech was delivered in the course of the debate on the Budget in the Assembly. The report reads: "He attributed the deficit to two causes: to the premature anxiety to help the Provinces by the remission of Provincial contributions, against which he had warned the Government in previous years, and to the reduction of the Salt Duty to Re. 1-4-0 per maund. If the Salt Duty had not been reduced thus, there would have been a clear gain of seven crores, and no deficits or danger of deficits."

Mr. Gandhi's Mind.

The working of Mr. Gandhi's mind is a more valuable thing to study, perhaps, than any single letter or article that may have proceeded from it in one of these weeks of March. It is a mind that within a few hours may be delivered of two such things as I will quote. Mr. Gandhi delivered "his last message and testament" on the eve of setting out on his mission of civil disobedience. He said: "Our case is strong, our means the purest, God is with us. There is no defeat for *satyagrahis* till they give up Truth." But an issue of *Young India* was published about that very hour. There was an article by Mr. Gandhi in it on the subject of the Viceroy's brief reply to Mr. Gandhi's letter to him. "The Viceroy represents a nation," says this article, "that does not easily give in; that does not easily repent. Entreaty never convinces it. It readily listens to physical force. It can go mad over a football match in which there may be broken bones. It goes into ecstasies over blood-curdling accounts of war. It will listen also to mute [*sic*] resistless suffering. It will not part with the millions it annually drains from India in reply to any argument, however convincing." It would appear from that that Mr. Gandhi's opinion of himself is that he is a user of the convincing argument.

Mr. Gandhi's Arguments.

What is the truth about this man, who will talk so glibly about there being no defeat for *satyagrahis* till they give up Truth? He has thought it worth while, addressing India in justification of his proceeding on his mission, unmoved by the Viceroy's warning that the course of action he was contemplating was clearly bound to involve a violation of the law and danger to the public peace—he has thought it worth while to drag in that bit about the Englishman and his love of a football match. You would suppose that a football match is a thing that the spiritually-minded Indians would never want to watch? The truth is that there might be nothing that would leave a deeper impression on the mind of any visitor to Calcutta than the size of the enormous crowds of Indians who flock to the Maidan to watch our football matches. There is more. I was listening only a week ago to three men talking about the Calcutta Football League, and the trouble that there has been over some of the matches. One of the speakers, the chief speaker indeed, is the agent of one of the biggest railways in India. He explained that the trouble arose, not because of bad tempers in the players, but because of ugly temper in the crowds. He had seen a crowd chase the members of an Indian team from the field, because those Indians had not played up to the crowd's expectation. He said that a crowd of from thirty to fifty thousand Indians, packed within the enclosure of the Calcutta Football Club might any day get out of hand, and there be a very dangerous and ugly riot. But Mr. Gandhi, in his convincing arguments, will ignore such a fact as that, as he will ignore the possibility of any Indian's holding Sir Maneckji Dadabhoy's opinion on the subject of the Salt Duty. He will write to the Viceroy as if it was world-knowledge that the only persons you could ever find to justify the Salt Duty are the coarse-minded and brutal British officials, the drainers of India's life-blood. He will tell himself any convenient lie.

Mr. Gandhi's Letter.

With so much of preparation, let the letter itself now be examined. It begins with such words as: "I would fain approach you and find a way out." It is the Viceroy, Mr. Gandhi's "Dear Friend," whom he would fain approach. What do the other Indians think, you may ask, of that attitude? Is the man sincere? Did he really want to find a way out? Except a few dupes, they none of them believe that he did. They all of them believe that there was nothing whatever behind the letter but Mr. Gandhi's wish to make "the worse appear the better reason," or the worse course—the one he had chosen—better than the course of, say, Sir Taj Bahadur Sapru. There was nothing behind the letter but Mr. Gandhi's wish to score the opening points in his duel with the Viceroy. An Indian of years and of ripe experience as an administrator, with whom I discussed the whole matter for three hours last night, spoke unhesitatingly of his own belief that "in Gandhi there is nothing but lies, trickery, and impudence." Those seem almost words too harsh to quote; but my friend used them, and he repeated them. "There will be nothing in Gandhi to the end," he said, "but lies and trickery." He reminded me of Satan's insincere grieving in the wilderness, and of the words addressed to him:

> Deservedly thou grievest, composed of lies
> From the beginning, and in lies wilt end. . . .

The Budget Debate.

The debates on the Budget have, as usual, ranged over the whole field; that is, the speakers have. One's general impression is that during the last ten years the financial administration of India has been a thing with the note of the amateur written all over it. The duty on imported silver will be taken off, in pursuance no one could clearly say of what aim, and a few years later the duty will be reimposed. The Post Office issues Cash Certificates bearing interest. Though the interest accrues from the moment the Certificates are issued, years pass before it is seen that provision must be made for that interest, just as much as provision must be made for the annual interest payable on the funded debt. A time-scale of pay, with periodical increments, is introduced in most of the Government departments, but the Finance Department will wait for each year to disclose, perhaps not fully till the year is over, what the total was of the salaries to be paid during the year. In a statement of the Appropriation Accounts of the Posts and Telegraphs Department one will be given such as this to read: "On the Postal side, revenue fell short of the estimate by about Rs. 22 lakhs. The decrease occurs mainly under Sale of Stamps, and the bulk of it seems to be due to the fact that the effect of the amendment of the Stamp Act . . . dispensing with the stamp duty of one anna on cheques and bills of exchange was not foreseen. The question arises as to whether the contribution made by the Department to the Provinces should not be reduced by the loss of revenue which might have been estimated to result from the change in the Stamp Act." "The decrease *seems* to be due"—"the loss *might have been* estimated." Is there not the note of the amateur over all that? One is almost made to think that one day before the Budget has to be presented they put in a hat, on slips of paper, what might be done—"Take off the duty on silver"—"take off the anna on cheques and bills of exchange"—"double the duty on silver"—"make it two annas on cheques"—and

Digitized by Google

that they get a blindfolded clerk to come and draw so many of the slips out of the hat. When one read one morning that the anna stamp on cheques was to be taken off, one said: "What made them think of doing that?" What *did* make them? Who can have felt that duty as any burden? It brought in so much revenue, at the minimum cost of collection revenue. And whatever was the point in taking off the duty on silver? There cannot have been any point. Now they are to reimpose the duty.

The Indian States.

More than two years ago I said that the rocks upon which the British-Indian political ship was likely to split, were, first, the financial position in India; secondly, the question of the relations between the Indian States and British India. The Associated Press understands, it is stated in to-day's newspaper, that important conversations are to be set on foot between Indian political leaders and the members of the Standing Committee of the Chamber of Princes regarding the place the Indian States should occupy in the future Constitution as well as the relations between the Central Government and the States. This conference is expected to take place in Delhi on March 29 and 30. The Indian politicians who have been invited do not include one member of the Congress Party. One might draw the attention to that of Mr. President Patel, who was recently heard in the Assembly, in one of those speeches that have been so improper, speaking of "the strength behind the Congress."

The King has been pleased to approve the retention for a further year by Khan Bahadur Sir Muhammad Usman of his seat on the Executive Council of the Governor of Madras which he will have held for a period of five years on March 30, 1930.

The appointment of Mr. Justice Arthur Page, K.C., a Puisne Judge of the High Court, Calcutta, to be Chief Justice of the High Court of Judicature at Rangoon in the vacancy caused by the death of the late Sir John Guy Rutledge is officially announced.

INDIA'S FISCAL AUTONOMY.

As the Cotton Textile Industry (Protection) Bill has now been passed by the Legislative Assembly, the following quasi-official explanation of the Fiscal Autonomy Convention will be of interest to readers of THE NEAR EAST AND INDIA:—"The fiscal autonomy of India has its origin in the following recommendations of the Joint Select Committee on the Government of India Bill (1919):—

"The Committee have given most careful consideration to the relations of the Secretary of State with the Government of India, and through it with the Provisional Governments. In the relations of the Secretary of State with the Governor-General in Council, the Committee are not of opinion that any statutory change can be made so long as the Governor-General remains responsible to Parliament; but, in practice, the conventions which now govern these relations may wisely be modified to meet fresh circumstances caused by the creation of a Legislative Assembly with a large elected majority. In the exercise of his responsibility to Parliament, which he cannot delegate to anyone else, the Secretary of State may reasonably consider that only in exceptional circumstances should he be called upon to intervene in matters of purely Indian interest where the Government and the Legislature of India are in agreement. This examination of the general proposition leads inevitably to the consideration of one special case of non-intervention. Nothing is more likely to endanger the good relations between India and Great Britain than a belief that India's fiscal policy is dictated from Whitehall in the interests of the trade of Great Britain. That such a belief exists at the moment there can be no doubt. That there ought to be no room for it in the future is equally clear. India's position in the Imperial Conference opened the door to negotiations between India and the rest of the Empire, but negotiation without power to legislate is likely to remain ineffective. A satisfactory solution of the question can only be guaranteed by the grant of liberty to the Government of India to devise those tariff arrangements which seem best fitted to India's needs as an integral portion of the British Empire. It cannot be guaranteed by Statute without limiting the ultimate power of Parliament to control the administration of India, and without limiting the power of veto which rests in the Crown; and neither of these limitations finds a place in any of the Statutes in the British Empire. It can only therefore be assured by an acknowledgment of a convention. Whatever be the right fiscal policy for India, for the needs of her consumers as well as for her manufacturers, it is quite clear that she should have the same liberty to consider her interests as Great Britain, Australia, New Zealand, Canada and

FERTILIZERS

TIME and Science have provided many remarkable changes from the primitive ways of the ancients to the organised methods of modern farming.

In the provision of fertilizers, supported by scientific research and a free advisory service, Imperial Chemical Industries Limited are helping to produce bigger and more profitable crops in every part of the Empire.

Enquiries may be made to:—

IMPERIAL CHEMICAL INDUSTRIES LIMITED

IMPERIAL CHEMICAL HOUSE, LONDON, S.W.1

A booklet N.E.I.9. entitled "The Products of Imperial Chemical Industries Ltd." will be sent, post free, on application to the Publicity Department.

Digitized by Google

South Africa. In the opinion of the Committee, therefore, the Secretary of State should, as far as possible, avoid interference on this subject when the Government of India and its Legislature are in agreement, and they think that his intervention, when it does take place, should be limited to safeguarding the international obligations of the Empire or any fiscal arrangements within the Emipre to which His Majesty's Government is a party.

"In justifying the tariff changes of 1921 to a deputation from Lancashire, Mr. Montagu quoted the above passage from the Report of the Joint Select Committee and added:

"These are very strong words, which, except for some timely warning by my hon. Friend the Member for Oldham, almost passed unchallenged in the House of Commons; but when the Bill came for the Third Reading to the House of Lords, Lord Curzon, speaking on behalf of His Majesty's Government,* pointed out the great change which had been instituted in these matters by what amounted to the grant of fiscal autonomy to India. I will read you his words if you like, but I am sure they must be familiar to most of you, and I do not want to waste your time. I can paraphrase them in the words of one of the speakers this afternoon. The people of India are plain, humble people and they regard a promise as a promise and after that Report by an authoritative Committee of both Houses and Lord Curzon's promise in the House of Lords, it was absolutely impossible for me to interfere with the right, which I believe was wisely given and which I am determined to maintain, to give to the Government of India the right to consider the interests of India first, just as we, without any complaint from any other parts of the Empire, and the other parts of the Empire without any complaint from us, have always chosen the tariff arrangements which they think best fitted for their needs, thinking of their own citizens first.

"Mr. Montagu further declared, in a dispatch to the Government of India, dated June 30, 1921, which was subsequently published in India, that in replying to the Lancashire deputation he had accepted on behalf of His Majesty's Government the principle recommended by the Joint Select Committee with regard to the fiscal freedom of India. On September 29, 1921, a resolution was moved in the Council of State recommending a declaration by the Government of India that they proposed to take advantage of the fiscal freedom conceded to them. After a short debate the mover withdrew his resolution on obtaining from the Government spokesman a declaration 'that the Government of India have every intention of exercising, in concert with the Indian Legislature and in what it believes to be the best interests of the country, the fiscal powers which have been conferred on it under the recent constitutional reforms.'

"Since then other pronouncements have been made in the Legislative Assembly and elsewhere to the effect that India has been granted fiscal autonomy, including a statement by Mr. Baldwin during his first tenure of the Premiership that "India . . . has been given economic liberty." The Labour Government of 1924 also recognised Indian fiscal autonomy, though its members made no public statement on the subject. The net result is that India has been promised by Secretaries of State of all three parties in this country that no interference by His Majesty's Government will take place in India's fiscal arrangements, with certain specific exceptions not relevant to the question of the cotton duties. This does not mean that the Government of India can act without reference to the Secretary of State, but it means that the Secretary of State is under an obligation not to overrule them when, after full consideration and consultation with him, they have, in agreement with their Legislature, reached a conclusion not in harmony with the views of His Majesty's Government."

* He said, among other things, "A responsible and representative British Committee charged with shaping a Government for India have conceded to India almost absolute freedom of fiscal policy," and described this as "a starting point to a future career in the growth of self-governing institutions in India, the importance of which cannot be exaggerated."

On Tuesday, April 8, 1930, at 4.30 p.m., at the Caxton Hall, Westminster, S.W.1 (St. James's Park Station), Lieut.-Colonel William Gavin Hamilton, I.M.S. (retd.), late Inspector-General of Prisons, Bengal, will read a Paper to the East India Association on "Imprisonment and Detention in India." The Rt. Hon. the Earl of Lytton, G.C.S.I., G.C.I.E., will preside and a discussion will follow the reading of the paper.

NEWS IN BRIEF.

The Greek Government has decided to erect Marconi stations for the duplex telephony and high speed telegraphy, one in or near Athens, with duplicate plant, one in Crete, and a third in Chios.

The Palestine Government on March 29 stopped the performances near the Wailing Wall of the Muslim musical ceremony of the Zikr which have in the past disturbed Jewish worshippers at the Wall.

Miss Freda Slutzkin, who was born in Australia, is the first woman advocate in Palestine. She was the only woman who took the recent law course in Jerusalem.

M. Marinkovitch, Yugoslav Foreign Minister, arrived last week in Paris, to discuss with the French Government Yugoslav relations with Bulgaria and Eastern European reparations.

The seat left vacant on the Bench of the Alexandria Mixed Courts by the recent resignation of Judge Mahmoud Bey Toayer is to be filled by Scandar Azer Bey, a judge of the Mixed Tribunals in Cairo.

The Turkish Grand National Assembly last week voted a law granting Turkish newspapers financial assistance from 1929—the year of the language reform—until 1931. Daily newspapers printed by rotary machines will receive nearly £T18,000 during the three years; other journals will receive smaller sums.

The President of the Greek Republic on March 30 laid the foundation stone of the Heroon edifice in Athens, commemorating the heroes of the Greek War of Independence. It consists of stones bearing the names of every Greek community distinguished in the struggle.

Following on its recent decision to give the municipal franchise to women, the Turkish Government has now announced that from 1931 women will be allowed to elect, and be elected, to the Grand National Assembly. At the same time, a direct system of voting will take the place of the present indirect system of holding elections for that body.

On March 22 the Orthodox Forty-Days' Requiem Service was held at St. Mark's Church, Belgrade, for the late Colonel Liubomir Christitch (second son of the late Premier, Nikola Christitch), sometime Military Attaché and Diplomatic Representative of the Kingdom of Serbia at the Imperial Court of Russia. The responses were sung by the Belgrade Russian Choir.

Five petitions of persons condemned to death for murder with premeditation at Safed during the Palestine disturbances appeared before the Judicial Court of the Privy Council on March 28, it being urged that many acts amounting to murder in English law did not amount to murder with premeditation in Ottoman law. Leave to appeal was refused.

Mr. J. H. Whitley, Chairman of the Royal Commission on Labour Conditions in India, and the other members of the Commission sailed from Bombay for England on March 22. The Commission will return to India in October. Mrs. Whitley, who sailed with the party, has made a very good recovery from her recent operation in Calcutta.

The Jewish Agency for Palestine (British Section) and the English Zionist Federation organised a memorial demonstration in honour of the late Lord Balfour on April 1 at the Royal Albert Hall. Dr. Chaim Weizmann presided and the speakers included the Chief Rabbi (Very Rev. Dr. J. H. Hertz), Mr. Amery, M.P., Lord Melchett, Mr. Felix Warburg, Mr. Nahum Sokolow, Mrs. Philip Snowden, Lord Cecil, Sir Robert Hamilton, M.P., and Colonel Wedgwood, M.P.

At the conclusion of the morning Liturgy a *Te Deum* was sung at the Greek Cathedral of St. Sophia, Moscow Road, Bayswater, on March 30, in celebration of the Centenary of the Independence of Greece. The Metropolitan of Thyateira (Dr. Germanos) officiaed, being assisted by the Great Archimandrite, the Very Rev. M. Constantinides. Among the large congregation were M. Demetrius Caclamanos, Greek Minister, attended by the *personnel* of the Legation; the Greek Consul-General and staff of the Consulate, all wearing uniform; M. Gennadius, a former Greek Minister to the Court of St. James; and the leading members of the colony were also present.

An official notice was published in Jerusalem last week on the subject of payment of compensation for losses suffered during the August riots, according to which £100,000 has been approved as the total sum which may be paid, *ex gratia*, to all claimants. The following is the scale of compensation: For killed under age of 14, no compensation; between the ages of 14 and 18, maximum compensation of £100; for a husband killed, £50; for a wife killed, £100; for both killed, £350 maximum; for disablement from wounds, sums ranging from £5 to £100. Persons receiving compensation must waive any claim for compensation under the collective punishments ordinance.

THE ANGLO-EGYPTIAN NEGOTIATIONS.

The formal opening of the negotiations for a Treaty of Alliance and Friendship between Egypt and Great Britain took place at the Foreign Office in the morning of March 31. The Egyptian Delegation, comprising Mustapha Pasha Nahas, Prime Minister, Wassef Pasha Ghali, Minister of Foreign Affairs, Osman Pasha Moharram, Minister of Public Works, and Makram Effendi Ebeid, Minister of Finance, were received by Mr. Arthur Henderson, Secretary of State for Foreign Affairs, and shortly afterwards the whole company adjourned to the Locarno Room, where the staffs of the Egyptian Delegation and the British negotiators were already assembled. Mr. Henderson was accompanied by Mr. Thomas Shaw, Secretary for War, Lord Thomson, Secretary for Air, Sir Robert Vansittart, and Sir Percy Loraine. Dr. Hamed Mahmoud, Egyptian Chargé d'Affaires, was with the Egyptian Delegates.

In opening the proceedings, Mr. Henderson said :—

It is with especial pleasure that, on behalf of His Majesty's Government and of my colleagues who are immediately associated with me, it falls to my lot to welcome the distinguished Delegation over which you, Sir, have the honour to preside. I regard the occasion as one of especial significance in the relations of our two countries. The welcome which has been extended to you on your arrival here is sufficient testimony of the importance which the people of this country attach to their relations with Egypt. Perhaps it is not out of place to record that to some of you at least the land of England is not a strange land. Some of you have visited London before, and one at least has thought so highly of our cultural opportunities that he has graced with his presence during some years a famous Oxford College. I refer to my friend the Egyptian Minister of Finance—Makram Ebeid. In meditating upon these facts I cannot but bear in mind that you have before you a good example in the person of your august Sovereign, King Fuad of Egypt. He has paid us the honour of two visits in recent years and won our respectful sympathy. We appreciate this tribute to the amenities of our home land. Well, Gentlemen, we are proud of our country. We are pleased to think that in the course of the more serious work on which you will be engaged, you will at least have some opportunity of seeing it at its best. You are to make, I understand, a visit to the ancestral home of our Royal House at Windsor. You will be received at our two oldest Universities. I could wish that your programme might include a visit to Scotland. But the work we have in hand may, I fear, render impossible so long a journey.

What is that work?

We are now come together here to achieve a great purpose. First, to bring a contribution, and an important one, to strengthen the great organisation which is being built up by the nations to establish peace between the peoples of the world. I refer to the League of Nations. Secondly, to seal by a Treaty of friendship between two peoples whose interests are in so many respects identical.

I will not refer to past failures to achieve the object we have in view. They are within the recollection of all of us, and I think we can all agree as to the unfortunate consequences of those failures. They simply had the effect of retarding that accommodation which sentiment, reason and mutual interest all directed as so essential for the welfare of the two peoples.

I refuse to contemplate the possibility of failure on this occasion. I believe that that is the mood in which the Prime Minister of Egypt and his colleagues have come to discuss with us the position. For the purpose which we have in view we have made known the position of His Majesty's Government. In August last His Majesty's Government made to the Egyptian people an offer inspired by feelings of the most friendly and most conciliatory nature. That offer has been before the Egyptian people and the people of this country for the past seven months. His Majesty's Government have been much gratified to observe that the spirit of friendship and good will which prompted the offer has been unquestioned and has been reciprocated in Egypt. In particular have they noted the friendly declarations of the Prime Minister of Egypt. Parliamentary elections have been held. The Party to which you, Sir, are the leader has been returned to power as a result of those elections and we welcome you as the representative of the great majority of the Egyptian people. You have demanded in the name of your Government, from the Egyptian Parliament, and have received, a Mandate to come to London and undertake discussions with us on our proposals. Those discussions receive their public and official send-off in our present surroundings which, I would remind you, but a few years ago saw the signature of the Locarno Treaties.

In the result of our labours I look forward to seeing the relations of Great Britain and Egypt secured on a basis of permanent friendship and alliance. Further, that Egypt should be enabled to play as a free and independent sovereign State the part in the comity of nations which befits her ancient greatness and her modern progress.

Your Excellency, Nahas Pasha, Your Excellencies, I extend to you a warm greeting on behalf of His Majesty's Government. I have the confident hope that our collaboration will be crowned with the success which the subject from its importance and far-reaching possibilities demands.

After Mr Henderson's speech had been translated into French by Sir Percy Loraine, High Commissioner for Egypt and the Sudan, Nahas Pasha replied as follows, an English translation of his speech being subsequently read by Makram Effendi Ebeid :—

In the name of my colleagues and in my own I thank your Excellency for the words of welcome that you have been good enough to address to us. The cordiality of the reception that has been accorded us has touched us deeply, and the numerous testimonies of sympathy which have been lavished upon us emphasise and enhance this wish for understanding and conciliation which has inspired the British Government's proposals, and to which it is a pleasure to me here to render public homage. Egypt, as your Excellency is aware, has responded to the conciliatory attitude of His Britannic Majesty's Government with equal good will. Profoundly attached to her constitutional liberties, she has been anxious to proclaim, by the voice of her authorised representatives, her firm resolve to arrive at loyal agreement with Great Britain. It is for that reason that we are here.

We have come, indeed, delegated by the people of Egypt, to discuss the proposals which have been made to it, to bring together and reconcile the respective points of view, to avoid any prospect of ambiguity and misunderstanding, to establish the relations of the two countries on friendship and confidence, the only foundations for an honourable, solid and lasting agreement. We are persuaded that we shall succeed in our task and that we shall reach an agreement which will satisfy the two peoples. To your good will and to ours, both equally evidenced, is added a new element of success: it is that we have made the acquaintance of your Excellency and have established with you personal relations of the pleasantest and most reliable character.

The failures of previous negotiations have not discouraged us. The desire manifested on several occasions by the two peoples to come to an understanding testifies clearly to the necessity of such an understanding, which is imposed at once by reason, sentiment and mutual interest.

May I be allowed here to express our gratitude for the great honour we have had of being received by His Majesty the King, who, with a kindness of the charm of which we can never say enough, has deigned to interest himself in us and in the success of our common mission?

Let your Excellency also allow me to express to you our gratitude for the homage rendered to the person of our august Sovereign. The whole of Egypt has been touched by the manifestations of esteem and of sympathy with which the English people and its Government have surrounded King Fuad on each of his visits to your beautiful country. His Majesty has enjoyed and greatly appreciated the charm of the English country and the intelligence and activity of its people.

Moreover, England is far from being unknown to most of us. We have already experienced the delightful and peaceful charm of your countryside, and we have been sensible of the eloquence of your monuments, of your past and of your traditions. The visit that we shall make to Windsor Castle will enable us to greet one of the cradles of your illustrious Royal Family, and the visit to two of your most ancient Universities will be enrolled among our best memories. As your Excellency has just recalled, one of my colleagues has so justly appreciated the importance of the traditional culture of this country that he has crowned his studies by a long stay in your illustrious University of Oxford. This example, followed by many of our young people, constitutes an excellent prelude to understanding and friendship by intellectual *rapprochement*.

It is this friendship and this understanding that our discussions, publicly and officially inaugurated in the same Room as witnessed a few years ago the signing of the Locarno Treaty, are going, I am fully confident, to consecrate definitely.

The mother of all civilisation stands erect to-day in the pride of her youth, decked in the splendour of her past, and she claims her share in the common, peaceful and fruitful work of free nations. It is natural that Great Britain should hold out a brotherly hand and that the mother of Liberty should greet joyfully the entry of Egypt into the Society of Nations, this concert of independent and sovereign States organised for the establishment of peace among all the peoples of the world.

At the conclusion of the speeches the British and Egyptian delegates adjourned to another room in the Foreign Office, where the negotiations will take place.

THE SHAH'S CORONATION.

As the anniversary of Riza Khan's *coup d'état* which began the present progressive system in Persia fell this year during Ramadhan, the military display which is always held to celebrate the occasion has been postponed until the anniversary of Riza Pahlavi's coronation, on April 24 (Ordibeheshte 4).

Four Jews charged at Jerusalem with the murder of an Arab last August have been acquitted after being in prison for five months.

PERSONAL AND GENERAL

TO-DAY

April 3, 1930 (New Style)
March 21, 1930 (Old Style).
Dhulqaada 4, 1348 A.H., of the Muslim Calendar.
Nisan 5, 5690, of the Jewish Calendar.
Farvardin 14, 13009, of the Persian Calendar.

Viscount and Viscountess Brentford arrived at 70, Queen's Gate on March 30 from Egypt.

The Marchioness of Titchfield, who arrived at Marseilles on March 27 in the s.s. Razmak from India, has returned to London.

Mr. Bernard Arthur Crean, Resident Magistrate, Kenya, has been appointed a Puisne Judge of the Supreme Court of Cyprus.

Sir Percy Loraine, Bt. (High Commissioner for Egypt and the Sudan), had an audience of the King at Buckingham Palace on March 24.

Field-Marshal Viscount Plumer and Viscountess Plumer have returned to 22, Ennismore Gardens from Santa Margherita.

Mr and Mrs. Washington Singer, Miss Longsdon, and Jean Longsdon arrived in England at the end of the week on their return from Egypt.

Field-Marshal Sir Claud Jacob has been appointed Chairman of the Royal United Service Institution in succession to Admiral Sir George Hope.

Sir Victor Corkran left London on March 28 for Marseilles. He sailed in the P. and O. s.s. Viceroy of India, in which Sir Henry Grayson and Sir Francis Aglen were among the passengers.

H.E. Monsieur Caclamanos, Greek Minister in London, will preside at a banquet to be held at the Savoy Hotel on April 5 by the Greek communities in England to celebrate the centenary of the Independence of Greece.

The Persian Minister (Mirza Seyed Hassan Taqizadeh), and the Ethiopian Minister (Nagadras Makonnen Indalkatcho) were among those received in audience by the King at Buckingham Palace on March 27.

Lady Birkmyre returned last week to 67, Queen's Gate, S.W., from India, where she has been staying for the past three months. Sir Archibald Birkmyre will remain in India for a few months longer before returning to London.

H.E. S. H. Taqizadeh, Persian Minister in London, left this week for Teheran. He may be returning in six or eight weeks' time. During his leave of absence, Mirza Muhammad Khan Nabavi, Counsellor of the Legation, will act as Chargé d'Affaires.

Commendatore Luigi Villari will speak to the Near and Middle East Association on "Italy's Problems in the Near East," on April 11, at a quarter to nine o'clock. The meeting will take place at 98, Portland Place, W.1., by kind permission of the Lady Headley. The Dowager Lady Boyle will preside.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. L. Maxwell, Christchurch, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R. Deccan. Fees 40 guineas per term, including all necessary extras, with reductions for sons of Clergy and Officers. Supervised holidays arranged for boys from abroad, at seaside or elsewhere.

Colonel Sanatescu (Millitary Attaché to the Roumanian Legation) and Mrs. Sanatescu entertained at dinner at the Ritz Hotel on March 24 the following guests: M. C. Laptew, Major and Mrs. Béldy, Colonel and Mrs. Thomas, Lieut-Colonel and Mrs. Uggla, Mr. and Mrs. Samuel de Souza-Leao Gracie, and Mr. G. Constantinescu.

The Palestinian Arab Delegation, composed of Mousa Kazim Pasha al Husaini, his Eminence the Grand Mufti of Jerusalem, Ragheb Bey Nashashibi, Mayor of Jerusalem, Alfred Effendi Roch, and Aouni Bey Abdul Hadi, arrived in London on March 30. It was met by Lord Templetown, who read an address of welcome to which the Grand Mufti briefly replied, by Colonel Howard-Bury M.P., Captain Robert Gordon-Canning, Mr. W. H. Stoker, K.C., who was counsel for the Arab Executive during the recent inquiry in Jerusalem, Jamal Effendi al Husaini, who will act with the delegation, and members of the Muslim community in London.

EGYPT IN ENGLAND.

In the evening of March 26 a brilliant and numerously attended reception was held at the Royal Egyptian Legation. Dr. Hamed Mahmoud, Chargé d'Affaires, received the guests, and he was joined at an early stage by Mustapha Pasha Nahas, Egyptian Prime Minister and Wassef Pasha Ghali, Minister for Foreign Affaires, who, with Osman Pasha Moharram and Makram Effendi Ebeid, and the other members of the Delegation that has come to England to negotiate an Anglo-Egyptian Treaty, had arrived at Victoria Station only a few hours previously. The presence of the Delegates and their large staff of Advisers added to the interest of the evening, and enabled the Egyptian visitors to make the acquaintance of, or to renew touch with, members of His Majesty's Government and many Members of the two Houses of Parliament who were present. One of the reception rooms was reserved for dancing, three others were used as supper rooms, and until an early hour in the morning the Legation presented an animated appearance.

On March 28 Nahas Pasha and his colleagues were received by the King at Buckingham Palace. A banquet was given in honour of the Delegation at the Foreign Office on March 31, and it is hoped that during the stay of the Egyptian Ministers opportunity will be found for a varied programme of visits to different places in England.

The Prince of Wales arrived at Juba on March 30. He took the Nile steamer Omdurman, one of the newest vessels in the Sudan Government's fleet, to Kosti (Eastern Sudan), and is then proceeding by rail to Khartoum, where he is due about April 14.

THE WEEK AT HOME

London, Tuesday Morning.

Liberals and Labour.

The informal pact between Liberals and the Labour Party to which I referred last week is still puzzling the pundits, who, not a little annoyed that their calculations of an early election have been upset, criticise both parties to it with some acerbity. It is, of course, generally recognised that Mr. Lloyd George's "explanation"—that a united front must be preserved for the Naval Conference—was just a way of speaking: certainly this explanation, like Coleridge's, wants explaining. The pact really appears to have been due to the desire of both Labour and Liberal parties to save themselves from unnecessary trouble.

For the "Left" wing of the Labour Party has been harassing the Front Bench considerably during the last few weeks. About thirty Socialist malcontents are making life very uncomfortable for "Uncle Arthur" and the other "safe men" of the Party: they vote against the Government on all sorts of absurd issues, and generally make things vexatious. What, then, more natural than to accept the offer of Mr. Lloyd George to support a Government which does not believe the socialisation of industry to be immediately practicable? Are not fifty Liberal allies better than thirty Labour enemies? Take the cash, and let the credit go!

As for the Conservatives, one would guess that they feel nothing but relief at the Liberal-Labour *entente*. I believe that Mr. Baldwin, so far from wishing for an election before the summer, would like (from the political point of view) to see the Socialists floundering with the difficulties of a Budget and another winter of unemployment before he asks again for the country's mandate. The Conservative calculation presumably is that by that time the country will be ready to accept Protection.

The non-party man may observe that the political situation is now more real than it has been for some time past, in that Liberals and Labour men, however different their labels, do actually think alike on very many domestic problems and should, therefore, be lumped together in the public view. Present Socialist is, in short, but old Liberal writ large. What may happen to Socialism and to Liberalism in the future is, however, a very different matter.

Unemployment.

Unemployment is still the subject that dwarfs all others in importance. How serious it is could be seen in the fact that the Minister of Labour, Miss Bondfield, who last November declared that it would be "dishonest" to borrow for the unemployment insurance fund, last week was obliged, owing to the increase in unemployment, to borrow another £10,000,000 for the fund. As things stood, the fund could finance a live register of 1,240,000, but the abnormal increase of unemployed to about 1,600,000 had upset all calculations.

No one actually opposed the new borrowing powers, but two very powerful speeches, one by Mr. W. S. Morrison (an able Scotsman whose future should be watched) and the other by Mr. Winston Churchill, contained memorable indictments of the Government's policy towards employment. It is but too easy to assume that the present Government cares for little but doles, and one would like to see more emphasis laid on the training and reconditioning of the unemployed. For the normal man who wants work, as Mr. Morrison said, the Government is a bad one.

The Prestige of Parliament.

There has been in the Press a lively controversy on the prestige of Parliament among the British nation to-day. Has it, as some say, lost its nineteenth-century authority and influence; or has it merely changed with the changing times? And is it absurdly unrepresentative, or is it as nearly representative as it is possible for an institution in a large democracy to be?

On the whole, I think those are in the majority who believe that Parliamentary influence has declined. It is not so much a question of oratorical effort or of the presence of big men as the fact that the Caucus has done its blighting work and that the Party Funds have been a curse. Real independence nowadays is practically impossible; real originality is at a discount. The standard of debate is now deplorably low: how often can one read a speech that is not an echo of the thought of someone else?

There are, it is true, interesting men in all three parties still in the House. But not nearly in such large numbers as there were, say, before Schnadhorst came on the scene. And there are precious few men who do not monotonously obey the crack of the Whip: the majority are mere automata.

It is unfashionable to talk of the rottenness of the Party System, but it is directly because of it that so much power has gone in recent years to the Cabinet. And rule by the Executive is not yet popular in this liberty-loving country.

The Decadence of Cambridge.

How fickle is fate, how faulty public estimate! Only the other day the welkin was ringing (whatever that may mean) with grief for Oxford. Nothing prospered with the Dark Blues: they had lost all causes, now they were losing all games. An all-pervading decadence had come over "the city of dreaming spires." No good to argue about it, the facts were self-evident: better let the historic past engulf its undistinguished future.

But lo! Oxford wins the Rugger match! A flash in the pan, said the omniscient readers of the popular Press. At Soccer and Hockey she draws with Cambridge—doubtless some easing up on the part of the invincible Light Blues. Oxford wins the Lacrosse match. But who understands Lacrosse in the South, which is the only part of England inhabited by thinking men? And now, last week, Oxford has whacked the Light Blues at Golf! This has fairly roused the prophet of woe. What if his diagnosis were faulty after all? Can it really be that Oxford is not doomed to decay, but destined to revive?

It really would be fun (to an Oxonian) if Oxford were to take off the Boat Race and the Cricket Match. Heaven forbid that it may be so, but at least it is not impossible. And if Cambridge is defeated by those who are already decadent, how decadent she herself must be!

The truth is, of course (as in so many things) that progress moves in cycles, if not in circles.

Book Reviews

THE OXFORD ORIENTALIST CONGRESS.

"PROCEEDINGS OF THE SEVENTEENTH INTERNATIONAL CONGRESS OF ORIENTALISTS. OXFORD, 1928." (Oxford University Press. 7s. 6d.)

The *Proceedings* of the Seventeenth Orientalist Congress, which was held at Oxford in August, 1928, have taken over a year finally to prepare, and though this volume is beautifully printed it is to be deplored that none of the papers actually delivered at the Congress could be included. One is referred, however, to publications which have since printed lectures given at the Congress, so that the disappointment of the very diligent student, at any rate, at finding none of the lectures printed *verbatim* will be modified.

From the personal point of view of the Congress, these *Proceedings* are a practically complete record, and to those who had the fortune to be present at the Congress they will serve as a reminder of a week of very pleasant, very full, and very stimulating living. The scantiness with which the actual lectures have been reported is presumably due to financial considerations: one cannot help feeling, however, that, even if it had involved a heavier subscription to the Congress, a synopsis of each lecture might advantageously have been inserted.

This volume is, nevertheless, quite indispensable, even as it stands, to any student of Orientalism. The Oxford Congress was a delightful success, and if there lies in front of him who would follow up all the learning displayed in any particular section of it a very stiff task, at least he can be certain that at the end of it he will have found his reward. These *Proceedings* do provide a skeleton by which practically the whole body may be reconstructed, though one must lament, again, the assumed fact that because the Congress had little connexion with the Schools Oxford has sent out these *Proceedings* in the barest form consonant with decency.

ANCIENT AGRICULTURE, INDUSTRY AND TRADE.

"THE ECONOMIC LIFE OF THE ANCIENT WORLD." By Jules Toutain. (London: Kegan Paul, Trench, Trubner & Co., Ltd. 16s net.)

The title of this book, and indeed of our heading, is somewhat misleading, as the "Ancient World" with which it deals is, for the greater part of the period dealt with, the Mediterranean basin, and later, the Roman Empire. And, except for a short incidental excursion into prehistoric ages in Gaul, it confines itself to events occurring in historic or quasi-historic times.

Clearly a book dealing with economics in this period and area was wanted to complete the story told by "The History of Civilisation" to which series this book belongs, and we doubt whether its compilation could have been put in abler hands than those of M. Toutain. We have deliberately used the word "compilation," because this accurately describes the contents of the book and because we feel sure that the author would not claim that such a term is misleading. The fact is that we are in possession of mountains of facts on much that is dealt with by M. Toutain. But they want arranging, and this task has been done in a masterly way, methodically, lucidly and, with very rare and unimportant exceptions, accurately. Where, as is too often the case, we are entirely without information on any particular subject, he states that this is so and stoutly resists the temptation to guess. While, therefore, this is no epoch-making book, it is an excellent piece of work, a trustworthy and pleasant guide to its subject and a valuable link in the chain to which it belongs.

From its beginnings, which were marked by activity chiefly of a domestic kind, and its end, when it was entirely subjected to the tyranny of the public authorities, the economic life of the ancient world passed in the course of centuries through an evolution which is most instructive. Its first steps forward were due to the passion of the Greeks for liberty and their love of initiative and adventure. By conquering Asia and by organising his conquests in a spirit of tolerance and assimilation, Alexander opened a marvellous field of action to it. After Alexander, Rome, by uniting the whole Mediterranean, by diffusing the classical civilisation all over the West and part of the centre of Europe, by the elasticity and liberality of her policy towards the conquered peoples, and by the radiation of her prestige beyond the limits of the Empire, gave it at least two centuries of really remarkable brilliance and expansion. It only began to decline when, under the influence of dangers at home and outside, the Imperial Government believed that the public authority was able to direct the labour of men and could substitute its often depressing influence for the fruitful inspiration of liberty.

Is there not perhaps a moral for ourselves in these, the last words of this book? We cannot but think that Lord Inchcape would read them as a grave warning against Government interference with British trade and industry. Would he be wrong?

We should add that the book contains a very helpful foreword by M. Henri Bress, and that the workmanlike translation is a credit to M. R. Dobie. C. S-W.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Turkey's Financial Straits.

The visit to Ankara at the request of the Turkish Government of delegates of the bondholders has had the effect of directing general attention to Turkey's new financial difficulties. In its way it was an adroit move on the part of the Ankara authorities to abstain from taking any action themselves, but instead to lay before representatives of the bondholders the facts of the position and thus place the onus of making suggestions on the Debt Council. It may be taken for granted that the gloomy side of the picture was not glossed over unduly at Ankara, but, allowing for the natural exaggeration of the position, the fact remains that owing to a variety of causes, not least among them being the ill-advised interpretation of the "Turkey for the Turks" policy, the country is in a very serious plight. The delegates have now returned to Paris to report to the Debt Council, whose advice to Ankara, as I have already indicated, is likely to take the form of a suggestion that the services of a foreign financial adviser should be engaged, following the precedent adopted by other countries in similar circumstances. But this proposal has been made to Turkey so often before without success that it is difficult to imagine its adoption even in the present crisis, for it would entail such a striking deviation from the policy hitherto pursued at Ankara, and would, in short, be an open admission that the authorities have been working on entirely wrong lines. The position is such, however, that Ankara may be forced to consider the step.

The Tariff Truce Conference.

The conference at Geneva has come to its inevitable end, and while Mr. Graham professes to be satisfied with the results obtained, it would seem obvious that in actual fact little of value has been achieved. A number of countries have agreed to a tariff truce for a few months, but the agreement is based on the existing tariffs, and it has to be borne in mind that there was a widespread raising of tariffs in anticipation of the conference. The proceedings at Geneva will not have been entirely wasted, however, if they have served to convince any considerable body of Free Traders in this country that there is not the slightest enthusiasm for Free Trade on the Continent.

Eastern Trade Difficulties.

In his speech at the general meeting of the Chartered Bank Sir Montagu Turner commented in detail on the remarkable fall in commodity prices which has been such a feature of recent months. As he justly pointed out, this general decline has had two effects. Dealers in commodities have hesitated to lay in stocks, and producers, owing to the smaller return, have been reducing their purchases of manufactures. Sir Montagu Turner regards the decline as a return to normal conditions, and thinks that the lowest point has almost been touched. As regards tin and rubber, which have undergone very pronounced declines, the position promises to undergo a marked alteration before long as a result of arrangements between the producers. But as the key to the low prices is the extent of consumption, it remains to be seen whether the steps now being taken will be sufficient to maintain a higher level until such time as an increase is a reflection of world conditions. Of the metals, silver, of course, underwent the worst slump, and Sir Montagu Turner pointed out that the effect on silver-using countries has been disastrous to the import trade.

India's Trade Changes.

The marked changes that took place in certain staple items of India's trade in the past year were the subject of comment by Sir Charles McLeod in his speech at the meeting of the National Bank of India. From the examples he gave it is only necessary to quote two or three to illustrate the alteration that took place as compared with the previous year. The wheat crop of 1928-29 in northern India was a failure, and as a result of this the exports of wheat totalled 14,204 tons as against 115,422 tons, while the imports of wheat totalled 706,331 tons as against 149,175 tons. Then the value of jute showed a decline of nearly 7 crores, due to the fall in prices. There was a further expansion in the tea trade both as regards India and Ceylon, the crop being a record one owing to favourable climatic conditions. Sir Charles McLeod was reserved as to the general outlook, but as regards India he expressed the view that, provided the internal position is satisfactory, there will be a revival of business sooner or later.

Turkish Language and the Press.

An interesting sidelight on the unforeseen consequences of some of the recent reforms in Turkey is provided by the law which has just been passed according financial assistance to Turkish newspapers for three years. The change from Arabic to Latin characters involved newspapers in expense for new plant, and there was the further result of a falling off in some circulations due to the difficulty experienced by the average Turk in learning to interpret the new characters. Whether the period of three years allowed by the authorities will be sufficient to bring back the lost legions of readers is possibly open to doubt. It may well be, however, that the necessity for Government intervention in this case will bring home to the Ankara authorities the need for greater circumspection in regard to reforms in connexion with things that really matter.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, April 1.

There has been some slackening in the activity which characterised the Stock Markets last week, a certain amount of profit taking being in evidence. Last week's accession of activity and the rapid rise in prices of gilt-edged stocks could not be expected to last, and the slight all round recession which has now occurred is quite a healthy and normal development. The tone of markets still remains quite good, and while a further reduction in Bank Rate was not anticipated this week, such a change is regarded as not unlikely in the near future. Home Rails did not have such a good week, partly owing to poor traffic returns and to the substantial increase in unemployment figures which are taken as an indication of trade depression. The miscellaneous markets were irregular and lacking confidence, but the speculative sections attracted more attention, though dealings remain on a small scale. Budget uncertainties are still a restraining factor.

Five Per Cent. Yield.

Most people who are concerned with obtaining a steady income from their investments usually aim at "five per cent. with safety." With the lowering of Bank Rate, and with it the lowering of deposit rate, funds tend to be transferred into gilt-edged investments which rise in price with the increased demand for them. It is now almost impossible to obtain a 5 per cent. yield from British Government Stocks, and investors should turn to other stocks which are practically as safe. In this category priority of standing belongs to stocks of British Corporations, most of which are trustee securities. Thus Coventry's 5 per cent. stock redeemable between 1954 and 1974 yields just over £5 per cent., as does the 5 per cent. Bradford Stock, redeemable 1942-52. There are also a number of Public Boards whose stocks are very sound investments, such as the Central Electricity Board's Four per cents., redeemable 1959-89 and Port of London Authority 4¾ per cent. Inscribed, both yielding a shilling or two over £5 per cent. Dominion and Colonial Stocks also offer an important range of safety first investments. Australian Commonwealth 5 per cent. Registered Stock, redeemable 1945-75, now yields about £5 9s. per cent. Nigerian Six per cent. (1949-79) and Southern Rhodesian Four and a Half per cent. 1959-68 give a return of about £5 per cent. Finally, there are several British railway stocks such as the Great Western Rent-Charge and L.M.S. 4½ per cent. Guaranteed both yielding over £5 per cent. The last five named stocks are all trustee securities.

I. C. I.

A satisfactory increase in profits for trading in 1929 compared with the year before is announced by Imperial Chemical Industries in their preliminary report. Net profit for the year amounted to £5,780,000, an increase of £567,505 over 1928. Allowing for the increase in capital this result amounts to practically the same as a year ago, and although, perhaps, disappointing to speculators, it may be considered satisfactory in the light of general industrial conditions. After sundry allowances and adding the amount brought forward, £5,889,015 is available for distribution. Of this sum the directors recommend that £529,020 be placed to reserves, compared with £509,138 last year and £350,923 be carried forward, as against £109,634 brought in. Thus £5,009,072 is available for the shareholders. The ordinary shareholders are to receive an unchanged dividend of 8 per cent., but the deferred shareholders are to receive 2 per cent., as against 1¾ per cent. in the past two years. The total reserves of the company now amount to £16,725,000. The directors state that the investments of the company are in total worth more than their book value as given in the balance-sheet. On the basis of the current dividends Imperial Chemical ordinary shares are obtainable to yield about £6 7s. per cent. and the 10s. deferred shares yield about £3 5s. per cent.

Some Rand Reports and Reflections.

This week there have been issued the reports for 1929 of the Rand gold producing subsidiaries of the Johannesburg Consolidated Investment Co., familiarly known as "Johnnies." In two cases—the Langlaagte Estate and the Randfontein—the position shows improvement from the mining standpoint: in the others it has been fairly well maintained, except that the Van Ryn Deep paid a total of 35 per cent. in place of 40 per cent. previously. But it will be interesting to examine the results from another angle. The following table sets out the dividends for last year and the price of the shares now and at the corresponding period of 1929.

	Dividend for 1929.	Approximate price of shares Now.	A year ago.
	s. d.	s. d.	s. d.
Langlaagte Estate	3 0	21 6	20 6
Government Areas	4 6	35 6	38 9
New State Areas	2 6	32 6	31 3
Randfontein	—	5 9	5 9
Van Ryn Deep	7 0	33 0	38 9
Witwatersrand Gold	6	9 0	7 6

It will be seen that Langlaagte, New State Areas and Witwatersrand Gold shares have improved in value during the period, whereas with Government Areas and Van Ryn Deep a large proportion of the dividends has been neutralised by depreciation in market price.

It is expected that the Lloyd barrage scheme will be completed by May, 1932.

General business stagnation affected the motor market in Abyssinia during 1929 (says an American report). Registrations of motor vehicles increased somewhat during the year—from 411 passenger cars, 43 lorries, and 31 motor cycles on January 15 to 502 passenger cars, 66 lorries, and 39 motor cycles on December 15.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended March 22 :—

Grain.—The better feeling on foreign grain markets noticed at the end of the last week, and which was maintained throughout this week, has not had, as anticipated, a practical effect on our market. In fact the usual reluctance on the part of grain holders to sell on a rising market owing to their anticipating an exaggerated rise in prices on the one hand, and the fact that several shippers who had sold cheaply were, on the contrary, expecting to cover at lower prices, on the other, combined to prevent any transactions taking place. There were hardly any arrivals of fresh grain at the shipping ports owing mainly to the peasants being busy on the fields, but the stocks are still sufficient to meet any normal requirements. Shipments of grain were, therefore, quite insignificant and rates of freight nominal at 9s. 6d. to 10s. for the Continent, mainly Weser, which port seems to be taking a keener interest in our barley. A 5,000 tonner was fixed from the Danube at 13s. 3d. Continent, 13s. 9d. U.K., prompt. The situation at Constantza remains unaltered.

Timber.—There are three steamers under loading and further small tonnage is shortly expected to arrive. It is reported that a parcel of about 100 wagons of beechwood has been booked for Llanelly (Bristol Channel) at £13 per wagon to be shipped all under deck. There is also a parcel of about 200 wagons for three ports, Spain, for which charterers are offering £11 per wagon. Some small inquiry is coming forward for Rotterdam and North France. Other markets remain rather neglected.

Weather and Crops.—The weather has been changeable, generally cloudy, warm, windy, and dry. Short, sharp showers are reported to have provided fairly abundant moisture in Northern and Western districts, and were followed by temporary falls in the temperature, the thermometer registering minima of from 2 to 6 in the north and north-east, though in most places even at night the temperature has generally been well above freezing point, and during the daytime 20 to 25 degrees Centigrade have been common. Though news of actual damage by drought to the autumn sowings has not yet been received, a good general rain is badly needed, especially in the eastern districts.

Sulina.—Bar depth 24 feet. River minimum 24 feet.

Constantza.—Over 7,000 tons were exported to Hamburg and the Weser, and nearly the same quantity went to Liverpool and Glasgow. Thirteen vessels loaded over 60,000 tons petroleum products and four took oil fuel for bunkers.

Bulgarian Report.

Bourgas, March 15. The markets abroad continue inactive and only an insignificant amount of business has been done. The weather has been variable alternating between sunshine and rain showers. The temperature at the beginning of the week was high but it fell subsequently, and since Thursday has only been 1 degree above zero Centigrade at nights, whilst there was some frost in the highlands, and light falls of snow are reported from northern parts of the country. The state of the crops continues to be good.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates :—

*†CIRCASSIA ...	May 30	*CIRCASSIA ..	Aug. 29

*First class passengers only. Specially low fares. †Calls Port Sudan.

SPECIAL NOTICE. New S. S. CALIFORNIA, 17,000 Tons, carrying FIRST CLASS and THIRD CABIN passengers, sails from LIVERPOOL Oct. 21, MARSEILLES Oct 27. All 1st Class state rooms are fitted with Punkah Louvres and with fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Incinerator, etc.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for supplying and erecting an incinerator and drying press at Amiria. June 8.

Loose Leaf Post Binders.—The Survey of Egypt invites tenders for the supply of 3,500 loose leaf post binders. May 19. (D.O.T.)

Metal Cabinets and Safes.—The Survey of Egypt, Ministry of Finance, Cairo, invites tenders for the supply of metal cabinets and safes. May 24. (D.O.T.)

Photographic Material.—The Survey of Egypt invites tenders for the supply of rolls of sensitive paper and photographic chemicals. May 3. (D.O.T.)

Rails, etc.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of rails and angle irons for 1930-1931. June 28.

INDIA.

Oil Engine driven D.C. Generating Sets.—The Indian Stores Department, New Delhi, invites tenders for the supply and delivery of oil engine driven D.C. generating sets for the Manzai Power Station of the Military Engineering Service. (D.O.T.)

YUGOSLAVIA.

Metal.—H.M. Consul at Sarayevo reports that a local firm is desirous of receiving quotations from British firms for the supply of 5,000 kilogrammes of bearing metal in blocks. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Tarantia for Bombay (Birkenhead, April 18). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mathura for Calcutta (Birkenhead, April 10); s.s. Maidan for Calcutta Birkenhead, April 24).

Bibby Line.—S.s. Staffordshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, April 16).

British India Line.—S.s. Mundra for Bombay (London, April 19); s.s. Margha for Colombo, Madras, and Calcutta (London, April 19).

Cunard Line.—S.s. Bantria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, April 12; Swansea, April 15); s.s. Bactria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, May 1; Liverpool and Swansea, May 3).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 10).

P. and O. Line.—S.s. Behar for Calcutta (London, April 11); s.s. Kaisar-i-Hind for Bombay (London, April 11).

Prince Line.—S.s. Sailor Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus ports (London, April 9); s.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, April 15).

Ellerman and Papayanni Lines.—S.s. Mardinian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 12; Swansea, April 12); s.s. Dido for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, April 16); s.s. Oporto for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 26; Swansea*, April 26); s.s. Lesbian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, April 26; Swansea, April 30); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, April 28); s.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, April 29). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to :—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Engineering Topics

(By An Engineering Correspondent)

Ipswich Sewage Works.

Mr. E. McLauchlan, the borough engineer and surveyor of Ipswich, is perhaps one of our greatest experts in connexion with sewage disposal, and the work he has done at Ipswich is remarkable for its efficiency. At the works he has an electrically driven dredger which can be propelled along each of the tanks, and the elevating buckets discharge through shoots into tip wagons on rails between the tanks. The tip wagons are run on rails to convenient places behind the tanks, where they can be dealt with as required. It is interesting to note that in the Ipswich scheme the tanks designed for the removal of the settleable solids occupy a space of 210 ft. 6 in., by 176 ft. in length and breadth respectively. The feed channel extends the full length of the sewage tanks, and the overflow from the channel to the sewage tanks is controlled by twelve sluice gates each 14 feet in length. Two penstocks control the entry from each chamber into the feed channel to the sewage tanks. The Gill sluice gates on the tanks enable any number of the series to be put in operation in accordance with the variation in flow. At the end of the tanks a somewhat similar arrangement of sluice gates is fixed by means of which the effluent can be passed into the collecting channel and thence through the outfall pipe, which is 60 inches in diameter into the river.

Training of Engineers.

There seems to be some revival of the discussion as to whether an engineer should have an intensive scientific training or whether he should be trained very largely in commercial methods. The term engineer would more properly be rendered if it had the qualifying adjective administrative before it, for there are thousands of engineers in the world who never have and never will have any use for commercial knowledge of any kind whatever other than that required for the management of their private affairs. Generally, the man who can say he has had managerial experience, no matter in what, will beat the practical man every time, unless the practical man has had business training. Now that engineering and science have become so intermingled the old question is cropping up again, and it seems fairly obvious that the answer will be that the scientifically trained engineer has an undoubted advantage over the engineer who knows nothing of science other than something of mathematics and applied mechanics, and here again the engineer who, in addition to scientific training has also some knowledge of business will rise superior to both.

But a general science training is by no means useless; the early study of the calculus would not only materially assist the engineer in dealing with alternating current problems, but would also give some help in connexion with ordinary mechanics. The aim of this study should not be to give facility in differentiation and integration, but to give such an understanding of the three fundamental examples as will enable the student to apply them himself to the solution of problems with which he may himself be confronted in the intelligent study of the principles of engineering and the problems that arise out of them. Another useful study would be that of thermodynamics, in view of the rapid development of the compression-ignition, internal combustion engine. The subject of chemistry is one that should be taken up by every engineer; so wide are its ramifications that any moment its aid may be called for in dealing with some engineering difficulty. As has been said, the function of a scientific training should be not only to assist the engineer to understand the various processes with which he deals, but to teach him to see in them particular applications of comprehensive principles which he thoroughly knows.

Concrete Roads.

The discussions on unemployment have inevitably brought up again the subject of concrete roads, and, in spite of the fact that we have hundreds of miles of these roads already built and practically lying idle in this country, there are people who seem to think that if only we would set to work in real earnest and build a few score miles of concrete roads, we should immediately become prosperous, and incidentally solve the unemployment problem. The cold truth of the matter is that we have wasted hundreds of thousands of pounds on new roads. There is hardly a road built within the past five years that is earning its salt to-day, or is ever likely to earn its salt; the only people to benefit are the private owners of cars who can indulge in a speed orgy on them every week-end, and because of that loudly and roundly declare that the new roads are a great blessing to the community and that we want more of them. As a matter of fact, unless we do not soon cry halt in connexion with this reckless waste of public money on unwanted roads we shall be forced at some not far distant date to stop work because we have no more money.

Considered as a road making material, concrete has stood up wonderfully against severe conditions, and what was regarded, a few years ago, as an experiment has become a standard method of road making. There are one or two drawbacks, none of great importance, and there are quite a number of precautions to be observed during the making of the road which, if neglected, might and in some cases, undoubtedly would, lead to failure. Few concrete structures are subjected, as are roads, to such a variety of destructive forces, and in order to afford the greatest possible resistance to all of them, the utmost efforts towards securing the best possible product are justified. The fact that so many of the concrete pavements that were built so many years ago are still carrying traffic at a reasonable cost of maintenance is a marked tribute to the value of concrete as a paving and road making material. It is, unfortunately, equally true that a number of concrete pavements made during recent years have failed to stand up to their work.

DIRECTORS' REPORT.

(Presented at the Seventy-sixth Ordinary General Meeting, 26th March, 1930.)

The Directors have now to submit to the Shareholders the Balance-sheet and Profit and Loss Account of the Bank for the year ended 31st December last.

These show a net profit, after providing for all bad and doubtful debts, of £848,254 9s. 11d. inclusive of £186,656 3s. 9d. brought forward from the previous year. The Interim Dividend at the rate of Fourteen per cent. per annum paid in September last absorbed £210,000. The amount now available is therefore £638,254 9s. 11d. and the Directors propose to pay a Final Dividend at the rate of Fourteen per cent. per annum together with a Bonus of Six shillings and threepence per share making Twenty-and-a-quarter per cent. per annum for the whole year, free of Income Tax; to set aside £50,000 on account of Contingencies and to carry forward the balance of £190,754 9s. 11d.

The Directors have to announce with regret the retirement of their esteemed colleague Mr. Henry Bateson, who during his period of office rendered valued service to the Bank as a member of the Board.

Mr. Arthur d'Anyers Willis, of Messrs. Ogilvy, Gillanders & Co., has been elected a Director, and the Shareholders are now invited to confirm his election.

Messrs. Jasper Bertram Young, Arthur d'Anyers Willis and Colin Frederick Campbell, the Directors who now retire by rotation, present themselves for re-election.

The Auditors, Mr. David Charles Wilson, F.C.A. and Mr. Henry Croughton Knight Stileman, F.C.A., again tender their services.

The Dividend and Bonus will be payable on and after Wednesday, the 2nd April.

By order of the Court, ARTHUR SCOTT, Secretary.

BALANCE SHEET 31st December, 1929.

Company Meetings.

CHARTERED BANK OF INDIA, AUSTRALIA, AND CHINA.

Difficulties of Exchange Banks.

The Outlook in India.

Sir Montagu Turner's Speech.

The seventy-sixth ordinary general meeting of the Chartered Bank of India, Australia, and China was held on March 26 on the bank's premises, 38, Bishopsgate, London, E.C.

Sir Montagu Cornish Turner (chairman of the bank) presided.

The Chief Manager (Mr. W. E. Preston) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—From the report you will notice that since we last met our colleague, Mr. Bateson, acting under medical advice, has, much to our regret, resigned his seat on the board. Mr. Bateson had a long and varied business career in Calcutta and in London. He possessed a matured and well-balanced judgment and his personality was much appreciated by all who knew him. We trust that he will be spared many years to enjoy his well-earned retirement. (Hear, hear.)

To fill the vacancy, your directors invited Mr. Arthur d'A. Willis, of Messrs. Ogilvy, Gillanders and Co., to join the board. Mr. Willis has accepted the invitation and you will be asked to confirm his election to-day. Mr. Willis has had a long Indian business experience, and as the representative of the firm of Messrs. Ogilvy, Gillanders and Co., the connexion between the bank and that firm, which has existed for so many years, will be continued. Our friend and colleague, Mr. Colin F. Campbell, is unable to be with us to-day as he is taking a well-earned rest and change.

Dividend and Bonus Maintained.

From the balance-sheet and profit and loss account statement you will notice that in most cases the figures are slightly better than last year. Current accounts have fallen by about a million and a half sterling, but fixed deposits exceed last year's figures by nearly two millions and a half. This follows the trend of present-day movements in most banks.

I am glad to say that the results justify our paying the same dividend and bonus as in previous years, and we are able to place £50,000 to contingencies account with a carry-forward in excess of last year. I trust this may be considered satisfactory, seeing the difficulties under which exchange banking is now conducted in the East. (Hear, hear.) There is the same extremely keen competition with rather less business and more competitors. It seems impossible to obtain a working agreement owing to the number of banks concerned and the diversity of interests. It is therefore not surprising that exchange operations result in profits which are comparatively insignificant.

Decline in Commodity Prices.

Business both for the merchant and the banker has also been difficult owing to the extraordinary decline in prices of all commodities forming the staple exports from Eastern ports. As a result, the sterling value of bills offering in those markets is considerably below the normal, and in some cases funds which had been laid down for the financing of the export trade have not been fully required. It is only natural that with prices constantly on the down grade dealers in commodities are careful to avoid laying down stocks, whether it be in the East or in the Western markets. The converse to this is also true—namely, that producers of Eastern commodities securing less for their crops are unable to buy the normal quantity of foreign goods. In other words, the purchasing power of the millions of consumers in the East of Manchester goods or manufactured British goods is correspondingly reduced.

As regards the fall in prices of commodities, I may mention a few instances dating from January, 1929, up to the present. Cotton shows a drop of 24 per cent., jute 20 per cent., rubber 29 per cent., tea 20 per cent., tin 19 per cent., wool 32 per cent., and wheat 12 per cent. Groundnuts, which form an important part of exports from the Coromandel Coast, have dropped from £21 to £15 per ton.

No doubt over-production or over-cropping is responsible in most cases for the fall in wholesale prices, but we must remember that for some time prices of many articles have been unduly high, the result of the boom year 1920. This present decline is therefore a readjustment of prices or a return to normal conditions. The process of readjustment is a painful one, and we can only hope that the end is not far off. I am inclined to think we have almost touched bottom.

Silver has had, perhaps, the most sensational slump of any article of commerce, according to the table recently issued by Messrs. Pixley and Abell. From 1833 to 1873 silver remained fairly steady about 60d. per oz., when the demonetisation of silver commenced. From 1873 to 1890 it was about 48d. per oz., and then came a steady drop to 28d. per oz. up to 1916, when it rose during the War period and touched 80d. for a short time in 1920. After a sudden drop to 42d., it declined gradually to 26 7-16d. per oz., where it stood at the commencement of January, 1929. Since that date it reached its lowest point in March this year at 18⅝d. per oz. The causes of this gradual decline are, among others, the establishment of gold standards in various countries and the increased use of notes in place of coins for daily purposes, also the cheaper cost of production consequent on the fact that in many cases in America silver is a by-product of ore-producing mines (copper and lead). Of the total world's production of silver (240,000,000 oz.), no less than 73 per cent. comes from North America. Thirdly, we have various countries, such as India, France, Belgium, and Great Britain, selling demonetised coins, or surplus coinage, and, finally, we have an import duty of 4 annas per oz. revived in India. The effect on silver-using countries such as China has been disastrous to the import trade, and holders of stocks may suffer severely.

The Chinese tael has dropped from 2s. 7d. to 1s. 11d., and the Hong-Kong dollar, which has been almost reduced to the parity of silver, has fallen from 2s. to 1s. 6d.

India.

Politically, India—or, we should say, a section of the 300,000,000 inhabitants of India—is at the present moment in a curiously unrestful condition requiring most careful handling and judicious treatment. I venture to say that only those on the spot can really judge of the prevailing conditions and to what extent firmness, tempered by the utmost consideration and good will, is required. It is only right that we should, as suggested by Sir John Hewett and Sir Claude Hill, trust the man on the spot—in other words, back up the Viceroy, Lord Irwin, with all the moral support we can give. (Hear, hear.) Lord Irwin, as Viceroy and Governor-General, has a most difficult task, requiring great tact, great forbearance, and great courage. He commands our sympathy and our respect.

As regards trade in India, there has been a comparative absence of activity in nearly every class of exports, mainly owing to the restricted demand in Western markets. Wheat exports from Karachi, which in the past few years averaged 300,000 tons and in some cases considerably exceeded that figure, last year reached only 15,000 tons, while 120,000 tons were imported. This was partly due to failure of crops in some districts and to the fact that a good deal more wheat is consumed in the country and is therefore not available for export. But the low price in Western markets has undoubtedly helped to restrict exports. Cotton exports, on the other hand, from Karachi increased appreciably, and 1,000,000 bales (being an excess of 200,000 bales over last year) were shipped to the United Kingdom and Continent.

Incidentally, I may here mention that, in view of the diminution of business in the Port of Karachi and to the fact that this port is considerably over-banked, it has been decided that the business of the P. and O. Banking Corporation, in which this bank has a controlling interest, be transferred to the premises of the Chartered Bank. This we consider desirable, especially from the point of economy. The name of the P. and O. Bank will, of course, be retained, and appear on the premises of the Chartered Bank. I am glad to say that the P. and O. Bank itself is, in its general operations, doing quite a satisfactory business.

In Bombay the cotton mills have been, and are, suffering badly from the effect of Japanese competition, added to which the industry has been hampered and harassed with constant strikes fomented by agitators, who seem determined to do their best to ruin the staple industry of Bombay. The mills will obtain some relief if the increased duties on imported cloth goods are approved by the Legislative Assembly in India, but more good will probably result from the reorganisation which has already been taken in hand.

The total capital of nine mills, we are informed, has been written down from £6,375,000 to £2,250,000, while the liquidation of ten other mills has resulted in a loss of £1,000,000. Bombay has thus suffered badly by the losses experienced by its chief industry.

Indian Government Securities.

The resulting depression of these untoward losses may to some extent account for the depreciation of Indian Government securities, for Bombay has always been a very active market in dealing in shares and Government securities. But apart from this there is the fact that India in recent years has borrowed too cheaply, as evidenced by the heavy drop in the various loans, and this was aggravated by the issue of Treasury Bills at a high rate. During the past three years the fall in Indian Government securities has averaged about 8 per cent. The recent fall also has, perhaps, been accentuated by the hint of repudiation made by Mr. Gandhi at Lahore in January last.

As regards repudiation by India of its obligations, the possibility is quite unthinkable, and the letter from Sir Arthur Hirtzel in *The Times* of January 28 last should give complete confidence to all intending investors in, or actual holders of, Government securities. As holders of these securities (and, of course, we are bound to have them in India), we have had to face the depreciation for the last three years, which has made a serious inroad into the profits we have earned in India; but the depreciation has been met fully, and our Government securities are written down to market value as at December 31 last. At the moment, at the price at which these securities stand, they are a perfectly sound and safe investment.

Jute Business.

Jute export business has been rather quiet, and the jute mill industry in Calcutta is suffering from over-production, but that is

a case of temporary indisposition only. The ordinary demand for hessians and bags from Australia, America, and the Argentine has slackened as a natural result of depression in exports from those countries, but that is likely to recover in the near future.

Tea has, as I have already said, experienced rather a heavy drop, especially in the coarser grades, but the very fine tea still commands a good price, and with reduced plucking on a wholesale scale the market should right itself.

The balance of trade in favour of India for the financial year 1927-28 amounted to £51,000,000, and seems likely to be rather higher for the 12 months now ending. Since 1864 the value of foreign trade has jumped from £60,000,000 to £420,000,000 annually. Imports of specie, silver and gold, have averaged from £28,000,000 to £30,000,000 for the past 30 years, the bulk of which remains in the country in the shape of hoards, jewellery, etc. The British Raj has therefore fostered Indian trade for the benefit of India to a remarkable degree. What India means to us and Great Britain means to India can be realised by a study of the Special Number issued by *The Times* on February 18 last.

It is interesting to note that recent trade returns show that during 1929 the import of motor-cars into India numbered about 20,000, of which 8,000 were American, 6,500 Canadian, and 3,600 British. As regards heavy lorries and omnibuses, 6,370 were Canadian, 5,800 from America, and 473 from Great Britain, but for motor-cyles Great Britain had 91 per cent. So also in China, cars from America numbered 767, from Japan 663, from France 153, and from Great Britain 107.

Burma has had a very poor season both in import and export markets. Rangoon has experienced one of the worst periods of depression ever known, both as regards exports and imports. Exports of rice have been affected by the poor demand from India especially, and prices have fallen. As a consequence the piece-goods business has suffered, and especially the Manchester market has been prejudiced by imports from Japan, Italy, and America.

Japanese Competition with Lancashire.

When we seek to explain the cause for Japan ousting Lancashire from its premier position in the Eastern markets we have to remember that apart from cheaper labour and perhaps longer hours Japan is benefiting by greatly improved organisation, resulting in mass production and mass distribution. Three large mercantile houses import more than three-quarters of the raw cotton consumed and export about the same percentage of the piece-goods produced by that cotton. The three firms have established agencies in Java, East Indies, all over India, all over the cotton-growing portion of China, as well as the United States, and selling agencies in most of the principal markets of the world. The spinning section is also largely controlled by big combines. Some 40 per cent. of the spindles are owned by four big firms. The cotton is spun into a small number of counts and from the yarn a number of standard cloths are made in bulk. With a huge turnover good results can be obtained from small margins.

Thanks to Staff.

In conclusion I desire to convey the thanks of the board to Mr. Preston, Mr. Bruce, and their colleagues at head office for their able management of the bank's affairs in the past year. (Hear, hear.) To the managers abroad, to the foreign and home staff, we also tender our sincere thanks and appreciation of the excellent work and continued devotion to the interests of the bank shown in these perplexing and difficult times. (Cheers.)

With those remarks I beg to move:—"That the report now presented, together with the balance-sheet and profit and loss account, be approved and adopted."

Sir William Foot Mitchell seconded the resolution, and it was carried unanimously without question or comment.

The Chairman next moved: "That a dividend at the rate of 14 per cent. per annum for the half-year ended December 31 last, together with a bonus of 6s. 3d. per share, free of income tax, be now declared payable on and after the 2nd proximo."

Sir Harry Goschen, Bt., K.B.E., seconded the resolution, and it was unanimously adopted.

On the motion of the Chairman, seconded by Mr. A. A. Jamieson, the election of Mr. Arthur d'Anyers Willis to the board was confirmed.

On the proposition of the Chairman, seconded by Mr. E. F. Mackay, the retiring directors, Mr. Jasper Bertram Young, Mr. Arthur d'Anyers Willis, and Mr. Colin Frederick Campbell, were re-elected.

Mr. A. I. D. Stuart proposed the reappointment of the auditors, Mr. D. C. Wilson, C.A., and Mr. H. C. K. Stileman, C.A., and this was seconded by Mr. W. Wallace, and passed unanimously.

Vote of Thanks.

Mr. E. T. Hargraves, proposing a cordial vote of thanks to the chairman, directors, and staff for the successful way in which they had conducted the business of the bank, congratulated the board on being able to maintain the dividend and bonus in spite of the difficulties to which the chairman had referred. He was far from believing that exchange banking was dead. He was convinced that when the trade of the world improved they might look forward to considerably better times.

Mr. F. Tomkinson seconded the vote, and it was unanimously accorded.

The Chairman briefly acknowledged the compliment on behalf of the board, adding that whatever their difficulties might be, so long as they had the management and staff which they at present possessed, shareholders need not fear the results. (Cheers.)

Mr. W. E. Preston (chief manager) thanked the shareholders for the vote on behalf of the staff.

Extraordinary General Meeting.

An extraordinary general meeting was subsequently held at which resolutions were passed for the adoption of new by-laws and regulations in substitution for the provisions of the bank's existing deeds of settlement, and authorising the court of directors to apply for and if granted accept a supplemental and consolidating charter in place of the bank's existing charters.

The above resolutions will be put forward for confirmation at a meeting of the shareholders to be held on April 16.

Fall in Commodity Prices.

Sir Charles McLeod's Speech.

The ordinary general meeting of the National Bank of India was held at the Wesleyan Hall, Bishopsgate, London, E.C., on April 1, Sir Charles C. McLeod, Bart. (the chairman), presiding.

The General Manager (Mr. Ross Munro) having read the notice convening the meeting and the auditors' report,

The Chairman said:—Gentlemen,—The report of the Directors and the accounts to December 31, 1929, have been in your hands for some days, and I presume you will allow me as usual to take them as read. (Agreed.)

Before proceeding with the ordinary business of the meeting I wish to express our great regret at the loss we sustained by the death of our friend and colleague, Mr. J. A. Toomey, who died on February 22 last. He had been connected with this bank for the long period of 55 years, during which period he occupied the position of inspector, London manager, general manager, and since 1913 was a member of the Board of Directors. We shall miss his wise counsel based on his ripe experience, and the absence of his kindly presence as a good friend will be deplored alike by the Board and his many friends who are shareholders.

Net Profits.

The result of our year's operations is a net profit of £511,132, compared with £530,829 for the previous year. The divisible profits amount to £788,461, and in comparing results I would ask you to note that whilst the net figures are slightly down on a year ago, the disposable total is still some £13,000 in excess of that shown for the year 1926 notwithstanding the times through which we have passed in the interval, which cannot be characterised otherwise than as difficult for banking operations so far as India was concerned.

We propose to set aside £60,000 in reduction of premises account, to repeat our allocation of £50,000 to officers' pension fund, and to pay a further dividend at the rate of 20 per cent. per annum free of income tax, which together with the similar interim dividend takes £400,000, leaving £278,461 to be carried forward—a slightly larger sum than was brought in. As usual all bad and doubtful debts have been fully provided for before arriving at the results placed before you.

Balance-sheet.

The balance-sheet figures (the rupee assets and liabilities of which have been converted as usual at 1s. 6d. per rupee) show a contraction which, however, in some cases is due to certain unavoidable causes involving special movements of funds and to the opportunity given to individuals and concerns so far as India was concerned to invest funds for short periods on terms more attractive than it would have been profitable to us to offer, and of course, as you are aware, a reduction on one side of the balance-sheet involves a reduction in the items comprising the other. A year ago I pointed out to you that we had to look for fluctuations from time to time in the total of current, fixed deposit, and other accounts, and this is proved by the fact that the increase shown for 1928 has more than disappeared. The total figure of £31,467,322 is, however, a healthy one and compares with £34,088,229 for the previous year. Bills payable and acceptances also show a contraction.

Digitized by Google

On the assets side cash and bullion figure at £4,914,509, against £5,333,827; Indian Government rupee securities at £5,804,041, against £6,589,807; whilst our British Government securities, Indian Government Debentures, and other securities are £6,070,155, against £6,261,485. It will be satisfactory to you to have our assurance that all our investments totalling £11,874,796 are gilt edged and short term securities and stand in our books at or under market value, and to note that whilst bills of exchange and discounts are down, our assets consisting of cash, bullion, investments, and bills of exchange stand at £24,239,631, against a liability in respect of current, fixed, and other deposits of £31,467,322—a position the liquidity of which cannot be denied.

In addressing you a year ago I foreshadowed a considerable increase in our building programme in order to meet the requirements of our business. House property at £545,514 shows an increase on last year's figure, and, as you have observed, we propose an allocation of £60,000 on this occasion towards the expenditure to which we are committed. A survey of our balance-sheet emphasises the extent to which conditions of Indian trading conformed with those prevalent all over the world, and we trust that in the circumstances the results placed before you will be considered satisfactory. (Hear, hear.)

I would like to say that we do not consider the slight falling off in any way attributable to political conditions in India, but to the general depression in trading conditions. It is true that a certain uneasiness showed itself in this country on rumours from India that a repudiation of Indian liabilities might be attempted under certain eventualities, and in consequence Indian loans had a set-back, but the statement from the Secretary of State for India reassured the holders that such a suggestion need not be taken seriously and Indian stocks have recovered to a great extent.

India's Trade Balance.

Considering the substantial fall in price of Indian commodities it is rather surprising that the balance of trade in India's favour has only dropped some two crores of rupees, according to the figures given by the Indian Trade Commissioner, in which, however, Council Bills are not included. If these are taken, the balance of trade in favour of India is reduced to 19 crores. It may be of interest to you if I give you some comparative figures connected with the principal commodities. While the total of exports (including re-exports) are only down by 9 crores, we find very marked differences in some of these commodities. In wheat, for instance, the exported quantity has fallen to 14,204 tons, as against 115,422 tons in 1928 and 305,937 tons in 1927, and on the other hand India imported 706,331 tons in 1929, as against 149,175 tons in 1928 and 76,758 tons in 1927, a truly remarkable change due no doubt to the failure from drought in the 1928/29 crop in Northern India. The exports of rice from Rangoon to India fell from 878,416 tons to 574,503 tons, but the total export from all parts of Burma to India and foreign countries was practically the same as in the previous year, 2,940,822 tons. Imports of merchandise into India during 1929 were valued at Rs.248 crores, against a similar value in 1928. Of this total cotton piece-goods accounted for Rs.61 crores in both years. Exports of jute, raw and manufactured, show a falling off of nearly 7 crores, due to the lower value to which these have fallen. On the other hand, cotton, raw and manufactured, shows an increase of some 4 crores. Cotton exports at one time occupied the highest figure in Indian exports, but jute now takes the premier place. Tea in both India and Ceylon shows considerable expansion, India at 380 million pounds against 355 million pounds the previous year, and Ceylon 251 million pounds against 236 millions in 1928.

As usual, I will give you the net imports of gold and silver into India during the year. The imports of gold have fallen from £15,814,000 to £13,375,000, and silver has dropped from £8,596,000 to £5,480,000. The price of the latter commodity has receded in a marked manner from an average of 26d. in 1927 down to the record low value of under 19d. during last month. There has been some recovery from the lowest point touched.

There have been no severe fluctuations in exchange, which has moved within narrow limits round about 1s. 6d. The Imperial Bank rate has also shown little fluctuation, averaging 6.323 per cent., as against an average of 6.196 per cent. in 1928. The Indian Government issued Treasury Bills during the past year to the extent of 41 crores, as against 29 crores in 1928.

Increased Cotton Duties.

The monsoon was on the whole a favourable one and Indian crops in consequence were satisfactory. As regards industries generally in India, the Bombay cotton mills continue in a very depressed state, partly owing to unrest amongst labour and to foreign competition which has caused a disappearance of margins between the raw and manufactured material. As doubtless you have seen, with a view to benefiting the local industry, the duties on cotton goods imported into India are to be increased from 11 per cent. to 15 per cent., with a further duty of 5 per cent. on goods not of British manufacture. As regards the latter, it is understood that the object of the imposition of an extra duty over and above what goods of British manufacture will be called upon to pay is to enable Bombay to meet competition in special lines of goods imported in greatly increasing quantities from countries outside of Great Britain. It is sincerely to be hoped that the alteration in the duties may have the effect of giving much-needed assistance to the Bombay mill industry whilst not unduly penalising our own Lancashire business.

The jute industry in Bengal, after a protracted period of prosperity, has reacted very materially, and at the present moment, although the price of the raw material has decreased substantially, manufactured goods have decreased still more in proportion and there is now little or no margin of profit.

Record Tea Crop.

The tea crop has been a record one owing largely to favourable climatic conditions in both India and Ceylon, and stocks have in consequence increased to a very large figure, which tended to reduce the price to such an extent that many concerns were selling a few months ago at under cost of production. During the last two months, however, prices have improved considerably, so we have reason to hope that no permanent injury will have been caused to the industry and that these excessive stocks may gradually be reduced. There little doubt that for the past year companies will not show such satisfactory results as for the previous four or five years.

The coal industry in India, which has been depressed for some years, certainly shows signs of improvement.

In East Africa conditions have not been so favourable. A pest of locusts last year did an immeasurable amount of harm, while the rainfall was fitful and irregular. Expansion is taking place in sisal, maize, and coffee, but prices of the two former commodities have fallen considerably. Cotton in Uganda reached the high figure of 816,229 centals (over 200,000 bales of 400 lb. each), but owing to excessive rain in January, which had an adverse effect on the crop, a low yield is expected this season. The coffee crop, on the other hand, has benefited and the coming season's crop is described as "extraordinarily good." It is interesting to note that tea growing in Kenya, so far only on a small scale, is quite promising. Given normal conditions, we may see a revival in this part of the world.

The Outlook.

You will probably expect me to give you some views regarding the future. Well, while not being at all pessimistic, I am afraid I cannot be very optimistic, as we are moving in uncertain atmospheres. We have an increase in Indian taxation, a proposal for an income tax on a 10 per cent. basis in Ceylon, and I am afraid we cannot escape an increase at home either directly or indirectly, looking to the increase in our national expenditure, but as regards India I feel confident that if she is not too much disturbed by internal dissensions of a much more serious character than your Board see any reason to fear, we will see a revival of business sooner or later.

Very great interest is taken in the coming report of what is known as the Simon Commission, which is expected to be issued shortly after Easter. Let us hope that when it has been thoroughly examined it may bring home to those in India who are preaching extreme views that by so doing they are preventing the progression which they themselves are clamouring for.

In conclusion I wish to add, on behalf of myself and the other members of the Board, our very great appreciation of the work and loyalty of our managers and staff, upon whom we depend for the satisfactory results we are able to place before you. (Hear, hear.)

The Dividend.

I beg to propose:—"That the report of the Directors and statement of accounts for the year ended December 31, 1929, be received and adopted, and that a dividend for the six months to December 31, 1929, at the rate of 20 per cent. per annum be paid on the shares of the company registered at this date, the same to be payable, free of income tax, on and after April 2, 1930."

After this resolution has been seconded by Mr. Langford James, and before I put it to the meeting, an opportunity will be given to anyone who wishes to make any remarks or to ask any questions.

Mr. R. Langford James: I have much pleasure in seconding the resolution which has just been proposed.

Mr. F. Tompkinson congratulated the Board and managers at home and abroad for the work they had done through this difficult year and said it was extremely satisfactory to the shareholders that the dividend had been kept up during the past year.

The resolution was carried unanimously.

The Chairman: I have much pleasure in proposing that Sir John P. Hewett, Mr. R. Langford James, and Mr. C. Nicoll be re-elected Directors of the bank.

Mr. Robert Miller: I have much pleasure in seconding that.

The resolution was unanimously adopted.

M. Alderman P. W. Greenaway: Mr. Chairman and gentlemen, I have pleasure in proposing: "That Messrs. Cooper Brothers and Company and Messrs. W. A. Browne and Company be re-elected auditors of the bank for the ensuing year, at the remuneration of 400 guineas per annum each, free of income tax."

Mr. John Mitchell: I beg to second that motion.

The resolution was passed unanimously.

Vote of Thanks.

Mr. J. Irwin Davis: Before proceeding with the resolution which I have to propose I would like to join with our Directors in an expression of our deep regret at the loss we have all sustained in the death of Mr. Toomey, who served the bank so faithfully for many years.

On behalf of the shareholders I have the privilege of proposing a very hearty vote of thanks to the Chairman and Directors for the care and prudence exercised in conducting the affairs of the bank during the past year, and also to the general manager, managers, and staff for their valuable services.

We have listened with very great interest to the excellent address of our Chairman. We can fully appreciate all the difficulties which

Digitized by Google

have attended the operations of the bank during a year of depression and financial and political troubles. We have all read in the Press exaggerated reports of the state of India. These reports have caused considerable apprehension in the minds of thousands of genuine investors in Indian stocks and shares, resulting in serious market depreciation. Happily that phase is now passing away and prices are gradually recovering. We should bear in mind that every word published here, tending to magnify the trouble in India, only aggravates the embarrassment of those who are responsible for the preservation of law and order and the carrying on of the business of the country. Those best acquainted with the conditions in India are not likely to be misled by the sensational stunts of the political Press in this country, nor by the fantastic display of a comparatively small party of fanatical politicians in India. These grotesque exhibitions may cause some dislocation of local traffic, but the great mass of the people merely look on with indifference at the passing show.

Notwithstanding the slight diminution in profits, the report is very gratifying, and the results excellent. In fact, the profits are not much below the highest previously reached. It is reassuring to learn from our Chairman's remarks that the slight diminution is not due to the political situation, but the general trading conditions to which India is no exception. We congratulate our Directors on such very highly satisfactory results.

Now there is a matter I would like to refer to. It is the smallness of the Directors' fees compared with those of other banks, now published for the first time in the balance-sheets. I trust that before another year steps may be taken to have this rectified. I think the amount of those fees was fixed many years ago, and in the meantime the work and responsibility have greatly increased. Comparing the balance-sheet of December, 1918, with that of to-day, I find the capital has increased from £1,000,000 to £2,000,000 and the reserve fund from £1,350,000 to £3,000,000, and the dividend has been steady all the time at 20 per cent., free of income tax, truly a remarkable testimony to the prudent policy pursued by the Directors. Most businesses have their ups and downs. It has been said recently that the downs are in the ascendent. However that may be, you see we have never had any experience of it. The unfailingly good results for so many years surely merit some recognition on our part.

We are fully aware how much we are indebted to the general manager, managers, and staff for the successful working of the bank, and I trust that the formal resolution which I have the pleasure of proposing may be taken by all concerned at home and abroad as a genuine expression of our gratitude and appreciation of the good work done during a very trying and difficult year. (Hear, hear.)

Mr. Lee: I have pleasure in seconding the resolution which has just been proposed.

The resolution was carried with acclamation.

The Chairman, in a brief speech acknowledging the resolution, said he was very grateful for the kind expression of appreciation.

The proceedings then terminated.

H.E.H. THE NIZAM'S GUARANTEED STATE RAILWAYS.

Voluntary Liquidation of Company Approved.

An extraordinary general meeting of H.E.H. the Nizam's Guaranteed State Railways Company, Ltd., was held on March 31 at Winchester House, Old Broad Street, E.C., for the purpose of considering resolutions providing for the winding-up of the company and a distribution of the assets. The Chairman (Lieutenant-Colonel George Huddleston, C.I.E., V.D.) presided.

The Chairman, in moving the resolutions, said:—You will remember that when we came together last January you resolved that your Board were to continue negotiations and, if able to do so on satisfactory terms, were to enter into an agreement for the sale of the company's railways to the Government of H.E.H. the Nizam. This briefly was the main provision of the resolution passed by you on January 20 last, and is what I think you would wish to hear about to-day.

The outcome is that an agreement to dispose of our railways has been concluded. Under its terms the Government of H.E.H. is to pay for them partly in cash and partly in short term debenture stock, the latter being covered by the deposit with Trustees of securities at present valued far above the debt we are accepting. For the sake of brevity I will hereafter refer to this debenture stock as "debentures."

The Imperial Bank of India have been appointed trustees and the securities promised has been deposited with the headquarters of that bank in Bombay. The manager of the London Branch will issue the debentures on behalf of H.E.H.'s Government, through the liquidators, whom you will shortly be invited to appoint. The trustees will have entire control over the securities and will only surrender them as and when the debentures are redeemed in whole or in part. Meantime you will receive interest at 5½ per cent. half-yearly. A trust deed providing for all this has been executed, and it only remains for me to tell you something more of the provisions, which will appear for the most part in greater detail on the debentures themselves.

First, the Government of H.E.H. the Nizam, in the course of our negotiations, claimed the right, subject to their giving three months' notice, to redeem the debentures in whole or in part on any interest payment date before April 1, 1933, when the last instalment is due. Secondly, redemptions are to be by drawings; thus on April 1, 1931, when the redemption of one million and thirty thousand pounds debentures becomes due, there will be a drawing to decide which out of the total issue of £3,088,340 debentures are first to be redeemed. Thirdly, as there was an unforeseen objection to the issue of any Debenture stock in the form of bearer bonds they will all be registered. It is hoped that they will be ready for issue, together with part cash payment, to which I will refer hereafter, by April 7. I need not say more about the debentures except to mention that the Imperial Bank has applied for a Stock Exchange quotation, and I am told that this will at once be arranged.

As to the main agreement between H.E.H.'s Government and ourselves, it is a lengthy document and I feel sure you will "take it as read." I cannot think of anything in it that I need call your attention to, excepting perhaps the monetary grants to the Board and the staff at home and abroad so generously sanctioned by you when we last met. It was estimated last January that £100,000 would suffice for all purposes, but subsequently your Board found that to interpret liberally, though without extravagance, your strongly expressed desire to be generous to the staff an extra £10,000 was needed. The sum of £110,000 has accordingly been provided for by the agreement, and so far as the staff are concerned will be distributed in a manner which, in the opinion of the Board, is best calculated to meet the wishes given prominence to by you at our last meeting.

It now remains for me to say that although it is only proposed to distribute at present in the liquidation 100 per cent. in cash on your stock holdings, it is hoped to make a further distribution as soon as the accounts have been finally audited. For some time past there has been a certain amount of dislocation of our business due to a strike on an adjoining railway which led to restrictions on our interchange traffic. So far as I know, this trouble continues. In addition a strike on our own line, chiefly confined to workshop and shed staff, began on February 27 and ended on the 18th instant. Although our receipts were affected and dropped badly, it is expected that it will be possible to distribute another 10 per cent., or slightly more, after the audited figures previously referred to are to hand, probably in August next.

I desire to take this, my last opportunity of meeting you, to say goodbye and to thank you very sincerely on behalf of all of us for the generous consideration you have extended to the Board and the staff. Personally, I wish to say that your support and often expressed good will throughout the time I have been associated with the Board, nearly 20 years, has been the greatest encouragement and help, and I cannot say how greatly I appreciate it. I wish to acknowledge publicly the willing assistance I have had from all my colleagues on the Board, and to thank them for their co-operation and help. I also desire to thank Messrs. Rendel, Palmer, and Tritton, the consulting engineers, who have been intimately associated with the Board for nearly half a century, and have never spared themselves trouble, whether in affording us their valuable advice or in carrying out the constant supervision our engineering contracts called for. I would also mention Messrs. Bircham and Co., the company's solicitors. During recent negotiations Mr. W. B. Carslake, of that firm, has placed almost his entire time and services at the disposal of the Board and has helped materially in bringing to a successful conclusion the agreement and relative questions connected with the sale of your railways to H.E.H.'s Government. Neither do I forget Messrs. Cooper Brothers, our auditors, nor Mr. Cassells Berryman, the company's shipping agent, or others I need not mention, who have all had our interests, as well as those of the Government, at heart. Finally, I am sure you will join me in thanking Mr. F. Adams, the company's able secretary, and the whole of the London office staff, who I can assure you have worked loyally and well throughout their service. I wish them happiness and success in the future.

The resolutions were carried unanimously.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended March 26:—

Egyptian Futures.

Sakel Contract.—Further advances were registered during the early days of the week, the market meeting with support in the shape of rather healthier trade reports and a hardening tendency in both American and Alexandrian values. In addition, further short covering was forced in, and this stabilised the position at the top of the movement for one or two sessions. More latterly there have been signs that the technical position has been readjusted by the partial elimination of the "bear" position, and on this account any reactionary tendency in the other markets would probably be reflected by a commensurate drop in this contract. This view applies in particular to new crop options, as to all intents and purposes near months are in quite a different category, coming as they do directly under the influence of the controlled position in Alexandria. For some little time we have pointed out the possibilities of near cotton at this side; tenderable stocks are limited, and even if we only attract a percentage of the customary Sakel offtake during the next few months, it should be sufficient to maintain them at a premium over new crops. The recent action of the current position is a pointer to what may happen to May and July as they mature. So far this month only twelve dockets have been tendered.

Upper Contract.—Only minor price alterations have to be recorded since we last wrote, the advancing tendency during the earlier days being neutralised by the recent reactionary tendency in the American markets. On the whole, more activity has been witnessed, near positions meeting with support from spot houses as a result of the somewhat improved trade situation.

Certain of the top grades are offering at a more reasonable basis from Alexandria, and, on this account, we qualify our remarks of last week regarding replacement values with Alexandria. For cotton grading round F.G.F. we stand at roughly 50 points below the overseas market, with approximately only half that difference for Strict Good and above. Reports of a substantial increase in the acreage planted with the shorter-stapled Egyptian varieties have been circulating recently, and this, coupled with the uncertainty regarding the American tariff situation, is responsible for the moderate support accorded new crop options. For the immediate future we think prices will fluctuate round the present level, with the action of the American markets the main controlling influence.

Egyptian Spot.

Fluctuations in "futures" have had the effect of checking business somewhat, in spite of the fact that the tendency of prices has been, on the whole, an upward one, particularly in so far as Sakels have been concerned. The inquiry has not been quite so brisk as has recently been the case, but a steady business has been kept up. The Continent has again featured prominently and business in this quarter looks like expanding. Lancashire buyers have been more cautious, but there are indications that trade up-country is slowly improving.

Sakels have been in fair request, both for the medium qualities at from 50 to 75 on, and in the better qualities at from 150 to 200 on. The low and inferior cottons have been scarcely inquired for at all.

Uppers. The usual steady inquiry has continued, chiefly for cotton at from 25 to 40 on March contracts, and the top qualities have also come in for a share of attention.

Pilion has been in only moderate request and results have been disappointing.

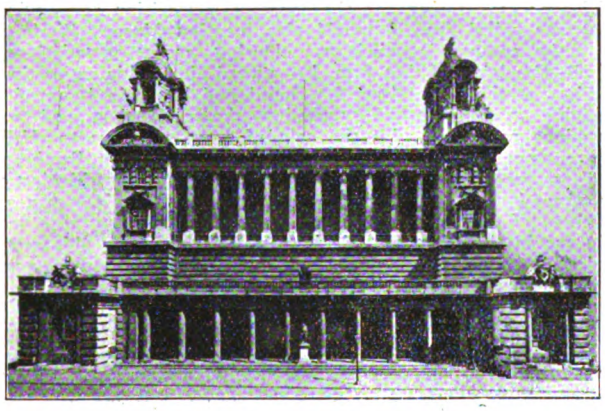
Maarad, Nahda, and Fouadi.—These have all suffered from neglect.

White cotton has been in improved request, but sales have been very moderate up to date.

Sudan Sakel.—The improved inquiry has continued and a fair business has resulted at steady rates.

Tokar Sales.—The demand for this cotton remains as dead as ever.

C.i.f. business has been very quiet, but we understand that more interest has been shown in new crop cotton in certain quarters. Forwardings were returned at 6,254 bales Egyptian and 2,689 bales Sudan. Spot sales.—2,000 bales Egyptian and 500 bales Sudan Sakel. Quotations of Sakel show an advance of 40 points on the week, Uppers have been raised 7 points, and the quotations of Pilion remain unchanged. F.G.F. Sakel to-day, 14.05d. F.G.F. Upper to-day, 10.24d. F.G.F. Pilion to-day, 10.90d.



THE LIVERPOOL COTTON EXCHANGE.

Liverpool Cotton Association

LIVERPOOL

GROWERS AND SHIPPERS SHOULD SEND THEIR COTTON TO LIVERPOOL.

All information may be obtained from the Secretary

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report as follows for the week ended March 20:—Since our last report we have had rather active new crop markets, especially for Sakel; the tone at the close to-day was fairly firm. The week's summary of price movements is as follows:—Sakellaridis: May, 28.18 dollars, 0.13 dollars up; July, 27.88 dollars, 0.33 dollars up; November N.C., 26.41 dollars, 1.09 dollars up; January N.C., 26.77 dollars, 1.15 dollars up. Ashmouni: April, 19.42 dollars, 0.02 dollars up; June, 19.86 dollars, 0.01 dollars up; August, 18.90 dollars, 0.37 dollars up; October N.C., 18.11 dollars, 0.63 dollars up; December N.C., 18.42 dollars, 0.57 dollars up; February N.C., 18.81 dollars, 0.63 dollars up.

NEWS FROM ALL SOURCES.

The Ministry of Public Works, Egypt, is studying a project for the creation of a single power station for both the Cairo and Heliopolis tramways.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended March 10 amounted to £E8,572, making the total from April 1 £E332,745, as against £E313,325 for the corresponding period of the previous year.

The P. and O. Company announce that, beginning with the departure of the Maloja from London on April 4, their fortnightly mail and passenger steamers to Australia will make Brisbane their terminal port. Of recent years these mail vessels have usually not proceeded beyond Sydney, and passengers to and from Brisbane have travelled by rail. It is felt that the unbroken transit by sea will be appreciated by Brisbane passengers, and shippers, to and from Europe and intermediate ports. The customary dates of arrival at and departure from Sydney will not be affected by the change.

An interim report of the Bengal Dooars Railway Company states that the approximate net earnings for the six months ended September 30, 1929, after allowing for Indian taxation, amounted to £45,944, which, together with £46,439 brought forward from March 31, 1929, and £1,310 for interest, makes a total of £93,693. From this amount must be deducted £170 for loss on exchange, and £7,200 for six months' dividend on the Preference stock, leaving an available balance of £86,323. The board have decided to carry the sum of £15,000 to reserve, and to declare an interim dividend of 4 per cent. on the Ordinary stock on account of the year ending March 31, 1930, subject to United Kingdom income-tax (less relief in respect of Dominion income-tax), leaving £55,323 to be carried forward at September 30, 1929. Dividend warrants will be posted to the Ordinary stockholders on April 15.

Why not visit

The SUDAN

this Winter?

KHARTOUM can be reached either via Egypt or direct by steamer to Port Sudan and thence by train-de-luxe. The social life of Khartoum during the season (December to March), the scenes of Wild Life on the Southern reaches of the White Nile, or interesting short trips organised by the Sudan Government Railways and Steamers from Khartoum, offer a unique variety of experiences to those in search of something out of the ordinary. It is also a new route to or from UGANDA and KENYA, involving neither difficulty nor discomfort. To the Sportsman it is Paradise.

Notes of the Week.

The Anglo-Egyptian Negotiations.

The negotiations between the Egyptian Delegation under Nahas Pasha and the Secretary of State for Foreign Affairs would not seem to have progressed far enough to enable the reaching of any definite stage to be recorded. All that is known is that the proposals submitted by His Majesty's Government last year are now being discussed *seriatim*. The desire of the Egyptian Ministers to elaborate their points of view is a natural one. At the previous negotiations their party was unrepresented, and they will wish to assure themselves that considerations which have weighed with them in the past have not been overlooked by the British negotiators. Herein lies the value of the Conference, as it should remove any sense of grievance on one side or the other that due consideration has not been given to this or that aspect of the question.

The Death of the Empress Zauditu.

The death of the Empress Zauditu removes a picturesque, but in some ways pathetic, figure from the stage of contemporary history. As a daughter of the redoubtable Menelik II, the Empress remained to the last a power in Abyssinia, but her influence, it has to be inferred, was exercised more often in a negative than in a positive direction. Associated on a dual throne with her active and enlightened cousin, King Taffari, she seems to have accepted philosophically his inevitable concentration of power in his own hands and to have withdrawn herself more and more from any active share in the Government. As a devoted daughter of the Church, she could not help forming a rallying point for the powerful Church party, and it is possible that often when she intervened in public affairs she was prompted more by the urging of ecclesiastical and other reactionaries than by her own judgment. Outwardly she maintained correct relations with her co-ruler, and it may well be that she played an unostentatious, but useful part in preventing more serious clashes between the non-progressive elements in the country and the reformers. Whether the effect of her death will be to strengthen the position of King Taffari or to embarrass him for a time by the uncurbing of the forces of reaction remains to be seen. On occasions of this nature fortune generally favours the side that is the first to exert its authority. The Empress' death coincides with a decisive victory won by the Central Government over a rebellious Governor, and the new Emperor will know how to use this timely advantage. It would seem, therefore, reasonable to expect that, as Abyssinia will now be spared the handicap of a divided loyalty, the rate of progress made by the country will become more rapid.

Political Tension in Roumania.

One of the effects of the overwhelming majority secured by the National-Peasant Government in Roumania at the last general election has been to convince the chief Opposition parties—the Liberals and the Averescans—of the ineffectiveness of challenging the Government in Parliament and to cause them to rely more and more on the public platform and the Press as a means for voicing their hostility to their political rivals. In this way the battle becomes more spirited, and denunciation is subjected to fewer trammels. To circumvent the Opposition's tactics in this direction the Maniu Government found itself obliged to pass emergency legislation making it a penal offence, punishable by imprisonment of from three months to two years, to spread abroad by means of publication, pamphlets, newspapers, circulars or posters or by the agency of the human voice untrue statements of a nature to provoke panic or to trouble the security, order or peace of mind of citizens. Where the dissemination of such inexactitudes is calculated to prejudice the credit of the State or of financial institutions, whether guaranteed by the State or private, or is calculated to endanger or agitate public or private credit, heavier penalties are enacted. The passage of this Law has roused the anger of the Opposition to white heat. An official *communiqué* has been issued by the Liberals under M. Bratianu, declaring that the Party has decided to oppose by every means at its disposal "this attack on the most vital interests of the country." The desperate attempts made by the Government, it continues, "to maintain itself at the head of affairs by the help of threats, scandalous concessions and dictatorial laws can only point more clearly still to the absolute necessity for removing the present régime." So far, however, defiance of the new Law appears to have been restricted to the introduction of a new feature in the Liberal Press. Under the heading "Alarming News: falling under the provisions of the Madgearu Law (three years' imprisonment)" appear various witticisms at the expense of Ministers, which constitute practically the

Digitized by Google

only comic relief in a political warfare waged with such deadly earnestness. If both sides could have taken their differences less seriously, the Government would have been able to avoid the violence done to the Party's contentions when in opposition regarding the freedom of the Press by confiscating a large proportion of the Bucharest Press on a certain day, because it published a report of speeches attacking the Regency Council delivered at a meeting of General Averescu's People's Party.

Roumanian Cabinet Difficulties.

In the face of persistent attacks from without Dr. Maniu's Ministry has not been able to maintain complete union within. The Government, which had to sacrifice its first Minister of Finance last October owing to his relationship to the new Regent, has now lost General Cihorski, Minister for War, whose appointment was understood to have been made in the first instance at the request of the Regency Council. His resignation has been brought about by an unfortunate combination of circumstances, petty in themselves, but liable to have wide ramifications. One of the achievements of Dr. Maniu's Government has been to strengthen the bonds of union between the component elements of Greater Roumania, which had shown signs of becoming weakened as a result of the alleged favouritism shown by previous régimes to the Regat, or Old Kingdom, at the expense of the newly incorporated Provinces. Transylvania would naturally consider that it had come into its own with the advent to power of its National Party under Dr. Maniu, but the new Government can also claim to have made Bessarabia better pleased with itself. At the recent communal elections not a single Communist was returned in the province, in spite of the activities commonly attributed to Soviet agents. It was, therefore, in keeping with the Government's policy that special stress should be laid this year on the anniversary—the twelfth—of the union of Bessarabia and Roumania. Unfortunately, the improvement in Bessarabian relations has brought to the fore one or two Bessarabians whose War record did not give general satisfaction to the nation, but whose efforts to rehabilitate themselves in popular esteem the Government has apparently accepted in the cause of national unity. When, at the public celebrations in honour of the Bessarabian anniversary, cheers were called for one of these men, the leader of the Bessarabian Peasants' Party, by the Government spokesman, three Generals ostentatiously left the gathering, and it would appear that the unwillingness of the Minister of War to reprimand his subordinates, in order to placate Bessarabian feeling that was outraged by their action, has led to his resignation from the Cabinet. The episode will have furnished fresh sinews of war to the Opposition, which had already attacked the Government's Bessarabian policy as a surrender to Communism, and M. Bratianu, indeed, is accustomed to prefix his public references to the Bessarabian leader in question with the word "traitor." Any wholesale defection of Bessarabians from the National-Peasant coalition group at the present time must detract from the cause of Roumanian unity.

Turkey's Financial Problem.

The suggestion made in these columns three weeks ago that the Turkish Government's financial policy might conceivably lead to a situation from which only a change of personnel would provide an avenue of escape finds an echo in Turkey in a series of articles in a Constantinople paper, *Yarin*. This journal, which has been in existence only a few months, has hitherto not attracted any special attention to itself. There can be no question that recently a tendency towards a guarded independence of thought has been manifesting itself even in newspapers noted for the closeness of their relations with the authorities at Ankara; but it is certainly a new departure on the part of the Press of the Turkish Republic when the Government is severely criticised in a series of articles, and the suggestion is made that the Prime Minister and his colleagues should make way for others better able to cope with the financial and economic situation. It is not unnaturally inferred that the *Yarin* would not have been so outspoken, unless it had had the assurance of some measure of high support for its candour; and even the arrest of the Editor and the non-appearance of the paper may not altogether dissipate this belief. The representatives of the Council of Foreign Bondholders have returned from their visit of inquiry to Ankara, in order to report to their Council. It is clear that Turkey cannot much longer hope to meet her obligations without recourse to a foreign loan, and that she is, therefore, confronted with the alternative of defaulting or of accepting financial help on the conditions laid down by those who will lend the money. There is no reason to suppose that those conditions will be more onerous than reasonable precautions dictate. In no quarter is there any desire to mix politics with finance, and the Turkish authorities must bring themselves to realise that the handling of State finance calls for experience and training just as much as the flying of aeroplanes or the construction of a ship. It may be possible to arrange for small loans from one source or another, but the loan that Turkey now needs, which may well run to a score of millions, can be forthcoming only if the Turkish Government agrees to some measure of supervision, not of Turkish affairs in general, but of the application of the loan and of the means by which its repayment is to be effected.

Clarity in Palestine.

The merits and demerits of the Palestine Report may be argued and re-argued; discussion may range from the masterly analysis of events to the "littleness" of the individual members of the Commission. One thing, however, the Report must effect. A shaft of light has been thrown on the whole problem, and the issue must be clarified. If the Report is to be made the subject either of denunciation or of gloating, it will have failed of its purpose. The all-essential thing now is for the Government, working in conjunction with such representatives of the Jewish and Arab sides as are available, to reformulate its policy in Palestine. This must be a constructive one. It is absolutely futile to attempt to play one party off against the other, in the timid hope that time will bring relief. We believe, however, that the Government is fully aware of the urgency of the situation, and that it is already taking counsel. Everyone, Arab, Jew and not least the sorely tried British official in Palestine, wants to know the real position. But it may well be that the questions of everyone cannot be precisely answered. Dr. Chaim Weizmann, whose leadership of the Zionist movement has been one of the most remarkable things in this generation, asks the following question, for instance, in a letter to *The Times*: "Is the policy of the Jewish National Home in Palestine, the policy of the Mandate, to be re-affirmed, encouraged, or arrested?" It is a subtle question, full of difficult points. But what does it really mean? Is the British official definition of "the policy of the Jewish National Home in Palestine" that of the Zionists? Theoretically it may be, but, actually is it? What Dr. Weizmann appears really to be after is the securing from the British Government what the French call *une police*, and, from the Palestine Government, *une politique*; or, simply, reaffirmation and encouragement. It is in the light of a vast accumulation of knowledge, among which the Report will take a conspicuous place, that this, among other questions, will have to be faced by the Government.

INDIAN NOTES.

Mr. Gandhi—Showman.

One of the principal attributes of the successful showman is the capacity to get himself talked about. No real exponent of the showman's art minds what people or the Press say about him so long as they say, and keep

Digitized by Google

saying, something. If, as we believe, and he himself has at least by inference admitted, one of the main objectives of Mr. Gandhi is to display his wares—in this case the cause of Indian nationalism, or rather his own particular interpretation of that vague and somewhat nebulous entity—he has succeeded beyond probably his wildest dreams. For even in these days of "stunt" journalism it is seldom given to one individual to monopolise the main news columns of the daily Press to the extent to which Mr. Gandhi has succeeded in doing during the past week. His carefully staged hesitation before taking the final step, the dramatic eleventh hour appeal to the Viceroy, so manifestly at variance with the defiant and intractable attitude assumed at the interview with the party leaders, and finally the protracted pilgrimage to the shores of Kathiawar may reveal the patent insincerity of the man, but their news value is undoubted. Fortunately there is no evidence to show that responsible opinion in India, any more than the Government which so obstinately refuses to fall in with his wishes, has fallen into the trap so adroitly set for them. The truth is, of course that Mr. Gandhi is as much of an embarrassment to the Moderate Indian and even to the less idealistic among his followers as ever to the Government, and that they find him no less intractable. "There is at the present moment," the leading organ of the Liberal movement complains "an unfortunate tendency in this country to denounce everybody who does not entirely fall in with Mr. Gandhi's plans, or who does not think that the Congress is the last word in political wisdom, to cover them with insults and abuse, as being potential traitors to India's cause. . . . Not only is this (Congress) doctrine false, but it is also extremely foolish, because, if for no other reason, it renders the task of all those who would help the legitimate advancement of India's political progress extremely difficult." That Mr. Gandhi had not thought of the Government turning his own weapons against him and is now at his wits' end to counter their inaction is abundantly plain. So far he appears to have achieved little more than his own discomfiture, and confident in the belief that, if and when the need for more more drastic action arises, they will not shrink from the unpleasant duty we may congratulate the Government and its advisers upon the skill and discretion with which they are handling a very difficult situation.

India's Trade in 1929.

The depression in the external trade of India is clearly reflected in the official statistics for the calendar year 1929. It is true that imports were steady: in fact, their total was higher, by about Rs.53 lakhs, than the total of the preceding year. But there was a marked reduction in exports. All the maritime provinces except Burma showed a decrease. The visible balance of trade in favour of India declined from close upon Rs.56½ crores in 1928 to less than Rs.54 crores in 1929. As regards imports Bengal showed an increase of nearly Rs.3½ crores, due to heavy imports of wheat. On the other hand, imports into Sind, Burma, Madras and Bombay were slightly reduced, the net result being, as is stated above, an increase of Rs.53 lakhs for the whole of India. It is of interest to note the position of the British motor car in the Indian market. During the calendar year 1928 India imported, from all sources, 18,260 cars, and 19,032 cars in 1929. Of these totals only 3,782 came from Great Britain in 1928, and 3,723 in 1929. Of the others, the great majority came from Canada and the United States. Regarding the external trade of India as a whole, it has certainly had a bad year. But at the same time there does not appear to be good ground for pessimism. It is, of course, impossible to say to what extent commercial progress may be hindered by political agitation; but at the same time, as we were recently reminded by such an acknowledged authority as Sir Charles McLeod, the importance of the antics of Mr. Gandhi and his associates may easily be over-estimated.

THURSDAY, APRIL 10, 1930.

THE REPORT ON PALESTINE.

Whatever may be said against the Report of the Palestine Commission of Inquiry, no one can deny that the Commissioners were impartial. They went to Palestine with an open mind; they returned from Palestine with a mind full, possibly too full, of the various aspects of what is obviously, though certain people have at times pretended to deny it, a capital problem in statesmanship. However the British Government act upon this Report, moreover, the document will surely be an historic one. That the Commissioners were conscious that this would be so is very evident from their writings.

Few observers, however, will contend that an adequate Report might not have been drawn up in less space. It is desirable, in these circumstances, to attempt to separate the academic features of it from its treatment of the fundamental problems of Palestine. We ought to say here that we accept the majority statement that, "the fundamental cause, without which in our opinion disturbances either would not have occurred or would have been little more than a local riot, is the Arab feeling of animosity and hostility towards the Jews consequent upon the disappointment of their political and national aspirations and fear for their economic future." (Mr. Snell, on the other hand, shares the normal Zionist view that "many of the immediate causes of the riots of August last were of a temporary rather than of a fundamental character, and were due to fears and antipathies which, I am convinced, the Muslim and Arab leaders awakened and fostered for political needs.") In other words, we do not believe that the problem is one merely of administration, but are profoundly convinced of the urgent necessity of re-defining British policy in Palestine, so that the local administrators may know definitely whither they are going, or at least attempting to go. No Administration, however strong, determined and ruthless, can successfully pursue a policy that is vague, irresolute and contradictory. It is wholly unfair that any Administration should be asked to do so. We shall return to this point.

Let us deal first with some of the academic points in the Report. First, of course, is the statement, with which no impartial man is likely to quarrel, that "the outbreak in Jerusalem on August 23 was from the beginning an attack by Arabs on Jews for which no excuse in the form of earlier murders by Jews has been established." To that extent, and from the immediate Zionist point of view, the Zionist contention is vindicated. Next, there is the statement that, in the opinion of the Commission, the outbreak was not premeditated—contrary to the opinion certainly held by the Zionists, and originally held, apparently, by the British authorities in Whitehall. And thirdly, that the outbreak neither was nor was intended

Digitized by Google

to be a revolt against British authority in Palestine—this again in opposition to the Zionist thesis that the Jews attacked were merely a shield for the British authorities, against whom the outbreak was really intended. Then come a series of comments upon various Zionist complaints—against the Grand Mufti, against the Palestine Arab Executive, and against the Palestine Government, particularly against Mr. Luke, Acting High Commissioner at the time of the outbreak. In varying and increasing degree, all these three authorities are exonerated from blame. As for the minor Arab grievances, which include the grant of concessions to Mr. P. Rutenberg and Mr. M. Novomeysky, the position of Ottoman subjects born in Palestine and now resident abroad, the high level of taxation, and the remission of part of the debt of Tel Aviv to the Government—these are dismissed by the Commissioners as ill-founded. These points, as we say, are largely academic: discussion will not cease on them with the publication of the Report, yet they are incidental, not vital.

But before proceeding to the larger aspect of this Report, we may set out what in the Commissioners' view immediately caused the outbreak. The causes were five: the long series of incidents connected with the Wailing Wall, beginning on the Day of Atonement, September, 1928, exciting and intemperate articles in the Arabic and Jewish Press, propaganda among the less-educated Arab people of a character calculated to incite them, the enlargement of the Jewish Agency, the inadequacy of the military forces and of the reliable police available, and the belief, due largely to a feeling of uncertainty as to policy, that the decision of the Palestine Government could be influenced by political considerations. Now the first contributory cause will, we hope, disappear with the findings of the Wailing Wall Commission, the appointment of which, apparently, is a matter of considerable difficulty. The second and third are matters for the local Administration to remedy. The fourth is now a fact: it was provided for in the Mandate itself, and in any case cannot now be undone. Really it is the last two causes which are the crux of the whole matter, and fortunately they rest in the hands of the British Government. We have no doubt that in regard to the first, practically all that is necessary has been done. Mr. Dowbiggin, who went from Ceylon to Palestine, is not likely to ask for many more British policemen than have already been sent to Palestine, and there are still, of course, two battalions of infantry in the Holy Land. The real problem, therefore, resolves itself about the last contributory cause.

A clear statement of British policy in Palestine is absolutely and urgently necessary. It has been constantly burked since Mr. Winston Churchill issued the famous Memorandum of 1922 (which, as the Commissioners point out, was never acted upon in spirit by the Zionists). In the cloudy and groping interval, both sides, Arab and Jew, have been hoping for the best. The "record" immigration of 1925 considerably heartened the Jews; the subsequently emigration from Palestine of Jews heartened the Arabs, who began to think seriously that the Zionist movement was dying of inanition. Above all, the illusion that the problem of Palestine was in process of disappearing was entertained by the British authorities at home, who, encouraged by the lack of incident during Lord Plumer's régime, were led into a fool's Paradise. If there had been in Palestine no problems to solve, Lord Plumer's régime would have been wholly admirable. It is the fate of his unfortunate successor to show that denial of the existence of problems is not synonymous with their elimination. The constant dropping of chill disdain may wear away some stones, but not the stones of the Holy Land. To hold the ring firmly may or may not be good administration: to grope for a policy is certainly not good statesmanship. It is much more through our vagueness than through our weakness that we, or, rather, the unhappy inhabitants of Palestine, are paying the penalty.

In Arab, Jewish, and British interests, therefore, the policy of the Mandatory Power in Palestine must be defined. Last week in the House of Commons, indeed, the Prime Minister emphasised that the Government would "give effect, in equal measure, to both parts of the Declaration and do equal justice to all sections of the population of Palestine." This, however, which was perhaps all that could have been expected at the time, carries us nowhere. It could have been foreseen, and it means—exactly what either side in the Palestine controversy likes it to mean. Until the British Government has very much more closely defined what it intends by facilitating the establishment of a Jewish National Home in Palestine, until, that is, it has come down more unequivocally on such matters as the fundamental nature of the "Home," whether it is to be, what Arabs would consent to its being, a "cultural and spiritual centre," as immigration, the possibility of an ultimate Jewish majority in Palestine, as land, the possibility of finding in Trans-Jordan homes for such Arabs in Palestine who are now living on land which the Zionists wish to purchase and so forth—until the British Government has really addressed itself to the problem, there will be no lasting peace in Palestine. Whether this Commission's Report, which virtually vindicates the Arab case (as distinct from incidental contentions) against extreme Zionism, will for the larger purpose be acted upon, whether the Government will accept the figure of 20,000 for the annual immigration of Jews into Palestine (the figure which was authoritatively mentioned at the meeting of the Jewish Agency at Zurich last August as reasonable) as, roughly, a desirable consummation, (this would make the Jewish population equal to the Arab in 1956) whether, seeing that, according to another official speaker at this meeting of the Jewish Agency, but five per cent. of the Jewish people have been attracted so far to the Palestine idea, the Government will conclude that support of Jews in Palestine by world-Jewry is but a phase, or whether the non-Zionist section of the Jewish Agency will so conduct the "Home" in Palestine as to make it acceptable to Arabs, we have no means of knowing. All that we do know is, that a long and strong view of the problem must now be taken. "My dear friend," as Dr. Johnson said, "clear your mind of cant." The Palestine problem is a genuine problem. Its real nature has been observed. The lines of its solution have been blithely ignored. The inevitable has been classed as the accidental. Now there must be a straightening-out. That in its solution there may be disappointment in store for both Arab and Jew is possible. But for the sake of those two Semitic peoples, and especially for the sake of the name of Great Britain in the world, and particularly in the East, this problem must be clarified. Let us have an end of fair and fiddling words, and evidence of a little real thought. Too long the matter has been governed by sentiment or prejudice. Let this present Government, profiting by the mistakes of past Governments, resolutely and zealously address itself anew to this problem; let it lay down explicit instructions to the local Administration. A lead given will be a lead followed. The knowledge necessary is at hand; the zeal we do not doubt. But may the Government remember that zeal without knowledge is the sister of folly.

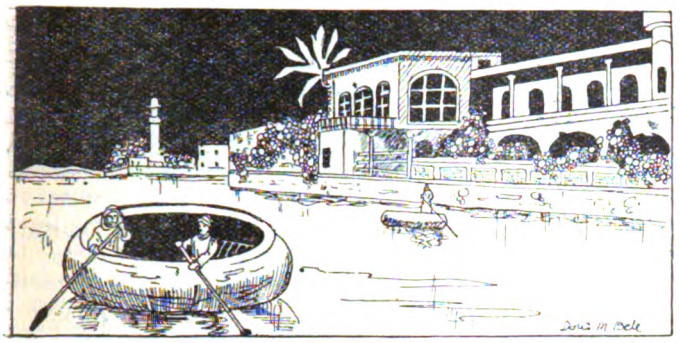
*The Near and Middle East

From Our Own Correspondents.



IRAQ.

Baghdad, March 26.

The Cabinet.

On March 11 King Faisal accepted the resignation of the Prime Minister, Naji Pasha al Suwaidi. At a meeting of his party—the Progressive—the retiring Premier declared that he was forced to resign owing to "the failure of his Cabinet to carry out its declared programme, which was based on the principles laid down by the late Abdul Muhsin Beg as Saadun." Dissensions in the Cabinet are said to have been caused by the power exercised by Yasin Pasha Hashimi, of whose inclusion in the administration several Progressive members—he is the leader of the Popular Party—disapproved. The other main difficulty was the question of British officials' contracts; the Cabinet wished to end, before the expiry of their full term, the contracts of some dozen British officials, chiefly belonging to the Administrative Inspectorate and the Police, a proposal to which the High Commissioner objected.

The wave of anti-British feeling which is sweeping over the political world of Iraq, that is to say over Baghdad city, broke harmlessly last Friday in a "peaceful demonstration" organised by the Popular and Nationalist parties. The police had taken every precaution to prevent breaches of the peace, and though the speeches made by some of the leaders were exceedingly inflammatory—"London, your hour has come," was one of the *haussas* or choruses of the crowd—no heads were broken. The demonstrators met at 1.30 p.m., at the Haidar Khanah mosque. Carrying banners, and marching in an orderly fashion, they proceeded down New Street to the Egyptian Consulate, where they halted to shout: "Long live the Wafd! Long live Nahas Pasha! Go for war, O Arabs!" The Turkish Legation and the American Consulate were also visited and hailed with shouts of: "Down with the Mandate!" The demonstrators then returned through New Street to the Haidar Khanah mosque. All traffic was stopped by the police during the demonstration, and most of the shops were closed until the evening. The Assyrian guards at the residence of the A.O.C., on the route march, were withdrawn and replaced by Arab police, in order to remove any possible cause of provocation.

The task of forming a new Cabinet has proved an exceedingly difficult one. Hikmat Beg Sulaiman, one of the chief opponents of the Suwaidi Cabinet, was summoned by the King on March 12, but failed to form an Administration. Daoud Beg Haidari and Jaafar Pasha al Askari, who is expected from London shortly, were also talked of as possible Premiers. On March 23 a letter was published from the King to Nouri Pasha as Said, the retiring Minister of Defence, appointing him Prime Minister. His Cabinet consists of Progressives, with a leaven of non-party personalities who are new to office and are not Members of Parliament. [The names were given in our issue of March 27.—Ed.] No Minister of Irrigation and Agriculture has been appointed.

As Nouri Pasha had been warned by the leaders of the Progressive Party, which has a large majority in the House of Deputies, that they would not support any Cabinet not composed entirely of Progressives, he is expected to advise the King to prorogue Parliament for some months, in order to avoid an immediate defeat.

Rumour has it that King Faisal and his new Prime Minister propose to go to England during the summer, in order to discuss Iraq's relations with Great Britain at first hand with the authorities in London.

Iraq-Najd Conference.

The Treaty of Friendship and Bon Voisinage verbally agreed upon by the two Arab monarchs at their conference in the Persian Gulf has not yet been signed, but complete agreement has been reached. King Ibn Saoud's Counsellor, Shaikh Hafidh Wahba, accompanied by the Foreign Secretary of the Government of Najd and the Hijaz, were in Baghdad for two days last week, with instructions to conclude the Treaty on the lines of the Gulf conversations. The thorny question of the frontier posts has been definitely referred to arbitration for settlement; with regard to reparations, the King of Najd has placed in a Jidda Bank the initial sum of £10,000 to be disposed of by the Government of Iraq in settling claims for losses due to raids which took place later than 1927.

King Albert in Baghdad.

The King of the Belgians has just left Baghdad after a brief and unofficial visit of five days, into which he packed an unusual amount of sightseeing and 3,000 miles of flying. He arrived by air from Cairo, and was the guest during his stay of the High Commissioner and Lady Humphrys. Several aeroplanes of the R.A.F. were placed at his disposal, enabling him to visit Ctesiphon, Babylon, Ur of the Chaldees, Mosul and the ruins of Nineveh and Nimrud. In company with the King of Iraq, the High Commissioner, the Air Officer Commanding, and the Prime Minister, King Albert also visited Ramadi, where he inspected the Iraq Desert Camel Corps, warmly congratulating King Faisal on the possession of so fine a body of men. Banquets in honour of the King of the Belgians were given by King Faisal and by the High Commissioner.

General News.

The Amir George and the Amir Habib Lutfalla, two Cairo personalities who control important cotton interests, have been visiting Baghdad, staying at the Carlton Hotel as King Faisal's guests. They are understood to be studying the possibilities of certain large agricultural and economic schemes for this country. The Lutfalla family was granted the title of Amir by King Husain. One of them was his Ambassador in Rome and other Continental capitals.

Saiyid Moyi-ed-Din Effendi Gailaini Zade, second son of the late Naqib of Baghdad, died last week.

ROUMANIA.

Bucharest, March 26.

The Communal Elections.

The communal elections have at last been concluded after a bitter struggle, the Liberals having evinced during this campaign a degree of combativeness hitherto unknown, which seemed out of proportion to the importance of the event. The Government retaliated with no less violence. At Bucharest, which is the cradle and the principal stronghold of the Liberal Party, a large number of votes was registered for them, viz., 14,000, while the National Party had rather a poor majority with 19,000 votes, approximately. In the Old Kingdom the Liberals were fairly strong and in four of the Departments all the Councillors elected belong to the Opposition. On the other hand, in all the other provinces the proportion of Liberals elected is small. In Bukovina, Bessarabia, Southern Dobruja and the Banat the success of the Government was complete, while in Transylvania the Liberals were completely beaten. As for the other Opposition parties, Averescans, the partisans of Dr. Lupu, the Minorities, Independents and Communists, their successes were negligible. It is to be noted that, although the Liberals constantly aver that Bessarabia is a Bolshevist province, the Communists did not have a single member elected there, nor indeed did they poll a single vote. This is surely sufficient proof of the falseness of the reports recently circulated on this subject. The same applies to the reported threat of war on the part of the Soviets, rumours about which have been agitating the populace for the last few weeks. On the contrary Bessarabia is perfectly peaceful, and would, perhaps, be more reluctant than any of the other provinces to plunge into the adventure of Bolshevism, of which it has tasted some of the horrors and dangers. Another detail in regard to the elections—in the three great industrial centres of Transylvania, Timishoara, Oradea and Petroshani, although a certain number of Communist votes were recorded, not one Communist municipal councillor was elected. At Chishinau the Jewish minorities made a cartel with the Government, and as a result all the municipal councillors are Jews.

These were the first elections in Roumania at which women have exercised their right of vote. The number of women electors is not yet very high, perhaps disappointingly low, but the right to vote granted by the law does not cover a very large class of women. Most of them voted for the Government in token of their appreciation of the fact that the National-Peasant Party was the first to recognise the rights of women in this respect and to introduce the general suffrage. A considerable number of women councillors have been elected, and a few communes have appointed a woman to the post of Mayor

Government and Opposition.

As was to be expected, although the elections were completely free, without any interference on the part of the Government, several regrettable incidents took place, which were immediately pounced upon by the Liberals and made the subject of interpellations in Parliament and of insinuations that the elections had not been legally carried out. Dr. Lupu was especially vehement. Dr. Vaida-Voevod, Minister of the Interior, who has lately been prevented by a long illness from taking part in political affairs, having returned to the Chamber (where he was given an enthusiastic welcome) replied to Dr. Lupu in an admirable speech, distinguished by its moderation and good sense. It was not only a reply to the Opposition campaign, but an announcement of the policy that the Government intends to pursue in future with regard to such unfounded and exaggerated attacks. In fact among the laws just submitted to Parliament is one for the severe repression of alarmist rumours calculated to mislead and alarm the population. One of the principal organs of the Opposition went so far as to circulate a statement regarding the contemplated revalorization of the leu, which fortunately was at once officially contradicted, for otherwise it would have led to the belief in an expected fall in the value of the currency and the failure of stabilisation, which would have been extremely harmful to the credit of Roumania abroad. The Government intends in future to take very severe measures against such rumours.

The Economic Situation.

The economic crisis is still marked and is, if anything, enhanced by the fact that the continued lack of rain seems to threaten the coming harvest. In this respect the danger is not yet serious, taking the country as a whole, for in all the northern parts of Roumania there has been sufficient rain and snow. It is the districts of Little Wallachia and the south that are suffering from drought, added to which has been a quite unseasonable high temperature for the last two weeks, so that pasturage is scarce and the spring ploughing cannot be begun. Still, the price of cereals has risen considerably during the last week and numerous inquiries have been received from abroad, so that considerable activity reigns at the silos where last autumn's harvest is stored.

Miscellaneous News.

Another fatal result of the long drought has been a great number of fires in the forests and in the villages, which have caused fearful ravages. In Muntenia and Moldavia several villages have been completely destroyed, among them some on one of the properties of Prince Carol, where 100 houses have been swallowed up by the flames, leaving many families destitute. The Prince, however, has had all these families provided for at his expense. In the Carpathians and round about Brashov hundreds of kilometres have been burned down and more than four hundred habitations have been destroyed, and the fire continues its progress up the mountain, defying all attempts to arrest it.

The same may be said of the famous oil-well at Moreni which have now been burning for eighteen months—a gas jet of tremendous force, making a noise like thunder—and all the attempts of engineers to devise a way of stopping it have hitherto proved futile. It is visited by large numbers of tourists and scientists.

His Royal Highness the Prince Regent, Nicholas, made his maiden speech (in the army) at a banquet given by the officers on the occasion of his promotion to the rank of General.

Belgrade, April 3.

Yugoslav Finance.

The Minister of Finance, Dr. Stanko Shverlyuga, has presented his Budget, the secrets of which were guarded with remarkable care, to King Alexander. The Budget balances at a total of 13,348,013,160 dinars (approx. £49,000,000). The expenditure is made up of expenditure on administrative matters, 8,534,561,553 dinars, and that for the running of the various State enterprises, railways, monopolies, mines, etc., 4,813,451,607 dinars. In last year's Budget the expenditure was estimated at 12,464,474,912 dinars, divided between administration, 7,945,647,510 dinars, and State enterprises, 4,518,827,402 dinars. The apparent increase in expenditure is 588,914,043 dinars on administration and 294,624,205 dinars on State enterprises. But during the 1929-30 period there were supplementary credits for administrative purposes amounting to a total of 539,685,472 dinars, so that the real difference between the actual expenditure last year and estimated expenditure in the coming year is very slight. The Minister stated in his exposé that the Budget has been so drawn up this year as to make supplementary credits unnecessary. This increased expenditure on State enterprises is a good sign, since this is merely the working capital of enterprises which return it with very considerable profits.

In the financial statement accompanying the Budget Dr. Shverlyuga claimed that there are undoubted signs that Yugoslavia is becoming financially stronger. Thanks to last year's good harvests the balance of trade was favourable for the first time since 1926, and that by over 300,000,000 dinars. As a result of this, the stock of foreign currencies at the National Bank has been increased to such an extent that the dinar is now covered to 55 per cent. of its present value, a far higher percentage than is deemed essential in most Western countries. In fact the dinar has been one of the most stable currencies in Europe for the last four years or so, and legal stabilisation can do little more than pledge future Governments to continue the currency policy followed by recent Governments. Rumours had been current, however, that, if a loan could not be obtained, money might be raised by the legal stabilisation of the dinar at a lower rate than the present one; inflation, in fact. This, it was stated, would please the peasant masses, since they would then get more dinars for their wheat and other products sold abroad. But these rumours, idle though they would seem to have been, unsettled the business world and Dr. Shverlyuga's statement that legal stabilisation would be carried through on the basis of the present value of the dinar was warmly welcomed.

Several important financial measures were carried through during the last year. The funds gained from the discounting of the second and third parts of the Monopoly Loan by Messrs. Rothschild (22,000,000 dollars) were used to regulate the mass of floating debts which has been allowed to accumulate since the end of the War. The Yugoslav War Debt to France was also settled on the most favourable terms, a very small part of Yugoslavia's annual receipts from Germany as reparations will be paid directly to France, who will receive, in 37 years, little more than the amount lent in money and materials during and immediately after the War. In fact, so favourably has Yugoslavia arranged the settlement of her War debts and the receipt of her reparations that it appears that she will have a greater net surplus of receipts over payments than any of the other States which fought in the World War. This may form a basis for a big loan when the foreign money market is more favourable, but Yugoslavia realises the folly of trying to raise money abroad now and has sufficient resources, according to statements by General Zhivkovitch and Dr. Shverlyuga, to wait until conditions are better. In the meantime the Minister of Finance pointed out that considerable sums of foreign capital are coming into the country, with increasing rapidity, in the form of great engineering and other works being done on long credits by foreign firms, and large concessions for the exploitation of Yugoslavia's mineral and water power wealth are being taken up by foreigners.

The Censorship.

The promised relaxation of the censorship on the Yugoslav Press has so far been limited almost entirely to permission being given for the waging of a series of polemics in the Belgrade Press, calculated to discredit completely M. Savtchitch, Mayor of Belgrade, and his Municipal Council. This would seem to be merely another step towards the settlement of the fierce dispute between M. Savtchitch and General Zhivkovitch, which has been raging for some time. On several occasions, M. Savtchitch's resignation has seemed inevitable, but, held by some unseen power, he manages to hold on.

The Serbian Patriarch.

It is feared that Mgr. Dimitriye Pavlevitch, Patriarch of Serbia, is on his death-bed. Some days ago he took, by error, a dose of a mild poison, mistaking it for aspirin, and as a result he is suffering from inflammation of the internal organs and lungs, which may well prove fatal in the case of a man of 84 years. Mgr. Dimitriye was elected Patriarch some ten years ago and was enthroned at Petch, the historic centre of the Serbian Church, in 1925. Of peasant origin and without great erudition, he has nevertheless carried out his difficult duties with great devotion and has won the affection of the masses of his people.

Yugoslavia and Bulgaria.

The exchange of ratifications of the conventions regulating frontier estates on the Bulgar-Yugoslav frontier completed on March 31 between Dr. Kosta Kumanudi, the Yugoslav Acting Foreign Minister, and M. K. Vakarelski, Bulgarian Minister in Belgrade, has been welcomed as a sign that both Governments concerned are sincerely seeking to establish good relations between their peoples. Had the Yugoslav Government sought to evade ratification, it had excellent excuses in the recent outrages committed in South Serbia by *komitajis* from Bulgaria. It would appear that the Bulgarians, impressed by the intervention of the Great Powers, and especially the activity shown by Great Britain, have decided seriously to tackle the ticklish problems presented by the existence in their country of a powerful organisation whose objects are to upset the relations between Bulgaria and Yugoslavia and eventually separate from Yugoslavia certain parts of the territory given her by the Peace Treaties.

A Visiting Dramatic Company.

On Saturday and Sunday next, April 5 and 6, the English Players from Paris will produce "Journey's End" and "A Bird in the Hand" in Belgrade. They are producing the same plays in Zagreb earlier. There is no doubt that they will get a warm reception here, all the more keen since the Belgrade theatre has prepared to produce "Journey's End" in Serbian within a few days' time. Queen Marie and Prince and Princess Paul of Serbia have already signified their intention to be present.

The Hellenic Community in Khartoum have decided to commemorate the centenary of Greek independence by the erection of a building in that city to serve as a Orphanage and Hostel for Greek children in the Sudan. The Community was officially constituted in 1902; it maintains a Greek school in Khartoum, and the value of its properties and funds at December 31, 1929, amounted to £E25,957.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, March 20.

The Civil Disobedience Campaign.

I have not yet heard it called the "civil disobedience stunt," but for that, one supposes, we have only to live a little longer. It is a matter, now it is eight days old, not much talked of; but then Mr. Gandhi has not yet reached the salt sea, so that the time for his action has not yet come. The Government might have acted; but have not done so. The longer they put off acting, the more time for public indifference to grow, and the bigger it is, the better. The Government might have acted; they might have served Mr. Gandhi with a notice not to make any political speeches. He would have disregarded it. Better, then, let him alone; arrest others freely, but let him be. Let him march his few miles a day, and receive what tributes were in store—a purse here, another purse there; the news here of the resignation of a few village headmen; the promise there that the proprietor of the liquor shop will deal no more in liquor. In a very few weeks' time, just as Mr. Prakasam, the other day in the Assembly, was "sworn in and loudly cheered by the Opposition benches on his being returned unopposed after his recent revolt against the Congress," the headmen who have resigned, and been cheered, will be cheered by the same voices on re-appointment, and the proprietor of the liquor shop will be applauded for resuming traffic by those those who are now applauding his having given it up. When a man does a thing in public, you cheer him. India is not to be done out of cheering this or that man, simply because she cheered him last month for doing the opposite of the thing for which he is now to be cheered.

Making Salt and After.

It is ten months, or it may be a little less, since I quoted a former member of the Viceroy's Executive Council as having predicted that India would throw in her lot with the next Great Power with which it is England's fate to be at war, if a Government is not established in the country under which they could live without feeling that they had lost their self-respect. That prediction was made in talk in a circle of which I made one. I met the speaker again a few days ago. Now he thinks it will be worse than that; he thinks that, if no sufficient advance in Indian self-government results from the Round Table Conference, there will be a revolution, and perhaps in less than a decade. His talk, though, was less of Round Table Conference and revolutions than of Mr. Gandhi's making salt. "Let the Government let him make it," he said. "Leave him a-making it for, say, three months, and let them then say: 'Good; now we confiscate and destroy that salt!'" The result to be feared, he added, is lest India should be encouraged to break the law right and left; but he spoke of that, I felt, with no real conviction, but as a man repeating what he had heard others say. He agreed that Mr. Gandhi should be given all the rope he can be given.

Viceroy and the Five.

This influential man let fall a word of great interest about the now almost forgotten interview that the Five had with the Viceroy just before the Congress sessions, when, some maintain, Mr. Gandhi and Pandit Motilal Nehru broke faith with Sir Tej Bahadur Sapru and the two others. It appears there exists an almost *verbatim* report of the whole discussion. I was telling my interlocutor that in my opinion the success of the Round Table Conference, as success would be judged by his Party—the Dominion Status one—will depend entirely on how the case is presented and argued. The Indian leaders will either present and argue their case so ably, that they will convince the British Cabinet that the advance they contend for should be granted, or they themselves will be sent away, persuaded that it would have been dangerous to go so far, but still having the satisfaction of feeling that they had argued their case well. "It would not do," I said, "to have the Indian case presented by Mr. Gandhi; for he would not condescend to argue, but would want to dictate and lay down the law." That made my friend remember Mr. Gandhi's last conference with a representative of England —the Viceroy. He possesses a copy of the *verbatim* report I have mentioned. It hurt him, he said, to read Mr. Gandhi's part; "for he was dictatorial; he was insolent; he was even impudent."

The Assembly.

The most interesting debates in the Assembly this week have been those in which the higher cotton duties were the subject, and the most valuable indication has been that the Indian politicians, left to themselves and without official guidance, are advanced enough in economic study to be on their guard against any attempt on the part of an Indian industry, even the most powerful, to exploit the mass of consumers. Some of the Indian members, Dewan Chamanlal foremost among them, have fought stoutly to establish their contention, which is that the Bombay Textile Industry has largely itself to thank for its present plight, and should not be protected, but left for the logic of things to compel it to set its house in order. It is difficult to know what the truth is; for one factor alone—the raising of the exchange ratio, and the effect of that on the general level of prices, and through that on India's economic condition generally—would take years of study. The Government are probably justified in affording the Bombay mills a short period of protection, while deciding that the whole question should soon be investigated by the Tariff Board. I might, to go back to the debate, quote this as a sample of Indian opposition to the duties: "Mr. Ghuznavi said the Bombay millowners were blind. He thought the proposed duty would not protect the Bombay mills, nor would it help them to tide over their present difficulties. Their trouble was that the management was utterly inefficient. Formerly the Bombay mills had China and East Africa as markets for their yarn and cloth. The millowners had never been patriotic, and, anxious only to earn money, they neglected the home market. To-day the position was that China had its own mills to produce yarn, and Japan had killed the Indian textile trade in East Africa." That is certainly an independent attitude.

Indian Banking.

The usual rule is for no independence to be shown, and, one may add, for little regard to be paid to truth-telling. This is from a newspaper summary of a memorandum to the Central Banking Inquiry Committee, presented by the Bombay Marwari Chamber of Commerce: "On the question of foreign trade the Chamber is of opinion that Indian traders have been handicapped by the insufficiency of financial facilities. This defect is attributed to the fact that no Indian bank has a branch in foreign parts, while all foreign banks have branches in India. This, the Chamber points out, leads to considerable discrimination. The Chamber, therefore, suggests the imposition of restrictions on foreign exchange banks, and the development of a strong Indian exchange bank." That is so like them. If a strong exchange bank, controlled by Indians, is a necessity to Indian traders, let the Indians establish it. A strong exchange bank, controlled by Indians, cannot be established, in the nature of things, by any but Indians, and it needs only enough of them, and capacity enough in those employed by shareholders and directors. If such a bank had been brought into being, those controlling it would have found that, if they wanted to succeed, they must not consider, when business is offered them, whether the firm is an Indian or a non-Indian firm, but what its financial position is. In banking it is very easy to lose money.

Digitized by Google

Freedom of Speech.

I may follow up a paragraph in which it has been coolly proposed that restrictions should be placed upon most of the banks existing in India (anything done would affect most of them), by quoting a paragraph from the report in my newspaper to-day of the proceedings in the Assembly. First I must say that a member of the House called attention to remarks by a retired judge regarding Indian-trained medical men, saying that these remarks had created discontent among Indians. This follows: "To an inquiry made by Mr. K. C. Roy whether the Government of India had any policy to refute allegations made against the Governor-General in Council and the people of this country by retired officials and by interested persons in the Press, the Home Member said the Government had no such policy." They do not care "tuppence" how much Mr. Gandhi and the Allahabad pandits abuse England and Englishmen. No one must say that Indian-trained medical men leave the colleges little taught. I am afraid it must be the fact, all the same, that often they do.

INDIAN ART AND ARCHÆOLOGY.

Presiding at the twentieth annual meeting of the India Society at the Caxton Hall on April 3, Sir Francis Younghusband stated that, following the recent visit of the Hon. Secretary (M. F. J. P. Richter) to India, the Society had been able to extend still farther in that country its system of co-operation with kindred organisations for the advancement of Indian art and literature.

Arrangements had now been completed for exchange of membership facilities with the Bombay Art Society and the Indian Society of Oriental Art in Calcutta. The journal *Indian Art and Letters* would reflect in its pages the activities of these societies in India in the same way as was already being done with the Association Française des Amis de l'Orient, in Paris and Strasbourg. In addition to the close contact which was being maintained with the work of the Archæological Survey of India, the Society was receiving much encouragement from the Indian States, some of which were making excellent contributions to the study of the past through their own archæological departments. The newly established Far Eastern section of the Society had been engaged on studies of Indian influences in Indo-China, Java, and Siam. Members would be gratified to learn that in connexion with these studies a centre of Asiatic culture was being organised in Brussels, and that arrangements for intermembership were being made.

A valued member of the committee, Mr. Percy Brown, to whom all interested in Indian culture were under a debt of gratitude, had returned to Calcutta as Curator of the Victoria Memorial. Prince Damrong of Siam had kindly presented to the Society examples of Siamese patterns on Indian cloths. They had attracted much attention, and an application had been received from a museum in Holland for a selection to be shown there. It was intended to make the holding of exhibitions illustrating special aspects of Indian art (in so far as it was linked therewith) a regular feature of the Society's activities.

INDIA IN PARLIAMENT.

In reply to a private notice question by Mr. Thurtle as to the Government's intentions in regard to the Bengal Criminal Law Amendment Act, the Secretary of State for India stated in the House of Commons on March 25 that a Bill was being introduced in the Bengal Legislative Council that day to amend the present Act, the five years' term of which ends on April 23. The effect of the Bill was to retain for five years more the provisions in the first 10 sections of the Act for the trial of certain offences by a curtailed procedure. The remaining sections of the Act, which grant the executive powers of arrest and detenion without trial, will be repealed; but, if the emergency recurred, these powers would be resumed.

In reply to various questions regarding the situation created by the recent action of the British Medical Council, the Secretary of State for India said that he had explained the general position on March 20. He was aware that the decision of the Council would prevent holders of Indian medical degrees gained during the period of non-recognition from practising in this country. The Government of India had informed him on January 6 that they did not expect to be able to introduce legislation for the establishment of a General Medical Council in India during the present session of the Legislative Assembly and he had not heard from them since on that point.

The King-Emperor has conferred the honorary rank of Major-General in the British Army on the Maharaja Sir Behin Shumshere Jung, the Prime Minister of Nepal, and has further appointed His Highness Honorary Colonel of the 4th Prince of Wales's Own Gurkha Rifles.

THE PROVINCIAL BUDGETS.

(From a Correspondent.)

By one of the anomalies of the working of the reformed constitution in India, although nearly all the real nation-building activities are now provincial transferred subjects conducted by Indian Ministers, the Provincial Budgets attract little attention outside the boundaries of the particular provinces concerned. In this country even their existence is probably hardly known.

All the provincial Budgets have now been presented to the respective legislatures and the members of the various councils are busy studying them with a view to finding out the faults of omission and commission on the part of Executive Councillors and Ministers alike. It is a gala season for the non-official members, and the officials responsible for the disbursement of public funds, and their spokesmen in the Councils, especially the Finance Members, have to submit to a microscopical examination of their policy and actions. The onslaught is severe and if the criticism is unfortunately more destructive than helpful, the fault is not of course entirely that of the critics. Irresponsibility at times is a privilege enjoyed by all oppositions. In this country its exercise is tempered by experience of the difficulties of office and a salutary knowledge that the rôles may soon be reversed. In India the Opposition has no such inducements to restraint.

Reference has already been made in The Near East and India to the parlous state of the Bombay Government's finances. In Bengal the position of the Finance Member is hardly more enviable. Revised receipts and expenditure on revenue account practically balance this year, but only owing to a windfall of Rs.55 lakhs. In 1930-31 the revenue is expected to be nearly Rs.43 lakhs less than the Revised Estimates and as expenditure is growing the opening balance is likely to be reduced by Rs.79¼ lakhs by the end of March 1931. The Punjab Finance Minister has been no more fortunate. Droughts and floods, to say nothing of locusts, have continued to prolong the series of lean years which the province has had to endure since the close of 1927. By postponing work in progress and by minor savings in other departments it has been possible to keep expenditure on revenue account down to Rs.1,130 lakhs, against the revised estimate of ordinary revenue of Rs.1,034 lakhs. In the end the accounts for 1929-30 are likely to show a surplus of Rs.20 laks, of which Rs.18 lakhs will be in the Famine Relief Fund. Expenditure in 1930-31 is expected to amount to Rs. 1,112, or Rs. 27 lakhs less than the revenue receipts On the other hand, additional repairs to irrigation works damaged by floods and heavy rainfall will call for Rs.28 lakhs, so that the Budget will only just be balanced, even after omitting a number of important works already approved by the Council and drawing on extraordinary receipts to fortify the revenue account.

In Bihar and Orissa there is likely to be a deficit of 19 lakhs of rupees next year. In Madras the total expenditure for 1930-31 is estimated at Rs.1,861 lakhs against an estimated revenue of Rs.1,847 lakhs, leaving a deficiency of Rs.14½ lakhs to be made good out of accumulated balances. In the United Provinces the ordinary revenue is estimated at Rs.1,283 lakhs, while expenditure charged to revenue account is not expected to exceed Rs.1,272. The Budget accordingly shows, as an exception, a small revenue surplus. In 1929-30 the Central Provinces will, it is hoped, close with a minimum balance of Rs.45 lakhs, and the ensuing period will see an increase to Rs.51 lakhs, in striking contrast to the position of Burma, where a heavy excess of expenditure over revenue is likely to result in the conversion of an opening balance of Rs.63 lakhs into a closing total of no more than one-third that figure.

The Secretary of State for India has appointed Mr. Hugh MacGregor to be Information Officer at the India Office *vice* Mr. Edwin Haward, who has resigned the post to take up an editorial appointment abroad.

PERSONAL AND GENERAL

TO-DAY

April 10, 1930 (New Style).
March 28, 1930 (Old Style).
Dhulqaada 11, 1348 A.H., of the Muslim Calendar.
Nisan 12, 5090, of the Jewish Calendar.
Farvardin 21, 1309, of the Persian Calendar.

Mr. and Mrs. J. H. Whitley returned to London on April 5 from India.

Sir Stanley and Lady Reed arrived at Marseilles on April 4 in the Ranpura from India.

General Sir Philip Chetwode will arrive in London at the end of May from India.

The Duke and Duchess of Northumberland have returned to 17, Princes Gate from India.

Sir Ian and Lady Malcolm have left London until the beginning of May.

Sir William Himbury has returned to Manchester after his stay on the Riviera.

Sir Albert and Lady Stern left Paris last week for the South of France.

Sir Algernon and Lady Firth returned to London on April 5 from Egypt.

Sir Robert Waley Cohen arrived at Plymouth on March 31 on his return from Lagos.

Lady Ratan Tata arrived at Marseilles on April 4 from Bombay in the P. and O. s.s. Ranpura.

Lady Lovat arrives in London to-day (Thursday) on her return from Greece.

Viscountess Chelmsford opened a Sale of Work in aid of Church work in India at the Hyde Park Hotel on April 3.

Sir Arthur and Lady Crosfield will return to Parkfield, West Hill, Highgate, at the end of this month from their visit to **Athens.**

Lord and Lady Forester have returned from Egypt to Willey Park, Broseley, Shropshire, where they will be in residence until June.

Sir Frederic Gauntlett, who recently retired from the post of Auditor-General in India, has accepted the appointment of Finance Minister, Patiala State.

Lt.-Colonel J. Stephenson, I.M.S. (Retd.) is lecturing to-day (April 10) at 4.30 p.m. to the Royal Asiatic Society on "The Natural History of Mediæval Islamic Authors."

H.E. Hohvannes Khan Mossaed, formerly Persian Minister in London, left Teheran last month to take up his position in Tokio, where he will open a Persian Legation.

The Earl of Inchcape arrived at 4, Seamore Place from the Riviera and Paris on April 7. The Countess of Inchcape, who is much better in health, remains in Paris for some little time.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. L. Maxwell, Christchurch, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R. Deccan. Fees 40 guineas per term, including all necessary extras, with reductions for sons of Clergy and Officers. Supervised holidays arranged for boys from abroad, at seaside or elsewhere.

M. Caclamanos, Greek Minister, presided on April 5 at a banquet in London given by the Hellenic communities in England to celebrate the centenary of the Independence of Greece.

The Marchioness of Titchfield, who recently returned to 16, Portman Square from India, left London on April 4 for Welbeck Abbey, where she will remain until the end of this month.

Sir Stanley Jackson, Governor of Bengal, will sail from Bombay for England on May 10 on leave of absence. He will be accompanied by Lady Jackson, and they will arrive in London on May 25.

Jaafar Pasha, recently Iraqi Minister in London, reached Ankara on April 1, on his way to Baghdad. A dinner in his honour was given the same evening by Abdul Halik Bey, Turkish Minister of National Defence.

Mr. F. S. Read, B.A. (London), who has been appointed Warden of the London University Union, studied educational problems and the organisation of schools in Greece and the Near East for ten years, and since his return to England has been doing post-graduate research in Byzantine History at University College.

The King has given authority to Mr. John Rosarius Felix Paolus Agius to wear the Insignia of the Order of St. Sava, Third Class, which decoration has been conferred upon him by the King of Yugoslavia in recognition of valuable services rendered as honorary Consul of Yugoslavia at Valetta, Malta.

On the occasion of the Muslim Festival of *Id-ul-Azha*, on May 9, a gathering will be held at the London Mosque, 63, Melrose Road, S.W.18, of which Maulvi Farzand Ali is the Imam. Dr. W. M. Weston will speak at 3.30 p.m., on "The Ideals of Islam," and Sir Francis Younghusband will preside over this address.

Our Cairo Correspondent writes (March 29):—"The King of the Belgians returned on March 23 from Iraq by the Imperial Airways Indian mail, having had a somewhat rough passage out. He proceeded at once to Luxor to rejoin the Queen and, after spending four days there, came to Cairo, where King Fuad personally paid him farewell at the station, and sailed on Thursday on his return to Belgium. Queen Elisabeth will remain in Upper Egypt until March 31, when she will come to Cairo, and, after spending three days here, will sail by the Sitmar for Genoa. The Queen of Roumania and Princess Ileana left to-day for Syria."

THE "GREAT BURNINGS" OF MEIRON.

By H. C. Luke.

In more than one respect is Palestine a land of contrasts. Climatically it probably affords greater diversity within its 10,000 square miles than any other territory of its size, for, although its loftiest mountain is not more than 4,000 feet high, it possesses in the sub-tropical Jordan valley the lowest depression in the earth's surface. In civilisation it runs the gamut between the primitive, patriarchal conditions of the Old Testament, under which the *Badawin* still live, and the most modern forms of urban life in such towns as Tel Aviv. And in few countries are religious contrasts more sharply defined than in the land which has given to the world Judaism and Christianity and has played an important part in the early development of Islam.

Yet, with all this diversity of matter and spirit, there is in some respects in Palestine a certain underlying uniformity which comes to the surface where one least expects to find it. It would be difficult, for example, to find three manifestations of human emotion more different in meaning, in venue, in their participants, than the Christian ceremony of the Holy Fire, which takes place in the Church of the Holy Sepulchre on the Saturday before the Orthodox Easter, in the Muslim festival of *Nebi Musa* at the supposed tomb of Moses near Jericho, and in the Jewish pilgrimage to Meiron in Galilee about to be described. Yet the dense crowds of devotees who dance and clap their hands on each of these occasions, who work themselves up by rhythmical movement into a state of exaltation and excitement in exactly the same way, shouting much the same sort of topical verses to precisely the same chants, induce the reflexion about Palestine in those who have seen the three festivals: "*plus ça change plus c'est la même chose*," or, more briefly, more ecclesiastically, "*semper eadem.*"

Meiron is situated in one of the most beautiful parts of Galilee, on the lower slopes of Jebel Jermak, the highest mountain of Palestine, and on the road recently constructed by the Palestine Government to connect the town of Safad with the Mediterranean at Acre. Now Safad is famous in Jewry for the development of the form of Jewish mysticism known as "Kabbala," which was brought to this north Galilean town by Jews expelled from Spain and Portugal at the end of the 15th century. Meiron, on the other hand, owes its sanctity and its position as the most highly revered Jewish place of pilgrimage in the country to the tombs of many of the celebrated Rabbis who laboured in Upper Galilee in the first centuries of the Christian era on the compilation of the "Mishna" and the the Palestinian Talmud. Meiron is not a town or a village; it is a collection of these early rabbinical tombs (some of them in caves and rock-chambers) which, with the ruins of a synagogue of the second or third century A.D., are grouped around two large buildings, the one a modern Talmudic seminary and Aged Home for Ashkenazi Jews, the other the enclosed synagogue which contains the tombs of two of the most distinguished of the Rabbis, Simon ben-Yechai and his son Eleazar, and is the central attraction of pilgrimage.

The synagogue proper is situated within the inner of the two courtyards which compose the sanctuary, the whole constituting a combination of *khan*, that is, an establishment where men and beasts may find shelter and accommodation, and of place of worship. The bodies of the two Rabbis are understood to lie in an underground cave or crypt, while on the floor of the synagogue are their cenotaphs, each enclosed by railings. The tomb of a third worthy, upon whose identity there is some doubt, stands in the outer court. Corresponding to these, on the flat roof of the buildings, are three pedestals of stone, or, more correctly, low pillars supporting stone basins, in which the "great burnings" the culminating feature of the annual pilgrimage to the tombs of the Rabbis are made.

The pilgrimage, which attracts Jews from all over the world, takes place on the festival called *Lag Be'omer*, namely, the 33rd of the 50 days which elapse between the Jewish Feasts of Passover and Pentecost (the 50th day). On this 33rd day the restrictive laws which are in force during the remainder of the period are removed. The prohibition against such things as getting married and the cutting of hair are withdrawn; and the day becomes one of relaxation and rejoicing, a sort of *mi-Carême*. According to the Kabbalists it is on *Lag Be'omer* that Simeon bar-Yechi died, and this day has thus become the date of the festival at the shrine, of which his tomb is the nucleus.

The ceremonies owe much of their weird, their almost unearthly effect to the circumstance that they take place at night. At this time of the year there is reasonable certainty of a clear starry sky, against which the flares of the blazing pyres illuminate the stiff, awkward gyrations of aged men in long robes, dancing around the columns of fire to the accompaniment of hoarse chanting, stressed by the clapping of hands on the part of the onlookers. In the basins upon the three columns or pyres, which correspond to the three tombs below, the pilgrims have placed their offerings for the burnt sacrifice. The offerings consist mainly of garments such as handkerchiefs, scarves and shawls (the latter often of considerable value), which, when they have been neatly folded and stacked, are soaked with inflammable oil. There is then auctioned by the custodians of the shrine the right to apply the first match to the pyres, and the successful competitors set alight their pyramids of clothes to the accompaniment of shouts of rejoicing from the spectators. Wizened and decrepit old men, whom one would have supposed far too infirm for such exercises, now proceed to dance round the pyres, and one is amazed to see how long they are able to keep up the exertion, one marvels at the agility which they are able to summon up, even though it be religious exaltation that lends strength to their limbs. The excited crowd singing hoarsely around one, filling every square inch of courtyards below and of flat roofs above, the three pyres sending up their flickering columns of fire and smoke, lighting up with intermittent flashes the wrinkled faces of the bent and ringleted old men who are dancing around them, at the back the outline of the mountain, dimly discernible against the midnight sky, combined to form a picture of strange unreality, in which the picturesque, the grotesque, and the pathetic have their share. I was not surprised to overhear some American Jews beside me remark, as they watched the capering and chanting and clapping of their Oriental co-religionists, that they could not make out what it was all about.

One of the most interesting features of the festival of Meiron is the number of its points of resemblance with that of the Holy Fire of Jerusalem. Apart from the element of fire common to both we find, first of all, the crowds of men and women of all ages and of little children, assembling at Meiron a day or two in advance, cooking, eating and sleeping in every available nook and corner of the synagogue and the rooms and passages of the *khan* which surrounds it, exactly as the pilgrims of the Eastern Churches camp on the floor and in the galleries of the Holy Sepulchre, packed as densely as sardines, in anticipation of the ceremony of the Holy Fire. It was hardly possible to penetrate inside the synagogue of Meiron or to make one's way on to the roof without treading on aged men and women and mothers suckling their young, so thick was the mass of people who had managed to squeeze themselves into the building. And as the Holy Sepulchre attracts in the Holy Week of the Eastern Churches pilgrims of the most varied races, Russians and other Slavs and Greeks from Europe, Arabs and Armenians and Jacobites from Asia, Copts and Abyssinians from Africa, so at Meiron, in addition to the Sephardim and Ashkenazim of Palestine, were gathered wizened little Yamanites from the coast of Arabia, Jews from Bokhara and Sam-

Digitized by Google

arkand dressed with infinite picturesqueness in the rich colours and stuffs of Central Asia, Aramaic-speaking Jews from Kurdish villages where they claim to have been settled by Sargon when he brought the ten tribes, their ancestors, from captured Samaria, Jewish pilgrims from Persia, Beni Israel from India. And what a variety of headgear one saw as one watched from the roof the heads of the throng below bobbing up and down or describing circles in the dance! There were Homburg hats and boaters, there were caps both Western and Russian, there were the fezzes of the Yamanites, there were the black turbans of the Sephardim, there were the white and black astrachan bonnets of the Central Asians, there were (a novelty these) the new Persian képis of field-blue imposed by Riza Shah on his subjects as a contribution to that "bowlerization" (if I may so term it) of the East that is now being enforced on their respective subjects by the *Duci* of Hither Asia.

The similarity of the chanting, the identity of the chants, of the devotees at the two functions have already been mentioned. An even more remarkable parallel is afforded by the auctioning of the right to light the pyre; for at the Holy Fire the highly prized privilege to be the first lay Copt and Jacobite to receive the fire from the Patriarch, as he emerges from the "ediculе" of the Holy Sepulchre, is put up to auction among the pilgrims of these communities.

Meanwhile, inside the synagogue below, Jews in small groups of twos and threes were going up to the cenotaphs of the two Rabbis to pray and weep with their heads against the palls as they do against the Wailing Wall in Jerusalem. I was taken into an inner chamber lined with low divans, on which sat a score or so of aged Sephardic Rabbis, very striking in their white robes and black silk turbans. These proceeded to offer up prayers for the health of His Majesty the King and, as they stood in a circle for this purpose, they made a picture which Rembrandt would have rejoiced to paint.

As the hour of dawn draws near the ecstasy of the pilgrims begins gradually to abate, there takes place a little ceremony which, insignificant in itself, yet serves to link the proceedings of to-day with those of a remote and even sinister past. The children present are led to the pyres, a little of their hair is snipped off; and the locks are solemnly placed on the embers to be consumed by the now dying flames. Anthropologists trace a connexion between the burnings of Meiron and the "great burnings" for dead Jewish Kings described in the Old Testament, and between the "great burnings," again, and the terrible offerings of the first-born children to Moloch the King of the Valley of Hinnom. The desire at present uppermost in the minds of the authorities of Meiron is for telephonic connexion with Safad, a desire that bridges the centuries in a manner with which all who know the Holy Land are familiar. Moloch and a trunk-line telephone such juxtapositions are of everyday occurrence in what Herzl denominated the "Old-New Land" of Palestine.

PROFESSOR D. M. KAY.

We much regret to record the death of Professor D. M. Kay, Regius Professor of Hebrew and Oriental Languages in the University of St. Andrews. Professor Kay, who died on April 5, had held the Chair since 1902. Before that date he knew the Near East well, both in the classical and in the modern sense. He was a learned student of the religions having their sources in Western Asia—Judaism, Christianity, and Islam—and in his generous tolerance and broadness of outlook he was of a type that is too seldom seen in our time. Far more than most living theologians, he really understood the essence of Judaism and Islam, and his inspiring teaching on these and on other allied subjects will be missed.

The trial of M. Matchek, leader of the Croat Peasant Party, who has been in prison for some time, is to be held on April 24 in the Special Court for the Defence of the State in Belgrade. M. Derlyevitch, another Croat Deputy and leading counsel for M. Matchek, was arrested last week. Members of the Serb Democrat Party and of the Serb Agrarian Party have offered to act as counsel for M. Matchek.

CENTRAL ASIA UNDER THE SOVIETS.

On March 26, at Chatham House, St. James's Square, S.W.1, Abdul Qadir Khan lectured upon "Central Asia under the Soviets." Lord Allenby was in the Chair. The lecturer spoke of a journey he had taken from the Khyber Pass to Tashkent, Samarkand, Bokhara and back to Chitral *via* the Pamirs. He emphasised the revolution which air transport in the hands of the energetic Russians had wrought in Central Asia, how they have harnessed the discoveries of science—radio, the cinema-train, and so on—to aid their Communistic teachings; and how this whole area was being forced by Moscow to grow cotton exclusively—the Central Asians being obliged to depend on Siberia for their food supply. He described how famous mosques had been turned into club-houses, wherein the doctrines of Marx and Lenin were now being taught.

Colonel Etherton and Colonel Bailey also spoke, Colonel Bailey stating his opinion that the policy of exclusive cotton growing—though Ferghana was a very rich centre—was bound to fail.

NEW LEBANESE CABINET.

The new Cabinet which has been formed in the Lebanon, following the resignation of that of M. Emile Eddeh, is as follows:—

Adib Pasha	... ...	Presidency, Finance, Agriculture.
M. Tueni	... ...	Education.
M. Ahdab	... ...	Public Works.
M. Nammour	... ...	Interior and Hygiene.
M. Husaini	... ...	Justice.

The new Prime Minister is a Maronite who formed the first Ministry of the Lebanese Republic and was formerly an official in the Egyptian Ministry of Finance. M. Tueni (Orthodox) is Editor of *Al Ahrar*, the leading Nationalist newspaper. M. Ahdab (Sunni), M. Nammour (Maronite), and H. Husaini (Shiah) were all members of the former Cabinet.

THE IMPERIAL CAMEL CORPS MEMORIAL.

A wreath was placed on the Memorial in Victoria Gardens, Embankment, on March 26, to the officers, N.C.O.s, and men of the Imperial Camel Corps who fell during the Great War in Sinai, Palestine, and Arabia. The wreath, which was provided by subscriptions from former Australian members of the Corps and brought from Australia in ice, was placed by Lieutenant-Colonel Langley, who commanded one of the Australian battalions. The High Commissioner of Australia, Sir Granville Ryrie, was present as well as Mr. Stanley Bruce, former Prime Minister of Australia, Sir Newton Moore, M.P., Lieutenant-Colonel R. V. Buxton, and Lord Winterton, M.P., of whom the last two were officers in the Corps. The Imperial Camel Corps comprised four battalions—three composed of New Zealanders and Australians (mostly recruited from the New Zealand Rifles and Australian Light Horse); and one composed of British *personnel* (mostly recruited from the Yeomanry)—and had attached to it an Indian Mountain Battery. The brigade was commanded by the late Brigadier-General Leslie Smith, V.C.

Sir William Willcocks, who was asked by the authorities of the Calcutta University to lecture on his irrigation scheme for Bengal, which was the outcome of his visit to India a couple of years ago, and who left Egypt for Calcutta at the end of January, is expected to return to Cairo about the middle of this month.

THE HEROINES OF ANCIENT PERSIA

By Bapsy Pavry

Miss Pavry has retold the stories of the heroines of the Great Persian epic, the Shāhnāma of Firdausi. The importance of the parts played by women in the history of Persia gives a peculiar fascination to-day to the quaint yet strangely modern characters therein portrayed.

THE WEEK AT HOME

London, Tuesday Morning.

The Conservatives' Position.

More attention might have been given to the speech made by Mr. Baldwin last week to the Primrose League had there not intervened, between the discovery by Lord Beaverbrook of the Referendum and this speech, the working agreement between Liberals and Labour.

Still, it is interesting to notice that Mr. Baldwin still entertains a belief that one may go to the country profoundly convinced in the virtue of food-taxes and yet escape primary responsibility for such taxes. He points out, of course, that, only if certain conditions were fulfilled, would a referendum be taken on the imposition of food taxes, but it can scarcely be denied that the Conservatives believe that there is an excellent chance of the necessary conditions being fulfilled and that then it would be the duty of every patriotic Briton to vote for food taxes.

This being so, it is near enough to political truth for opponents of the Conservatives to charge them with favouring food taxes, and personally, I do not see how Mr. Baldwin can escape the dilemma, more especially as the most enthusiastic adherents of the "new idea"—the Beaverbrook section—make no bones at all about where they stand.

It is curious that Mr. Baldwin, who was in front of his party in the disastrous election of 1923, should now be reproached for his caution! Apart from that, there is quite definitely a growth of hostility towards his leadership in the House. Again it is his decent, forbearing instincts which are questioned: in other words, the fact that he is a poorish hand at the party game. But how can this best Whig in the country take other than a national view of things?

Recovery of the Railways.

Those who prophesied some years ago that motor transport by road would inevitably beat the railways are now proved to be wrong. For, very slowly, the railways are recovering. One cannot judge of their popularity so much by their receipts, which are subject to the prices charged, as by the numbers travelling on them. The Minister of Transport has just issued a survey of the working of the railways in 1929. It is there shown that forty million more people travelled by rail in 1929 than in 1928, and sixty million more than in 1927. Yet passenger journeys produced less revenue than in 1928. The figures are interesting.

The income from passengers was £69,000,000—over £2,000,000 down on 1928, and nearly £3,300,000 down on 1927. Goods train receipts amounted to £106,600,000 —£3,000,000 more than in 1928, but nearly £4,000,000 less than in 1927.

On the whole, the prospect for the railways is not bad. They now have the power to run road transport as well, so that their passenger traffic must be increased. But the fixing of prices is a matter of pure expediency, and it may be some years before the railways have attained real equilibrium.

Cheap Talk on Religion.

The discovery some years ago by the popular Press of this country that the subject of religion was a paying one has not been wholly happy. For though many real experts in religion have thus found wider pulpits than they might otherwise have graced, room has been found for the cheap and superficial.

Last week, for instance, Mr. C. E. M. Joad, a young man who has what is called a "good Press," issued his decree that within a hundred years science would have killed all organised forms of Christianity. Whatever can be charged against Mr. Joad, lack of confidence is not one of his defects. He, however, knows as well as anyone the limitations of science, and he would, apparently, have our dissatisfied generation seek an outlet for their religious instincts in an amorphous mysticism.

Such talk is excellent for the elect, but it is dangerous for the uninformed multitudes, who may be unaware that the mystic commonly has first a profound knowledge of organised religion. There is a real danger in these nebulous longings. No real religion ever dies.

The Boat Race.

Excitement is steadily growing on the Boat Race, and opinions on next Saturday's great event are dictated mainly by hope or fear. Cambridge ought on form to win, and I personally think they may easily do so, but Oxford have shown sufficient form to show that they may be respected. Yet one has, I think, to be an Oxford man to believe that, even if they win the toss, they will win—for the improvement during the last week of the Light Blues has been of that disconcerting certainty which makes the Oxonian mutter between his teeth: "*credo quia impossibile.*"

As far as one can judge, public interest in this event is as keen as ever. Colours are being worn everywhere by those who never will see Oxford or Cambridge, whose only idea of the Universities, possibly, is gained from the films. The other day I overheard a very typical and human remark. One women was asking another of her little son, was 'e Oxford or Cambridge? "Oh," the mother replied, "'E ain't nothing yet. 'E ain't old enough." A few more years would roll, and the young urchin would, as a matter of perfect right, be hailed (Lord knows by what force) into either the Light Blue or the Dark Blue side.

It's a curious thing to confess, but when a small boy I "was Oxford." Later, of course, I saw the light. Yet I still have a sneaking regard for those queer enthusiasts who can staunchly support a reasonless cause.

Spring in the Air.

You could tell, without going to the country, that spring is on the way. Men walk in the street with a jaunty, care-free air; a blithe heartiness pervades the town; the balmy air puts to flight the soot-laden atmosphere. Maidens trip the pavements as if in eager enchantment, and a buoyancy of speech is everywhere affected.

But Spring is not really here yet. The almond blossom is out, true, but there are many trees which show little burgeoning. Still, the may and the blackthorn are beginning to shoot; in fact, all seems burstingly ready for this quickening time of April. But we are a good fortnight behind time this year.

EXHIBITION OF PERSIAN ART.

It was a very fortunate thought, on the part of the authorities of the Royal Academy, to have, after the magnificent displays of Flemish, Dutch, and Italian art, an exhibition of the Art of Persia. This exhibition, which is to be held in Burlington House next January and February, is being arranged in conjunction with the Second International Congress on Persian Art and Archæology which is being held simultaneously at the School of Oriental Studies under the auspices of the University of London. This Congress, which is to be attended by scholars of Europe, America, Asia, and Africa—drawn from at least fifteen countries—is a direct result of a Congress which was held in New York and Philadelphia in November, 1926, under the auspices of the American College Art Association and of several American Museums.

This 1926 Congress was attended by some fifty-five delegates from six different countries, and such enthusiasm was shown at it that the President, Professor John Shapley, was instructed by the delegates to make provision for a Second Congress.

Both the Congress and the Exhibition have from the outset been thought of as parts of a larger programme for the development of a knowledge and appreciation of Persian and allied Near Eastern art. And we may say here that it is a matter of fairly general agreement now that the importance of the Perso-Mesopotamian region in connexion with artistic origins and influences has hitherto been much under-estimated. Though the precise degree of influence which Ancient Persia exercised over Babylonia and Assyria, India and China, and even Byzantium, is a subject of considerable controversy, the important relation is not doubted.

Naturally, many Societies have helped in the organisation of this Congress and Exhibition. It is being held under the auspices of American, German, and French Societies, as well as of a strong committee in London, and, though most of the active direction must remain in the hands of the London Committee, the fact that the whole affair is the result of international collaboration should not be forgotten. Some of the foreign groups have already given funds, others have made considerable commitments, have done valuable preliminary work, and are ready to go to further effort and expense, to deprive themselves of their treasures for a period, and, in the Museums, to disarrange their installations. None of the participating nations, except Persia, can hope for much immediate benefit from the Exhibition, but they are co-operating from the sense of a common cause.

Scope of the Exhibition.

The purpose of the Exhibition is "to exhibit the art of Persia in its origins, development and consequences," with special emphasis on its contributions to European art and architecture. A sum of £10,000 is being secured as financial guarantee. The whole Exhibition, it is estimated, will include objects worth over £3,000,000. Most of the insurances are being generously given.

The scope of the Exhibition is vast. Certainly nothing of the kind has ever before been attempted. The entire history of Persian art from prehistoric times to the present will be covered by characteristic examples, gathered from the most important public and private collections in many parts of the world. Not only will there be the most famous masterpieces exhibited, but also a large number of exhibits which have hitherto remained almost unknown. These treasures will come both from private collections in Europe and Africa and from the great Mosques of Persia. The Shah of Persia, Riza Pahlavi, has authorised the sending to this Exhibition of any objects that may be selected either from the Imperial Collection and the Imperial Library or from the famous Shrine of Imam Riza at Meshed and the Shrines of Ardabil and Kum. Many objects discovered by recent expeditions, some of entirely new types, will be shown for the first time.

The number of exhibits is imposing. There will be architectural sections and ornaments, including some notable examples of figural stucco relief from the fifth to the twelfth century; more than fifteen hundred drawings, miniatures and illuminations, approximately three hundred examples of gold, silver and bronze work; more than a thousand brocades and velvets dating from the fifth to the eighteenth century; a thousand or more examples of painted and enamelled pottery; more than a hundred carpets, including twenty of the finest known silver, gold and silk carpets, generally called Polonaise. The beautiful mediaeval glass, book covers, calligraphy, arms and armour will be shown by the finest examples obtainable.

The exhibits will be arranged in a strictly systematic way so that the development of Persian Art will be clearly shown. The continuity of Persian designs and the use of the same pattern in various materials will form a particularly interesting exhibit. Persian skill and taste in modifying a pattern in accordance with the material is one of the primary sources of Persian excellence in art, and comparative examples showing this phase have never before been assembled. It is hoped to prepare architectural models of several famous monuments in full colour, and it is possible that a few of the great relief sculptures of Achæmenian and Sasanian periods will be shown by casts specially taken for the purpose.

A large group of exhibits will be assembled to show the relation of Persian art to derivative arts in other countries. Certain types of Chinese porcelain, Mughal miniatures, textiles and carpets, Mesopotamia faience, Coptic textiles, Byzantine ceramics and objects of many other classes will be arranged in conjunction with their Persian prototypes.

In addition to the usual period maps, maps are being prepared showing the cross currents of influence focussing on Persia and the lines on which Persian influences, in turn, expanded throughout the civilised world. Historical tables and charts also are being prepared.

A Supplementary part of the Exhibition will consist of a section of no fewer than ten thousand photographs, some in colour, including not only architectural and archæological views in Persia and allied countries, but also additional objects in each class in museums and private collections all over the world. There will be a sales desk for photographs and books. Lectures will be given during the course of the Exhibition.

Values of the Exhibition.

It is needless to say that an exhibition on such a scale and of such character will have important consequences. Entirely beyond the obvious value of assembling any varied and comprehensive group of superlative works of art, this Exhibition will render other important services. It will show more clearly than ever before the character and evolution of the most vital forms of Near Eastern art. It will demonstrate more conclusively than by any arguments that the æsthetic culture of Europe from Hellenistic times to the present has been continuously enriched and renewed from Persian sources and that many of the most important phases of our arts are Near Eastern in origin. There will be exhibited to the public what has long been revealed to the few, that mastery of abstract design belongs to the Orient, and that the Orient, and particularly Persia, has much to offer the modern student

CZECH SELF-TAUGHT

By P. SELVER, B.A. Hons. (Lond.).

Digitized by Google

and designer in the way of instruction and inspiration.

Despite the fact that infinitely precious treasures of Persian art exist in various countries, they are so scattered and detached, even in the public collections, that they offer a just and comprehensive picture of Persian art only to the thoroughly prepared expert. These dispersed objects bear almost the same relation to a complete and perfectly integrated collection of Persian art that a box of colours bears to a finished picture. New connexions and unsuspected values will be revealed even to the expert when a complete range of typical examples is properly assembled.

Although of secondary importance, an exhibition of this kind should also yield certain economic results. To exhibit to designers and students innumerable masterpieces of decorative art, to show them models of supreme craftsmanship in many media and many styles, to assemble so many of the originals on which our modern decorative art is based is to bring a freshening force into contemporary design, sensibly to improve its quality and to benefit economically every industry for which sound design and attractive appearance are relevant.

The influence of such an exhibition on contemporary art should be even more important and might even contribute towards inaugurating a new epoch. It is historically true that all the great periods in art have been initiated by stimulating contact with the arts of other peoples. Dramatic contrasts in styles, new methods and materials and ideas impinging on the old, release, in turn, new creative forces. The arts of European painting and sculpture, noble as they are, are possibly too familiar to perform this renovating function. The arts of Persia, now known in essence only to a few, have both the requisite novelty and basic congeniality to European taste to give contemporary art just the reviving impulse that it needs. Its life-giving element of keenness and surprise and its fundamental soundness together contain the potency and the promise of a new Renaissance in European art.

For the general public Persian art provides a sound and accessible introduction to art in general. The thoughtful observer will find his horizon expanded, his observation sharpened, his imagination stimulated and freed from conventional formulæ and his understanding of pure form and colour, in which Persian art is undisputably supreme, clarified and enhanced.

The deliberations of the Congress, the material of the Exhibition, and all the results of recent investigations in the History of Persian Art will be summarised in a monumental three volume "Survey" to be published by the Oxford University Press, on the conclusion of the Exhibition. This work will contain approximately eight hundred pages of text and eight hundred illustrations, of which more than a hundred will be in colour. The work is being prepared by a group of more than thirty specialists in a dozen countries and, for scope, authority, and method promises to be one of the most important recent contributions to the history of art.

The preliminary work of the Exhibition and the Congress is under the direction of a distinguished English Committee, working in conjunction with the American, German, and French Committees.

The Officers of the Congress and Exhibition are as follows at present announced :—

Sponsor: His Imperial Majesty Riza Khan Pahlavi, Shah of Persia.

Hon. President: H.E. Hassan Taqizadeh, Persian Minister to the Court of St. James.

Hon. Vice-President: The Lord Lamington, G.C.M.G., G.C.I.E.

Executive Committee: Sir Thomas Arnold, Leigh Ashton, Esq., A. Chester Beatty, Esq., *Treasurer*, W. Buckley, Esq., Laurence Binyon, Esq., Sir Reginald Blomfield, George Eumorfopoulos, Esq., Roger Fry, Esq., R. L. Hobson, Esq., John Hugh-Smith, Esq., W. R. M. Lamb, Esq., M.V.O., Sir William Llewellyn, K.C.V.O., P.R.A., *Chairman*, Sir Percy Loraine, Bt., K.C.M.G., Eric MacClagan, Esq., Arthur U. Pope, Esq., *Secretary*, Oscar Raphael, Esq., Sir Denison Ross, Sir Philip Sassoon, Prof. A. J. B. Wace, Sir Arnold T. Wilson, *Vice-Chairman*, and Sir Robert Witt.

We hope to give in a subsequent issue further details of this Exhibition.

THE PATRIARCH OF SERBIA.

His Beatitude Mgr. Dimitriye Pavlovitch, Patriarch of Serbia, died in Belgrade on April 6 after a short illness. His Beatitude was the First Patriarch of the Yugoslav Kingdom, and was, according to *The Times*, a real son of the Serbian people. He was born in the small town of Pozharevatz, the son of a poor workman, and had to work as a domestic servant to gain his living while he was studying in the secondary school in Belgrade. His great endurance and application enabled him, however, to pass through the secondary school and not only to study theology but to be a student of philosophy at the University of Belgrade and later a student of agriculture in Paris. He was ordained priest in 1870 and consecrated Bishop of Nish in 1884. He became Archbishop of Belgrade and Primate of Serbia in 1905. After the War, when the head of the Serb Orthodox Church was raised to the dignity of Patriach, Mgr. Dimitriye, who retained the Archbishopric of Belgrade, was elected Patriarch and also Archbishop of Karlovce and Petch, the see of the ancient Serb Patriarchs of pre-Turkish times. After the late M. Pashitch, the Patriarch was the most popular person in Serbia. He had a resolute character and a firm will and generally obtained what he wanted. For instance, quite lately, the question of the reorganisation and statutes of the Pravoslav Church under the Dictatorship, which had been a matter of contention for several months, was settled in conformity with his ideas in November, 1929. It is also interesting that under Patriarch Dimitriye the changing of the name of the State from the Triune Monarchy of the Serbs, Croats, and Slovenes to the Kingdom of Yugoslavia did not affect the Orthodox Church of Serbia, which retains its name of "Serb-Pravoslav Church." The late Patriarch was remarkably modest in his way of living, and never lost contact with the people from whom he rose to his high dignity.

THE CENTRAL ASIAN SOCIETY.

Professor S. H. Langdon will lecture to the Central Asian Society, on April 9, at 5 p.m., on "The Excavations at Kish, 1928-30." The lecture, which will be illustrated, is to be given at the Royal Society's Hall, Burlington House, W.1.

On April 30, at 5 p.m., Professor Paul Pelliot will lecture (in English) to the Society on "Christianity in Central Asia in the Middle Ages." This lecture will be given in the Royal Society of Arts Hall, John Street, Adelphi, W.C.

THE PALESTINE ARAB DELEGATION.

Miss Margaret Farquharson, President of the National League, held receptions on April 2 and 3 to meet the members of the Palestine Arab Delegation. The chief guests were Musa Kazim Pasha, the Grand Mufti, the Mayor of Jerusalem, Jamaal Effendi Husaini, Aouni Beg Abdul Hadi, and Mr. Alfred Roch. Among those who accepted invitations were:—The Estonian Minister and Mme. Kallas, the Earl and Countess of Denbigh, Earl Howe, Viscount Templetown, Lord Riddell, Lord and Lady Strathspey, Lord Aberconway, Colonel the Master of Sempill, Lord Ernest Hamilton, Lord Danesfort, Lord Armstrong, Colonel Cuthbert James, Colonel Howard-Bury, Mr. and Mrs. Wardlaw-Milne, Captain Charles Waterhouse, Lady Sydenham, Lady Newnes, Captain E. N. Bennett, Colonel Geoffrey Glyn, Sir Stewart Sandeman, the Dowager Lady Henley, the Dowager Lady Boyle, Mr. and Mrs. F. J. Nettlefold, Mrs. Arthur Wegster, Lady Dance, Major-General Sir Alfred Knox, Sir Michael O'Dwyer, the Hon. Violet and the Hon. Alice Douglas-Pennant, Sir William Wayland, Brigadier-General Sir George Cockerill, Lieutenant-General Sir Sydney and Lady Lawford, Brigadier-General Burt, the Hon. Lady Bailey, Mr. W. H. Wilson FitzGerald, Mr. and Mrs. and Miss Stoker, Adbul Majid, Colonel Norman Thwaites, Major Sir Logie and Lady Elphinstone, Mrs. Walter Reid, Miss Marian Bower, Mme. Clara Novello Davies, Lady Austin, Sirdar Ikbal Ali Shah and Mrs. Ali Shah, Major and Mrs. Court Treatt and Mrs. Errol Hindes, Major Polson Newman, Mr. Owen Tweedy, Major Mitford Brice, Miss Violette Cordery, Mr. Arthur Leslie, Mr. and Mrs. Hagberg Wright, Sir Bartle Frere, and Colonel Maurice Alexander.

Speeches of welcome were made by Miss Farquharson, Mr. W. H. Stoker, and Colonel Haward Bury; and Musa Kazim Pasha, the Grand Mufti, and Ragheb Bey Nashashibi replied.

Liquid fire is being used to fight the locust pest in Trans-Jordan, where the invasion is said to be the worst on record.

This year in Persia the festival of the New Year, *Now Ruz*, was officially restricted to four days—March 22, 23, 24, and 25. The usual practice is to make the holiday one of about thirteen days.

Mirza Mohammed Ali Khan Faroughi, Zoka ul Mulk, a former Persian Prime Minister and recently Ambassador to Turkey, was on March 31 appointed Minister of National Economy. This Ministry, as *The Times* points out, has only lately been established for the development of national resources—agriculture, irrigation, stock-raising and the export of local manufactures. The present Persian Ministry of Public Works now becomes the Ministry of Communications, with the duty of controlling railways, roads, navigation, and ports.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Turkey's Financial Crisis.

While no statement has so far been made following the return from Ankara of the representatives of the Turkish bondholders, there is reason to suppose that at long last the Ankara authorities have come round to the view that foreign assistance is essential if the country is to overcome the existing economic crisis. It is significant in this connexion that the Turkish Press has been publishing articles emphasising the need for foreign financial aid. The good will of the Powers towards Turkey is not in question; they have throughout taken the logical attitude that the well being of every country is in the interests of all, and they are prepared to do everything possible to assist Turkey in the difficult task of economic reconstruction. The Ankara authorities, however, have made the task of giving useful aid very difficult, and it is one thing for them to envisage the desirability of a large foreign loan at this time and another to obtain it. To put the matter quite bluntly, the foreign financial markets are not satisfied that Turkey commands the necessary expert knowledge for the supervision of her financial policy at a difficult time, and in the absence of that expert knowledge there is the fear that a short cut out of difficulties will always be sought in the repudiation of foreign debts. Consequently it would be an impossibility without the most absolute safeguards for Turkey to raise a loan on any European market. If a loan is to be raised it can be only on the basis of a complete financial reorganisation, and that presupposes the appointment of a foreign financial adviser, a step which, distasteful as it may be to Ankara, is undoubtedly an essential preliminary to a further approach to the foreign money market.

Developments in Greece.

At the meeting of the Hellenic and General Trust, Ltd., Mr. F. A. Szarvasy was able to give a most encouraging survey of the position in Greece, which, he pointed out, is successfully emerging from its difficulties It is a fact too little appreciated that apart from Turkey the financial record of the Near East is generally good. Greece's financial history constitutes a particularly notable chapter in Balkan finance, for despite the fact that almost continuously from 1909 to 1922 she was engaged in wars or was troubled by internal difficulties, she has met her obligations ever since 1898. For that reason it has never been difficult for Greece to raise loans on the foreign markets. At the present time Greece's debt service requires about £10,000,000 or slightly over one-third of the State's expenditure, but one-third of the amount is for debt redemption, and Mr. Szarvasy pointed out that it is estimated that within fifteen years about 50 per cent. of the national debt will have been paid off. A large part of this amount will, of course, remain in the country. Greece still has a substantial adverse balance of trade, but it is significant of recent developments that while imports last year increased by roughly seven per cent. exports increased by about eleven per cent. Like every other country, Greece has important invisible imports of cash, which counterbalance the adverse trade balance, notably the remittances from abroad which are estimated at about £7,750,000, the receipts from the mercantile marine, and the tourist traffic. Greece's industrial position, Mr. Szarvasy remarked, called for a severe policy of rationalisation, and this is being carried out under the leadership of the National Bank of Greece in co-operation with the Hellenic and General Trust and other concerns. In this connexion Mr. Szarvasy pointed out that the company's policy is only to lend on well-secured mortgages to those industries which have already submitted to the pruning knife. Mr. Szarvsy looks to the development of the water power resources of Greece to exert a favourable influence on Greek industry in the future.

Constantinople Telephone Company.

A further indication of the expansion of American interests abroad is provided by the news that a controlling interest in the stock of the Constantinople Telephone Company has been acquired by the International Telephone and Telegraph Corporation, whose operations, prior to the present development, covered no less than nine countries. This transaction is the latest stage in the keen competition which has been in evidence for some years between British and American communication companies. This is only one of the fields in which American finance is endeavouring to obtain a strong foothold, and as a change in the control of a British company is bound to entail a loss of trade to our manufacturers it is difficult to appreciate the point of view of those who have criticised the very necessary steps that have been taken by certain concerns to ensure that an adequate proportion of the share capital must remain in British hands.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, April 8.

Business in the Stock Markets has shown a considerable falling off, but prices on the whole were well maintained, confidence being helped by the firmness of Wall Street. There was a reactionary tendency in the gilt-edged market early in the week as the prospects of a further reduction in Bank rate faded, which was accentuated by the revelation of a deficit of £15 millions in the national accounts for the past financial year. Towards the end of the week, however, there was some revival of investment demand, and prices recovered. Home rails have been comparatively idle, and the foreign bond market was less active. Internationals moved up in sympathy with the activity in Wall Street, and there was some quiet buying of domestic industrials. Oil shares were considerably brighter and there was a better tendency in tea and rubber shares. The account which has just opened runs for three weeks and, as it covers both the Budget and the Easter holiday, cannot be expected to reveal any startling developments.

Dominion Stocks.

The Stock Exchange section dealing in Dominion stocks is at present fairly quiet, but with any tendency for an increase in general business this section is almost certain to participate in any revival, in view of the high levels to which British Government stocks have been raised. It should be remembered that nearly all Dominion Government stocks are trustee securities and therefore there is always a fair demand for them, subject to exceptions in particular cases. Two groups which at present are at a particularly low level are those of Australia and of India. In the case of Australia this is quite unjustified, and a good recovery is expected. The Commonwealth guarantee is behind all the loans, whether Federal or State, and at the back of these loans are valuable assets, such as railways, harbours, and public buildings. The present Australian Commonwealth Government has, moreover, cut down the sums to be borrowed annually from overseas. Since Australia started borrowing about 70 years ago she has never once defaulted. Thus stock such as the 5 per cent. Registered 1945-75, yielding about £5 8s., and New South Wales 5¼ per cent. Loan, 1947-57, yielding £5 15s. per cent., are quite attractive. As for India, her economic position is as sound as ever and is being dealt with, both by Government and the commercial communities, with increasing knowledge. Much publicity is given to political agitation, but the great mass of moderate opinion and continued commercial growth, although not good matter for headlines, is a solid factor in the Indian situation. This is again being realised by investors, and Indian stock is approaching a stable price with the 4½ per cent. Loan 1958-68, for example, yielding a little less, and the 4½ per cent. Loan 1950-55, yielding a little more, than £5 9s. per cent. For this return they are both worth buying.

Morris Motors.

Yet another very satisfactory motor car company's report has recently made its appearance—that of Morris Motors (1926), Ltd. Net profit from trading and interest for the year 1929 is given at £1,285,181. This figure is arrived at after the usual allowances, including taxation, and also £25,123 for depreciation of Government securities, although since the date of the balance-sheet these have appreciated. The preference shareholders received their 7½ per cent. dividend as usual, but this year for the first time the ordinary shares receive a dividend at the rate of 10 per cent. tax free. The ordinary shares are privately held, for the most part by Sir Wm. Morris himself, and he has declared his intention of devoting the whole of his dividend to charity. The ordinary dividend absorbs £200,000. The balance-sheet shows a very strong position. The total capital amounts to £5 million. The reserve account stands at £2 million and investments account for £3,133,897 out of the total assets of £8,855,854. The only shares available to the public are the 7½ per cent. cumulative preference shares now obtainable to yield about £7 per cent. Morris Motors are among the "big three" of the motor industry—the other two companies being Austins and Singers—who make seventy-five per cent. of the private cars manufactured in this country. Morris Motors have therefore proved themselves to be very well able to face the competition of other British motor car makers.

Small Capitalists.

A leading London daily paper has published some very interesting figures in an attempt to prove that the great industrial and commercial companies are in fact owned by a very large range of people and not by a small number of shareholders. Thus, for example, the Prudential Assurance Company has a nominal capital of £1,200,000, but this is owned by 5,500 shareholders, their average holding being £218. Among railways the £412 million odd of capital of the L.M.S. is owned by 298,182 shareholders, that is an average of £1,382 per shareholder. Selfridges, with a capital of over £2½ million, is owned by 17,000 shareholders, giving £151 per shareholder. Imperial Chemicals, capital of over £76 million, belongs to 165,000 shareholders, or an average of £463 per head. These figures do indicate the extent to which capital is now owned by a large range of people. The average figure should not, however, be allowed to mislead. Thus in the case of the L.M.S., 82,065 shareholders own over £1,000 of capital each, whereas another 65,902 shareholders have all only £100 or less. Moreover, shareholders of one company are often holders in another, and this is especially true of the large members, so that the total number of shareholders in the Kingdom is not as big as it might appear from these figures. On the other hand, they are no doubt more numerous than many critics of capitalism may believe.

BANQUE FRANCO-BELGE ET BALKANIQUE

Joint Stock Company

Capital - Leva 150,000,000 fully paid up.

Affiliated to the Banque Belge pour l'Etranger (a foundation of the Société Générale de Belgique), Banque de l'Union Parisienne, Wiener Bank Verein, Oesterreichische Credit Anstalt für Handel und Gewerbe, Ungarische Allegmeine Creditbank.

AUSTIN REED'S NEW TROPICAL DEPARTMENT.

"Making it hot for the traveller" was how Mr. Austin Reed described the idea of the Red Lacquer Room which Sir Alan Cobham opened at a luncheon in London last week to mark the opening of Austin Reed's new Tropical Department. A private view of mural paintings by Mr. Fred Taylor, R.I., who was specially commissioned to carry out the decorative scheme, took place before the lunch, and was attended by Lady Cobham, Sir John Sandeman Allen, M.P., Chairman of the Royal Empire Society, Colonel the Master of Sempill, and the Hon. Mrs. Forbes Sempill, Sir Basil Clarke, Mr. A. S. Comyns Carr, K.C., and Lieut.-Col. G. S. Hutchison, D.S.O.

The Red Lacquer Room forming the new Tropical Department is carried out, as its name implies, in brilliant red lacquer with finely carved insets of Chinese scenes set at intervals in the panelling and in the doors of the fitting rooms. Forming a frieze above the walls some two feet in depth are a series of paintings by Mr. Fred Taylor, R.I., depicting scenes in our tropical Empire based on an imagined tour through the tropical belt which begins in Egypt, passes through India, Burma, and Australia, and thence to British Honduras and West Africa. The ceiling is decorated with golden dragons on a white background, and the whole room, lighted by crystal lamps from concealed points above the frieze, gives an impression of tropical heat and splendour. It provides the most appropriate background possible to the man wishing to see himself as the East will see him.

NEAR EAST MARKET REPORTS.

The following cabled reports have been received by Barclays Bank (Dominion, Colonial and Overseas):—

Alexandria, March 17.

Egypt.

Trade conditions during the past month have been poor. The withdrawal of goods from the quays since the application of the new Customs duties has proceeded more smoothly than was anticipated, but the markets have suffered generally from overstocking and general financial weaknses.

Continuing their intervention in the cotton market, the Government have fixed prices of 28 dollars Sakel, for May delivery, and 19.80 dollars Ashmouni, June delivery. The first and second March tenders were heavier than expected and amounted to 520,000 kantars, making the total received by the Government to date 959,250 kantars. Owing mainly to the possibility of Government intervention. July futures have remained fairly steady. The real weakness has been shown in the new crop months, November and October, quotations for which have fallen steadily in sympathy with the very weak American market; Novembers now stand at a discount of 220 points compared with March. The spot market has been stagnant and sales have averaged only about 700 bales daily, while the previous demand for Ashmouni has fallen off and premiums have declined steadily. Failing a normal outlet for cotton, nearly all the arrivals from the interior have been for delivery to the Government and the few sales made on the market have consisted of small and untenderable lots. Stocks at Minet-el-Bassal have accordingly continued to accumulate and exports to dwindle. Arrivals from September 1 to date are 6,776,226 kantars, compared with 6,885,432 kantars in the corresponding period last season, while exports are reported to be 4,232,641 kantars, against 4,768,182 kantars. Stocks are 3,736,117 kantars, against 3,290,755 kantars.

The cottonseed market, both for spot and futures, has been inactive, with a falling tendency. Premiums have declined, but local consumption is fair. The outlet for cakes and oils is poor and prices have touched a record low level during the month. Arrivals from September 1 to date are 3,056,741 ardebs, compared with 3,069,957 ardebs in the corresponding period of the previous year. Exports are reported to be 1,723,185 ardebts, against 2,271,647 ardebs. Stocks are 1,415,627 ardebs, compared with 1,337,944 ardebs. Local consumption has been 762,784 ardebs, against 684,853 ardebs.

The stock of Manchester goods is increasing, and the market is dull; prices are a little lower than last month. Hesitancy is shown in the sugar market and business is moderate. Business in imported rice has been moderate at steady prices, owing to the reduced stocks. There has been a satisfactory demand at unchanged prices for Egyptian rice for local consumption and export.

The onion market has opened very weak, with quotations ranging from 2s. to 3s. 6d. per bag. This position is mainly due to the large stock of Valencia onions in England and the consequent lack of demand for the Egyptian variety. The crop is late and shipments from Upper Egypt have been retarded, owing to the poor quotations ruling here; as a result, onions have, on the whole, arrived in good condition and not immature, in contrast with the position when high prices cause premature shipment. Generally the crop is at least 30 per cent. less than last year.

Stocks of cereals are decreasing, except in maize. The market is quiet and prices are lower than last month. The quantities in shoonahs and barges are as follows (in ardebs):—Wheat, 90,000; lentils, 4,000; maize, 12,000; beans, 10,000; barley, 22,000.

Palestine.

Jerusalem, March 12.

General trade conditions continue poor for the time of year and the consumption of goods is very slow. There are large stocks of Japanese piece-goods, and sales are unsatisfactory. Gum arrivals have improved during the past few days, and the weather is now favourable to large production. Groundnuts are well stocked and, at present, quotations for overseas offers, at around £E11 per ton, are not attractive.

The Sudan.

Khartoum, March 14.

General financial and economic conditions have been stagnant and are still difficult, but there has been a small improvement in the market, owing to Muslim and Jewish festivals. A decline has been shown in the orange market in the United Kingdom, prices ruling at present being from 7s. to 16s. per case, compared with 17s. to 24s. per case for the same period last year. Germany is now second to the United Kingdom as a purchaser of oranges, and prices there range from 13s. to 14s. per case. Shipments to the United Kingdom during February were 603,288 cases, the total for the season to the end of that month being 1,693,304 cases.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Tarantia for Bombay (Birkenhead, April 18). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maidan for Calcutta (Birkenhead, April 24); s.s. Matheran for Calcutta (Glasgow, April 24; Birkenhead, May 1).

Bibby Line.—S.s. Staffordshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, April 16); s.s. Gloucestershire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, April 30).

British India Line.—S.s. Mundra for Bombay (London, April 19); s.s. Margha for Colombo, Madras, and Calcutta (London, April 19).

Cunard Line.—S.s. Bantria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, April 26; Swansea, April 29); s.s. Bactria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, May 1; Liverpool and Swansea, May 3).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 10); s.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 31).

P. and O. Line.—S.s. Novara for Calcutta (London, April 25); s.s. Macedonia for Bombay (London, April 25).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, April 17); s.s. Lancastrian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus ports (London, April 30).

Ellerman and Papayanni Lines.—S.s. Oporto for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 12; Swansea, April 12); s.s. Mardinian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, April 12; Swansea, April 16); s.s. Dido for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, April 16); s.s. Lesbian for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 26; Swansea*, April 26); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, April 28); s.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, April 29). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

The Bondholders' Report

The report of the Corporation of Foreign Bondholders for 1929 has only a brief reference to the visit to Ankara of Mr. Wyatt and a representative of the French bondholders, which was undertaken following indications that the Turkish Government might be considering the suspension of payments to bondholders. Bulgaria again comes in for commendation, it being mentioned that the Arrangement of 1926 continues to work smoothly and that the position of bonds bearing "barred" coupon sheets has been regularised. A large part of the introduction is again devoted to the United States of America, and it is stated that the Council has applied to the United States for a reconsideration of the bondholders' claims against the defaulting State of Mississippi. It is interesting to know that politicians from repudiating States have been foremost in demanding the collection of World War Debts "up to the limit of the capacity to pay." We give the following extracts from the report dealing with the Near Eastern countries:—

Bulgaria.

The arrangement of 1926 has continued to work in a satisfactory manner, and the credit of £5,000,000, obtained last year under the auspices of the League of Nations, has been utilised mainly for the stabilisation of the currency, more than half being earmarked to reinforce the Bank of Issue, and to pay off Budget arrears. In June, 1929, Bulgaria decided to regularise the position of those Bonds which she had previously subjected to differential treatment on account of the nationality of the holders. As from that date, all such Bonds are to be treated in the same way as those coming under the Agreement of 1926, made between the Bulgarian Government and the British, French, and Dutch Bondholders. Now that Bulgaria has made a final settlement of her reparation debts it is to be hoped that a period of stability and progress will ensue.

Greece.

The gross receipts in 1928 applicable to the service of the old gold loans in 1929 amounted to 2,339,340,295 drachmæ, against 2,250,020,994 dr. in 1927, and of these sums the plus-values, which are derived from part of the Monopolies, the stamp duties, and the tobacco duties, yielded 232,399,929 dr. and 200,293,830 dr. respectively.

The total gross receipts in 1928 subject to the Control of the International Financial Commission were 4,116,836,240 dr. and £15,151. This total includes, in addition to the 2,339,340,295 dr. mentioned above: (1) the surtaxes on the tobacco duties assigned as security for later loans (12,084,926 dr.); (2) the customs receipts of the ports of Corfu, Patras, Laurium, and Volo (253,253,247 dr.), which constitute an additional contingent security of the old gold loans, and those of the ports of Salonika and Kavalla (566,854,791 dr.), on which the Five per Cent. Loan of 1914 has a first charge; (3) the gross receipts of the revenues assigned to the Refugee Loan of 1924 (892,302,981 dr.); (4) payment by the Refugees Settlement Commission for the ordinary service of the Refugees Loan (53,000,000 dr.), and (5) the receipts from the same Commission for extraordinary amortisation of the Refugee Loan (£15,151).

The conversion of the proportion of the above plus-values appertaining to the bondholders produced 6,674,798 gold francs, half of which was available for increase of interest and half for increase of sinking fund. Adding to the first half (*a*) 4,500,000 gold francs awarded by the Arbitrator for increase of interest, (*b*) balances from the previous year, and (*c*) interest saved on Bonds redeemed from 1898 to 1928, the net amount available for increase of interest was 10,230,087 gold francs. Out of this sum additions to the minimum interest were paid at the rate of 57 per cent. of the original interest in the case of the Four per Cent. Monopoly Loan, 58 per cent. in those of the Funding Loan and the Five per Cent. Loans of 1881, 1884, and 1890, and 56 per cent. in that of the Four per Cent. Rentes. Adding to the second half the balance from the previous year, the net amount available for increase of sinking fund was 3,452,092 gold francs. Out of this sum additions to the minimum sinking fund were made at the rate of 12 per cent. in the case of the Four per Cent. Rentes and 14 per cent. in those of the other loans.

In 1929 payment was also made of the arrears of additional interest and sinking fund due in respect of 1926 and 1927, in accordance with the Arbitral Award, at the rates, for additional interest, of 62 per cent. of the original interest in the case of the Four per Cent. Rentes, and 60 per cent. in that of the other loans, and, for additional sinking fund, at the rate of 8 per cent. in the case of all the loans.

The gross receipts in 1929 for the service of the old gold loans in 1930 were 2,494,768,223 dr. and the portion applicable to the plus-values was 224,580,747 dr. With the additional receipts from the Monopolies and other sources, the total gross receipts in 1929 were 4,255,078,170 dr. The total additions to the minimum interest rates payable in 1930 in respect of 1929, are 57 per cent. of the original interest to the Monopoly Loan, 60 per cent. to the Funding Loan, 58 per cent. to the Five per Cent. Loans of 1881 and 1884 and the Piræus Larissa Loan, and 60 per cent. to the Rentes. The total additions to the minimum amortisation rates are 14 per cent. to the Loans of 1887, 1893, and 1889, and 12 per cent. to the Loans of 1881, 1884, and 1890.

The information given above is concerned principally with the revenues applicable to the service of the Funded Debt. As regards the wider aspect of the national finances, the results of the financial year 1928-29 fell short of the estimates of both receipts and expenditure. But as the underspending was considerably more marked than the deficiency in receipts, the provisional accounts for the year disclose a surplus. The national Budget for 1929-30 was framed on the basis of a lower estimate of receipts than that of the previous year. The estimated expenditure, however, was higher, the resulting deficiency being made up by an appropriation from the realised surplus of 1927-28. The results for 1929-30, so far as ascertained, justify the expectation that the final accounts will show a favourable margin on the estimates on both sides.

Turkey.

The first two payments to bondholders were duly made as from April 4 and May 25 respectively, in respect of the contributive shares due by Turkey and the Levantine States under French Mandate, and, in the case of the Unified Bonds, they amounted to 2s. 8d. gross per unitary coupon (=13s. 4d. per cent.). Since then the Debt Council has made definite settlements with Palestine, Iraq, and Italy (Dodecanese), and the payment made on November 25 included the shares of all the above countries, plus the share due by the three latter on account of the first two payments. In consequence, the Unified Holders received 3s. 4d. gross per unitary coupon (=16s. 8d. per cent.) and this third coupon payment represented nearly 78 per cent. of the total contributions due from Debtor States under the Agreement.

The whole of Turkey's proportion of the coupons paid in April and May, 1929, and part of the one paid in November, 1929, were contributed by the Debt Council from funds already in their possession. Since the ratification of the Agreement, Turkey has actually provided only £1,405,300 of the amounts required for her portion of the above three payments and of that due on May 30, 1930, while the Debt Council has contributed £1,329,800, and has in addition refunded to the Turkish Government the equivalent of £405,000. The exchange of documents of title for new arrear bonds also commenced on November 25, and the first redemption coupon on the bonds became payable on the same date.

Shortly after the contract entered into force, the Turkish Government notified the Debt Council that it would exercise its right under the contract to suspend amortisation for two years, and the amount of the annuity, so reduced, which is payable by Turkey until May

INDIAN AFRICAN SERVICE

31, 1931, was fixed at £1,435,000. The Turkish Government adopted the method of paying one-eighth (i.e., £179,375) of the annuity in advance, on the first of each month; and the January, 1930, payment completed the first annuity. The Government allowed it to be clearly understood that the provisions of the contract regarding supervision by the agent of the Debt Council, of the revenues ceded as guarantee should be respected and applied in entirety forthwith. The Debt Council accepted this method on condition that such acceptance should involve no modification of the bondholders' rights, or of the guarantees stipulated in the contract. The Debt Council notified the Turkish Government in August, 1929, of the nomination of their agent in Turkey, but, in spite of repeated requests, the Government's formal agreement to the appointment has not yet been given.

Negotiations for a settlement of their repartitioned shares of liability continue with Bulgaria and Greece, but difficulties have arisen in the case of Yugoslavia. At the end of the Balkan Wars of 1912-13, the Kingdom of Serbia became possessed of certain territories previously belonging to Turkey, and so became liable for a share of the Ottoman Public Debt, amounting to about £T5,500,000. Serbia acknowledged this liability in a treaty signed at Constantinople in March, 1914, and the repartitionment of the Debt necessary at the conclusion of the Balkan Wars was in the hands of a Financial Commission which was dissolved by the outbreak of the Great War.

The Treaty of Lausanne entrusted the Debt Council with the task of repartitioning the Ottoman Debt, not only for the territories ceded by Turkey after the Great War, but also for those detached from her after the War of 1912-13. Yugoslavia, however, was not a signatory to the Treaty of Lausanne and now claims that she cannot recognise the Debt Council's right to deal with the repartitionment of assets which she received in 1912-13. The decision of the Arbitrator appointed by the League of Nations fixes Yugoslavia's share at approximately the same figure as was anticipated by the Financial Commission of 1913, and this apportionment was duly notified to Yugoslavia, as was done in the case of the shares of the other Successor States, without objection on her part, at the time. In view of the injustice caused to bondholders by the refusal of Yugoslavia to enter into negotiations with the Debt Council, for a liability the existence of which she acknowledged before the War, it is hoped that she will not persist in her present attitude. The fact that the assets represented by Yugoslavia's share in the Ottoman Debt were acquired long before the Treaty of Lausanne, which did not break the continuity of the Debt Council's existence or alter its right to receive what is due, should be sufficient reason to induce Yugoslavia to reconsider her attitude.

The Eastern Telegraph Company, Ltd., announce the payment by warrants on May 1 of interest for the half-year ending April 30 on their Four per cent. Mortgage Debenture stock. The transfer books of the Debenture stock will be closed from April 25 to 30, both days inclusive.

The profit of Anchor Line (Henderson Brothers) for 1929 amounted to £253,353. Deducting directors' fees, £1,260, and including the amount brought in, £96,669, the amount available was £348,762. There has been written off for depreciation £256,485, while the Preference dividend absorbs £14,300, leaving £77,977 to be carried forward. The fall in profits is accounted for by the general depression in national and international trade, and especially by the lack of demand and low homeward rates of freight ruling in the Bombay service. In the Glasgow-New York trade there was a decrease in freight earnings, but passenger business showed improvement.

(By An Engineering Correspondent)

Water Filtration for Steel Works.

The greater attention now being given to scientific methods generally in industry is well illustrated by the fact that the purification of the entire works water supply, quite apart from boiler feed purposes, is beginning to be undertaken, and of great interest in this connexion is that the Imperial Japanese Steel Works, Yawata (on the Island of Honshiu) have just recently placed a contract with the Paterson Engineering Co., Ltd., London, for a very large rapid gravity sand filtration plant. The capacity is 40 cubic metres of water per minute (12,662,000 gallons per day), and the installation is to be arranged for extension at a later date to 60 cubic metres per minute (19,000,000 gallons per day).

Apparently the water supply to the blast furnace and general steel plant at Yawata is of a difficult character as regards suspended material, and the installation is a striking example of the use in industry of large modern rapid gravity filters such as generally used for towns' water supply. Full details are not yet available, but a battery of standard rapid gravity filters are to be installed, constructed of re-inforced concrete on the Hennebique system.

These filters are, of course, in wide use for towns' water supply all over the world, especially including Egypt, Persia, and India, one of the latest installations being a plant of 48,000,000 gallons per 24 hours recently operated at Kempton Park for the Metropolitan Water Board (London), while it may be stated that plant of this character is operating at the Jamshedpur Works of the Tata Iron and Steel Co., Ltd., in India. The filter consists of a rectangular ferro-concrete tank filled with a deep layer of graded sand through which the water flows by gravity, thus giving the filtration. For cleaning purposes compressed air is used, the bed of sand being blown up for a few minutes at intervals, say every 24 hours, to disentangle the separated impurities which are swept away to the drain by momentary reversal of the water flow by means of suitable valves. The filter is then ready again for use at once, the same sand lasting for years, and generally, as in the present case in Japan, a battery of such filters is used with suitable valves and pipe connexions. Also, when necessary, various accessory equipment may be included to give a continuous supply of clear, pure water, and, for example, if the drainage areas is moorland, the water may be stained brownish colour due to peat, and this is taken away by first treating with coagulents, such as alumina, before passing through the sand filters. The Japanese Imperial Steel Works at Yawata was founded in 1897, with a capacity of 60,000 tons of steel products per annum. At the present time the Yawata Works has a capacity of 325,000 tons of steel products, but huge extensions are now in hand to bring the figure up to 750,000 tons, and eventually 1,000,000 tons, while Japan is already producing about 65 to 70 per cent. of her own iron and steel, and the important coal, iron and steel and other developments in Southern Manchuria, based on the Fushun Colliery, will be familiar knowledge.

A recent Roumanian Customs Circular provides that samples of the undermentioned goods, of the maximum weights and dimensions specified, wil be admitted duty free if sent direct to the trader's or manufacturer's address, and if not more than two samples of the same kind of goods are consigned to the same importer:—(1) Yarns of wool, to a length of 1½ metres; (2) cotton yarns of one or more strands (single or multiple twist), to a maximum length of 5 metres; (3) sewing or embroidery thread, fishing yarns, and twines, to a maximum length of 2 metres; (4) natural wool, washed, bleached, or dyed, to a maximum weight of 100 grammes; (5) chemical products, to a maximum weight of 150 grammes.

Motors and Motoring.

(By Our Motoring Correspondent)

Commercial Motors.

In reviewing the commercial vehicle situation it becomes apparent that during the past year makers did not commit the mistake of over-producing. It might almost be said that, considering the vast possibilities of the export trade, we did not build quite sufficient cars and that production as a result fell short of the potential if not the actual demand. In the ¾ and 1 ton fields there is always a fair demand, and, things being what they are, there has been a good deal of competition therein. It is in the heavier duty field, which comprises all vehicles from 2 tons upwards that the real business will be found this year; quite a demand will be experienced for the 5 ton truck, which will take a good overload and haul a trailer, and which, this being essential, will travel over rough ground. The other day I attended a demonstration at Slough of the six-wheel drive production of the F.W.D. Co. This is a fine piece of work, and not only did it stand up to the severe tests which were imposed, but it showed that it had great reserves of strength. Indeed, it was that certainty of latent power that impressed me most of all. The vehicle is just the thing for the big contracting firms.

Uses of Motor Lorries.

So far, the uses to which motor lorries have been put, have been somewhat limited; now, new uses are being discovered every day. In many respects the motor truck has been prevented from developing as it should by reason the short-sightedness of makers. Now, they are putting on their models all kinds of special bodies and, further, are mounting those bodies with various mechanical devices as small hoists, lifts, drags, etc., which will enable the user to load or unload more quickly and to deal with special loads without trouble. All such useful appliances make the lorries better earners and economisers. There is one thing which ought to receive attention and that is the worn-out truck. There comes a time when useful life ceases and expensive, worn-out life commences. The lorry user ought to be told more plainly and clearly than he is when that period commences. As it is, he has a lot of generalities told him, is obsessed with some idea that makers want him to scrap his car so as to force him to buy a new one, and feels he is perhaps doing the businesslike thing when he keeps on using the lorry. If makers, by a sound advertising campaign, would educate lorry owners as to such matters as obsolescence and uneconomical use of motor vehicles, they would be well advised. But that advertising must be on sound lines.

The commercial vehicle situation must be looked on in the light of a recent enormous increase in the number of the unemployed. It is true that the number has been largely and artificially swelled by crowds of married women seeking work and by numbers who have at last become converted to the idea that it is a far less tiring life when all one has to do is to walk up to get the dole, but no matter whether the ranks of the unemployed are artificially inflated or not, the fact remains that they are there and they will have to be dealt with. That explains the frantic haste with which the Minister of Transport is urging local authorities to make a start on as many road and other work schemes as they can. There is a very big work's programme ahead and a vast road making scheme will probably be indulged in, now the summer is coming on. All this work means motor lorries. There will be a vast quantity of transportation machinery needed to get the big official schemes under way and makers will consequently be well advised to make prospective users and potential buyers aware of what they have to sell.

A Light Delivery Van.

The American Austin Co., an American firm licensed to manufacture and sell in America under the designs and patents of the Austin Motor Co., Ltd., is planning to turn a large part of its works over to the production of a light 5 cwt. delivery van. It is claimed for the vans that they will travel at a maximum of 50 miles an hour, will go 45 miles on a gallon of petrol and that the total weight is about 9 cwt. Further, they will go for about 1,500 miles on a quart of oil. It is expected that there will be a big demand for these little vans in the States and that the production will be such that the cars will be able to be sold at about £90 to £100. In that case they will provide the business world with a sound little truck of ample carrying capacity at about the price of of a good motor-cycle and side car delivery outfit. The operating costs will be very low, but they will be of much higher goods carrying capacity than the sidecar outfit, and will furnish the driver with protection from the weather, which is not obtainable on the three wheel outfit. The low fuel and oil consumption will make these little vans as economical to operate as a solo motor-cycle with a goods carrier behind; their short wheel base, small size and large lock will make them fast and easily driven in traffic and simple in steering to or away from the curb, and on account of their light weight and easy stopping they will be economical on both tyres and brakes. It is said that already a number of American parcel carrying companies and delivery concerns have looked into the proposition with considerable interest and already tentative orders have been placed. The appeal of the makers of this class of vehicle to the business world is briefly, an economic one. They offer to give the retailer and the parcel deliverer a small unit in which there is no dead weight to be carried, which is more economical in fuel and oil than any other car on the road, which has a lower first cost and which can be handled with ease under any traffic conditions. I am now looking forward to the Austin Motor Co. doing something of the kind for this country. They must know all about the activities of their trans-Atlantic associates and must realise that what will sell in New York for delivering goods will sell equally well in London for a similar purpose.

A Forestry and Hunting Exhibition is to be held at Liubliana from August 31 to September 15.

The Messageries Maritimes announce big reductions in fares by their steamers to Naples, Piræus, Istanbul, and Izmir.

A fusion has been arranged between two Danube navigation companies in Roumania, the Navigation Fluviale Romane and the Societatea Romana Dunareana. The new company will bear the title of Societatea Fluviala de Navigatie Romana.

Private cars in use in Egypt on December 31 last totalled 16,647, while commercial vehicles numbered 4,515, and taxi-cabs 6,555. New vehicles registered during the second half of 1929 totalled 2,331, 650, and 909 respectively.

A road for motor traffic has recently been opened connecting Mohammarah on the Persian Gulf via Khorramabad, with Teheran. It is claimed that it will provide a quicker route than that via Baghdad and Khanikhin to Teheran.

Company Meetings.

HELLENIC AND GENERAL TRUST.

Review of Conditions in Greece.

Policy of Gradual Expansion.

Mr. F. A. Szarvasy's Speech.

The second ordinary general meeting of the shareholders of the Hellenic and General Trust, Ltd., was held on April 7 at 41, Bishopsgate, London, E.C.

Mr. F. A. Szarvasy presided.

The Secretary (Mr. T. S. D'A. Hankey) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Ladies and gentlemen,—I have to apologise for the absence of our chairman, Sir Eric Hambro, who has not yet returned from his business trip to South America. The directors' report and balance-sheet have been circulated, and, with your permission, I propose to take them as read.

The Balance-sheet.

Dealing first with the accounts, you will observe that during the past year we have issued 100,000 shares of £5 each and that the issued and paid-up capital now stands at £1,000,000. The average capital employed, however, during the year has only been £639,500, or 63.95 per cent.

The 100,000 shares having been issued at a premium, we have created a capital reserve, and preliminary expenses have been written off against this reserve, leaving a net balance of £6,644 14s. 5d. Our investments fall into three categories—loans against mortgages, investments in marketable securities, and advances against the deposit of marketable securities. You will see the rough division from the balance-sheet figures.

Our income from all sources has been £61,852, and after deducting all expenses, but before making provision for income tax, the net figure available is £50,211 10s. 6d. This represents 7,85 per cent. earned on the average capital employed, against 7.29 per cent. for the previous period of 13 months, for which accounts were issued, or against 6.73 per cent. for the equivalent proportion of the same period. You will notice that management expenses, including directors' fees, amount to less than 1 per cent. on the issued capital, which is the usual charge for companies like ours.

The Distributable Balance.

After providing for income-tax the amount carried to the balance-sheet is	£40,351 9 5
To which has to be added the balance brought forward from the previous year	£15,773 5 3
Making a total of	£56,124 14 8
The interim dividend of 3 per cent., less tax, has already been paid, absorbing	£12,000 0 0
Leaving available	£44,124 14 8
Out of which the board recommend a final dividend of 3½ per cent., less tax, making 6½ per cent. for the year. This dividend will absorb	£21,812 0 0
Leaving to be carried forward	£22,312 14 8

Over 2¾ per cent. on our capital subject to tax.

Although during the last few weeks, due to the advent of lower money rates, the general situation seems to have become more settled, I feel sure you will agree that a conservative policy is called for, and that we must look to the building up of reserves before embarking on a more adventurous dividend policy. During the current year we shall have our full capital available, and, as our investments on mortgages in Greece give us a fairly high return, and seeing that the rest of our capital is invested at an average rate of about 6¾ per cent., barring unforeseen circumstances our income should again be very satisfactory.

Economic Conditions in Greece.

As you are aware, a large part of our company's activities is connected with Greece, and perhaps a few words regarding recent developments in that country may be appropriate. First, let me remind you that that gallant little counrty has faithfully kept its engagements since 1898, in spite of the fact that virtually from 1909 until 1922 it was involved almost continuously in the turmoils of war or frequently a prey to internal dissensions. Military expenditure of over £160,000,000 sterling was piled up and provided for out of the nation's own resources, a truly formidable burden for a country with about 6,200,000 inhabitants.

It is pleasing, therefore, that a review of the economic conditions in that country as obtaining at the beginning of 1930 shows that the country is successfully emerging from its difficulties, and that it now enjoys political stability under its veteran leader. It would be unreasonable to expect that Greece should have escaped the world-wide slump in business when practically all other countries have suffered more or less severely. Difficult times were, therefore, experienced, and the lack of adequate credit facilities obtainable by trade and industry has retarded readjustment.

Greek industries are being affected in the usual way by the stabilisation of the currency and the fall in commodity prices. Many industries in that country have grown up rather quickly in order to cope with the large increase of population resulting from the influx of refugees. As a result there are still too many small competing interests operating in an uneconomic way, and a policy of severe rationalisation is undoubtedly called for. This is being effected under the leadership of the National Bank of Greece in co-operation with ourselves and others, your company taking a more distant interest, in so far as we only lend on well-secured mortgages to those of the industries who have already submitted to the pruning knife.

Undeveloped Water Power.

A factor which should influence Greek industry favourably in the future is the large resources which the country possesses in yet undeveloped water power suitable for the creation of hydro-electric stations. We have, therefore, thought it desirable to establish contact with certain interests which are exploring the possibilities in this direction. With this end in view we have associated your company with Italian and Scandinavian groups well versed in business of this nature.

An influential company has been formed under Italian auspices, allied with Belgian and Scandinavian interests, with the object of establishing hydro-electric stations in Greece. We have invited Mr. Giulio Blanc to become a director of your company, as that gentleman is prominently connected with the undertaking I have just mentioned. I trust you will join our board in giving him a hearty welcome and allow us to convey to him our good wishes for his future co-operation with us.

Reorganisation of Industry.

There are many interesting items one could mention in connexion with Greece. I will just touch upon a few of them. To help the reorganisation of industry the Government, through the National Bank of Greece, has intimated that it is prepared to guarantee loans up to £600,000. A new Agrarian Bank has been formed, and agricultural production has been relieved of taxation for two years. The use of cheques is being actively encouraged, and the stamp duty on these is being reduced. A bankers' clearing house has been established and is already being largely utilised.

Greece, as an importer of motor-cars and oil, is making rapid progress. In 1921 761 cars and trucks were imported, whereas in the first nine months of 1929 this figure rose to 3,530. Imports of oil have risen from 7,946 tons in 1913 to 28,000 tons for the first nine months of 1929. Agricultural production has increased by over 10 per cent. during the last two years.

Imports have increased during 1929, in comparison with 1928, by approximately 7 per cent. in value. Exports are over 11 per cent. up. Deposits entrusted with the Greek banks increased during the same period by about £1,600,000.

Reparation Payments.

A very important factor which will favourably influence the

Digitized by Google

financial situation of Greece is that she will receive from Reparations under the Young Plan an annual mean sum of £1,182,400, as against the £200,000 received up to the present from Germany and the £37,000 from Bulgaria. On balance the Greek Budget will now benefit from Reparations by £706,000 annually for the first 14 years and £344,000 for the next 22 years.

Besides the foregoing sums, the Conference granted Greece compensation for losses suffered by Greek citizens during the period of neutrality. Optimism is justified, seeing that, in spite of her difficulties, Greece is at present amortising National Debt at the rate of over £2,600,000 per annum.

Greece's National Debt.

The National Debt Service for 1930-1931 represents about 35 per cent. of the State's expenditure, and requires about £10,000,000, but fully one-third, say £3,400,000, is for redemption of debt, a most important consideration. The National Debt per head is now about £17 and the Debt charge per head about £1 12s.

It is estimated that about 50 per cent. of the National Debt, or approximately £50,000,000, will have been paid off within 15 years. A large part of this amount belonging to Greece will remain in the country. The budgets of the State have been leaving a real surplus since 1927, while the Treasury had a steady credit balance at the bank.

Immigrants' remittances, which are estimated to amount to £7,750,000 per annum, are an important factor in judging the financial prospects of the country: also the receipts from the Mercantile Marine. The latter amounted, at the end of September, 1929, to 1,304,844 tons, exclusive of sailing ships, as against 1,256,965 tons at the end of 1928. I feel sure you will agree with me that all these are satisfactory features and encourage us to continue our policy of lending a helping hand in further developments.

Investments.

Our investments in marketable securities are well spread:—

Bonds, Debentures, and Debenture Stocks ...	82.02 per cent.
Preference stocks and shares	5.51 per cent.
Ordinary stocks and shares	12.47 per cent.

As regards geographical distribution, while the purpose for which the company was formed makes it inevitable that a large part of our interests should be in Greece, we have been careful to distribute the remaining portion of our capital as widely as possible.

The Immediate Future.

The immediate future seems more settled, and if cheap money continues and has the expected influence of revitalising trade we may anticipate greater industrial activity and a decrease in the figures of unemployment, which have reached alarming proportions. It is too early, however, to assert with any measure of confidence that we have seen the worst, and therefore the careful policy of only gradual expansion which your board has followed until now must be continued.

Before concluding my remarks I must place on record our appreciation of the services of our Athens board, which, as before, contributed very greatly to our progress. Also our thanks are due to the National Bank of Greece, who have continued to give us valuable assistance. The office staff, both in London and in Athens, have given loyal and efficient service, of which the board are duly appreciative.

The Chairman concluded by moving the adoption of the report and accounts.

Mr. A. R. Wagg seconded the resolution, and it was carried unanimously.

The dividend as recommended was approved; Sir Eric Hambro, K.B.E., Mr. A. N. Hadjikyriakos, Mr. F. Alexander Szarvasy, and Mr. Giulio Blanc were re-elected directors; and the auditors, Messrs. Peat, Marwick, Mitchell and Co., were reappointed.

Extraordinary General Meeting.

At a subsequent extraordinary general meeting of the company a resolution was passed sub-dividing each of the 200,000 issued and fully-paid shares of the company of £5 each into 10 shares of 10s. each, five to be Preference shares and five Ordinary shares, and, immediately upon such sub-division, the Preference shares to be converted into Preference stock and the Ordinary shares into Ordinary stock.

The proceedings then terminated.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended March 29:—

Grain.—The improvement mentioned in our previous report was maintained throughout the week, especially as regards maize, for which commodity the inquiry for prompt shipment was strong at the end of the week. Local freight rates have improved somewhat in consequence during the last two days, but, for reasons explained previously, the volume of business as well as shipments to consuming markets were restricted. A prompt steamer of 5,000 tons has been fixed from the Danube at 13s. 3d. Continent, 13s. 9d. U.K. full terms.

Timber.—Although the market shows no decided improvement in general, small inquiries are coming forward for various usual destinations. A Roumanian 3,000 tonner is on her way up river to load a combined cargo of grain and wood for Piræus, the latter at £6 5s. to £6 10s. per wagon. Otherwise Greek ports still remain neglected. Another small vessel is loading 120 wagons at £7 for two Syrian ports, for which destination there is further inquiry. Several parcels have been booked at about £7 5s. for a vessel destined to be berthed for four ports Italy. Two steamers are under loading for Alexandria, and a third one at present undergoing repairs came up for a cargo secured at £5 15s.; timber exports to Alexandria are usually brisker than this at the present period of the season. A vessel loading with grain is completing her cargo with timber booked for Rotterdam at £8 5s. The parcel of hard and soft wood for Spain mentioned in last week's report has been placed on a spot steamer at £11 per wagon.

Weather and crops.—Light local rains were fairly frequent in the north and west, and extended to the eastern districts in the second half of the week. High maximum temperatures have been rarer than during the last few weeks, and the cool, cloudy weather and general absence of strong, drying winds, have enabled the crops to obtain great benefit from the much needed rains, even where these were very light.

Sulina.—Bar depth 24 feet; river minimum 24 feet. In view of the comparatively small amount of silt due to the absence of the usual spring floods, it is expected that there will be no difficulty in maintaining the depth of water over the Bar. The Danube Commission is accumulating materials for continuing the extension of the entrance piers at Sulina, which work is expected to begin about the end of April.

Constantza.—Arrivals of grain from the interior, and exports, only amounted to a few hundred tons during the week ending March 26, but about 10,000 tons were expected to be shipped during the following week for the Antwerp/Hamburg range. Eleven ships loaded over 43,000 tons petroleum products and three took oil fuel for bunkers.

Bulgarian Report.

Bourgas, March 22.—A slight improvement has been noticeable on the grain market, and some business has been concluded for Rotterdam and Hamburg, for which destinations about 1,500 tons are reported to have been booked in Varna and Bourgas at rates from 9s. 9d. to 10s. prompt shipment.

The Bill for the reduction of export taxes has been passed and will come into force as soon as it is published in the Government Gazette, *Darjaven Vestnik*. It is hoped that this reduction will help shippers to dispose of the exportable surplus of cereals before the arrival of the new crop, which is very promising.

The weather has been warm and although at times cloudy no rain falls have been reported from any part of the country. The crops are everywhere in excellent condition.

Digitized by Google

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended April 2:—

Egyptian Futures.

Sakel Contract.—A further moderate advance has been registered in values during the past week, but, on the whole, our response to the hardening tendency in the American markets and higher Alexandria reports has been somewhat disappointing. This, to a certain extent, bears out our remarks of last week regarding the weakened technical position, owing to the fact that a large portion of the "bear" account worked up on the decline during the earlier days of last month has now been covered. Another factor that has operated to slow down any further advance is the closing up of near positions with Alexandria. Whilst even at the reduced difference now in force we are still at a considerable discount, and the local stock remains attractive, it is not so outstandingly cheap as it has been, and on this account covering operations against spot sales have not given the same support as hitherto. The most satisfactory feature of the week has been the improvement shown by trade reports; no doubt business in yarns still leaves a good deal to be desired in the way of volume and margins, but it appears that a definite move in the right direction is in progress, and, given further encouragement in the shape of stability, or, better still, a gradual appreciation in raw material values, a much healthier outlook in this section would develop. Reports from Alexandria to the effect that the Government are going to release 30,000 bales of their old stock for exports have been circulated during the past few days. It is stated that the cotton will be consigned in equal portions to the U.S.A., the Continent, and this market. Just how this would react on the contract here, should the news prove correct, depends on the quality of the cotton; if the shipments come within the tenderable range, near positions might be affected. The general opinion is that the old Government stock has deteriorated to the extent of placing it outside the contract, but this point cannot be determined until more definite details are obtainable. In view of the substantial reaction that has taken place from the low level obtaining a few weeks ago, it appears a sound policy for those who have been running long, to take part of their profits with a view to replacing their holding should the market ease.

Upper Contract.—This market has received better support from trade sources during the past week, and this, combined with a hardening tendency in the American departments, has influenced a rise of 19 to 23 points for near and 28 to 35 points for distant positions since we last wrote. As anticipated, the Government have had to face further heavy tenders, the initial April declaration amounting to 393,750 kantars. This will have the effect of further tightening the position and increasing the difficulties of export houses in negotiating c.i.f. business. The local stock has been much reduced during recent weeks, and this is reflected in the hardening appearance of near positions.

Egyptian Spot.

The advance in "futures" during the week has caused rather a hesitating tendency amongst buyers. There would appear to be a good undercurrent of inquiry, but evidently spinners have little faith in the higher levels recently attained, and as a result sales have shown a falling off as compared with those of the last few weeks. The Continent has maintained its interest in our local stock, but less has been heard from America. Of course, we are not now so cheap as we were about a month ago, when local contracts were running at a discount of 150 points below Alexandria; but even after the narrowing which has occurred, there is still plenty of cheap cotton to be picked up here by discriminating buyers.

Sakels.—The improved inquiry for the Good cotton has been fairly well maintained, but buyers have been working very much on a hand-to-mouth principle. Less interest has been displayed in the medium qualities, and, as was the case last week, the low and inferior cotton has been neglected.

Uppers.—The demand for this cotton has been somewhat quieter, but the inquiry has been well dispersed, and practically all qualities have come in for attention from time to time. There has been a slight tendency for the basis of the medium quality to harden.

Pilion has been in fair request, principally within a range of from 10d. to 11d. As we have pointed out before, the amount on offer at these prices is distinctly limited, and sales have been moderate only. The better qualities have been neglected.

Maarad, Nahda, and Fouadi.—These have all suffered from neglect.

White Cotton has again been in improved request, and appears to be cheap as compared with Sakel at the moment.

Sudan Sakel.—A good business has occurred. The old crop is becoming rapidly exhausted, and we advise those of our friends who are still interested to act soon.

Tokar Sakel.—There has been more business done in this growth.

C.i.f. Business.—We are inclined to think there has been slightly more doing, but it is, of course, very difficult to get at anything like exact figures. Forwardings were returned as 2,829 bales Egyptian and 2,791 bales Sudan. Spot sales: 1,400 bales Egyptian and 2,350 bales Sudan Sakel. Quotations of Sakel show an advance of 20 points; those for Uppers 23 points, and those of Pilion 15 points on the week. F.G.F. Sakel to-day, 14.25d. F.G.F. Upper to-day, 10.47d. F.G.F. Pilion to-day, 11.05d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report as follows for the week ended March 27:—The futures market has not been as active as last week, although still better than it was a few weeks back; the tone at the close to-day was fairly firm. The week's summary of price movements is as follows:—Sakellaridis: May, 28.18 dollars, unchanged; July, 28.19 dollars, 0.31 dollars up; November N.C., 20.78 dollars, 0.37 dollars up; January N.C., 27.00 dollars, 0.23 dollars up. Ashmouni: April, 19.40 dollars, 0.02 dollars down; June, 19.91 dollars, 0.05 dollars up; August, 19.10 dollars, 0.20 dollars up; October N.C., 18.17 dollars, 0.06 dollars up; December N.C., 18.50 dollars, 0.08 dollars up; February N.C., 18.85 dollars, 0.04 dollars up.

The production of the Attock Oil Company for March totalled 19,988 barrels.

The Greek Government is reported to be considering the increase of the import duties on certain kinds of rubber.

In connexion with the last International Rugby football match, Imperial Airways have arranged for a special Easter air return to Paris at the rate of £8, leaving Croydon at 8 a.m. on either Good Friday, Easter Saturday, or Monday, returning from Paris on the Monday evening at 6.30 a.m. or on Tuesday morning at 8 a.m.

CYPRUS CROP PROSPECTS.

The report on Cyprus crops for March gives the following details:—

There is a decided improvement in the condition of the wheat crop. The crop so far is free from rust, and the feared outbreak reported last month in Larnaca District did not spread.

Barley fields which suffered from excessive moisture are showing rather stunted growth. The crop is maturing rapidly. Prices are 1s. 8d. to 2s. per bushel.

Planting of potatoes is practically over, and in early localities hoeing is in progress. Growth on heavy soils is irregular on account of wet conditions. A certain amount of old stock is available. Prices showed a slight improvement early in the month, but the new tariff imposed upon imported potatoes in Greece has altered conditions and prices are again falling. At present they are £4 10s. to £5 10s. per ton.

Prospects for the new season cotton are very hopeful. An increase in the area of both irrigated and unirrigated cotton is expected. Prices for seed cotton are 2s. 11d. to 3s. 3d. per stone.

There is little or no demand for carobs, and prices are nominal—13s. to 15s. per kantar.

It is estimated that half of the Famagusta orange crop has been exported, but business is very slow. Prices are £2 to £2 10s. per 1,000 for Jaffa type and 15s. per 1,000 for Valencia type. In the Lefka area over 7,000,000 oranges are estimated to be available for export.

Tobacco seed beds have been prepared, but whether the actual area to be planted will reach that of last year is doubtful. Large stocks of last year's crop still remain unsold, and the market prospects are not very hopeful.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Rails and Angle Irons.—The Survey of Egypt, Ministry of Finance, Cairo, invites tenders for the supply of 13,000 tons of new or second-hand tarred rails and 177 tons of new or second-hand angle irons. June 28. (D.O.T.)

Weighing Machines.—The Physical Department, Ministry of Public Works, Cairo, invites tenders for the supply of weighing machines, counter scales, and Beranger balances. June 2. (D.O.T.)

Waterworks Plant.—The Egyptian Ministry of the Interior invites tenders for the supply and installation of pumping machinery, filters, and an artesian well, etc., for the waterworks at Samanoud (Gharbieh Province). May 20. (D.O.T.)

INDIA.

Power Plant for the Haripur Central Jail Power Station.—The date for the reception of tenders for the above contract has been extended to May 12. (D.O.T.)

YUGOSLAVIA.

H.M. Consul at Sarayevo reports that a local company desires to receive offers for the supply and delivery of one grinding machine capable of a daily production of 10,000 kilogrammes of stone powder ("Steinmehl") from hard limestone. (D.O.T.)

Notes of the Week.

Turkey and Her Public Debt.

Turkey, it is to be hoped, will come to no hasty decision on the subject of suspending her Debt payments. The money for the May instalment has already been provided, and she has six months within which to consider the position in all its bearings. In view of the protracted nature of the negotiations that closed with the agreement of last year, when every possible concession was made to the Turkish Government, it was hardly to be expected that the Foreign Bondholders could acquiesce in any further postponement of payments. The financial stringency of the country is admitted, but it would be idle to pretend that Turkey has had the benefit of the world's best expert opinion in facing her difficulties. Her record during recent years has demonstrated her will to win through to financial stability at the cost of heavy taxation, but it has not been calculated to inspire outside opinion with confidence in the wisdom lying behind that will. The attitude of the Bondholders' Council is understood to be that the country's difficulties are fully appreciated, but that it is firmly believed that the situation can be retrieved by a sounder fiscal policy without the stigma attaching to a repudiation of Turkey's debts.

General Pangalos.

A further stage in *L'Affaire Pangalos*, the end of which promises to provide a synonym for the Greek Kalends, has been reached with the conviction of the ex-Dictator, by a special Commission of the Senate, on the charge of having been the moral instigator of a transaction carried through by a subordinate Minister in his Government, by which a gambling concession was leased to a tenderer who had not offered the lowest tender. General Pangalos was sentenced to two years' imprisonment, but the verdict has to be confirmed by the Senate in plenary session. Whether, in the event of the Senate's endorsement, the fact that the ex-Dictator has already spent two years in gaol will be set against the present sentence and result in his immediate liberation remains to be seen. In any case there would appear to be more charges outstanding against General Pangalos, and he is likely to continue to give employment to the Greek judiciary for some time to come. The indictment against him has rung the changes on most of the crimes known to the Greek penal code, but the more serious charges, starting with that of high treason, have gradually been abandoned. There still remains his famous edict regulating the length of women's skirts. If it is intended to try him on this count as well, it might be well to hasten on the trial before the regulation length is fixed according to the Dictator's own measurements, and Counsel for the defence can plead not only that the sartorial trade flourishes by means of dictatorial enactments, but also that in anticipating the judgment of Paris by four years General Pangalos set Greece at the head of the world of fashion, where in this centenary year his efforts have been so conspicuously crowned by the election of the Greek Queen of Beauty as "Miss Europa." The popularity of such a plea might shake the Republic to its foundations and expose Greece to the risk of yet another Dictatorship.

Need of Conciliation in Palestine.

It is to be assumed, unfortunately, that no definite step will be taken in shaping the future of Arab-Jewish relations in Palestine until the Houses of Parliament have debated the Report of the Commission of Inquiry. Anxiety and tension will not decrease in the interval, and the optimist might hope that unofficially Arabs and Zionists might meet in London to discuss the possibilities of the situation. But, as will be seen from official statements which we publish elsewhere in this issue, whereas the Zionists are naturally and considerably depressed by the Report, the Arabs are naturally and considerably elated. Obviously both sides were holding their hands until the publication of the Report, and now that it has come, the Arabs are apparently little disposed to treat with the Zionists. Yet the Prime Minister's statement in the House, which we recorded last week, concerning the fulfilling of British obligations in the Holy Land, was made after hearing both Arab and Zionist points of view. In these circumstances one might have thought it to be the path of wisdom one the following of which we advocated long before the publication of the Report—for Arab and Zionist leaders in London to confer together in order to discover whether some *via media* were not possible. At the worst, no harm can be done: at best it might make life easier and sweeter for all in Palestine. A conciliatory spirit, which, while not forgoing the ideal, grasps that which is immediately practicable, in the hope, certainly, that later on the full claim may be realised, is a sure way of gaining British sympathy. After all, both Arabs and Jews are able to make the demands they are making only because of the British conquest of Palestine from the

Digitized by Google

Turks. To be intractable in standing out for the full granting of something which British sacrifices alone made possible is the surest way of making Great Britain harden her heart.

The Mandatary's Mind.

But although we emphasise the desirability of a fresh endeavour on the part of Arab and Jew to arrive at a solution, we do not forget that the paramount need of the moment is for clear thinking on the part of the Mandatory Power. The British ideal in the Holy Land—and we would suggest here that no British official in Palestine has failed to do his utmost to keep it in view—is the creation of a Palestinian people, neither specifically and dominantly Arab in interest nor specifically and dominantly Jewish in interest. Great Britain ought to realise that in Palestine, as anywhere else, a house divided against itself cannot stand. The time is peculiarly ripe, therefore, for something more than verbal and pious hopes of this kind. If the creation of a united people in Palestine is really possible, it is the duty of the Mandatory Power to set out much more clearly than has yet been done the lines of its realisation; if, on the other hand, it is not thought possible, but that other solutions—whether as a bi-racial State, or by means of cantonments, or howsoever else Palestine is to develop—are better to aim at, the change of policy should be boldly enunciated. It is really intolerable that after ten years' administration we should not know, in effect, whether Palestine is to be treated as part of Arabia or as an extension of Europe, whether it is to resemble such countries as Switzerland or South Africa or Canada or Ireland, or whether the ultimate self-government of the Holy Land is independent of whether there is a Jewish majority or not. So far we have groped for a policy; we have drifted on. Let there be now an end to such fatal vagueness.

Air Force in the Middle East.

A very useful debate took place in the House of Lords on the question of air policy in the Middle East, Lord Trenchard making the notable suggestion of substituting the Air Force for the existing forces in such places as the North-West Frontier, the Persian Gulf, the Red Sea, and the Sudan. In regard to the Persian Gulf and the Red Sea, this suggestion was convincingly countered by Lord Beatty, who remarked, what is perfectly true, that in the Persian Gulf many things had to be taken into consideration besides the stategic aspect—such as stopping the slave traffic and the arms traffic. In the Red Sea, also, similar problems were presented which could be performed only by naval forces. Other speakers deplored the indiscriminate slaughter caused by bombing, and in this we fancy they were making a just point. It is highly necessary, while applauding and admiring the immense courage and enterprise of the Royal Air Force in the East, not to forget that this Force, like all other arms, has its limitations. Perhaps the safest generalisation to make would be to the effect that, whereas the R.A.F. is admirable in supervising desert frontiers, its ability to cure trouble far exceeds its ability to prevent it. One may certainly agree with Lord Thomson, who stated that the Government were now considering the matter raised by Lord Trenchard, that though admittedly the Air Force could not keep order "in large cities or in crowded centres or even in comparatively small towns like those in Palestine," the use of troops for police purposes is to be avoided.

Egypt and The Hijaz.

The reported agreement between Egypt and the Hijaz in connexion with the visit of the Egyptian Medical Mission is a matter for gratification. It would have been most regrettable if, on the eve of the Pilgrimage Season, Egypt and the Hijaz had once more come to loggerheads, though this prospect was very near but a week or so ago. So far the terms of the agreement are not known, but the dispute really turned on a question of national pride, namely, whether or not the Mission could fly the Egyptian flag on their cars. That so petty a consideration should now have been removed is all to the good, and it may henceforth be hoped that the relations between Egypt and the Hijaz will become more and more cordial.

"The Case for India."

A little book, bearing the above title, by a Quaker who has, we believe, done good educational service in the Central Provinces and Bombay, deserves especial attention at the present time, as an exposition of what the author calls the "ruthless idealism" of India. On the other hand the correctness of the title may be questionable. It is not the case for India, but the case of the Hindus: and, even among the latter, it is the views of a "proud and sensitive intelligentsia," and, above all, of those who are followers of Mr. Gandhi, that are set out as the views of India. The author's probably unconscious prejudice against the Muhammadans can be gathered from the demonstrably incorrect statement that they, and not Hindus, were responsible for the murderous outbreaks at Malegaon and Chauri Chaura, to say nothing of the description of the Indian Mussalman as an anachronism. The Englishman ignorant of India, for whom this book is presumably chiefly intended, would also gather from the description that the moneylenders are mainly Mussalmans and their victims Hindus. Finally, the author, if he had worked as much among Mussalmans as he obviously has among Hindus, could hardly have remarked on the bitter distrust of the Mussalmans towards the British Government: their distrust towards their Hindu fellow countrymen is somewhat more obvious. The English reader might also be misled by the suggestion that industrialism in India is a western product, forced on an unwilling India. Most practical and patriotic Indians regard an increased industrialism as inevitable, and indeed desirable, to counteract the pressure of an ever increasing population on the land. The author agrees that if the British were to be totally removed, a lapse back to the condition of one hundred and fifty years ago would be probable, and that her case would be worse than that of China. Yet he claims that entire freedom is the only solution. His book is free from the suggestion of any such practical remedies for economic evils, as are to be found in such books as Mr. Saha's Economics of Rural Bengal, namely, compulsory consolidation of agricultural holdings, a radical treatment of land tenures in Bengal, and above all a spread of birth control. In this he is doubtless as ruthlessly idealistic and illogcally logical as his great exemplar Mr. Gandhi.

EGYPT AND GREAT BRITAIN.

It is unfortunate that the negotiations now in progress between the British and Egyptian Governments should be accompanied by public references, couched in language of unusual violence or bitterness for this country, which are concerned with personalities more than with principles. The purpose that it is hoped to serve by such means is not clear. The negotiations are taking place on the basis of proposals published a year ago, which there has been ample time to discuss, and if they could have been shown to outrage the good sense of the country as a whole, there ought to have been no difficulty in securing the downfall of the Government responsible for them. It is argued, however, that there is grave danger that the Foreign Secretary, after declaring in a formal document that the proposals made for a Treaty with Egypt represented the extreme limit to which he could recommend His Majesty's Government to go in their desire to achieve a lasting and honourable settlement of outstanding questions between Great Britain and Egypt, will go beyond that limit. Whether intemperance of speech and promiscuous denunciation of Egyptians as a whole, and the Egyptian Delegation in particular, are calculated to deter the Foreign Secretary from his alleged intention must at least be open to doubt. There can be no question, however, that they are being carried to a point which is in danger of constituting a breach of manners, and when indulged in by any responsible person inside or outside Parliament reflect on the country's reputation for hospitality. Rightly or wrongly, the Egyptian Government was invited to send Delegates to London to negotiate the terms of a treaty. It will not be without precedent, if in the course of the negotiations they try to make the best terms for themselves that they can. Such action does not necessarily reveal original sin. On the other hand, a weak or foolish surrender on the part of the British negotiators, or a deliberate breach of the pledge given to the country in the words used by Mr. Henderson in his letter of August 3 is a matter between the British electorate and its Government alone. If the terms of a treaty are found to constitute a betrayal of Great Britain's vital interests, the fault will lie not with Egypt but with the British Government of the day.

These Anglo-Egyptian negotiations would seem to have provided the solitary instance where it has become necessary to remind the British nation of its reputation for "playing the game." During the nine or ten years that immediately followed the War some fairly hard blows have been exchanged between the Egyptian Wafd and Great Britain. Neither side has any difficulty in persuading itself that it was wholly in the right and its opponent wholly in the wrong. In 1928 the Wafd went out into the Egyptian political wilderness and remained there until last year. When it was triumphantly returned to power last December, it found itself confronted with an offer of a treaty with Great Britain on terms which it had had no previous opportunity of obtaining. From that moment there has been a noticeable cessation of all overt antagonism towards Great Britain. In matters of purely Egyptian concern certain disciplinary action may have been taken which has appeared to suggest that the friends of Great Britain in Egypt have no claims on the friendship of the Egyptian Government: but a similar policy attaches to the political system of many European countries, and need not be invested with any special viciousness when adopted in Egypt. The invitation to send a Delegation to London to negotiate a treaty was accepted with entirely correct expressions of friendly intentions and good will, and no public utterance bearing on the subject of the negotiations has, so far as is known in this country, been made to which any legitimate exception could be taken by the other party to a conference which has been summoned as between equals. It is quite true that, if the past is carefully raked up, a case for considerable misgiving can be made out, which would at once be countered with equal conviction and possibly greater vehemence. The dictates of fair play, however, prescribe that at this particular stage the past should be allowed scrupulously to remain buried. The proposals made last year by the British Government—for which the Egyptians cannot be blamed—open up the possibility of a new era. It may be that they will be found by the Wafd to place Anglo-Egyptian relations on such a different footing, that the good haters of yesterday become the good friends of to-morrow. In any case both common sense and the instinct of "playing the game" prompt the leaving open of the door of opportunity as wide as possible. If British trust should prove to have been misplaced, it does not necessarily follow that Great Britain, and not Egypt, will be the sufferer in the long run.

If fair play has to be urged on the British side, it may also be commended to the Egyptians. It would be idle to deny that misgivings have been roused in Great Britain by the complete absence of any gesture suggestive of the reciprocation of the overtures for really cordial relations that the draft proposals connote. A departure from stilted, albeit correct phraseology; the avoidance for the time being of changes in the Civil Service or in the ranks of diplomacy that were liable to be interpreted as the singling out for official displeasure of those who have been consistent advocates of Anglo-Egyptian friendship—in a variety of ways the ground might have been cut away from under the feet of extremists, who, as is abundantly manifest, are to be met with in both countries. No permanent harm, however, will have been done, if sincerity and the facing of realities inspire the work of the Conference. The Egyptians are well aware that they cannot call upon the British Empire to commit suicide by endangering the security of its vital trade artery, the Suez Canal. They aspire, very rightly, firmly planted as they are upon it, to be one day as efficient guardians of that highway as the British can be from a distance. The facing of realities will prompt them to await the inevitable acceptance of an obvious fact rather than to attempt to force belief in a theory which is palpably untenable. It is the essence of the proposed treaty that it should be in force for a stated period, and thereupon be subjected to reconsideration in the light of possible new factors. For this reason the treaty need not necessarily stereotype Anglo-Egyptian relations for all time. It requires little imagination to appreciate the significance to Egypt, at the time of reconsideration, of an argument that could point to a period of unquestionable loyalty to the British Empire's interests, without derogation to Egypt's interests, or to realize the harm that would be done to the Egyptian cause, if countenance were lent at this stage to the contention of extremists that good haters of yesterday can never be true friends to-morrow.

BULGARIA.

Sofia, April 3.

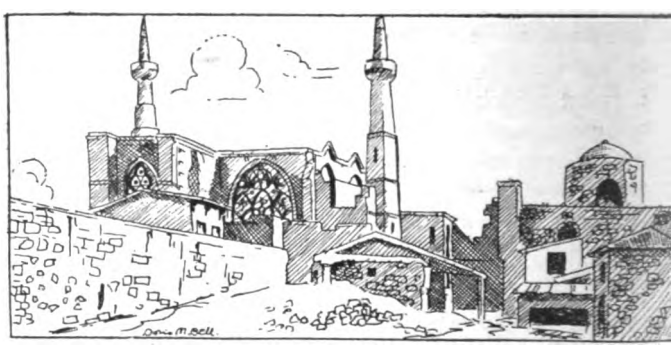
Economics and Politics.

The crisis, which is both political and economic, continues throughout the country. Its repercussions, which have been confined up to the present to influential quarters, are now spreading to the people. The illusion which has succeeded the hopes recently entertained of the long awaited change in the Government has heightened the impatience of public opinion, which is beginning to growl against the present state of things. And the country seems deeply divided between interested defenders and determined opponents of the Government.

Politically, the crisis is caused by the weakening—the wear and tear—of the Government whose particular group in the Sobranye is leading towards the disintegration of what is called the Democratic Entente; and also by the efforts of the Opposition groups to unite and to form a ministerial combination which could succeed this bizarre group which is neither united nor a coalition of parties. In this direction the Agrarians have taken the initiative, but their invitation to the other groups in the Sobranye has not had the desired effect, owing to the profound distrust which still exists among politicians towards this party of ill repute. A check to the Agrarian initiative was provided by the refusal of the Socialists, who, by reason of their insignificance, wished to reserve for themselves the direction of the future anti-Ententist *bloc*. It was further provided by the indecision of the Democrats, whose chief, M. Malinoff, is the man generally marked out to form the Government of to-morrow; they were unwilling to launch themselves into a remorseless struggle without first exhausting all possibilities of reaching a conciliatory combination comprising equally all elements of the Opposition and of the present Government. The idea of M. Malinoff, shared by all reasonable men, has just been taken up by the Radicals, who recently adopted, at their annual Congress, a motion in which they proclaim "the necessity of a regrouping of the forces of the Bulgarian democracy in a *bloc* which, basing itself on the Constitution and on the parliamentary régime and in working for national reconciliation, will be able to establish a minimum programme of urgent reforms, financial, economic and political, such as will save the country from the catastrophe with which it is threatened."

This word "catastrophe" is at the moment the most widely heard word in Bulgaria. One hears it everywhere at public meetings which are organised, not, as is customary, by the politicians, but by the artisans and the merchants in the country. Everyone who is suffering from the unprecedented stagnation of business is protesting, and, naturally, protesting against the Government, which it charges, rightly or wrongly, with having practised in political and financial matters a lazy and careless policy. The signal for the vast movement of public protest against the Government was given by the Chamber of Commerce and Industry of Plovdiv, which, at its last session, addressed a formal protest to the President of the Council and to the Minister of Finance, urging them to bestir themselves, and to take, however belatedly, the necessary measures for the menacing situation. This gesture was supported by other Chambers of Commerce and Industry, and at once the discontent of the commercial and working classes, and of the mass of people directly affected, took on an anti-Governmental orientation. One saw expanding the irrational conviction that the first thing to do to remedy the crisis, in however small a way, was to provoke a change in the Ministry. Also in all the public meetings which have been organised in the last few days by economic corporations in a large number of towns, notably at Sofia, Plovdiv, Bourgas, Stara-Zagora, Chirpan, Gabravo, Tirnovo, Stanimaka, and so forth, the Government has been sternly criticised, and held responsible for the misfortunes of the country.

The Government is doing all it can to remedy the deplorable situation and it has just decided on the application of economic and financial measures, but it is scarcely probable that it will succeed in smoothing down the movement and calming the masses. Rather is it probable that this time the economic combined with the political factor will break up the resistance of existing parties and lead to a regrouping of the political forces of the country.



CYPRUS.

Nicosia, April 1.

The New Education Law.

The working of the new Education Law continues to be a very sore subject. The Governor having appointed new councillors under its provisions, a first meeting was held under the chairmanship of Canon Newham. The Archimandrite Philotheos, being present on behalf of the Greek Archbishop, began by reading a formal protest from his Eminence, dated March 28, regretting that instead of increasing the powers of Greek representatives, in accordance with British principles, the new law had diminished them, and requesting that the protest might be transmitted to the Colonial Minister. Other business was

then transacted, including the appointment of six District School Committees; and loans were voted for various new school buildings when circumstances permit.

Visit of Aeroplanes to Cyprus.

It is very rarely that aviators from any quarter visit the island. The announcement that two British aeroplanes would arrive at a point five miles from Nicosia, on the Morphou Road, on March 20, at 3 p.m., therefore, caused no little excitement. They arrived at the appointed time and place, after a six hours' flight from Cairo. A large number of spectators had assembled at the spot, to which Sir Ronald and Lady Storrs motored. The greatest interest was taken by all. The officers were entertained by the Governor, and the crews at police quarters. On March 27 the smaller of the two aeroplanes carried out a number of evolutions before a large concourse of spectators at a low altitude, and next day they both left the island.

The Mail Service.

The Government invite tenders for a service by steamer between Cyprus and Egypt, which must be lodged before August 1. The contract will be for not less than three years, and begins as from December 30 next. The steamship of not less than 2,000 tons gross must have first-class accommodation for 200 passengers from June to September, and less from October to May; and also space for cargo. It will arrive weekly, on Thursday 2 p.m. at Famagusta, and leave Limassol 10 p.m. Friday, calling once a month also at Papho. It will not visit Syria, as hitherto.

Cyprus Cigarettes.

Probably many persons in England will be glad to hear that cigarettes made from Cyprus grown tobacco can now be obtained. The *Cyprus Gazette* quotes information that the preferential rate of duty makes it possible to sell such cigarettes at 4s. the 100, which is considerably less than the price of so-called "Egyptian," or Turkish, cigarettes. There are said to be considerable stocks of Cyprus tobacco of good quality now available. The Trade Commissioner in London, Major Flinn, will, no doubt, take active measures to promote the sale of these cigarettes.

Cyprus Goats.

The milk of Cyprus goats and sheep is good, and is largely consumed both fresh and in cheese; but the breeds are susceptible of considerable improvement. The Government has imported twelve Maltese goats, eight female and four males, with a view to improving the local species, both as regards milking and domestication. It is also considered that the improved breed will be less destructive of forests. They have been sent to the Government farm at Athalassa, near Nicosia.

A Loss to Cyprus.

The death, on March 30, of the Hon. M. H. Michaïlides, M.L.C., at Limassol, has deprived Cyprus of one of her best citizens and Councillors, who has served the island in many capacities. His only son, Hercules, has been called to the Bar in England, and his three daughters were for some years at schools in London, all becoming distinguished English scholars. The eldest is married to Mr. Zenon Rossides, who acted as Secretary to the late Greek deputation. Mr. and Mrs. Rossides are both still in London.

General News.

On March 25 the Centenary of Greek Independence was celebrated in all towns, and many villages, from an early hour. Services were held in churches, meetings held, speeches made, and resolutions passed; sports and amusements were the order of the day.

On Sunday, March 23, prayers were offered in all Greek churches for the oppressed Russian Church, under Soviet persecution.

Mr. B. Dickenson, Senior Puisne Judge of the Supreme Court, has been appointed to Kenya as from February 3.

EGYPT.

Cairo, April 5.

The British Chamber of Commerce.

It is many years since there has been made such a clear statement of the point of view of the British community in regard to the proposed political and fiscal changes as was afforded in the speech delivered by Sir Henry Barker, Chairman of the British Chamber of Commerce, at the annual general meeting held in Alexandria earlier in the week. To use Sir Henry's own opening words—after he had paid a well-merited tribute to the interest taken in, and the assistance given to British commerce by Lord Lloyd—what he said is what all the members of the British community, as well as those of the foreign communities, feel about the recent political events and their bearing on the future of the community in Egypt. He could not have found more moderate or telling terms in which to express the fears and requirements of the foreign traders of Egypt, and his remarks have made such an impression on foreign circles that copious extracts have been cabled by their representatives in Egypt to the leading Continental papers.

The European communities have never really objected to the principle of the transfer of penal jurisdiction in the matter of foreigners from the Consular to the Mixed Courts, nor to the application of reasonable and necessary taxation to foreign residents. There is much to be said in favour of the former, and the latter is after all but equitable, for, as Sir Henry Barker very rightly said, no man can seriously contend that he has a right to live in any country and not subscribe his fair share to its upkeep. But the prosperity of Egypt is mainly due to the foreign communities, without whose activities and capital it would have been impossible to regenerate the country and bring it to its present satisfactory condition. It is only fair, therefore, that, if the privileged position under which those communities have been able to contribute so strikingly to the well-being of Egypt, is in any way to be altered, such alteration should be accompanied by guarantees of a nature to afford, in the new circumstances, to those communities the same assistance as to the safety of their persons and property as well as the same means of carrying on, without undue interference, their daily activities as they have enjoyed in the past.

All that the foreign communities in Egypt ask is that in return for the renunciation of the privileges hitherto enjoyed under the Capitulations, which, they readily admit, need adjustment to meet modern conditions, there shall be, on the one hand, guarantees against arbitrary action and abuse in the direction of a proper reorganisation with European staff of the Public Prosecutor's office and a strengthening of the European element in the police, and, on the other hand, some form of protection against indiscriminate incidence in the application of taxation and some assurance on the proper spending of such taxes as they pay.

If Sir Henry has felt impelled to call attention in so public a manner to the fears and requirements of the community which he represents, it is because during the past nine months there have been various symptoms giving the impression of an inclination on the part of the British authorities to disregard the interests of the British community in Egypt—which are identical with those of other foreign communities—and subordinate them to the conclusion of an agreement on the Egyptian question, and because recent acts of the Egyptian Administration have seemed to have revealed a distinctly anti-European and particularly an anti-British tendency.

The Belgian State Visit.

The Queen of the Belgians left Alexandria on April 3 on her way back to Brussels. The visit of the Belgian Sovereigns has been in every respect a splendid success. They themselves expressed themselves as delighted at all the arrangements made for their comfort which went without a hitch throughout the month their visit, official and private, lasted. While the execution of the programme reflects the greatest credit on the officials responsible, both Belgian and Egyptian, the organisation owes its success to the thoroughness with which King Fuad personally directed the arrangements for his guests. Particularly was his forethought apparent in the matter of the Kassed Kheir, the Royal yacht on which the Queen made her voyage up the Nile to Luxor.

Gilbert and Sullivan.

An amateur performance of Gilbert and Sullivan's "Pirates of Penzance" was given this week at the Royal Opera House in aid of the Bursary Fund of the English School, Bulac. The Cairo Amateur Dramatic and Musical Society is again to be congratulated on a successful production, guided by Mr. Workman, the son of the well-known member of the D'Oyly Carte Troupe. This is the third time this popular comic opera has been produced in Cairo since the beginning of the century, the previous performances taking place in 1905 and 1910.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, March 27.

Unrest and Revolution.

Much the most important political speech of the week, if not the only important one, has been the one delivered by our own Governor, addressing the Bengal Legislative Council on the subject of the Bengal Criminal Law Amendment Act of 1925, which is due to expire on April 23. This Act grants to the executive power of arrest and detention without trial, that power having been forged to deal with revolutionary organisations that had violence and assassination for their objects. It is now proposed to repeal that provision, or not to seek a renewal of it, it having for three years or so been found possible to control revolutionary movement in Bengal without having recourse to the power of detention without trial. The Act also empowers the Executive to appoint Commissioners to try specific offenders, or offences, if one may speak of trying the offence. These powers have been used solely for the trial of persons for specific acts of a terrorist nature. The Governor explained to the Legislative Council that his Government do no feel justified in recommending the abandonment of these powers. Legislation for their continuance will accordingly be placed before the House. April 1 has been allotted for the discussion of a Bill for the repeal of the sections of the Act that provide for detention without trial. One supposes that legislative bodies cannot be expected not to meet on April 1; but perhaps it would be better, if they did not.

Indian Army Expenditure.

"Any new constitution," said Sir Arthur Froom a week ago in Delhi, saying a thing that has been said and repeated in these letters, "is likely to cost more than the present, and where is the money to come from except by taxation? Many, I know, hold the view that with self-government the Army expenditure will drop by crores of rupees Is it expected that the Indianisation of the Army in India—and here let me say that I have no quarrel at all with those who look forward to India's Army being efficiently officered by her own nationals—will provide a less costly weapon of defence? I doubt it. It must be self-evident to everyone that if and when the Indianisation of India's Army is complete, there will be not only the North-West Frontier to watch, but also a long stretch of frontier on the north to protect and guard, which will require a very much larger army than is in India to-day." If the truth of that could be taken in by such as Sir Tej Bahadur Sapru, Sir Ali Imam, and other leaders, we should hear less of India's 'aspirations," for India's "aspirations" are based largely, I well know, on the belief that a smaller army, and one Indianised and proportionally cheaper, would suffice. The leaders dream dreams of fifteen or twenty crores a year to spend on "nation building" services. If they knew that the fact is that they will have to spend more on the Army, and that they might only too easily have a war-bill to meet, they could dream no more such dreams. The British-Indian Government might cut down the Army expenditure considerably, and keep it down for a period of years; for it is strong enough to face that risk; but no Dominion Government would be strong enough.

The Round Table Conference.

Mr. Ramaswami Mudaliar, moving a resolution in the Council of State recommending that the Round Table Conference should be convened as early as possible, said, it is reported, "that the Conference offer as embodied in the Viceroy's historic pronouncement of October 31, had the support of all shades of public opinion in the country, but Government's dilatoriness in the matter of the appointment of that Conference and in indicating the probable time of its appointment had caused reasonable suspicion and alarm in the public mind. He strongly urged an early materialisation of the Conference offer, especially in view of the recent developments towards civil disobedience, and maintained that an early announcement of the precise date of the Conference would serve as a counterblast to civil disobedience propaganda, and would bring hope to those who had despaired of British promises and constitutional methods of advancement."

"Industrious Apprentices."

The British Government and the Government of India must now have been aware for months that all India wanted the date of the Round Table Conference fixed, and the *personnel* chosen, quickly; so that it would appear that only confused thinking can have dictated the opinion that to act so was impossible, or that it would be unwise. Why so? The date could have been fixed months ago; it was not beyond the wit of man to calculate what time the preliminary work would take. It could have been decided months ago—as far ahead as you liked—when the Round Table Conference would be held. That would have given India something to talk about—the date chosen—and that itself would have been a gain. As to the *personnel*, it cannot be much better known now than it was a year ago who are the most influential among the saner of India's political leaders; who, in other words, *must* be invited to the Conference. *Those* could have been invited months ago. That would have made another thing for India to talk about. The list of persons invited could have been published as not final: it could have been given out that the Governments would consider representations on the subject. Others would be invited, it might have been announced, if that seemed good. The impression one has drawn is that matters are too much in the hands of those who may be thought of, not as men anyway approaching the calibre of the Lord Balfour whom England has just lost, but as industrious apprentices. The Indian problem was certainly big and difficult enough to have been committed to the hands of a Lord Balfour.

Weak Assumptions.

One has drawn the impression also that the heads of those to whom the problem has been committed are full of weak and wrong assumptions, both as to what must be done before the Conference meets, and as to the course that it is likely to take, when it does meet. Is it assumed that the British Government, with the Statutory Commission's Report at last in its hands, *must* consult the Government of India, and the Government of India, the Provincial Governments? If that is assumed, then it is assumed that at the Conference the Princes and political leaders from India must confront the Prime Minister and the Secretary of State, these two having the Report in their hands; these two saying: "This Report must be both the starting-point and the end of all our discussing." That would be quite wrong. The Indian leaders would only have to say, and would say: "We care nothing for that Report. The Commission, whose work it is, was heavily boycotted in India. Besides that, the Chairman was a lawyer, and we cannot be bound by the legal view of Indian things. We care nothing, then, for that Report: we have come here to tell you freely what we think the Constitution should be. Pray put that Report away." The Indian leaders will say that. There is no answer to that either, but to put the Report away. Or obstinately to insist upon discussing it, and nothing else, which would be to make the Round Table Conference end with things worse than they are now. The British Cabinet must be prepared to hear what India has got to propose, relying upon being guided, not by any Report, and what it says, but by officials from India and other experienced persons, present in the Conference room, or round the corner.

Resignations.

A newspaper that has come in since I began to write

Digitized by Google

reports that many village officials who resigned just as Mr. Gandhi was about to enter their villages, hardly waited for the dust of the feet of his lagging followers to subside, before they asked that their resignations might be considered as withdrawn, the said resignations having been handed in under local pressure. I have not yet heard whether that dealer in liquor, who said he would sell no more liquor, sold some that evening, or waited till the next morning. They are all such children. When you know them well, nothing they do makes you angry. You only laugh. And the way they laugh back to you!

THE SITUATION IN INDIA.

By L. F. Morshead, C.S.I.

In the turmoil and vicissitudes of the political situation in India we must not forget that the essential factors remain the same. We purpose to give Indians self-government, but we do not wish to see the Imperial connexion severed, and we have to safeguard our responsibilities as trustees. Our effort to combine these aims has led to embarrassments, of which Mr. Gandhi's proceedings are the latest sensational incident. It may, therefore, be worth while to bring to notice some correspondence, which was undertaken with the aim of finding a different line of advance, to be directed towards the achievement of an All-India Union. If we can bring about with the help of Indians such a Union, and enable India to stand without assistance, we shall between us have accomplished a bigger thing than our government of the country for a century or more. It is the right culmination of our rule.

The correspondence is with an Indian in British India, a shrewd observer, in touch with Indian politics. It began by my sending to him for criticism a book I published a few years ago. In this book an attempt was made to estimate Indian feeling in relation to British influence, and to gauge the difficulties experienced by Indians in reconciling our Western education with the ties of Indian tradition. The conclusions reached need not be reproduced. My correspondent, after commenting on the book, gave me his own views, and added a warning that Indian "Nationalism," although rudimentary and mainly a reaction to British occupation, inspired a passion, nevertheless, which ought not to be ignored. I wrote then to describe the British attitude, and the obstacles which caused us to hesitate to give effect to Indian aspirations. The letter developed into an open letter, suggesting that a line of advance should be sought outside the present conflicts and commitments: in brief, that the possibilities of the Native State system should be explored in alternative to the possibilities of the British Indian system. The letter elicited a qualified, but not unfavourable opinion from those to whom it was communicated, along with an inquiry whether the case had been presented to the Statutory Commission. It had not been presented, because it had seemed to me to be outside the scope of the Commission, but the inquiry led me to attempt a statement of the case in the form of an open letter to an Englishman, as it had been stated in that way to an Indian in British India. This letter deals with criticisms made by those to whom the subject has been mooted from time to time.

The letters are now offered for publication. It is not necessary to give the whole of the first. The extracts begin at the point at which the obstacles I mentioned are taken into account.

Letter to an Indian.

March, 1929.

. . . What are these obstacles? I will state them as they occur to me rather than in any order of importance. There are, first, the relations between you and us and the Princes. Next, the danger of communal disturbances, the interests of the weaker communities and of the toiling millions. Next, our trade and investments, which are not dwelt upon a great deal, but must be at the back of our minds. Next, the question of defence. And, finally, our commitment to the formula of 1917.

As to the Princes a move has been made already, if the report be correct that the All-Parties Conference, at the suggestion of the wing led by Sir Tej Bahadur Sapru, have invited an exchange of views with the Princes, and that the Princes are willing to entertain the suggestion. That, in my humble judgment, is the most statesmanlike move made yet, for the simple reason that British India ought to have the Princes with it, not against it. What the upshot has been I have not seen, but it is plainly to the interest of India that the willingness on both sides should continue.

As to communal dissension I agree that communal electorates have accentuated communal feeling. But would the situation have been better without them? Communal electorates were adopted before Dyarchy, as a concession to Muhammadan insistence, and were accepted, in deference, I suppose, to the same insistence, in the Congress League scheme. So they were reluctantly continued under Dyarchy. But would there not have been as much or more trouble, if they had been discontinued? What started the accentuation was the scramble for powers when the distribution was in process. I agree with you about that. The leaders had to show that they were supported, and had to work up their followers in order to make plain the support. The followers took to rioting amongst themselves. As soon as the peace was broken the matter passed from politics to administration; and the extent to which the rioting spread and continued implies a weakness in the administrative control of our Governments under Dyarchy. But does not the root of the trouble lie in the fact of the dissension itself? The lesson of the last few years has been that an old antagonism, though dormant, is still alive, and can be stirred into violent activity. That is a lesson of value to India itself. The danger is there, and it is a danger with which India will have to reckon.

I think the Montagu-Chelmsford report was right in questioning the value of compacts between the Hindu and Muhammadan leaders. Those compacts are made in the face of the enemy, the British—I speak figuratively, as we have no wish to be the enemy—they do not bind the followers: and they are liable to fly asunder when the pressure under which they were entered into is relaxed. They are not of permanent value as a safeguard. Similar compacts made in the face of the same sort of pressure have failed us in our own history.

Nor do I see how any tinkering with electorates or safeguards by representation can avert the danger. If the cleavage was one of opinions which change, then the minority of to-day might be the majority of to-morrow. But the cleavage between Hindus and Muhammadans is not one of opinion but of religion. It is too deep-seated. A Muhammadan minority can never become a majority under any representative system: for if it became one, the system would have ceased to be representative. Such a minority can only maintain its interests against a prevailing majority by association with other minorities. That is a precarious position, liable to be upset whenever the prevailing majority can buy off a party to the association. Under such a system there is an indifferent security for minority interests, little peace or stability of government, a preoccupation with intrigues. Has not that been made evident in France and on the Continent, wherever there has been a multiplication of groups? An old cleavage is not likely to be closed up in that way.

A representative Assembly is not by its nature impartial. Party and partiality go together. The party or parties in power are committed to their own interests and their own views. The leaders must pay more heed to their supporters than to the opposition. In our own history the tyranny of Parliaments has equalled, even exceeded, the tyranny of Kings. That happened many years ago, but it is still possible for a number of men in power to exercise oppression as much as one. Nor are the Courts a safeguard to more than a limited extent. It is their business to apply the law, not to make it: and they can only apply the law, when set in motion. If it is the business of the Government to set them in motion, the Government may for political reasons wish to be lenient to some and severe upon others: if it rests with a party aggrieved, he has to consider how far his purse will carry him against his opponent: and all upon the assumption that the Courts are impartial, which they have not always been with us. When feeling breaks out into violence, the fear of punishment in the Courts is not effective as a deterrent. You and I have seen that too frequently in India.

The right remedy is to see that feeling is not aroused: that no community, however strong or numerous, is permitted by reason of its strength and numbers to take advantage of any other community: that provocation and aggression are disallowed: that so cause may not arise for the sense of resentment which breeds reprisals and counter-reprisals, whereby the bitterness of feeling is kept alive: that the energies of the different communities are not dissipated in antagonism to each other, but are harnessed to the service of the State.

Now, any sort of Government ought to be able to see that provocation and aggression as between the members of different communities are not allowed, and to be able to enforce its regulations through the Courts. But under a representative system there is a danger of the revival of feeling at each recurrent election: and if a community in a permanent majority gains power time after time, it is not in human nature to expect that it will not assume a privileged position. It can hardly fail that a sense of resentment is aroused.

I do not wish to belittle the services of either a representative Assembly or of the Courts. The great virtue of an Assembly is that it provides a safety valve for grievances and that it can exercise a control over taxation and expenditure. But to ensure fair play

Digitized by Google

between communities there is need for an authority above politics, free to study the interests of the State without the ties of party obligations. There is no other way that I can see. In two great crises in our own history when feeling ran high, we were saved not by the Parliament nor by the Courts, but by the individual above both.

National feeling, of course, helps. In times of national emergency it has brought our parties together, as Indian nationalism in opposition to us has from time to time united yours. National feeling with us has a more permanent influence, in that each of our parties seeks to persuade the public that its own policy will be best for the country as a whole. It acts as a check upon party exuberance in that way. But Indian nationalism will not help you in particular States. You will have to develop a State nationalism to obtain a check that will be of any use.

In my book I have suggested that it does not matter whether the authority above politics is a Governor or a President or a Prince. But it does matter. A Governor implies an authority appointed from outside the State. He does not belong to the State: his interests are not wholly those of the State. From a sentimental point of view a State ought to be able to keep in check its own elements of disorder, without a foreign element in its Government. From a practical point of view a Governor will be in a weak position, because, being appointed from outside, he will not have the attachment of the people behind him, as he should have, if he belonged to them. His policy must be to avoid asserting his authority as far as possible, knowing that whenever he passes from advice to action he will concentrate the animus of the party in power against himself: that his motives will be misrepresented to the public, and that to be sure of the support of those who sent him he must have convincing justification. He will have such justification when trouble has developed, but if he seeks to intervene in order to prevent the development, he must be able to satisfy those who sent him that his judgment is sufficient to stand the adverse criticism that will be levelled against it. That naturally induces hesitation and delay. Other causes operate in the same direction. His general policy must be to interfere as little as possible with the self-government of the State. If his advice is repeatedly disregarded, he still can only go beyond advice on rare occasions. Otherwise he will be charged with reducing self-government to a nullity. If your people wish to have their own way about the constitution, they will surely wish to have it with the Governor afterwards.

A President again is not above politics. He was intended to be in the United States, but actually he has become the nominee of the party machine. In France he has become a figurehead. In the South American republics the strongest candidate often stormed the position, and the opponents had to fly the country. I dare say that would not happen in India; but there is this dilemma in front of the untried experiment, namely, that a proved leader who has come to the front in politics, would be unable to break with his following, whilst one who was not a proved leader would not be able to assert himself. There might be exceptions, but on the average I cannot help thinking that it would be so.

I should say, then, that a Governor would be impartial, but on the average weak; a President would be stronger but on the average partial. His strength might depend upon his partiality. What is wanted is an authority who starts free to use his own judgment, and is in a position to do so.

You get that better with a Prince. Unlike a Governor, he starts with the support of the attachment of the people, as belonging to him. Unlike a President, he can study the interests of the State without party pre-occupations. His solicitude for the prevention of discord is less encumbered, and he gains a continuity of experience in the practice of that prevention which is denied to them. He provides a focus for that national feeling which I have mentioned as a secondary check upon dissension. Popular sentiment does not rally about a Governor or about a President, as it does about a Prince. Compare our King in that respect with the President of any country you may choose to name.

(To be continued.)

INDIA IN PARLIAMENT.

In the House of Commons on Monday the Secretary of State for India announced that he had consulted the Chairman of the Statutory Commission and was now able to say that the Statutory Commission's Report would be issued in two volumes, with an interval between the publication of the first and the second. Almost the whole of the first volume was in the printer's hands. The second volume was not so far advanced. He hoped to be able to make a more definite announcement as to dates of publication when the House resumed after Easter. No time was being wasted in the completion of a very heavy task.

In reply to other questions, Mr. Benn said that the movement initiated by Mr. Gandhi had developed generally along the lines which were anticipated. Broadly speaking, it might be said that the defiance of the salt law had in itself not caused much trouble. Its real significance lay in the attempt to use it as a means of rousing public sentiment to a dangerous pitch, and in one or two places the public demonstrations had, he regretted to say, resulted in clashes with the police. It was too early yet to give an appreciation of the effects of this campaign, but he had every confidence that the steps taken by the Government of India would be adequate to deal with the situation as it might develop.

CORRESPONDENCE

INDIGENOUS RULE IN INDIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I regret that absence from home and loss of the original notice to which Mr. Rushbrook Williams in your issue of March 27 takes exception have delayed the reply to which he is entitled. Objections to book notices have generally so little interest except to the author and to the writer of the notice concerned that I shall be as brief as possible. I should premise that no imputation was made against Mr. Rushbrook Williams' position as a professional historian, though I certainly regarded the brochure in question as mainly, and quite properly, political.

Mr. Rushbrook Williams asks whether I think that Dravidian culture has been confined always to the South. I do not, but most people are agreed that it was, and is, much stronger in the South than in the North. Let us take one authority only, but the leading one as regards village communities. Baden-Powell writes ("Village Communities of India") that in Northern India the Dravidians were overborne as a distinct element by the Aryans and other later-coming races. Such early Dravidians as were in Upper India became fused with these other races so that no trace of a separate language remained. The Southern Dravidians never were disturbed by any extensive immigration, and retained a distinctive character. Again, he points out that, while the original Dravidian form of "Severalty" or Raiyatwari villages fills India south of the Vindhyan hills, Aryan domination and that of the later tribes produced in the North the more complete or cohesive form of joint-village. Mr. Rushbrook Williams considers, I understand, that what he agrees to be a pre-eminently Dravidian institution remains stronger in the Indo-Aryan North than in the Dravidian South. It is a matter of opinion, in which doubtless one is liable to be influenced by one's own experience of villages.

Mr. Rushbrook Williams considers that I have fallen into what he calls the modern error of imagining that the Indian States were merely constituted out of fragments of the Mughal Empire. One does not need to be a professional historian to perceive that that Empire was not constituted *ex nihilo*. It doubtless contained elements which persisted after its dissolution and are to be found in Indian States as in the British Provinces. But an authority whom Mr. Rushbrook Williams probably will not dispute, Mr. Nicholson in "Scraps of Paper," describes the State with which Mr. Rushbrook Williams has been himself specially connected as "carved out of the Mughal Empire," and, in a general sense, this is true of most of the Indian States, always excepting those of Rajputana.

Finally, I understand Mr. Rushbrook Williams to object to the general statement that the Emperors were "lords of the soil." Other authorities do not seem to agree with him. Smith ("Early India") says: "The Native Law of India has always recognised agricultural land as being Crown property." Moreland ("Agrarian System of Moslem India"), while observing that modern writers appear inclined to take sides on the question whether the land under the ancient Hindu system was owned by King or peasant, says: "If the rights in question amounted only to occupancy during the King's pleasure, there is complete continuity between the Hindu period and the Moslem." Finally, Mr. Chudgar, who cannot be suspected of being partial to the rights of Princes, says ("Indian Princes"): "Theoretically all lands belong to the State." The fact that the land is in practice assigned, or held feudally, or permanently occupied by cultivators, does not affect the general theory.

I hope that I have not, writing without the original note, omitted any of Mr. Rushbrook Williams' points, none of which seems to affect the value of his pamphlet.—I am, etc., THE WRITER OF THE NOTICE.

THE PALESTINE COMMISSION'S REPORT.

[*We append official Zionist and Arab comments upon the Report of the Palestine Commission of Inquiry.*—ED.]

The Zionist View.

The following letter appeared in the *Manchester Guardian* of April 11 from Dr. Chaim Weizmann, who wrote from the Zionist Organisation, 77, Great Russell Street, W.C.1:—

As President of the Jewish Agency for Palestine, it is my duty to lay before the British public a statement concerning some of the points raised by the "Report of the Commission on the Palestine Disturbances of August, 1929."

The task set to the Commission by His Majesty's Government was to "inquire into the immediate causes which led to the recent outbreak in Palestine and to make recommendations as to the steps necessary to avoid a recurrence." The Commissioners have found that "the outbreak in Jerusalem . . . was from the beginning an attack by Arabs on Jews," and that the further riots also "took the form, for the most part, of a vicious attack by Arabs on Jews accompanied by a wanton destruction of Jewish property." We never doubted that this was the case, but we welcome the facts having now been officially established.

The Prime Minister stated in the House of Commons on April 3 that the Government is now studying the various recommendations of the Commission with a view to dealing with the immediate causes of the outbreak and to preventing a recurrence. We have full confidence that the question of security will be satisfactorily solved by His Majesty's Government.

While we are by no means prepared to accept all the findings of the Commission upon the immediate causes of, and responsibility for, the outbreak, it is the part of the report that goes beyond the terms of reference laid down by the Secretary of State which, in our view, most urgently calls for a reply. The Commission has thought it necessary to enter upon major questions of policy, such as land settlement and immigration matters reserved to His Majesty's Government, and (with the exception of Mr. Snell, whose "Note of Reservations" is a document alive with human sympathy) the Commissioners have done so in a manner which shows a complete lack of understanding of the world-wide Jewish problem for which a remedy is being sought in Palestine, as well as of the solemn international pledges which form the basis of Great Britain's mandatory responsibilities.

"The outbreak," says the report, "neither was, nor was intended to be, a revolt against British authority in Palestine." This statement ignores the fundamental fact that the very justification of British authority over Palestine is in the Mandate, which is the charter of the National Home for the Jewish people. The report finds the fundamental cause of the outbreak in "the Arab feeling of animosity and hostility towards the Jews, consequent on the disappointment of their political and national aspirations and the fear for their economic future," and adds in another connexion that the "great benefits" conferred on the country by Jewish immigration and Jewish work "have been, as it were, incidental to the main purpose of the enterprise, and did not form part of the original design." This is indeed an amazing comment on the policy of the Jewish National Home; for, while we are glad that our work by its very nature benefits the Arab population, and it is our intention that it should, we cannot accept the premise implied in this and other passages of the report that our right to live in Palestine is affected by fears entertained, or dependent on advantages derived, by its Arab inhabitants. On the strength of our historical connexion with Palestine, a national home was assigned to us in that country by the unanimous verdict of the civilised world. We are in Palestine "as of right, and not on sufferance."

I do not propose to deal here with all the points in the report which can, and will, be challenged on grounds of fact, but I must refer particularly to two points. It is said that "Palestine cannot support a larger agricultural population than it at present carries, unless methods of farming undergo a radical change . . ." but the very essence of our work is precisely to produce such "a radical change," and after fifty years' experience of our colonisation we affirm that room can be found for tens of thousands of additional Jewish farmers in the country without infringing on the legitimate interests of the Arabs. The report alleges against us that we are creating a landless proletariat. In reality the total of Arab tenants displaced by us is small, and the overwhelming majority of them have been, without our assistance, re-established on the land. Further, we contend that there was no connexion between these alleged agrarian grievances and the disturbances of August, 1929. Among the hundreds of Arabs who have appeared in the law courts on charges of complicity in the riots there was not one who could be described as a tenant evicted by us. Had there been even a single case of that description the most would have been made of it against us in the evidence before the Commission. The report suggests that Jewish immigration has exceeded the absorptive capacity of the country, and even charges the Jewish Agency with a serious departure from the agreement embodied in the White Paper of 1922. This allegation is based solely on the economic crisis of 1926-7. Whatever the causes of the crisis, there is no evidence of its having adversely affected the Arabs, while the Jewish unemployed were admittedly cared for by ourselves; and, whereas the richest countries in the world still struggle with acute unemployment, in Palestine there is now a shortage of labour. The balance of ten years of our work in Palestine is that, although the Jews have increased by 100,000, and the Arabs, whose numbers had previously been almost stationary, have also increased by 100,000, the entire population is now employed, at wages and under conditions much better than were ever known in Palestine before.

The alleged fears of the Arabs "for the economic future" have led three Commissioners to suggest that our immigration should be curtailed and our freedom to purchase land be restricted. There can be no national home without men and without land; and either limitation would mean for us a virtual cancelling of the policy of the Mandate, would reduce us to a position inferior to that which we face in any other country, and would turn the very name of the Jewish National Home into derision.

We welcome the declaration made by the Prime Minister on April 3 that His Majesty's Government stands by the policy of the Mandate; and we welcome its endorsement by the leaders of the two Oppositions. We Jews cannot wish for any greater assurance than we have received from the three responsible leaders of the British nation; and we look forward with the fullest confidence to the statement in which His Majesty's Government will give a detailed and concrete exposition of its future policy in Palestine.

Meantime I declare, in the name of the millions of Jews organised in the Jewish Agency for Palestine: It has been the privilege of our generation to set its hand to the work for which our ancestors have waited and prayed; and we do so under the auspices of the nation whom the united voice of the world Jewry has asked to assume the Mandate. We have laid the foundation of our National Home in Palestine. The work which we have begun we shall continue. We shall not desert our ideal and our pioneers.

The Arab View.

The following is the official view of the Palestine Arab Delegation, as announced at a meeting in the House of Commons on April 10:—

It gives the Palestine Arab Delegation great pleasure to seize this opportunity in this place to manifest the deep gratitude of the Arabs of Palestine for all that has been done in their support by Members of the two Houses of Parliament who took up their just cause and sympathised with them during the last twelve years of disappointment, anguish, and misery. In the opinion of this Delegation the services rendered by these noble members were not of benefit to the Arabs of Palestine only, but to the Jewish inhabitants and to the Palestine Administration also. For, whenever the Arabs of Palestine beheld themselves roughly handled by an oppressive policy, assaulted by the biased European Press, ignored and misunderstood by the League of Nations, provoked to the point of extreme excitement by their political antagonists in Palestine and thus driven to despair, it was always your sympathetic support that damped their excitement and gave their leaders confidence in the policy they have adopted of keeping their movement within constitutional channels.

During the last twelve years three British Commissions of Inquiry have been appointed on different dates to report on the political situation in Palestine, and all three have more or less implicitly or explicitly condemned the present policy that is being executed here. But out of the three, the last Commission of Inquiry submitted recently to His Majesty's Government the most comprehensive and exhaustive Report.

This Report may be divided into two sections, namely: their findings as to the immediate causes of the outbreak of August last and the real and fundamental causes of that and all communal disturbances in Palestine. In considering their findings with regard to the immediate causes, we are gratified to find that the accusation brought against the Arab leaders by Jews all over the world and particularly against His Eminence the Grand Mufti and the Palestine Arab Executive, that they have organised and premeditated this outbreak, were found to be without any foundation. The Commission further showed that the outbreak was an immediate explosion of previously suppressed feelings and that, had it been organised, the consequences would have been quite different. They clearly showed that after the outbreak Arab leaders stood on the side of the Government for peace and order. Blame, however, is attached to Arab leaders because they have organised public opinion to defend their rights and conducted constitutionally a political campaign and thus people were excited. If leaders are to blame because they organised public opinion and conduct constitutionally a political campaign against the policy which is believed by all to be most detrimental and destructive to their existence, then Arab leaders will accept that blame with pride. We are glad, however, to find that the Commission single out the Jewish procession of August 15 as the outstanding contributory incident to the outbreak.

But by far the more important section of this Report is that which deals with the fundamental causes of the disturbances. As a matter of fact, had not the Commission gone deep into these causes, they would have done nothing. Their Report would have been only useful to arouse antipathies, to create doubt and to fan an already existing fire into flames. In our opinion all sections concerned should be grateful to them for taking that step and giving a full and exhaustive description of the whole situation.

Those who criticised them for that were, unintentionally perhaps, advocating a future policy of drift that previously culminated in trouble. The Commission in their deeper investigations have gone down to the real seat of trouble and discontent. Jewish migration, acquisition of lands by Jews, and Arab constitutional grievances and disappointments were at the root of the trouble in Palestine.

After carefully sifting a huge mass of evidence, visiting nearly every part of Palestine, coming into direct contact with all sections of the people and particularly the simple country people and studying all sorts of documents of experts on the Arab and Zionist sides and official papers, they came to the conclusion that Jewish immigration in general was not conducted in accordance with the economic

Digitized by Google

capacities of the country, that it became a burden upon the country as a whole, that the Zionist land policy was detrimental to the rights and position of the Palestine Arab inhabitants, that Palestine contains no land for new immigrant settlers, and that its Arab inhabitants are unanimous in their demand for a representative Government. These conclusions were laid down in the Report after a detailed statement on each of the three topics has been made in which the views of the two sides were explained, weighed, studied in the light of facts and figures, and then commented upon in a way as not to leave any doubt in the minds of unbiased readers as to the truth of those conclusions.

This Delegation, however, disagrees with the Commission on certain points and recommendations, which, had they been treated in the same exhaustive manner as the other more important points were treated, they would have come to different conclusions on these points. As examples, we mention the Dead Sea Concession. The Commissioners, having studied, it seems, the Novomeysky Concession alone, without studying the proposals of other groups who offered much better terms, saw only one side of the question. Again we disagree with the Commission in that they regarded troubles as having started on August 23. We have every reason to believe, even it could be concluded from the Report's version of the story, that the troubles began on August 17, when a private quarrel between Jews and an Arab in a Jewish quarter in Jerusalem was turned by Jews into a communal attack of Jews against isolated members of the Arab communities in different Jewish quarters during the two subsequent days. Their victims then had not the slightest connexion with the first quarrel. It was this that set the conflagration ablaze, although it grew wider in dimensions on August 23. We disagree with them in their statement that Jews pay more in taxation per head than the Arabs. Arabs pay their exact proportional share in taxation, but have to provide a huge outlay for the execution of the Zionist policy which needs huge public security, establishment and Hebrew interpreters. Their recommendations, further, regarding the increase of public security and suppressing the Press are considered as detrimental to the Arabs.

In going over the reservations of Mr. Snell, the Labour Member of the Commission, this Delegation find that, whereas the Commission had recourse to a scientific method in their investigations by laying before the readers all that could be said on every question involved, supported by facts and figures and then coming to their conclusions, the reservations of Mr. Snell were substantiated by nothing of that sort and were obviously differences of opinion based on rather sentimental considerations towards one phase of the problem.

Leaving aside certain reservations of which we have just quoted some instances, Sir Walter Shaw's Commission have laid before His Majesty's Government a fair and clear description of the situation in Palestine, and have pointed out the real cause of the trouble that should be at once removed if peace and good relations are really to be established in Palestine for the good of all its inhabitants irrespective of race or creed.

As representing public opinion in Palestine, this Palestine Arab Delegation tender to Sir Walter Shaw's Commission their hearty thanks.

THE PALESTINE ARAB DELEGATION.

A meeting was held on April 10 in one of the Committee Rooms of the House of Commons to welcome the Arab Delegation that has come from Palestine and to hear statements from them. [The most important of these statements, the Delegation's comments upon the Palestine Report of Inquiry, we publish on the previous page.] Lord Brentford presided over the gathering, which included Members of both Houses of Parliament, as well as visitors.

Musa Kazim Pasha, head of the Delegation, referred to his three previous visits to London to plead against the imposition of the Zionist policy on Palestine. He intended, he said, to keep on knocking at the door of justice until it was opened to the Arabs.

The Grand Mufti spoke of the pledges given to the Arabs, which brought thousands of them into the Great War to fight with the Allies. The Balfour Declaration after the occupation of Palestine came, he said, as a grave blow, and since then the Arabs had been submitted to a policy of oppression which had deprived them of anything in the way of self-government. The application of the Zionist policy was the cause of the last outbreak. The Holy Land should be a land of peace because it was respected by the three great religions of the world. They had been asked by their country to ask for justice and the fulfilment of pledges given to them. Their demands were quite moderate. They asked for equal rights for all inhabitants of Palestine in the government of the country. Only by this means could peace be established.

Ragheb Bey Nashashibi, Mayor of Jerusalem, and Aouni Bey Abdul Hadi also spoke.

Jamal Effendi Husaini gave a brief sketch of the present position in Palestine, emphasising the distress caused to the Arabs by over-immigration of Jews and the purchase of lands formerly worked by the *fallahin*.

Lord Brentford said that there could be no more important representatives of the Arab people in Palestine than those who had just put their case before the meeting. It was, he said, highly desirable in a time of great anxiety with regard to Palestine, and while the Government was considering the Report of the recent Commission which went out to consider the causes of the sad and much-to-be-regretted disturbances that took place in that country, that the difficulties of the Arab position should also be considered. It had been said that the Commission had gone outside the exact terms of their reference and reported more than they were asked to report. He was bound to confess that a mere report on the rebellion itself would really be useless because it would leave untouched the underlying causes which might have led to riots and which might lead to riots again in the near future. Riots were not usual in the British Empire, and they did not want to see them in territory mandated to us and governed by us under mandate. He thought that matters could not be left in their present position. The mere determination to enforce a full Zionist policy on a country in which 70 per cent. of the inhabitants were bitterly opposed to it could not be allowed to continue. They were not at that meeting anti-Semitic. But they did feel that while they endeavoured to facilitate the wishes of the Jewish nation it could not be done harshly and cruelly. It was essential that we should find out the causes of dissatisfaction on one side or the other and clear dissatisfaction away. Unless something was done by the country to deal with these underlying causes we had not seen the last of the riots, and if in renewed rioting the Arabs on the other side of the Jordan were involved the matter would be much more serious than on the last occasion. He considered it to be absolutely necessary that the Government should get to the bottom of the trouble and take such measures as would ensure peace, happiness, and contentment in Palestine.

Certain questions were asked—mostly by Labour Members of Parliament; they were replied to by Jamal Effendi Husaini. Among the replies were statements to the effect that it was an economic necessity that there should be no more Jewish immigration for the present, that the present Delegation absolutely represented the wishes of the masses of Palestine, that the Arabs rejected the offer of an Arab Agency because they asked for representative government, and that the Arabs had never accepted the conditions of the Mandate.

A resolution was moved by Colonel Howard-Bury, and seconded by the Earl of Denbigh, asking the Government to go fully into Arab grievances in the hope of finding a solution which would meet the Arab claim and bring peace to Palestine. This resolution was passed *nem. con.*

NEAR AND MIDDLE EAST ASSOCIATION.

Lady Headley was at home to the Near and Middle East Association on April 11 at 98, Portland Place to hear Commendatore Luigi Villari speak on "Italy's Problems in the Near East." The Dowager Lady Boyle presided, and among those who accepted invitations to be present were: The Bulgarian Minister and Mme. Hadji Mischeff and Mlle. Margaret Mischeff, the Latvian Minister and Madame Vesmans, the Lithuanian Minister and Mme. Bisauskas, the Siamese Minister, the Persian Chargé d'Affaires and Mme. Nabavi, Signor Mamelli, Counsellor of the Italian Embassy, Herr Karl Zeileissen, M. Atlante Koci, Dr. and Frau Feine, M. Dimitri Naoumoff, Dr. van Scherpenberg, Colonel and Mme. vitez Beldy, Dr. Adoph von Halem, Lord and Lady Henry Bentinck, Viscountess Dupplin, Lord Headley, Lady Donington, Lord and Lady Strathspey and the Hon. Joan Grant, the Count and Countess Ferranti Capponi, Countess Spetia di Radione, Count de Salis, Baroness de Goldsmid, Sir Edward Boyle, Sir Henry and Lady Burt, Lady Meiklejohn, Sir Harry Eyres, Lady Hewitt, Sir Henry Clark, Lady Tighe, the Hon. Mrs. Spencer Graves, Mr. L. Cobham, Canon Douglas, Commander and Mrs. Hare, Commander and Mrs. Milman, Mr. and Mrs. Bruce Dick, Dr. Ernest Griffin, Mr. and Mrs. Hilary Jenkinson, Mme. Agresti, Miss Brunner, Mrs. Macduff, Mr. Roland Michell, Mrs. Wesley Watson, Colonel Dixon-Spain, Mrs. Scott Nelson, Major Polson Newman, Mrs. Gibson Smith, Mr. E. H. Keeling, Mrs. Sherwood Kelly, Mr. Scott Duckers, Miss Evelyn Samuel, Mr. Granville Hancock, the Rev. G. Henniker Gotley, and the Rev. Farzand Ali.

RUPERT BROOKE MEMORIAL.

Our Cairo Correspondent writes (March 29):—"Considerable progress has been made in regard to the erection of a statue to Rupert Brooke on the Island of Skyros, where he is buried, and the Cairo Committee has now issued an appeal for funds in Egypt. So far £200 have been subscribed in Greece, £300 in England, and £100 in Egypt. The total amount required is £1,200 to £1,500. This, it is hoped, will be collected by next June, when the statue, which is being executed by the eminent Athenian sculptor, Michel Tombros, will be unveiled. The scheme had its inception in Egypt. Subscriptions made payable to the Rupert Brooke Memorial Account can be sent to the National Bank of Egypt."

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

YUGOSLAV ART.

One thing above all others is manifest in the Exhibition of Yugoslav Sculpture and Painting which was opened last week on the ground-floor galleries of the Tate Gallery, Millbank, and that is, tremendous national enthusiasm. It is indeed the national idea, the national achievement of the Yugoslavs which it is hoped by this Exhibition to portray—as is obvious from the very fact that it is being held under the auspices of the "Jugoslav Society of Great Britain" and of the "Friends of Great Britain in Yugoslavia." As readers of The Near East and India very well know, this show is in the nature of a return visit for the Exhibition of British Art held last year in Liubliana, Zagreb, and Belgrade.

From the international or social point of view, therefore, this Exhibition must be of considerable value. One should, however, be on guard against making exaggerated claims for its artistic merits.

In one thing, indubitably, the Yugoslavs excel, namely, in sculpture. Here their national genius seems instinctive, their work spontaneous, their command of medium perfectly natural. Meshtrovitch and Rosanditch tower, indeed, above other artists in this Exhibition. But all the sculptors here represented have an easy technique, which is neither derivative nor forced. Particularly in the medium of wood is this command of natural resource evident; there will be many, indeed, to consider the work in local wood the most memorable thing in the Exhibition.

Meshtrovitch has numerous excellent works, and I mention as an indication more of personal preference than of unusual merit the following:—a magnificent head and shoulders of "Moses," done in marble and in the grand Rodinesque manner, a dapper and finished bust of "Sir Thomas Beecham" in bronze, a bronze-gilt portrait of "Mme. Banaz," a penetratingly human and moving "Mother and Children" and "Woman with a Harp" and "Girl with a Guitar," all three in marble. But the finest of Meshtrovitch's work her eis that which is done in wood and springs from devotional inspiration. In Room XXVIII there are wooden panels by him which will never be forgotten by those who have seen them: they express in absolutely final words, a whole history of the Christian Yugoslavs, expressed in the free terms of the twentieth century.

But Meshtrovitch is not alone; it cannot even be said that he dwarfs the other sculptors. Rosanditch, for example, if possibly less a virtuoso than the greatest Yugoslav artist, seems to have even more power of expressing feeling. One might mention, of his representations, a beautiful "Torso" in rosewood—a very fine piece of work indeed; a "Pieta" done in wood, and another "Pieta" which is an altarpiece from the Petrinovitch Mausoleum in Bratz, Dalmatia—a wood panel. Other sculptures which cannot be overlooked are various things by Augustinchitch, some very delicate and poetical work by Krshnitch, strong marine subjects by Stoyanovitch, and a couple of accomplished heads by Lukitch. Nor can one omit a *tour de force* in wood by Tone Kralye, representing the tortured face of "The Christ."

When one leaves the sculptures, however, to come to the oils, water-colours, and other exhibits, one feels at once as if the Yugoslavs, instead of continuing to speak their own language, had engaged the services of interpreters. They have not yet learned the art of expressing themselves in colour, the Continental models being almost everywhere obvious. There are exceptions to this generalisation, and there are artists who make modification necessary. Branko Popovitch, for instance, in a portrait of himself, shows no sense of difficulty in the medium of oil; Hegedushitch, for all his coloured stylisation, shows originality and spirit; Klyakovitch has a memorable picture, called "Fishermen"; Yakshitch and Preditch have an almost classical technique; Muyadzhitch has striking dignity and reserve; Vidmar, excellent audacity, and Betzitch, an attractive directness.

The water-colours are less competent than the oils; they smack of Paris and Vienna. Too often the artist takes a bridge, a stream, and a few quaint types of his particular locality in Yugoslavia, slaps them down, and relies, presumably, on the interest of local colour to attract lookers. There is little discipline in these things; the artists simply have not yet learned their job.

In sum, one feels from this Exhibition the virility, the resolve, the epic nature, if you will, of the Yugoslavs. For the lyric side, the impressionistic side they are as yet untrained—as, indeed, might reasonably be expected from their history. Yet even in the magnificently strong sculptures there are hints of a poetry, a tenderness, and a passionate insight that encourage the thought that this people is capable ultimately of rising to the heights of artistic greatness. In wood and stone they have already accomplished great things; labour, discipline, and patience will lead them to conquests in other media also. This Exhibition, which was opened on April 10, closes on May 31.

On April 10 a dinner was given at the May Fair Hotel by the Jugoslav Society of Great Britain, in connexion with the opening of the Yugoslav Art Exhibition. Lord Henry Cavendish Bentinck presided. The toast of "Yugoslav Art" was proposed by Sir John Lavery, and a translation of M. Ivan Meshtrovitch's reply was read by Mr. M. Churchin, Hon. Secretary of the kindred society in Yugoslavia. M. Branko Popovitch and Dr. Chankar also responded to the toast. The health of the Guests was proposed by the Chairman, and M. Juritch, Yugoslav Minister in London, responded.

The dinner was attended by nearly 120 members of the Jugoslav Society and guests, and among those present were, in addition to those already mentioned, the Bishop of Gloucester, Lady Cavendish Bentinck, Major-General Lord Edward Gleichen, the Dowager Lady Swaythling, Sir Alban Young, Sir Walter Napier, Lady Meiklejohn, Sir Harry Eyres, Sir Robert Witt, Lady Lavery, Lady, Lockyer, Mr. Edward Duveen, Mr. C. Aitken, Colonel A. C. Temperley, Major H. W. V. Temperley, Mr. Eric Maclagan, Dr. Churchin, Dr. B. Pouritch, Mme. Banaz, Mr. and Mrs. Seton-Watson, Mr. Roland Bryce, Miss Bryce, Rev. H. J. Fynes-Clinton, Miss C. M. Marx, Miss Stafford Northcote, Mr. W. F. Rhodes, Rev. E. St. G. and Mrs. Schomberg, Major Sim, Mr. and Mrs. Smodlaka, Mr. A. H. E. Taylor, Mrs. Carrington Wilde, M. Yovanovitch, and Mr. R. Fitzgibbon Young.

EXCAVATIONS AT KISH.

Professor S. H. Langdon lectured to the Central Asian Society on April 9 on "The Excavations at Kish, 1928-30." The lecture, which was given in the Royal Society's Hall, Burlington House, was presided over by Sir Denison Ross, who mentioned particularly Professor Langdon's profound knowledge and his courage and endurance. With the aid of many magnificent lantern slides—some of them shown for the first time in England—the lecturer spoke of pre-diluvian and post-deluvian civilisation at Kish. This civilisation, he said, was not destroyed by the Flood. The line of flood level was clearly visible in this city.

Much of the lecture was technical, and can be summarised only with injustice, but those who wish to understand exactly how the Flood—apparently a riverain matter—is interpreted by those in possession of the latest information on the site of it will eagerly await the reprinting of Professor Langdon's lecture in the Society's *Journal*.

AIR MAIL TO INDIA AND IRAQ.

The Postmaster-General draws attention to the fact that air mail letters addressed to places on the North-Western Frontier of India and in Baluchistan, and in particular to Rasmak and Quetta, should be prepaid at the lower fee of 5d. per ½ ounce, in addition to ordinary postage, and not at 7d. per ½ ounce plus ordinary postage, which covers air transmission from Karachi to Delhi. The latter service offers no advantage to letters for the destinations in question as compared with transmission by ordinary route beyond Karachi.

The public is also reminded that all air mail letters for Iraq should now be posted on Fridays for transmission by the direct Indian air service, the air fee being 3½d. per ½ ounce in addition to the ordinary postage. The air mail is due at Baghdad on the following Tuesday evening, and at Basrah on Wednesday morning.

PERSONAL AND GENERAL

TO-DAY

April 17, 1930 (New Style).
April 4, 1930 (Old Style).
Dhulqaada 18, 1348 A.H., of the Muslim Calendar.
Nisan 19, 5690, of the Jewish Calendar.
Farvardin 28, 1309, of the Persian Calendar.

Miss Vera Morrison-Scott has returned to 44, Belgrave Square from Egypt.

Lady Betty Butler, who has been on a visit to Egypt, has returned to London.

Mr. and Mrs. Raoul Foà returned last week to 95, Park Street from Egypt.

Sir Boyd Merriman, K.C., M.P., has been elected Chairman of the United Club.

Sir Harry Moorhouse arrived in London last week from a cruise to Egypt and the Mediterranean.

Sir Stanley and Lady Reed, who have been on a visit to India, are staying in the South of France until May.

Captain and Mrs. Scott MacReady have left Abbey House, Malmesbury, for a cruise in the Mediterranean in the s.s. Avondora Star.

Colonel and Mrs. Woolrych Perowne have returned to 253, St. James's Court from their visit to India, Ceylon, Palestine, and Malta.

Lieutenant-Colonel and Mrs. R. B. Charteris recently returned from India to Cahir Park, their residence in County Tipperary.

General Sir William Peyton arrived at Marseilles on April 10 in the P. and O. s.s. Naldera from Bombay. Sir James Crerar was among the passengers.

Lord and Lady Lloyd left London at the end of last week for Italy, and will not return to London until the beginning of May.

The Hon. William and Lady Beatrice Ormsby-Gore left 5, Mansfield Street on April 8 for Wootton House, Kempston, near Bedford. They expect to be away until the beginning of May.

Lady Lovat returned to 48, Bryanston Square on April 10 from Greece, and left London with Lord Lovat the same day for Scotland.

Colonel Sir Umar Hayat Khan returned from India last week and has resumed his duties as a Member of the Secretary of State's Council.

Field-Marshal Sir Claud W. Jacob, G.C.B., K.C.S.I., K.C.M.G., has consented to become President of the Territorial Army Rifle Association in succession to the late General Sir Charles C. Monro, Bt., G.C.B., G.C.S.I., G.C.M.G.

Sir Andrew Ryan had an audience of the King at Windsor Castle on April 8, and kissed hands upon his appointment as his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Jidda.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. L. Maxwell, Christchurch, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R. Deccan. Fees 40 guineas per term, including all necessary extras, with reductions for sons of Clergy and Officers. Supervised holidays arranged for boys from abroad, at seaside or elsewhere.

Sir Delves and Lady Broughton, who have been on a visit to Egypt, the Sudan, and Kenya, returned last week to 6, Hill Street, Berkeley Square.

Lady Eckstein and Miss Herminie Eckstein returned last week to 18, Park Lane from their travels in South America.

The Air Ministry announces the appointment of Air Marshal Sir Edward Leonard Ellington, K.C.B., C.M.G., C.B.E., as Principal Air Aide-de-Camp to the King (vice Air Chief Marshal Sir John Maitland Salmond, K.C.B., C.M.G., C.V.O., D.S.O.). Sir Edward commanded the Royal Air Force in the Middle East from 1922 to 1923, in India from 1923 to 1926, and in Iraq from 1926 to 1928. At the beginning of last year he was appointed Air Officer Commanding-in-Chief, Air Defence of Great Britain. He was created K.C.B. in 1920.

NEWS IN BRIEF.

The Greek Chamber last week passed the agreements on Eastern Reparations reached at The Hague Conference.

Miss Dickinson, who is well known for her social work in Bombay, has been nominated as the first woman member of the Bombay Legislative Council.

The Persian Majliss on April 2 passed a Bill for increased taxation on motor cars and other vehicles and also a Bill imposing income tax.

Soviet Press reports state that the Zaidi Imam Yahya of the Yaman has sent to the Soviet Government a present of two leopards and one monkey, which will be placed in the Zoological Gardens in Moscow.

According to present arrangements the Prince of Wales will leave Egypt for home on April 20, travelling on board a P. and O. liner. The Prince will fly to Cairo from Wady Halfa and is expected to reach there to-day.

Practically one-third of the entire population of Trans-Jordan has been mobilised in the warfare against the locust plague, which has become a serious menace, and incredible quantities of locusts have been destroyed.

An Arab was sentenced in Jerusalem on April 9 to 18 years' imprisonment. He was found guilty of the unpremeditated murder of three Jews in Jerusalem during the riots in August. Two Arabs, charged with the murder of a Jew in the riots at Haifa, were acquitted.

Sentence of death was passed last week on a Jew accused of the murder of two Arabs during the Palestine riots last August. The accused man had already been condemned to death on November 10, but on appeal a re-trial was ordered. This is the first sentence of death against a Jew in connexion with the disturbances to be confirmed.

THE WEEK AT HOME

London, Tuesday Morning.

The Budget.

Mr. Snowden's Budget was awaited with some trepidation. Now that we know the worst, the tendency is to congratulate ourselves on having escaped so lightly. Of course the usual criterion, an entirely false one, is the effect of it on one's personal position; and by that criterion it will be a popular Budget.

Criticism of it seems likely to come from two quarters, from the extreme Labour group, and from the Conservatives. The I.L.P. appear prepared to denounce it for its lack of Socialism, the Conservatives for its abundance of Socialism! Liberals and orthodox Labour like the Budget. Many of those who are non-Party applaud its methods of meeting the deficit by adding to income-tax and sur-tax, but deplore the ending of the Safeguarding Duties. Others look upon the ending of those Duties without a sigh, but deplore the tendency in England to reverse the usual cry and have representation without taxation. Grave heads are wagging over the fact that those who mostly enjoy the benefits of the social services contribute nothing to them, and are, therefore, insufficiently appreciative of them. This matter is really a psychological one. There is something in it, but I would not be prepared to say how much.

As for the argument that the Budget has been framed for electioneering purposes—that is said of every Budget; and always has a grain of truth in it.

The Naval Conference.

The cynic may say what he will about the substitution of a Three-Power Pact for the Five-Power Pact which was the aim of the Naval Confernce, but the ordinary man, who never built such hopes on the Conference as the interested politicians, is profoundly thankful that it has ended as well as it has. Admittedly, it is not very much to "write home about," that, after weeks of discussion, something has been obtained that might, presumably, have been obtained weeks ago; but how much worse it might have been!

The whole affair is not a fit one for party capital to be made out of it, and they do little good who set out against what Mr. MacDonald has accomplished that which he might have accomplished had Continental Powers been sounded before America. The Prime Minister knows might have accomplished, had Continental Powers been committed, that, as a reversion of the Conservatives' *entente* with France, the Labour Party swung possibly too far towards America. It is by such mistakes, or rather, from the lessons to be learned from them, that the world moves on.

Mr. Baldwin and Lord Beaverbrook.

The repercussions of the "Empire Crusade" on the Conservative Party are obviously going to furnish our political commentators with good "copy" for a long time. For no sooner had the breach between Lord Beaverbrook (of what Lord Rothermere and his "Secretariat" are doing few people take any notice) been healed, than news comes that the surgical binding called "Referendum" has either slipped from position or is coming unstuck. In any case, Lord Beaverbrook is most agitated over the thought that certain influential members of the Conservative Party are determined not to make Food Taxes an issue at the next Election.

What Lord Beaverbrook wants, apparently, is for the Conservative Party as a whole to come out in favour of food taxes before the election, not merely at the Referendum subsequent to the election. For this manœuvre, however, Mr. Baldwin and apparently the majority of his party are unprepared. He is anxious, in fact, to go to the country next time without a word on food taxes. That he can do this I doubt very much.

The Wool Deadlock.

For crumbs of comfort in these days the observer has to search very carefully, and often enough has to fall back on his own philosophy. There is, indeed, no point in exaggerating the woes of England, but there is also no point in denying the facts.

Take the wool deadlock, for example. A short time ago there was a "cut" in wages in the cotton industry. The same panacea has been officially decreed for the wool industry, though one might have thought the depression which still exists in the cotton industry might have suggested that reduction of wages was not the sole remedy.

Whether that be so or not, there is now a stoppage in the wool industry, consequent upon the operatives' refusal to accept the employers' conditions which were framed as a result of Lord Macmillan's award. It is a miserable business, to which, all too often, the tragic human side is forgotten.

The transition from old-fashioned and out-of-date methods in industry to the new "rationalised" methods is implying years of uncertainty and suffering. Even that, however, could be borne did we know for certain that those who control the methods are consciously improving them and thinking of to-morrow. There is a suspicion that too many are living merely for to-day: in which case the whole moral basis of the argument is altered.

The Boat Race.

Though one cannot, of course, regret that justice has once more triumphed, it is impossible not to render homage to the fight which Oxford put up on the Thames on Saturday. That Cambridge were better is admitted, was known beforehand, and was proved on the day, but that Oxford, having this knowledge, sharing this fear, simply would not admit it, is something which went to the hearts of many thousands more people than those who cheered the Dark Blues along on Saturday. Oxford were fighting against odds, which only a miracle could have upset; and they fought memorably.

To lead Cambridge for three miles was thought possible only by a few hopelessly prejudiced Oxonians (though all Oxford men should be this, of course). It was a brilliant effort. But against the science and knowledge of Cambridge—apparently developed to a rare degree this year—it failed. The result will have heartened both places, though the historical fact that Cambridge now lead Oxford in the number of victories is a possession glorious to only one place.

Book Reviews

"CONTES DE PALESTINE."

"UNHOLY MEMORIES OF THE HOLY LAND." By Horace B. Samuel. Illustrated. (London: The Hogarth Press. 15s.)

We must admit that our hopes of reading in this book some really indiscreet accounts of persons and things in Palestine have been disappointed. The author, who has had ten years' experience in the Holy Land, first as a Judge and then as a lawyer, might, one feels, have made much more of his opportunities. His outlook, as he justifiably says, "is not the concrete malice of the man out to ventilate some petty personal spite, but the mere intellectual honesty of a man who really cannot resist such an absolutely first-class target as that presented by the British-cum-Arab-cum-Zionist-cum-Missionary-cum-League-of-Nations Palestine of the last eleven years." Within the bounds of decent malice, however, he might have been much more amusing and intriguing.

The book starts off well enough with an account of the Jewish Regiment—the 38th Royal Fusiliers, whose motto was said to be—though Mr. Samuel does not mention it, possibly because it is a chestnut—"No advance without security." This chapter sets the tone of the book, which is light, critical, and high-spirited. One can see from his account of O.E.T.A. that here is no ordinary Zionist, even though he minces no words in describing the anti-Zionist sympathies of the soldiers in Palestine after the War. He says, for instance :—

> I feel bound to state that whatever their station in life, and whatever the angle of contact, the Arabs exhibited invariably far better manners than did the Jews. Nor was this particularly surprising. For good manners are of the essence of alike hospitality and of intrigue, in both of which arts the Arabs are past masters. . . . The Jews, on the other hand, even when they were in the right, were so clumsy, fussy, and aggressive, as to derive very little more credit out of the business, than in the not infrequent cases in which they were in the wrong. The Balfour Declaration had completely thrown them off their balance. They expected to have the new dish of freedom served up to them on a nice gold salver, with a suitable inscription in the Hebrew language, while the Arabs waited gracefully at table.

In a clever way he shows how the anti-French conduct of the military administration in Palestine was coupled with its anti-Zionist sympathies, so that, shortly after San Remo, "the heads of the Chief Administrator and his Chief of Staff were duly served up on chargers for the edification of the French and the Zionists." One might have thought, incidentally, that the legal mind of Mr. Samuel would have noted the unusualness of this act of appointing a civilian to Palestine before peace had been signed with Turkey, but he makes no mention of an interesting fact.

Mr. Samuel does not write well, but by very bluntness he drives home his points. In writing of Sir Herbert Samuel's coming, for example, and of the Spring disturbances, he portrays in a vivid way the resentment of the Zionist at the High Commissioner's liberal attitude. He appears to think that luck was with the first Jewish High Commissioner, and that had the Arabs been treated more sternly during his régime, the tragic affair of 1929 might never have happened.

Like all Zionists, the author admires the régime of Lord Plumer, who went on the principle that no political situation existed in Palestine—an admirable enough principle from the point of view of administration pure and simple but one that simply postpones the solution of real if obscured problems. One notes with great interest that in his chapter contrasting Sir Herbert Samuel with Lord Plumer, Mr. Samuel categorically states his view that "the building up of an intensive, industrial civilisation is the only means by which mass immigration can become a practical reality"; and he thinks that even during Lord Plumer's régime the country made disappointing economic progress.

On the question of religion in the Holy Land, Mr. Samuel writes as an ardent believer of no sort. Particularly on his own people is he severe. Speaking of Tel Aviv, for example, that purely Jewish town in which the quintessentially Jewish soul can burgeon free, he says :—

> The general tone of the town is free and continental, and the sexual ethics of quite a number of the women are twentieth-century rather than Victorian. Though the matter cannot be carried farther than the sphere of estimate, I doubt if more than fifteen, or at the outside twenty-five, per cent. of the population of the town is sufficiently orthodox to have any conscientious objections about the private violation of the Sabbath.

As for the multidinous sects which venerate Jerusalem, or parts of it—

> It is certainly to be regretted that the Earthquake of 1927, in its discretion, instead of destroying numerous innocent lives, did not eliminate from the world all those shrines of all those creeds where the atavisms of centuries and of centuries stew in the venom of their own hate.

The book would have been better, and more in keeping with its title, had Mr. Samuel refrained from including a chapter on "The 1929 Riots and their Aftermath"—which happened, of course, after he had left the country. This final chapter may be a credit to his heart, but will not enhance his reputation, for it consists of a series of unoriginal debating points or comments that are well known to the students of the Palestinian problem. He would have done better to end with his "Conclusions," of which the following is perhaps the most interesting as showing his independence of general (published) Zionist thought :—

> What is perhaps a not impossible line of development, is that more and more blocks of land will fall into Jewish hands, that a certain number of the fellaheen will, in fact, migrate to Trans-Jordan, where there is any amount of land available for cultivation, and that there will always remain an adequate supply of Arab unskilled labour. There is already manifested a tendency for Jewish land to be purchased, not in isolated pockets, but in heavy contiguous blocks. It is possible that Jews will tend to form distinct "cantons" in the agricultural part of Palestine, just as they form distinct quarters in the principal towns.

We have indicated that the book is an interesting one, even though it lacks the fascination one had expected. It is, however, carelessly written, and there are a few minor blemishes in it. For instance, the name of the President of the Jewish Agency is misspelt ubiquitously, Mr. Philip Guedalla is *not* "the distinguished President of the English Zionist Federation," and the American Commission to Syria in 1919 did *not* elicit the fact that "a British Mandate was the most acceptable."

THE PALESTINE "HAGADA."

"THE ILLUSTRATED HAGADA, FIRST JERUSALEM EDITION." With original illustrations and designs by Arieh Al-Hanani. English translation edited and re-arranged by Julian L. Meltzer. (Jerusalem: Hamadpis Liphshitz. 4s. net. Postage abroad 10d.)

The Passover "Hagada" containing the *Seder* service which is read in Jewish homes on the first two evenings of the Passover festival has been published for the first time in Palestine, and the publishers are to be congratulated on their production. The Hebrew type is very clear and the English translation faces the Hebrew page. The original designs and illustrations in the book are by Arieh el Hanani (Saposhnikoff), the designer of historical tableaux and scenes for the Palestine theatrical companies "Habima" and "Ohel."

The *Seder* service, which commemorates the deliverance of the Israelites from Egyptian bondage, is a joyous celebration in which the children are the most important participants, and those who are brought up with the Zionist ideal ever before them will certainly delight, from a sentimental point of view, in this truly Palestine "Hagada," though the book will also doubtless prove a favourite gift to other young members of the Jewish faith. Mr. Solomon Rosowsky has contributed three musical compositions for three of the traditional folk songs with which the service concludes.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

THE OXFORD ORIENTALIST CONGRESS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Will you kindly permit me to offer one or two observations on your review of the volume of Proceedings of the Congress? Without any doubt a full report containing reprints of the numerous interesting papers offered would have been useful. But this was out of the question for financial reasons. We had £300 available; and to print the papers—containing numerous words in various Oriental scripts, and many of the papers unintelligible without illustrations—would have cost at least five times this sum. Abstracts were suggested, but they would have been most difficult to prepare and of little use, and would still have cost to print far more money than we had. Moreover, many contributors failed to produce any abstracts of their papers.

We might have raised the subscription. But there were many reasons why this was disallowed. We desired a large attendance, and Orientalists as a class—especially foreign Orientalists—have never been wealthy, and are poorer still since the War. It is also doubtful if we should have raised more money by asking two or three pounds from each member. Besides cutting out many foreign European scholars, and spoiling the international character of the meeting, a very large fringe of intelligent amateurs who did not mind spending a pound would have stayed away rather than pay two.

From your Reviewer's last sentence, I think there is some misunderstanding as to the position of the University in connexion with the Congress. Beyond lending its name for the issue of invitations the University as a corporate body did nothing at all. The whole financial and administrative responsibility lay on the individuals who formed the Organizing Committee, and the practical management from beginning to end was in the main the work of Mr. Driver, the honorary Treasurer, and myself.—I am, etc.,

C. N. SEDDON.

XVII International Congress of Orientalists, Indian Institute, Oxford. April 8.

THE REPORT ON PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In your leading article of April 10 you refer to the Zionist complaints against the Grand Mufti, against the Palestine Arab Executive, and against the Palestine Government, and state that "in varying and increasing degree all these three authorities are exonerated from blame." As you make no further reference to the question of blame or responsibility, your readers, unless otherwise informed, may conclude that the Report does not apportion any responsibility at all to those three authorities. Such a conclusion is contradicted by the Report itself.

On p. 158 the Report states: "The Mufti was influenced by the twofold desire to annoy the Jews and to mobilise Muslim opinion on the issue of the Wailing Wall. The Mufti, like many others who directly or indirectly played upon public feeling in Palestine, must accept a share in the responsibility for the disturbances."

On p. 159 the Report states: "For their failure to make during the week preceding the disturbances an attempt to control their followers by declaring publicly and emphatically that they were on the side of law and order, neither the Mufti nor the Palestine Arab Executive can be acquitted of blame."

Mr. Snell, in his Reservations, goes further. He says (p. 172): "I therefore attribute to the Mufti a greater share in the responsibility for the disturbance than is attributed to him in the report. I am of the opinion that the Mufti must bear the blame for his failure to make any effort to control the character of an agitation conducted in the name of a religion of which in Palestine he was the head."

As regards the Arab Executive, Mr. Snell writes (p. 173): "I find it difficult to believe that the actions of individual members of the Executive were unknown to that body or indeed that those individuals were acting in a purely personal capacity."

As for the Palestine Government, the Report states (p. 163) that "the policy of reducing the garrison in Palestine and Trans-Jordan was carried out too far," that "the Palestine police, regarded collectively, were not to be relied upon after fire had been opened or for purposes of fighting at close quarters," and "the Intelligence Service has proved to be inadequate." If the Government are not responsible for these three serious defects, who then is? Besides, Mr. Snell (p. 173) rightly points out: "I am unable to absolve the Palestine Government from blame for not having issued an official *communiqué* denying that the Jews had designs on the Muslim Holy Places."

In the light of the above quotations it will be seen that your lenient summing-up must be very seriously revised and rectified.—I am, etc.,

ISRAEL COHEN.

The Zionist Organisation Central Office,
77, Great Russell Street, W.1.
April 11.

[We are content, for our part, that our readers will not equate the exoneration "in varying and increasing degree" to which we referred with the non-apportioning of "any responsibility at all" to which Mr. Cohen refers. It is possible, of course, by a careful selection of extracts from the Report, to create different impressions. From a reading of the whole Report, however, one's dominant impression is that the Commissioners took a far more lenient view of the charges brought against the three authorities we have mentioned than was thought probable in certain quarters.—ED.]

CENTRAL ASIAN SOCIETY

(in which is incorporated The Persia Society.)

Founded in 1901 to study the politics, commerce, geography, history and archæology of Asia. Authoritative lectures are given, and a quarterly Journal published.

The subscription of £1 per annum entitles members to a copy of each issue of the Journal, tickets for all meetings, and the loan of books from the library.

Applications for membership, stating occupation and connexion (if any) with Asia, to be addressed to the Secretary, 77 Grosvenor Street, W 1

NEWS IN BRIEF.

Orders have been issued to Persian officials and all pupils in the schools to wear only Persian cloth.

A declaration was read last week in the Roumanian Chamber on behalf of twenty-four Bessarabian Deputies expressing their fidelity to a united Roumania.

Bishop Varnava, Metropolitan of Skoplye, has been elected Orthodox Patriarch of Yugoslavia.

The Soviet Government has decided to settle 84,000 nomad families in Kazakistan, Central Asia, this year, and is making special grants for the purpose.

A young Jewish student of Warsaw has written 11,367 words in Hebrew on an ordinary postcard, which is to be presented to the library of Jerusalem University.

The Pope has made the Commission for Russia independent of the Sacred Congregation for the Oriental Church, and has appointed a Jesuit, the Titular Bishop of Ilium, to preside over it.

Rear-Admiral R. G. H. Henderson, C.B., who has been invited by the Roumanian Government to advise about the construction of a naval base, was on the staff of the British Naval Mission to Greece in 1913. He was received by Dr. Maniu in Bucharest on April 6.

The dispute with the Hijaz authorities in connexion with the visit of an Egyptian Medical Mission to the Hijaz, because it was proposed to fly the Egyptian flag on the mission cars, has been adjusted. The mission has now been promised every facility to visit Mecca, Madina, Jidda, and Yambu.

M. Venizelos, speaking in the Greek Senate, said that his negotiations with the British Government in 1926 for the settlement of the Greek War Debt were hampered by M. Eutaxias, at that time Premier, who published abroad that Greece would pay £50,000 more than the Greek Minister in London was authorised to offer.

The Egyptian Government has asked for a credit of £E70,000 with which to fight the locusts. Immense swarms passed over the Sinai Peninsula last week in the direction of the Delta. An advance guard of the main flight appeared over Cairo on April 9, and it is feared that the cotton crop may be damaged.

The death occurred on April 12 of a very brilliant soldier, Major-General Sir Gerald Boyd, who entered the Devonshire Regiment as a private in 1805 and at the time of his death was Military Secretary to the War Office. In 1923 he was appointed Commandant of the Staff College at Quetta.

The death occurred on April 11 of Sir George Harvey, formerly Commandant of the Cairo City Police. After serving with the 42nd Royal Highlanders at Tel-el-Kebir and El Teb, Colonel Harvey entered the Egyptian Service in 1883. For a time he commanded the Sudan Gendarmerie. During the War he served as Provost-Marshal for Cairo and Upper and Middle Egypt.

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Budget.

Mr. Snowden's Budget contained no surprising element. Fresh revenue had to be raised, and it is to be found precisely on the lines that were to be expected under a Socialist Administration, and, as a foretaste of things to come, the Budget will, it may be hoped, have some educative value for the electorate. The most interesting feature of the Budget is the way in which the income tax increase has been so framed as to affect only a very small fraction of the whole population. Thus a further stage is reached in the process of divorcing financial responsibility from voting power. Under an ideal system every voter would contribute directly in taxation, and there would then be a safeguard against ill-advised measures and an assurance that economy would be a living factor in every party's programme. As things are the most that can be hoped from a change in Government is that a brake will be placed on expenditure, not that a definite turn will be taken in the direction of economy. The feature of the Budget which will come in for most immediate criticism is, of course, the pending removal of the Safeguarding duties. By this step the cleavage between the two chief parties is brought into strong relief. If the Conservatives come in at the next election there will be a very wide extension of Safeguarding to enable certain trades to meet foreign competition. Then if they should lose the subsequent election the duties would go again. It is this prospect of endless disagreement on what should be a non-party matter and of a condition of permanent unsettlement in the trades affected that makes it difficult to view the trade outlook with any marked degree of optimism. If trade is to develop in present conditions it will obviously have to do so in spite of the politicians.

Turkish Finances.

The *communiqué* issued following the close of the meeting of the Council of the Ottoman Debt in Paris on Friday, dealing with the recent visit to Ankara of Mr. Wyatt, Chairman of the Council, and M. des Closieres, the delegate of the French bondholders, revealed nothing that was unexpected. The delegates informed the Turkish Government that they could not consider any modification of the contract made with the bondholders on June 13, 1928, and emphasised the importance for the maintenance of Turkish credit abroad of the fulfilment of the existing obligations. Then, as I anticipated would be the case, the recommendation was made, following a preparatory examination of the position, that a foreign financial expert should be appointed to draw up a scheme for the reorganisation of Turkish finances in collaboration with the Ankara authorities. It was further mentioned that Ankara is looking to a loan to meet its immediate obligations, and, that being the case, it is not an unreasonable assumption that the Turkish authorities would place no obstacle in the way of such an essential preliminary to further financial assistance as the appointment of a foreign adviser. However, according to the latest report from Turkey they have no intention of consenting to any such step.

Ankara's Policy.

The report to which I refer deals specifically with the meeting of the Council of the Ottoman Debt, and it is stated that the Ankara authorities absolutely decline to agree to the proposal that a foreign financial expert should be appointed. As I have already pointed out, the same suggestion has been put forward on many occasions in recent years, and its invariable reception can leave little ground for surprise at its rejection now, though the fact that the economic position of the country has been growing steadily worse might have altered the attitude of the Ankara authorities. The Turks, it appears, are not content to adopt a merely negative policy, but now have in mind a definite suspension of payments on the Ottoman Debt. If there are no fresh proposals, it is stated, the coupons due at the end of May will be met, but subsequently payments will be suspended. In the interests of Turkey no less than that of the long-suffering bondholders it can only be hoped that no step of this nature will be taken. Were such a development to take place any idea of a further loan would be placed out of court, and the view would naturally gain ground that the whole object of Ankara's manœuvres this year has been to wring further concessions from the bondholders who, one would think, have already yielded enough to satisfy anyone.

Tea Restriction.

In common with tin, rubber, and other commodities, the tea plantation industry has been suffering from the ailment of over production, and, in consequence, following the example of other industries, negotiations have been taking place for a restrictive arrangement and have now been brought to a satisfactory conclusion. By means of the scheme it is anticipated that there will be a reduction in output of about 57,000,000 lb. which, it is estimated, should be sufficient to restore the position. The present situation has arisen largely because of the exceptional crops of the past year, and there is no reason for thinking that, as in the case of rubber, the industry would be likely to be faced with a long period of depression. It is true that one of the chief markets of pre-War days is not yet a purchaser of tea on a large scale, but new markets for the beverage are being developed, notably in America and Egypt, while all the evidence with regard to the great tea drinking countries goes to show that consumption is on the whole on the up grade and should continue to increase. It can only be a matter of time, therefore, before consumption and production are again more or less balanced

The B.I.F.'s Success.

From the details now available there is no question that the recent British Industries Fair was a marked success, despite the trade depression. In every section more business was done than at the 1929 Fair, a fact which speaks for itself. Overseas buyers came to the Fair from seventy countries, and it is satisfactory to know that there was a fair number or representatives from the Near and Middle East. The best proof that the Fair is meeting a genuine demand is to be found in the fact that 2,000 exhibitors in London and Birmingham have already booked space for the next Fair, and many of them want more than they had last time.

IRAQ RAILWAYS.

Report for 1928-29.

The Administrative Report of the Iraq Railways for 1982-29 shows that like so many other lines the system has been seriously affected by motor transport. During the period in question it is stated that competition from motor transport was extremely acute. It is believed, however, "that the point of saturation in respect of the number of cars on the road has been nearly reached, and that the Railways may hold their own by continuing to extend their quick, cheap services and make it necessary for many car owners to work beyond rail head, where they will not only earn a living, but will also provide services that will bring passengers to the railway stations."

One of the most interesting developments of the year was the opening of negotiations with the Simplon-Orient Express Service for the inclusion of the Iraq Railways within the scope of its activities. The negotiations were successful, and, as anticipated in the report, the current year has seen the proposed service in operation. The service enables passengers to travel by sleeping cars from Western Europe via Istanbul to Nissibin, whence a motor car service connects with the rail heads at Baiji or Kirkuk via Mosul. The advantage of this service is that it provides another comfortable commercial route between Europe and Iraq.

Naturally, as Iraq is an agricultural country, produce forms the most important item of the goods traffic. Reference is made in the report to the growth in the number of pumps used for raising water for the grain crops of central and southern Iraq. These pumps are worked by internal combustion engines, the oil for which has to be brought by rail either via Basrah from the Abadan refinery or from the Khanikin refinery to Baghdad. It is pointed out that the transport of oil is, therefore, closely associated with the extension of agriculture. The effect of good rains on the railways is to increase the amount of produce that will have to be carried and to reduce the amount of oil required. The northern liwas of Arbil and Mosul which produce very fine cereals are not served by the railways, and it is pointed out that an extension of the line into these parts would lead to the export through Basrah of great quantities of grain. In recent years it is remarked that there has been an increasing traffic from the Mosul liwas into Syria, and it is added that "if Iraq is to benefit fully from its most northern liwas, and from the grain and fruit crop of the wonderful Kurdistan Valleys, it must attend to its transport facilities." The date crop of the middle Euphrates area is another important commodity for the railways. This crop cannot be estimated until the late spring, and the amount of transport required for it varies from year to year.

Details of the year's working show that the total earnings of the railways for the year ended March 31, 1929, amounted to Rs.83,79,593, while the gross working expenditure, including depreciation, totalled Rs.82,46,580, there being thus a surplus of earnings of Rs.1,33,013. Adding miscellaneous receipts, etc., the net surplus of earnings was Rs.2,02,609. The number of passengers carried was 715,501 as compared with 532,740 for the previous year, while 571,997 tons of goods were carried as against 599,266. The estimated receipts from the passenger traffic for the year were very near to the actual. Great reductions in fares were tried between points with a radius of about 60 miles from Baghdad, and as a result of these experiments the system of cheaper fares was extended to other parts of the system. The effect of the lower fares was an increase in the number of passengers of 36.6 per cent., while the earnings were only slightly less than in the previous year. It has been shown, it is stated, that "with frequent light, fast and cheap services the railway can hold its own against the greatly increased road transport even though rail travel entails journeys by road to and from railway stations. In order to provide these local services lighter power units are necessary, and three Sentinel locomotives have been ordered and will be in service in 1929-30." The goods receipts, it is stated, were very disappointing, being Rs.10,99,454 below the estimates. The poor harvest was responsible for this result.

Dealing with the future prospects for the railways the report indicates that while the present scope of the service can perhaps be maintained without recourse to the Treasury, a more extensive competition has to be encountered, and therefore increased facilities are necessary, calling for capital expenditure. The principal need is for the extension of the railway to connect the northern cities with the capital and thus with Basrah. Means are also required by which passenger trains can cross the Tigris at Baghdad where at present there are only two floating bridges to connect the two parts of the city, providing for one-way traffic only. It is pointed out in this connexion that the problem of Baghdad is the problem of Iraq, since there is not a single permanent bridge across the Tigris between Mosul and the sea. Unlike the Tigris, the Euphrates has two permanent bridges and also the Hindieh Barrage, which is also a road and rail bridge, while a fourth bridge is being constructed at Falluja. In conclusion it is pointed out that the Ministries of Irrigation and Agriculture and of Communications and Works are doing a great deal for the development of the country, but progress must be retarded until communications are greatly improved. "The future prospects of the railways are bright, if they are allowed to continue under the management of experienced Railway Administrators. The improvement and general development of the Railways are of course bound up with the development of the country, and there is no lack of opportunities to carry out schemes that are economical and beneficial to the country if the necessary finance can be arranged."

The Rt. Hon. Sir Robert Horne, G.B.E., K.C., M.P., has been elected a director of the P. and O. Line.

The report of the Alexandria Water Company for 1929 shows a net revenue of £185,057. The dividend is maintained at 14s. 9d.

The Chamber of Shipping is advised that the Turkish sanitary authorities no longer require vessels arriving in Turkish waters from Greek ports to be subjected to deratisation, but that medical examination will continue to be effected.

The Royal Exchange Assurance announces that it has been decided to recommend the General Court to be held on April 30 to declare a further dividend of 17 per cent., less tax, making 27 per cent. for the year 1929. The dividend is at the same rate as for the previous year.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, April 8.

The Economic Situation.

The financial situation has shown some signs of improvement during the past fortnight. The prices of cereals have gone up considerably, and the demand has even begun to exceed the supply. As a rule, the transport of grain takes place during the months when no work can be done in the fields, but this year the peasants have been unwilling to sell at the low prices prevailing, and they are now busy with the summer sowings and cannot spare the time for attending to the sale of their last year's crops. The statistical report of the Minister of Finance likewise shows progress towards a satisfactory balance of trade, which in recent years has always recorded a considerable deficit, that is to say, the imports have greatly exceeded the exports in value. The index number of the cost of living in Bucharest shows a seasonable fall from 5,685 in February to 5,614 in March (the basic 100 representing the prices in August 1916.) Nevertheless failures of business firms are still abnormally frequent, but this is a phenomenon which was to be expected after the stabilization of the currency and the long period of artificial values which preceded it. Given a good harvest this year, it may be hoped that a more normal state of affairs will be established in the autumn.

Crops and the Weather.

The abundant rains that have recently fallen have caused a great sigh of relief to go up all over the country, and work on the fields has begun with great zest. The winter crops are saved. They were on the point of drying up and had not grown perceptibly for many weeks. The feeling now in regard to the coming harvest is decidedly optimistic, and, if favourable conditions continue, Roumania may yet find a way out of many of her difficulties by the end of this year, for the prosperity of the country depends to a very great extent upon the abundance of the harvest and its satisfactory sale. Whether the prices will ever again reach their former level, is, of course, a moot question, considering the enormous quantities of grain now produced in other parts of the world.

Improvements in Bucharest.

The improvements which have been made in the condition and appearance of the Bucharest streets in the course of the last few years are so great that the city will hardly be recognised by a visitor who has not been in Bucharest since, say, 1925. Many large modern buildings have been erected (as a result of which rents have begun to come down to a more normal level), the streets have been laid in the centre and in some residential quarters, the traffic has been regulated and in the most congested areas the "one-way" system has been introduced with marked success. Several modern hotels have been built, where clean rooms can be had at moderate prices. Altogether the city is rapidly taking on the aspect of an important capital.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Loose Leaf Post Binders.—The Survey of Egypt invites tenders for the supply of 3,500 loose leaf post binders. May 19. (D.O.T.)

Metal Cabinets and Safes.—The Survey of Egypt, Ministry of Finance, Cairo, invites tenders for the supply of metal cabinets and safes. May 24. (D.O.T.)

Incinerator, etc.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for supplying and erecting an incinerator and drying press at Amiria. June 8.

Cement.—The Main Drainage Department, Ministry of Public Works, invites tenders for the supply of cement for the year 1930-31. May 19. (D.O.T.)

General Stores.—The Director-General, Main Drainage Department, No. 2, Sharia Maleka Nazli, Cairo, invites tenders for general stores required during 1930-31. May 24.

Rails, etc.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of rails and angle irons for 1930-1931. June 28.

INDIA.

Pumping Plant.—The Indian Stores Department invites tenders for the supply and erection of 2 vertical shaft low lift centrifugal pumps, 2 horizontal shaft multi-stage high lift centrifugal pumps, hand-operated overhead travelling crane, piping, valves, switchgear, etc. Alternatively, gear-driven, triple throw ram pumps may be submitted. May 26. (D.O.T.)

Water Softening and Oil Eliminating Plant.—The Indian Stores Department (Engineering Branch), Simla, invites tenders for the supply and erection at site of (a) one combined oil eliminator and make up water softener plant, and (b) one recording type water meter to record the output of the oil eliminator and water softener plant. May 1. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Tarantia for Bombay (Birkenhead, April 18). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maidan for Calcutta (Birkenhead, April 24); s.s. Matheran for Calcutta (Glasgow, April 24; Birkenhead, May 1).

Bibby Line.—S.s. Gloucestershire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, April 30).

British India Line.—S.s. Mundra for Bombay (London, April 19); s.s. Margha for Colombo, Madras, and Calcutta (London, April 19).

Cunard Line.—S.s. Bantria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, April 26; Swansea, April 29); s.s. Bactria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, May 1; Liverpool and Swansea, May 3).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 10); s.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 31).

P. and O. Line.—S.s. Novara for Calcutta (London, April 25); s.s. Macedonia for Bombay (London, April 25).

Prince Line.—S.s. Lancastrian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus ports (London, April 30).

Ellerman and Papayanni Lines.—S.s. Lesbian for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 26; Swansea*, April 26); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, April 28); s.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, April 29). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cryprus via Alexandria; Greek outports via Piræus or other convenient port.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, April 15.

In spite of the shadow of the Budget and the absence of a further reduction in Bank rate, which in some quarters had been hoped for, prices in the stock markets during the past week have been well maintained, and in view of the approach of the Easter holiday dealers have little cause for complaint. Activity in Wall Street was a helpful factor and Paris was a buyer. Gilt-edged stocks were hesitant at first, but became firmer as the week progressed. The week's new issues met with a good reception. In the foreign market the outstanding feature was a revival of interest in Chinese loans and there was a little investment business in Argentine stocks. Tobacco and brewery stocks moved irregularly on fears of Budget possibilities, but commercial motor shares came into the limelight on amalgamation rumours. Rubber shares were exceptionally quiet, but there was again a fair amount of activity in the oil market.

Some 1929 Profits.

The *Economist* newspaper has just published another set of its quarterly figures of profits disclosed by industrial companies. The figures are based on the annual profits as they are declared in any given quarter, and those announced during the first quarter of this year have now been compiled. It should be pointed out that most of them refer to financial years ending between September and December of last year, that is, covering a period prior to the present trade setback. The figures concern 516 companies, and the annual net profit totalled £62 million, as against their total net profit of £60.9 million for the year before, an increase of £1.1 million, or 1.9 per cent. On closer examination of the industries covered by these 516 companies, a considerable difference in the increase is revealed. The most notable is iron, coal, and steel, in which 28 companies announce a profit of £3 million odd, against about £1.5 million twelve months ago, the actual profits being practically doubled. Brewery companies' profits increased by 5 per cent., shops and stores by 6 per cent. Motors and cycles, with an increase of nearly 20 per cent., rubber companies 27 per cent., and tramways 45 per cent. are all encouraging items. On the other hand, shipping profits are down by 20 per cent. and textiles by 29 per cent. It should be remembered that the increase or decrease in each industry is very largely affected by the results of the larger companies; thus the very good results of Austin and Leyland Motors are to a great extent responsible for the high increase in motor profits indicated above. The figures are particularly significant just now as indicating the possible yield from these sources of direct taxation.

Hotels.

In the course of the speeches made at the recent general meeting of Gordon Hotels, Ltd., some interesting and valuable remarks were made as regards the conditions existing in the hotel industry in Great Britain. In many respects the year 1929 proved an exceptional one. The first few months witnessed the disturbances attendant on a General Election, but these had hardly subsided before there followed, first, the crash on the London Stock Exchange, and, secondly, on a much vaster scale, a similar catastrophe on the American Stock Exchanges, the latter being world-wide in its influences. Among the several results of these phenomena was a restriction in the spending power of many sections of the community, and this naturally reacted unfavourably on the hotel industry.

The business is inherently speculative, for a multiplicity of factors has to be considered in planning for this industry. Being possessed of excellent management, several hotels may be mainly for this reason regarded as leaders in the industry, and the shares of these companies hold chief interest for the investor. Among such may be included Gordon Hotels, whose 4½ per cent. perpetual debentures yield about £6 12s. per cent., and the Savoy Hotel, Ltd., with ordinary shares yielding about £5 10s. per cent. The closing down of the neighbouring Hotel Cecil has considerably improved the outlook of the Savoy.

Tea Stronger.

The plans for the restriction of tea output on the plantations have reached an advanced stage and may be expected shortly to be put into operation. A most important aspect of the plan is that both the British and Dutch planters are party to it. This gives it a very fair chance of success. The present position of the tea market is, broadly speaking, characterised by a glut of the cheaper blends of tea, and less serious over-supply of the better blends. The public is not buying more tea, but is taking advantage of lower prices to buy better tea. The restriction plan is therefore being graded to apply considerable restriction to producers of inferior blends and only small restriction to planters of the better quality teas. Needless to say, the elaboration of an acceptable scheme has been long and difficult, but agreement is now in sight. Meanwhile the stock position has improved a little and prices have moved up in the last few weeks, so that the restriction scheme comes into force under favourable conditions. While a large amount of tea growing will continue on the borderline of profit making and must remain very speculative, the outlook for well-established companies has now improved. Of these investors may be interested in such companies as Consolidated Tea and Lands, Darjeeling, or New Dimbula (Ceylon), whose ordinary shares yield respectively £9, £8 6s., and £8 per cent. These companies have all had good profit-earning records in recent years.

INDIAN AFRICAN SERVICE

LONDON—ANDREW WEIR & CO., 21, Bury Street, E.C.

The Roumanian Chamber has ratified the treaty of commerce with Italy signed on February 25 last.

The Empire Marketing Board reports that the total direct shipments of oranges from Palestine to the United Kingdom in the present season have amounted to approximately 1,870,000 boxes, as compared with 1,260,000 boxes last year. Total shipments to the Continent have amounted to about 596,000 boxes, as compared with about 320,000 boxes last year. Transhipments to the United Kingdom via Port Said up to March 29 totalled some 230,000 boxes, as compared with about 94,000 boxes at the corresponding date last season. Shipments to all destinations in the present season have therefore totalled nearly 2,700,000 boxes, as compared with about 1,600,000 boxes last season and about 2,000,000 boxes in each of the previous two seasons.

The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — **SOFIA** — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roser is made under the control of the Bank in all rose-growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

Engineering Topics

(By An Engineering Correspondent)

Waterproofing Cement.

There has been considerable controversy of late in the engineering world regarding the possibilities of waterproofing concrete and ordinary cement and also as to the advantages to be derived from it when it was or if it could be done. Quite a lot has been written on the subject, and not a few authors have written what may well be called textbooks on the topic. A few years ago it could be said with perfect truth that architects, engineers, contractors, and builders in general failed to recognise the benefits that resulted from due consideration of damp-preventing in domestic architecture, and the economies that would result, in many instances, in constructional work from waterproofing. We have now, however, almost made a new branch of engineering, and waterproof engineering might be defined as that branch of general engineering activity which is devoted particularly to the means of protecting structures against the ravages of water in its discomforting or destructive form. In its broad sense, by waterproofing we mean the rendering of materials or structures immune to the action of water either in small or large amounts.

Let us look at some of the directions in which this new branch can, with benefit, get to work. To quote the words of an eminent engineer, we design and instal elaborate sewer systems, the result of much study and thought, and spend thousands of pounds in providing efficient sewage disposal plants, and often neglect, at the same time, to make the sewers properly watertight, with the result that the pumping and disposal plants are burdened with the handling of ground water which, in some cases, may equal or exceed the amount of sewage, thus increasing the working and maintenance costs by from 25 to even 40 per cent. We go to the expense of constructing huge refrigerating plants and allow, through porous, defective, and leaky walls, moisture to find its way in, thus raising the temperature of the cooling rooms after every effort has been made, in other directions, to keep it as low as possible. We put up expensive concrete structures, and with them it may and sometimes does happen that lack of provision for waterproofing or the employment of a defective system may set up intermittent or, in some climates, continuous damp which takes away considerably from the value of the structure. A few years ago the charge was levelled at structural engineers that they often put up buildings with all possible speed to save time and money, and, before the walls had been given time to lose the large quantities of water stored up by rain or by water used during the construction period, applied paint and plaster, only to find that, later, the paint began to peel and the plaster began to loosen and go to pieces. It was once said that engineers often take proper precautions to prepare their specifications with a view to securing perfectly dry structures, and then, through a false economy in the effort to secure the lowest tenders or through inadequate supervision, find the work, which it was expected would be perfect, turn out to be leaky and troublesome. The result of that frequently was that excavations had to be opened and the origin of the troublesome water traced, at considerable cost of time and money.

To-day, engineers are doing much in the direction of waterproofing structural work, but a good deal still remains to be done. Impartial advocates of waterproofing will hold the view that there is merit in every method that has been used. Practical common sense compels us to admit that there is no sure and certain remedy which will suit all conditions, and waterproofing must be studied with the same scientifically observing eye with which we study all other engineering problems. Broadly speaking, we have to accept only those methods of treatment which lend themselves to various local conditions.

It may be mentioned, in conclusion, that building materials are, as a rule, quite porous and the ordinary mortar in which masonry and brickwork is laid is perhaps the most porous of all. Just at the present time the engineering profession is paying a good deal of attention to the porosity of concrete, and technical papers are giving a good deal of space to articles and to the expression of various experts' opinions on impervious cements. Those who have worked in the laboratories claim that there is little difficulty in making concrete impervious without special treatment, but practical concrete workers have, on the other hand, found this rarely to be the case, even when the utmost care is exercised in the choice of material, the method of mixing, and the application. There is no doubt that concrete can be mixed so that a nearly impervious mass can be obtained, but it is questionable whether the extra trouble required does not make this process less economical than that of mixing the concrete in the ordinary way and applying a good, specialist waterproofing compound or, and possibly preferably, incorporating some specialist waterproofing material in the concrete during the mixing process.

Railway Safety Devices.

In railway engineering work the chief consideration is always the safety of passengers and of the staff, and railway engineers and operating officials alike have their minds constantly engaged on problems connected with "safety first." New and improved safety devices are continually being tried out, and, if satisfactory, adopted, and one of the lesser-known of these, and for a description of which I am indebted to a prominent railway engineer connected with one of our principal railways, is the "sand drag." The remedy formerly in use for goods trucks breaking away on steep gradients was to place a set of run-off points at a convenient place on the incline, so that such vehicles would be diverted from the main track by being derailed. It will be realised that complete derailment of goods waggons, even if only loaded with minerals, is undesirable, especially in a confined space, as even if no damage is done to the freight, the rolling stock may be damaged, and consequently means have now been devised whereby derailment is obviated.

On reaching the run-off points the vehicles are diverted into what my informant calls a "sand-drag." This consists of a pair of rails interlaced with the main track rails, thus forming another track parallel with the main track but with the centres of the two tracks only about 14½ inches apart, these sand-drag rails being mounted on the same sleepers as the main track rails. The sand-drag rails are enclosed in a trough formed of steel angles or timber on each side of the rail and secured to the track timbers. The trough is filled with sharp sand or gravel to a height of three inches over the head of the sand-drag rail and vehicles entering the drag have, therefore, to plough through the gravel. This is found to have a powerful retarding action on the wheels and the vehicles are eventually brought to rest in the sand-drag without damage to themselves, and they can be drawn out without any trouble, as and when convenient. The experiments which have been made with sand-drags have, I am assured, been quite satisfactory, and sufficient data is now in existence, as a result of those tests, to enable railway engineers to construct sand-drags to suit any given position or circumstance.

Highly Superheated Steam Temperatures.

The fact that the new Clarence Dock (Liverpool) and the Ironbridge (Shropshire) Power Stations, and also the extensions to the Millfields Road Station of the Hackney Metropolitan Borough Council, are to be operated at 800 degrees Fahr. superheated steam temperature typify the remarkable revolution that has taken place during the last year or two as regards superheated steam temperatures. It has now been demonstrated, and particularly by the Superheater Company, Ltd., with their well-known "M.L.S." single-pass multiple-loop design of superheater, that temperatures up to 850 degrees Fahr. can be operated with safety when using low carbon steel if proper scientific methods of design and construction are adopted.

A number of such superheater installations are operating, or under construction, in Great Britain for temperatures above the figure of 750 degrees Fahr., hitherto regarded as being the limit, of which another striking example is the plant of Synthetic Ammonia and Nitrates, Ltd., Billingham-on-Tees, with steam at 830 degrees Fahr. This is one of the highest temperatures so far employed in industry, while also the I. G. Farbenindustrie in Germany are operating at 800 degrees Fahr. on the same lines, and other examples in power station practice are Walsall (760 degrees Fahr.), Hull (775 degrees Fahr.), Sheffield (800 degrees Fahr.), and Barking (785 degrees Fahr.), Efficient superheating at, say, 725-850 degrees Fahr., especially with low carbon steel, is largely a matter of long experience and careful adaptation of the equipment to the individual conditions. For example, in the "M.L.S." high duty designs, with which the above plants are fitted, the saturated steam always goes first through the section in the hottest gas zone, while the design provides for the "critical" velocity to be reached at the normal load of the boiler, so that the difference in temperature between the metal and the steam will be at a minimum, and a maximum factor of safety is ensured. A vital matter also for conditions of 750-850 degrees Fahr. is uniform distribution of the steam throughout all the elements under all conditions of loading, as by this alone can local overheating be avoided. The characteristic feature of the design to ensure these conditions is the single-pass system, in which a number of multiple loop elements are connected in parallel between the saturated and superheated steam headers, the elements consisting of several lengths of pipe united to form one integral length by machine-forged return bends. These integral forged return bends are thicker and stronger than the tubing itself and eliminate the necessity for autogenous welding, with its attendant uncertainty as to strength and permanence of the weld. The same general principles are available for "Lancashire" boilers as well as marine and locomotive boilers, whilst another important field is low temperature carbonisation.

ADVERTISING IN
"THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of ***all*** classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

CONDITIONS IN GREECE.

The report of Hambros Bank Ltd., for the week ended April 11, gives the following details:—

As from the 12th inst., the export duty on oil and olives exported from the islands is reduced by 25 per cent. A bill has been laid before the Chamber of Deputies increasing the import duty on maize and on potatoes. The provisions of this Act are coming into force as from the 12th inst. The application of the provisions of the Act of Taxes on Agricultural production is suspended for the year 1930-31 and 1931-32. As from 1930-31 the tax on sheep and cattle is reduced to 4 drs. per head, and on pigs to 12 drs. per head. Various other tax remissions are allowed both on direct and indirect taxation.

From the published balance-sheets of the banks operatin Greece (apart from the Bank of Greece), it transpires that the total amount of deposits on December 31, 1929, was 12,608,780,802.23 drs., against 12,505,000,000 drs. at the end of October 1929. The deposits in foreign exchange included in the above figures amounted on December 31 to 3,899,076,429.90 drs., against 3,868,500,000 drs., at the end of October 1929. In the above amounts there are not included the Savings Bank Deposits of the National Bank of Greece which on December 31 amounted to 1,329,011,534.79 drs., against 1,259,000,000 drs. on October 31.

Company Meeting.

AGRICULTURAL BANK OF EGYPT.

Dividends Maintained.

The report of the Directors on the working of the bank for the year ended January 31 last, submitted to the shareholders at the twenty-seventh ordinary general meeting held at the offices of the bank in Cairo, on April 9, states:—

The Directors have to report that the net profits of the Bank for the financial year 1929-30, established in accordance with Article 40 of the Statutes, amount to £E597,380.583. From this amount there have to be deducted: (i) interest on Debentures, £E142,471.876; (ii) provision for the reserve fund, £E5,602.505; (iii) provision for the special reserve fund, £E26,811.890—£E174,886.271; leaving £E422,494.312. And there have further to be deducted: (iv) dividend on £1,250,000 preferred shares, £E48,750; (v) commission to the National Bank of Egypt, £E14,218.608—£E62,968.608; leaving £E359,525.704, which is available for distribution as dividend on Ordinary and Deferred shares. The Ordinary shares have to receive, in the first instance, dividend at the rate of 5 per cent. per annum, £E120,900; balance, £E238,625.704. This balance of £E238,625.704 is available for the Ordinary shares to the extent of one-half, or £E119,312.852, and for the Deferred shares to the extent of one-half, or £E119,312.852.

Ordinary Shares.

The amounts therefore available for dividend on these shares are as follows:—Balance from the year ending January 31, 1929, £E96,564.912; interest for the year, accrued on the above balance, £E4,828.245—£E101,393.157; dividend at the rate of 5 per cent. per annum, as stated, £E120,900; further amount available, £E119,312.852; total, £E341,606.009. The Directors propose to pay a dividend at the rate of 10 per cent. per annum, requiring £E241,800, and to carry forward the balance of £E99,806.009.

Deferred Shares.

The amounts available for dividend on these shares are as follows:—Balance from the year ending January 31, 1929, £E55,271.978; interest for the year, accrued on the above balance, £E2,763.599; total, £E58,035.577; further amount available, £E119,312.852; total, £E177,348.429. The Directors propose to pay a dividend of £55 per share, requiring, £E107,250, and to carry forward the balance of £E70,098.429.

The profits for the year show an increase over last year which is entirely due to the special bonus distribution, alluded to later in this report, encashed on our holding of Mortgage Company of Egypt Shares. But for this, our profits would have shown a decrease, as a natural result of the smaller amounts now outstanding both as loans and as arrears. The actual collections under these headings have been entirely satisfactory. There is also a satisfactory decrease in expenses; this question receives the constant attention of your Board.

The payment of the same dividends as for the past five years, which the Board recommends to your approval, will not, by reason of the special bonus distribution of the Mortgage Company, involve a draft on the amounts carried forward to the credit of the shareholders.

Mortgage Company of Egypt, Ltd.

The dividend paid for the year ended March 31, 1929, on the Ordinary shares of the Mortgage Company of Egypt, Ltd., was at the rate of 17 per cent., together with a special distribution of £125,000, or 12s. 6d. per share. This latter sum represented, approximately, the amount set aside since the year 1923 to provide against the claim by the Commissioners for Inland Revenue in London for income tax on the company's profits. As stated in last year's report this claim has now been withdrawn except in respect of dividends actually paid in the United Kingdom. The business of the company continues to make satisfactory progress.

Arrears.

Out of the instalments in arrear on January 31, 1929, amounting to £E41,594, a sum of £E39,327 has been either collected or written off during the year; the amounts collected are included as profit in the profit and loss account for £E26,714 as capital and £E12,610 as interest.

The instalments due in 1929-30 which have not been collected in the year amount to £E27,695, of which £E8,030 are for interest; no credit has been taken for this latter sum in the profit and loss account as, in accordance with the statutes, only interest actually encashed can be included in the profits. The balance, £E19,665 representing capital due and not recovered in the course of the year has, as required by the statutes, been deducted from the receipts before arriving at the net profits for the year.

Any encashments on the total outstanding arrears—£E29,962—will be included in the profits of the year in which they are effected.

Output and Collections.

We have made during the year 132 "A" Loans for a total of £E4,197 and 48 "B" Loans for a total of £E15,530.

The total of loans exceeding £E1,000 each was £E46,231 on January 31, 1930. The arrears on these loans were £E4,662.

A sum of £E318,789 was collected out of the annual instalment of £E346,484 and a sum of £E39,324 was collected from the arrears, making a total collection of £E358,113, as compared with £E443,155 for last year.

The percentage of the annual instalment collected is 92 per cent., as compared with 90.7 per cent. in the previous year. There is also an improvement in the percentage of the collection of arrears, which has risen from 94.4 per cent. to 94.5 per cent.

We have to inform you that, at the close of the financial year, Captain Westropp resigned his position as Managing Director. His colleagues take this opportunity of reminding the shareholders of the devoted service which Captain Westropp has rendered the bank during the past twenty years. They are glad to say that he is continuing as an ordinary Director, so that the bank will still benefit by his long experience of its affairs. Mr. H. R. Brereton, hitherto Deputy Manager, who has been in the service of the bank since its inception, has been appointed Manager.

The directors beg to thank the staff at head office and the agencies for their satisfactory work during the year.

Expropriations.

The number of expropriations made by the bank during the year are as follows:—Number of cases in hand on 1/2/29, 614; number of cases begun during 1929-30, 2,131; total, 2,745; cases settled, 1,802; balance, 943; cases brought to expropriation, 67; balance pending, 876.

In 10 of these cases of expropriation 72 feddans were bought in by the bank, and in 57 remaining cases 599 feddans were bought in by third parties.

The Directors of the British India Steam Navigation Company, Ltd., have resolved to pay on May 16 interim dividends of 2½ per cent., less income tax, on the 5 per cent. Preference Stock and 4 per cent., free of income tax, on the Ordinary shares, for the half-year ended March 31.

The Directors of the London and Lancashire Insurance Company propose the capitalisation of £727,862 of the balance standing to profit and loss account and the application of that amount in reducing the uncalled liability on the shares. This means a bonus of 100 per cent., the shares of £5 each now being £1 paid, and the effect will be to reduce the uncalled liability on the 727,862 shares issued by £1 per share and make them £2 paid. As regards the dividend for 1929, the directors recommend the final payment on May 9 of 10s. per share, less tax, making 19s. per share. The Directors propose to increase the interim dividend payable in November next by 1s. to 10s. per share, less tax. This, if payable on the paid-up capital as increased by the above bonus, will be equivalent to 25 per cent., or 50 per cent. on the old capital.

THE AGRICULTURAL BANK OF EGYPT.

INCORPORATED IN EGYPT.

The Liability of the Members is Limited.

NOTICE IS HEREBY GIVEN that at a GENERAL MEETING of the above-named Company, held in Cairo on the 9th April, 1930, it was decided that a DIVIDEND of 10s. per Share on the Ordinary Shares of £5 each and £55 per Share on the Deferred Shares of £5 each should be PAID on and after the 10th April, 1930, at the National Bank of Egypt in Cairo, Alexandria, and London (6/7, King William Street, E.C.4).

Payment will be made in London less income-tax.

The said dividends will be paid to the holders of Ordinary and Deferred Share Warrants to Bearer on presentation of the respective Dividend Coupons (Ordinary No. 27, Deferred No. 26) at the above Banks.

Forms for listing the above-mentioned Coupons will be supplied on application by the Bankers above mentioned.

Coupons must be left with the bankers for previous examination.

By Order,

B. HORNSBY, President.

Cairo, 9th April, 1930.

ECONOMIC CONDITIONS IN BULGARIA.

[*The following notes are taken from the bulletin of the British Chamber of Commerce (of Bulgaria), dated March* 30.]

Although imports seem to have dropped to almost unprecedented low levels, foreign trade figures continue to show an adverse balance. Liquid money is scarce and the credit position is heavily tied up. Suspensions of payments and failures have reach considerable proportions, and the stagnation of tobacco and other agricultural produce is likely to continue for some months to come. Bills protested during December amounted to 341,536,000 leva, as against 120,669,000 leva during the same month in 1928.

Business is slack all over the country. Leather products, metals, ironware, and chemicals are inactive. Owing to the depressed condition of the market, local industries are reducing their orders for raw materials abroad. However, the increasing number of tenders invited for the supply of railway appliances may constitute a fair compensation for the loss.

The first symptoms of a change for the better may be seen in the growing tendency for concentration and amalgamation of financial and industrial concerns.

Trade in 1929.

During 1929 imports amounted to 7,659,961,012 leva and exports to 5,928,892,824 leva. Tobacco occupied first place in the exports with 2,643,528,734 leva, followed by eggs 708,079,830 leva, cereals 500,000, hides and skins 266,000,000 and attar of roses 255 million. The remaining exports consisted of cattle, sunflower and oil seeds, fowls, etc. From the above figure it will be seen that imports exceeded exports by 1,731,088,000 leva. During 1928 imports totalled 6,440,628,743 leva and exports 5,729,691 leva.

The Crops.

Reports received throughout the country concerning the winter crops are favourable. With the exceptionally mild winter which was accompanied with rains in various sections during February, the crops are promising. In the southern province agriculturists were able to prepare their lands for the spring planting, and provided weather conditions continue and there are no heavy frosts during the next two weeks, planting will be completed several weeks earlier than previous years and crops will have a good start before the hot weather sets in.

Bulgarian State Railways.

The Director-General's report on the working of the State railways for 1929, shows that there were 2,425 kilometres of broad gauge open lines, 155 kilos. 75 cm., and 320 kilos. 60 cm. gauge lines. The rolling stock consisted of 440 locomotives of all types, 600 passenger coaches, and 10,107 (covered and open) goods waggons. The improvement in the upkeep of locomotives and their mileage is noticeable. In 1924-25 the engine mileage averaged 19,285 kilometres; 1927-28, 23,526; and in the year under review, 25,000. The rolling stock also showed an improvement. In 1925-26 the kilometrage was 10,336; in 1927-28, 14,185; and for 1929 this latter figure will be considerably exceeded.

The passenger traffic shows but a slight improvement. In 1928, 8,436,419 pasengers were carried, and in 1929, 8,720,000. 3,713,184 tons of goods traffic was transported, against 1,713,184 tons in 1928. Parcels and baggage traffic consisted of 16,000 tons, as compared with 11,018 tons in 1925-26 and 14,000 for 1928.

The revenue each year continues to increase. The net revenue in 1925-26 was 608 million leva (£12,750,000); 1927-28, one milliard, sixty-nine million, eight hundred thousand leva (£13,300,000). When the final figures for 1929 are published it is predicted they will exceed £14,000,000. Working expenses, however, simultaneously increased. A large portion of the increase is due to renewals and repairs to locomotives and rolling stock damaged during the War. The working expenses in 1925-26 amounted to 580 million leva; 1927-28, 749 million; and the 1929 figure is expected to reach 800 million.

JOHNSTON LINE
Mediterranean, Black Sea and Danube.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended April 5:—

Grain.—The continuous improvement of the grain markets abroad, whilst causing a general revival of hopes on our market, did not lead to important business as might have been expected, owing to the scanty arrivals of maize and barley at the shipping ports, due mainly to the peasants being busy on the fields. Several sales have, however, been effected for later shipment. The arrival of important quantities of maize is expected after the Easter holidays, when, provided there is no set-back on consuming markets, brisk business is anticipated. Freights, in consequence of a temporary shortage of spot tonnage at the beginning of the week, rose to 12s. 6d. for Continental ports; the rise, however, was of short duration, as several prompt steamers accepted lower rates, with the result that freights dropped again to 11s. 6d., at which figure they were maintained until the end of the week.

Timber.—The depression on the wood market continues and is aggravated by Russian competition. Buyers in Naples who have bought timber here for which space has already been engaged are asking for a postponement of shipment, or even cancellation of the room engaged, until their local accumulations, caused by Russian dumping, have been reduced. Some activity continues for Syria and Alexandria, for which destinations fairly large sales have been effected. Freights remained unchanged, but a firmer tendency is noticeable owing to grain making a greater demand on space.

Weather and Crops.—The report of the Ministry of Agriculture for the week ending April 1 records lower temperatures throughout the country, and states that snow or rain fell last week in nearly all districts, but that there was insufficient humidity of the soil in the south of Bessarabia, north of Dobruja, and the plain of Tisa; nevertheless, the autumn sowings had a good appearance and spring ploughing and sowing were progressing everywhere with great activity and in normal conditions. The weather this week was generally dry, cold, and cloudy till yesterday, when it turned brighter and warmer here. It is reported that in Transylvania rain began to fall abundantly on Thursday and was continuing yesterday with a tendency to spread throughout the country.

Sulina.—Bar depth, 24 feet. With the exception of one day, owing to stormy weather, the dredgers have worked continuously during the week, and the general conditions are reported to remain good. River minimum, 24 feet.

Constantza.—Exports of grain during the week amounted to about 5,000 tons to the Antwerp/Hamburg range, and a similar quantity is being shipped at the time of writing to the same destinations. A steamer is loading about 400 waggons of timber for Tunis and a Roumanian liner is carrying a parcel of about 60 waggons for Beyrout. Nine vessels loaded about 36,000 tons petroleum products and three ships took oil fuel for bunkers.

According to the Duesseldorf *Mittagsblatt* the Stores Department of the Indian Railways has placed contracts for 16 locomotives, of a total value of £65,367, with the Hannoverische Maschinenbau Company, and contracts for 17 locomotive boilers with Messrs. Henschel and Son, of Cassel. A large number of wheels and axles have also been ordered from Messrs. Krupp, of Essen.

Digitized by Google

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended April 9:—

Egyptian Futures.

Sakel Contract.—Active trading in new crop positions has been the principal feature since we last wrote, local profit-taking and Alexandria selling being mainly counteracted by Continental support. Up to the end of last week, little alteration in the level took place, but we experienced a poor session on Saturday, when weakness in the American contract reacted on our position and caused a break of 25 points. Since this, higher Alexandria reports have caused a gradual hardening, with the result that on balance only minor price alterations have to be recorded as the result of the week's trading.

We understand that speculative support has been revived in Egypt during the past two sessions owing to reports that swarms of locusts had appeared in Upper Egypt, in the Eastern provinces, and in the Delta. This news has not been confirmed from authoritative sources. Reports continue to reveal a most optimistic tendency, but the turnover has not been on the scale of the previous week; in some quarters the opinion is held that business is being held up in view of the approaching Budget. Some of the consignments out of the Government's old stock are on offer here; the cotton has deteriorated materially. Old crop months have not met with much support recently, but even so they are still holding their premium over more distant deliveries and will probably continue to do so. Whilst we do not look for any material alteration in prices, for a close view we would prefer to advise moderate sales should any further appreciation be witnessed.

Upper Contract.—Only a limited business has transpired in this market during the past week, and in the absence of any active trade or speculative support prices have been inclined to fall away. Trade reports continue to be satisfactory, but some of the largest users in this country are substituting other and cheaper growths in place of their usual Upper qualities, and this cutting down in consumption is now beginning to be felt.

Egyptian Spot.

The weaker tone in futures has had a somewhat depressing effect on the spot inquiry, and during the past few days this has sunk to very small proportions. It is rather surprising, therefore, on totalling up sales, to find an increase on those of the previous week, and we can only suggest that this is caused by a hang-over from last week's brisker inquiry, when a good deal of averaging was done. At the present time, with the approach of the Easter holidays and the likelihood of a very mixed Budget to be faced in the near future, we cannot look for any immediate improvement; in fact, the tendency appears to be towards lower levels. On the other hand, we do not anticipate any serious decline in values.

Sakels.—There has been less demand this week for cotton above Fully Good Fair, and only a moderate demand has been experienced for the medium qualities themselves. More interest has been shown in the very low grades at between 5d. and 6½d.

Uppers.—A fair demand has been experienced for cotton at from pass to 25 on, and the Continent has once again helped sales. Here again, the lower qualities have attracted more interest.

Pilion has suffered from neglect on the whole and very little business has been reported.

Maarad, Nahda, and Fouadi.—The inquiry for these growths has been almost negligible.

White cotton has been quieter.

Sudan Sakel.—A fair business has taken place. A few lots of medium quality new crop, which was released for sale, have been eagerly snapped up by spinners anxious to test the new crop.

Tokar Sakel.—Very little inquiry has been experienced and we are not aware of any sales having been reported.

C.i.f. Business.—Less activity has been witnessed in this department. Forwardings were returned as 6,918 bales Egyptian and 994 bales Sudan. Spot sales, 1,900 bales Egyptian and 600 bales Sudan Sakel. Quotations of Sakel have been reduced 5 to 10 points, those of Upper 17 points, and those of Pilion 20 points. F.G.F. Sakel to-day, 14.20d. F.G.F. Upper to-day, 10.30d. F.G.F. Pilion to-day, 10.85d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report as follows for the week ended April 3:—

Since our last report the futures market has been fairly active and the tone steady. The week's summary of price movements is as follows:—Sakellaridis: May, 28.15 dollars, 0.03 dollars down; July, 28.21 dollars, 0.02 dollars up; November N.C., 26.95 dollars, 0.17 dollars up; January N.C., 27.22 dollars, 0.22 dollars up. Ashmouni: April, 19.43 dollars, 0.03 dollars up; June, 20.00 dollars, 0.09 dollars up; August, 19.58 dollars, 0.48 dollars up; October N.C., 18.58 dollars, 0.41 dollars up; December N.C., 18.91 dollars, 0.41 dollars up; February N.C., 19.27 dollars, 0.42 dollars up.

Sakel.—The better tone mentioned in our last report has been maintained this week, and the prices of new crop deliveries again show a slight advance. The improvement is due to the advance of half a cent in New York, to the continued less satisfactory reports on the outturn of the Sudan Sakel crop, to the danger of an invasion of locusts from Sinai and consequent destruction of crops, and, finally, to the rather better demand from spinners. The latest report of the Department of Agriculture of the Sudan Government estimates the total Sudan Sakel crop at 529,000 kantars, against 597,000 kantars a month ago, and 501,000 kantars, last year's final production. As is indicated by these figures, there is not a great deal of difference between the probable production this year in comparison with that of last. Regarding the locust attack, we consider that the fears expressed are premature. The improvement in the demand is principally due to some buying on the part of Lancashire, almost exclusively for prompt shipment.

Practically no business has been concluded in new crops, which would seem to indicate lack of confidence on the part of spinners

in present levels of prices of new crop deliveries, in spite of the fact that the latter are considerably cheaper than old crop positions. The statistical position is, naturally, extremely heavy, but as a large proportion of existing supplies is held by the Government, the market does not feel the weight of the accumulation of stocks. As regards an opinion on the market, we should say that for old crop, prices will continue to move round about present levels by reason of the limits fixed by the Government. For new crops, a possibility of an advance appears rather problematical, at any rate for the time being, primarily as prospects are for an extremely ample supply next season, and, secondly, by reason of the more or less complete indifference of spinners regarding purchases.

Uppers.—The advance in American prices has favourably influenced our market and a decidedly better tone has prevailed during the week under review. Trade interest has been a little more active, due to some buying by Lancashire and Continental spinners. A narrowing of the difference between November Sakel and October Ashmouni is to be noted, resulting from straddle liquidations.

The present difference of from 2½ dollars to 2¾ dollars between October Alexandria and October New York is generally considered reasonable, and it is therefore expected that our market will follow very closely the fluctuations of New York.

The Ashmouni/American new crop straddle (October/October) this week stands at 272 points, against 283 points last week and 388 points at this time last year.

The week's receipts amount to 157,086 kantars, against exports 136,853 kantars; the stock in Alexandria stands at 3,957,464 kantars. The official figures of arrivals and exports for the period September 1, 1929, to March 26, 1930, are as follows:—Arrivals: Sakellaridis, 2,282,054 kantars; Ashmouni and Zagora, 4,070,451; Pilion, 298,262 kantars; Various, 463,045 kantars; Scarto, 64,543 kantars; total, 7,178,355 kantars. Exports: Sakellaridis, 1,384,722 kantars; Ashmouni and Zagora, 2,623,490 kantars; Pilion, 172,508 kantars; Various, 224,494 kantars; total, 4,406,249 kantars.

Spot.—Towards the close of the week the market showed rather more activity, due to a slightly improved demand from spinners. The total turnover amounted to about 8,100 bales, of which we estimate 2,300 bales Sakellaridis, 5,000 bales Ashmouni and Zagora, 400 bales Pilion, and 400 bales other varieties.

Sakellaridis.—A slightly increased business has been done in all grades, but buyers show no intention of pushing prices, and spot differences remain about unchanged.

Ashmouni and Zagora.—There was a considerably increased demand for these varieties, mainly for Fully Good Fair and Fully Good Fair to Good, and this, coupled with the very large deliveries against the April contract, caused spot differences to harden somewhat.

Pilion.—A small turnover was registered in the medium and good grades, but this cotton is not too plentiful on the market and consequently buyers were obliged to pay somewhat higher premiums.

Other Varieties.—A few lots of White and Nahda changed hands at about last week's differences.

Crop, 1930.—Reports received this week from our agencies in the interior indicate satisfactory conditions everywhere.

The tenth Liubliana International Fair will be held this year from May 29 to June 9.

Notes of the Week.

Reconstruction in the Near East.

By embodying in a Special Illustrated Supplement, published with this issue of THE NEAR EAST AND INDIA, descriptions of a few of the large public utility works that are being undertaken at the present time in the Near and Middle East, we have endeavoured to call attention to the important changes that are taking place in a part of the world which has remained too long under backward conditions. There is no need at this stage to inquire whether the Great War and the economic disorganisation that followed in its train delayed a movement which was already on foot before 1914, or whether it needed such an upheaval as the four years' struggle provided to shake the East out of its former groove. The fact remains that in every country there is to-day the same striving after material improvement which seeks expression in big productive works. Ambitious programmes are inevitably held in check by financial considerations; but gradually, with the return to more settled conditions and with stabilised currencies, it is possible for Western finance to devote its attention with more confidence to the needs of the Near and Middle East. In one of the reclamation projects adopted by Greece it will be seen that a scheme has been devised by which, in the place of a contract involving the payment of a fixed amount, the Greek Government is able to maintain a close check on the actual cost of the work, after having agreed to payment of a fixed percentage over and above that cost. There can be little doubt that this type of contract will commend itself in cases where Governments feel themselves at a disadvantage in gauging the cost of contemplated work and are inclined to regard profits and profiteering as synonymous terms.

Yugoslavia and Bulgaria.

The serious economic crisis through which Bulgaria is passing would call for less attention abroad if it were not for the fact that any political changes in that country at the present time may encourage the more extreme Macedonian element to connect the difficulties of the Liaptcheff Ministry with its adoption of a more drastic policy towards the Revolutionary Organisation. For the moment it would seem as if the strong action taken by the Bulgarian Government has disconcerted the Organisation, and that the latter's only available reply has been to threaten a new campaign in May, possibly in the hope of relieving the present pressure. Whether peace in the Balkan Peninsula can finally be achieved without more direct action than the Bulgarian authorities have so far taken remains to be seen; but it is all to the good that a stage has been reached at which Macedonian excesses are no longer interpreted in Yugoslavia as provocation directly inspired by official Bulgaria. In the last week or two the theory of friendly relations between Yugoslavia and Bulgaria has received support from the reception accorded to the representatives of the Bulgarian Holy Synod at the funeral of the late Serbian Patriarch, and from a visit of a Bulgarian football team to Belgrade. Both sides, it may also be inferred, are inclined to view with friendly interest the visit to Sofia of the British Minister in Belgrade and to welcome the interpretation inevitably placed upon the visit, that Great Britain may yet take a more active part in promoting Balkan unity.

Locust Invasions.

The invasion of the locust is one that few countries in the world have wholly escaped, if their whole history be considered; certainly every Continent has known this Biblical plague. It so happens that that section of the world with which THE NEAR EAST AND INDIA deals is peculiarly susceptible to the ravages of the insect. From India to Morocco the locust from time to time—and the periodicity of the plague is as yet undetermined—descends on the land to mock the farmer's hope of toil, and not even yet, when science has lent so much to the East, have the harmful ways of the locust been controlled. Obviously it is a danger which can be met only by international action, for the locust respects boundaries neither between States nor between Continents. For many years now the Mandated States of the Middle East have been acting in concert; each year there has been a conference. Last week a White Paper (Cmd. 3542) was published giving particulars of the agreement arrived at in May, 1926, by Turkey, Iraq, Trans-Jordan, Palestine and Syria. To these States it would appear to be necessary to add the Hijaz and Najd and North and East African States, such as Egypt, the Sudan, and Abyssinia. Recently, as the world knows, Egypt and Palestine have suffered severely from the remorseless hordes of insects, but the fight put up against them has been very stout, and the damage

Digitized by Google

done has been infinitesimal compared with what would certainly have been done in the year, say, immediately before the War. Much, however, still remains to be done in amassing information upon the locust, and one can think of few subjects in which the States of the Near and Middle East could more fitly co-operate in the certain knowledge that benefit would accrue to each.

Extra-Palestinian Complaints.

It is a mistake often made by superficial students of the problem of Palestine to suppose that the respective worlds of Islam and of world-Jewry are united in making opposing demands. But in remembering the fact that Islam and world-Jewry by no means represent entities, one must beware of falling into the other error, namely, of supposing that Palestine is a purely local problem, which can be solved, so to speak, on its own axis. One is reminded of these thoughts by the news that the Mussulmans of India are now agitating on behalf of their fellow Muslims in Palestine. Now it is difficult to overlook the fact that these protests, of a meagre character before the Commission of Inquiry had reported, have become more intense since it has appeared that the British Government—if the Commission were a true reflex of its feelings—had "found" so largely against the Zionists. In other words, it would seem that the Muslims of India, who depend so considerably on the good favour of the British Government for the retention of their present position in India, have been waiting until the position in Palestine had been cleared by the Commission of Inquiry. It will be instructive to see how much attention the Government will pay towards the Indian Muslims in their treatment of the Palestinian problem.

Chittagong—and After.

While it is perfectly true, as Mr. Benn reminded the House of Commons last week, that the campaign initiated by Mr. Gandhi has developed along the lines which were anticipated, its inevitable results are becoming more and more apparent. Sporadic outbreaks of rioting in Calcutta, Bombay and Karachi have been followed by an armed raid on Government arsenals bearing every sign of careful organisation. In other words, the anarchical and Communist element has taken the opportunity afforded by Mr. Gandhi's propaganda to breathe new life into the revolutionary movement which had been lying dormant for some time. The attitude of Mr. Gandhi towards this latest manifestation of the inevitable consequences of "non-violent civil disobedience" is characteristic, but the reverse of helpful. On the other hand, Lord Irwin's prompt action has undoubtedly been well received throughout India, although the Liberals and other moderate parties still seem unable to muster up sufficient courage openly to denounce the lawlessness which they hasten to deplore in private. In announcing the repeal of those sections of the Criminal Law Amendment Act which grant exceptional powers of arrest and detention, the Governor of Bengal made it clear that the possibility of an emergency arising again which would necessitate their resumption could not be ignored. The step now taken is the best possible assurance that the Government meant what they said. The success which attends their prompt action will largely depend upon the loyalty and confidence with which the authorities are supported in this country.

THURSDAY, APRIL 24, 1930.

THE ANGLO-EGYPTIAN NEGOTIATIONS.

The hope entertained—at least on the British side—that the Anglo-Egyptian treaty would be concluded before the Easter holidays was destined not to be fulfilled. On the Thursday before Easter the Secretary of State for Foreign Affairs, in making his promised statement to Parliament had to announce that certain important points still presented difficulty and that it had been agreed that the discussions should be adjourned over the Parliamentary recess. It would appear that the Egyptian Delegates had hoped until the last moment to find the British Government more accommodating towards their views regarding the future of the Sudan, and that, when finally they realized that on this point Great Britain could not modify her attitude, they wished for more time to reconsider the position. In spite of the fact that the Delegation in London comprises the Prime Minister and three most prominent members of his Cabinet, consultation with the other Ministers left in Egypt would, in the peculiar circumstances, not be an empty formality, as the present Egyptain Government lays stress on its position as the authorized representatives of Egypt, who have been specially delegated by the Egyptian people to sign a treaty with Great Britain.

Now that the British Government has made it clear that, however willing it may have been to go over again with the Government of Egypt the ground constituting the basis of future Anglo-Egyptian relations, it has no intention of departing in any material respect from the views laid down last year, the main interest shifts to Egypt. There can be little doubt that the upshot of the negotiations will have been to convince the present Egyptian Government that a treaty with Great Britain is essentially a matter for the Council Chamber and not for street demonstrations. Hitherto the impression has been allowed to gain currency in Egypt that such a treaty was a unilateral affair, the main provision of which could be settled by spokesmen bandying slogans in the market-place. All that may have seemed necessary, therefore, was to appoint delegates who knew all the slogans, and to bid them incorporate them in a treaty. The delegates, however, have learned that, if there is to be a treaty, it must conform more closely to the reasoning of statesmanship than the usual type of street oratory. The task of the Egyptian Government, accordingly, is to inculcate the rudiments of statecraft among its own followers. The Delegation that came to London was given, by formal and deliberate vote, a free hand by Parliament. If the treaty which it accepts here is not accepted, after reasonable explanations, by the Egyptian Chamber, the present Egyptian Ministry will be forced to admit that constitutional government in Egypt is at present an impossibility. The Anglo-Egyptian negotiations thus become a test of Egypt's capacity for self-government. It is open to the Delegates to refuse to sign a treaty, and the *status quo* as before June 1928, which, in spite of occasional excitements, subsisted for four years, is restored in Egypt. If, on the other hand, they act on their mandate to sign a treaty and have satisfied themselves that they have secured the best terms that they can expect, it would be a fatal blow to government in Egypt, to allow their work in London to be undone by mob clamour on their return.

*The Near and Middle East

From Our Own Correspondents.

PALESTINE.

Jerusalem, April 12.

A Complex of Festivals.

It may happen, once every six or seven years, that the Eastern and Western Easters fall on the same date. That involves tactful management and prevision on the part of the authorities in arranging for the numerous Holy Week and Easter ceremonies at the Church of the Holy Sepulchre, so that Latin, Orthodox, Armenian and the other Oriental Churches can carry out their devotions in seemly fashion. This year is one when the two Easters coincide. Matters are further complicated this year by the Jewish Passover and the local Muslim feast of Nebi Musa also falling together and at the same time as the Christian Easters. During Passover, and particularly on the first and last days of the Passover (this year, Palm Sunday and Easter Sunday) the Jews, both religious and patriotic, frequent the Wailing Wall in great numbers; while at Nebi Musa Muslim enthusiasm is always at its highest.

It is easy, then, to understand the anxiety these days of those responsible for the peace of Jerusalem. "Nebi Musa" means that great numbers of the simpler-minded Muslims from outlying villages, and the stalwarts of Hebron and Nablus, troop into Jerusalem in festive mood, are heartily received by the local political leaders and primed with patriotic speeches delivered in memory of the glorious days of Saladin and his victories over the infidels from the West. This year *Al Buraq* is also figuring largely in these speeches and as the principal *motif* of the marching slogans of the Nebi Musa processions. It is never forgotten here that it was the combination of Nebi Musa and Passover which led to the riots of 1920 (which, it may be added in parenthesis, called forth the "defensive tactics" of a group of young Jews, which led to the arrest of Mr. Vladimir Jabotinsky and his heavy sentence, which was the cause of the iron entering into his soul, which accounts in part for his doctrine of "Zionism solely by virtue of a Jewish Majority," which accounts for "Revisionism," which again accounts for the aggressive and "provocative" policy of the *Doar Ha-Yom* and the "Brith Trumpeldor" type of youthful Jewish jingoism, which led to the famous demonstration of Jewish boys and girls at the Wailing Wall on August 15 last year, which was the supposed immediate cause of the bloodshed of last August).

But this year no incidents are expected. Every possible police precaution is being taken. The "Men of Hebron" arrive in Jerusalem to-morrow for their night's stay in Jerusalem on their way to Nebi Musa; and they will be most tenderly shepherded by police and military. Measures have been taken so that they shall not meet the crowds of Jews going to and from the Wailing Wall. Mr. Keith-Roach, Deputy Assistant Commissioner in charge of Jerusalem, is responsible for the drafting of a gigantic chart—a precious historic document for those who collect Jerusalem literature—giving in tabular form the time-table and routes prescribed for all the religious processions from April 10 to 20, so far as they affect Muslims, Jews, Latins, Greek Orthodox, Abyssinians, Copts and Jacobites and "other Churches." But though the police may be able to control the routes taken, one doubts whether they can suddenly succeed in controlling the local indifference to punctuality. Yet the big display of police and military, machine-guns and armoured cars should be enough to maintain the peace, even if the communities should, by chance, get entangled. Also one is constantly receiving the assurance from Arab friends that there is no likelihood whatever of any trouble owing to the presence of the Arab Delegation in London—a perfectly innocent remark, meaning that with Arab interests well represented in London local grievances do not call for local action.

The Inquiry Commission's Report.

Copies of the Shaw Commission's Report are at last available in Palestine. Long extracts are being reproduced in the local Press. The impression it makes on the two sides is what might have been expected. The Jews dislike, to say the least, the tone of the Report as a whole, but they take refuge in the Snell reservations as proving that there is still justice in the world, and that there are still some types of Gentile mind which can grasp the Zionist idea as a whole—as producing advantages that are genuine and positive, while the alleged counter-balancing disadvantages are perhaps not at all what they have been made to seem.

The Arabs are, or were, intensely gratified. The very brief official summary, published here the same moment (2 a.m. on the morning of April 1) as the publication in London, was such as to give but the barest outlines, omitting all the light and shade; and Arab opinion was rather inclined to take it almost as the equivalent of a verdict of "justifiable homicide" with a rider to the effect that the exacerbating cause should be removed. Closer reading of the complete document is showing them that the verdict was not quite so clear cut; yet it is the early summary rather than the full document that has left the deepest impression. Furthermore, hopes in the successful issue of the labour of the London Delegation are strong; reports from London have been encouraging; and much is made of the news that Viscount Brentford is now to be counted among their highly connected English advocates.

The Commission's remarks about the part played by Mr. Luke, Acting High Commissioner during the troubles, are, of course, highly welcome in non-partisan circles.

THE HIJAZ.

Jidda, April 7.

The Diplomatic Corps.

With the King's return drawing nearer there has been much activity in diplomatic circles, which, for one reason or another, have been sadly depleted by absentees and gaps during what has proved to be (if, indeed, one can yet speak of it in the past tense) the longest and coolest cold weather that Jidda has known for a very long time. On March 25 we were glad to welcome back Abdul Ghani Bey Sani, the Turkish Diplomatic Representative, and his wife, after an absence of six or seven months. Sani Bey has had to undergo a series of operations, but appears to be no worse for his long sojourn in hospitals and nursing homes. His Government does not seem to have considered it necessary to change the somewhat indeterminate style and designation of its representative at Jidda, and presumably the Soviet Minister becomes automatically the *doyen* of the Diplomatic Corps, a barren but picturesque honour formerly enjoyed by Sani Bey before his departure on leave. Yesterday we had the further pleasure of welcoming back an old friend in the person of Ain al Mulk Hibibullah Khan Huwaida, who comes to Jidda on his third (and it is to be hoped longest) visit, but this time in the capacity of Chargé d'Affaires pending his appointment as Minister for Persia. The chariot-wheels of the new British Minister still tarry, though it is scarcely probable that they will tarry much longer; while rumour has it that an interesting development is shortly to be expected in the Dutch community, enabling it to hail its charming Consul by the style of Excellency.

The Foreign Minister, Fouad Hamza, is still absent in the Lebanon, where he was married on March 30, and it is said that he will probably not return to the Hijaz until after the Pilgrimage.

The text of the Iraq-Najd Treaty, signed at Baghdad on March 10, has not yet been published here, nor have we any news of its ratification or tenour. At any rate, the King will be welcomed back by a full house of diplomatists on the occasion of his return from an epoch-making tour of pacification and reconciliation.

The Pilgrimage.

After a long lull, which gave rise to some despondency in commercial circles at Jidda, steamers are beginning to arrive with pilgrims from India, Syria and Egypt. The total number now in the country is 44,694, and there will have to be a big and rapid influx during the next few weeks if the 100,000 mark is to be reached this year. The culminating ceremony of the pilgrimage will be on May 8 or 9, according to whether the moon is seen on the 29th or 30th of this month.

Egypt and the Hijaz.

Owing to the absence of the King and the pre-occupations of the new Egyptian Government no progress appears to have been made in the adjustment of the political relations of the two countries. Such delays are bad for all concerned and have on the present occasion given rise to a hitch in connexion with the departure from Suez of the customary Egyptian medical mission, which was expected here towards the end of March, but has not yet been able to sail and apparently cannot do so until the difficulty has been adjusted. Such matters were not, however, allowed to affect the celebration of King Fuad's birthday on March 26, when Hasan Bey Ashmouni, the Egyptian Consul, was "At Home" to the Diplomatic Corps in the morning and gave a tea-party in the afternoon, which was attended by the Governor of Jidda and all the most prominent officials and notables of the town. It is to be hoped that there will soon be an Egyptian Legation at Jidda.

Charles Alexander McKinley.

I cannot close this letter without a brief reference to the sudden death at Khartoum on April 6 of one whose name will remain inseparably linked within the history of Jidda, during the past decade. Off and on during these past ten years "Mac" (as he was always called) and his dog, "Whiskers" (who strangely enough died only six weeks ago here) formed a unique centre-piece to the European society of the town. His cheerfulness was irrepressible; perhaps it shone most brightly when things were most gloomy. The changing kaleidoscope of Jidda found him ever the same; and it was all one to him whether his work fell to be done under the barbarous and medieval conditions of King Husain's régime or amid the exploding shells of the Wahhabi besieging army. Only last year, his health having been impaired to some extent by long residence here, he was transferred to the Sudan for a change of scene; but it was assumed and hoped by all that he would soon be back at his post as manager of the Jidda branch of Messrs. Gellatly, Hankey and Co. His many friends at Jidda extend to his employers and his family their deepest sympathy in a loss which they share. No man is indispensable in the world's scheme, but some friends can never be replaced. "Mac" was only 32, when Fate summoned him in the midst of a swim. *Vale!* Mac, all right behind!

THE PRIME MINISTER OF EGYPT.

The Prime Minister of Egypt, Mustapha Al-Nahas Pasha, gave a dinner-party at the Royal Egyptian Legation on April 16, when his guests were: The Secretary of State for Foreign Affairs and Mrs. Henderson, the Lord Privy Seal and Mrs. Thomas, Mrs. Snowden, the Secretary of State for Dominions and Colonies, the Secretary of State for India and Mrs. Benn, the Secretary of State for War, the Secretary of State for Air, the First Lord of the Admiralty and Mrs. Alexander, the Minister of Health and Mrs. Greenwood, the Minister of Labour, the Egyptian Minister for Foreign Affairs and Mme. Wassif Ghali Pasha, the Egyptian Minister for Finance and Mme. Makram Ebeid, the Egyptian Minister for Public Works, the High Commissioner for the Irish Free State, the High Commissioner for India and Lady Chatterjee, the High Commissioner for Canada, the Attorney-General and Lady Jowitt, Air Chief Marshal and the Hon. Lady Salmond, the Lady Mayoress of London, Lord Ponsonby, Sir Rennell and Lady Rodd, Sir Herbert Samuel, Lieutenant-Colonel Sir Maurice and Lady Hankey, Sir Percy Loraine, Mr. and Mrs. Hugh Dalton, Mr. Oliphant, Mr. Mounsey, Mr. and Mrs. Malkin, Lieutenant-Commander the Hon. Joseph Kenworthy, R.N., and Mrs. Kenworthy, Sir Murdoch and Lady Macdonald, Major-General Sir Robert and Lady Hutchison, the Hon. Cecil Campbell, the Hon. Donough and Mrs. O'Brien, Mr. and Mrs. J. A. Spender, Mr. and Mrs. Charles Robertson, Mr. and Mrs. Foa, Mr. and Mrs. Leach, Mr. and Mrs. McKenzie Wood, Mr. and Mrs. E. Thurtle, Colonel and Mrs. Malone, Mr. Arthur Henderson, jun., Mr. W. Henderson, Mr. Selby, Mr. Murray, Mr. Monck, Mr. and Mrs. Scrivener, Mr. and Mrs. Norton, Mr. Ronald, Mr. Mack, the Egyptian Chargé d'Affaires, Ahmed Maher Bey, Mahmoud Hassan Bey, Mustapha El Sadek Bey, Miralay Ahmed Rifaat Bey, Miralay Ibrahim Badran Bey, Miralay Hafez Sedky Bey, M. Georges Dumani, M. and Mme. Kamel Selim, M. Ahmed Ragheb, Mahmoud Saddik Bey, M. Georges Cattaui, M. Abd El Kerim Safwat, M. Hassan Nahas, M. Hussein Mohamed Bey, Mtre. CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, April 3.

The Fiscal Autonomy Convention.

What has actually been done this week, as the Legislative Assembly's passing of the Cotton Tariff Bill, and the Council of State's passing of the Finance Bill, has interested us less in India than the arguments about the Fiscal Autonomy Convention, and how it ought to be interpreted in practice. I could leave that question on one side, but that would be to shirk the more difficult task. It is the more difficult, but it is not too difficult; for the position can be made sufficiently clear by quoting a passage from the speech in the Assembly of the Commerce Member, and by then giving the other side in the words of Sir Hari Singh Gour. Sir George Rainy said: "The fiscal autonomy convention means this: while there is always previous consultation with the Secretary of State, the final decision as to the proposals to be placed before the Legislature rests with the Government of India and none else. In this case the Government of India's position is that of a Dominion Government which places proposals before the Legislature; to that extent the Government of India are independent. But how long does this position of independence continue? Till the Legislature pronounces on them. In the Dominions, if the Legislature does not agree, there is a change of Government, which restores harmony. In India, under the present Constitution, no such result is provided for; so that if the Government and the Legislature do not agree, the convention ceases to operate, and is at an end."

The Other Side.

"You cannot deny," said Sir Hari Singh Gour, putting the case for the other side, "that within the small, narrow compass of fiscal autonomy the Constitution must operate as if we were a self-governing Dominion, and I submit that that is what the Secretary of State meant when he said that for the last ten years the fiscal convention had been worked by India like a self-governing Dominion. There is no incongruity between an irresponsible Executive and the working of a convention like this, which must be read as a part of an Act. It raises another question. Government want the most free expression of the opinion of the House. Do you think this House is in a position to give the most free expression of opinion after the Treasury benches have said, 'either accept half a loaf or nothing?' Is that conducive to a free expression of opinion? Either the Government must convince us by a free expression of opinion or be convinced. In fiscal matters Government have no power except with the concurrence of the Legislature." There, then, is an argument, and not one to brush aside. One may feel assured that it will be maturely considered both by the Government of India and by the Secretary of State, with a view to the conduct of legislation in the fiscal sphere in future. That would seem to absolve a Correspondent of THE NEAR EAST AND INDIA from entering into it.

The Indian States.

A rule to follow at this time is never to overlook any indication of the part that the Indian Princes are likely to play at the Round Table Conference and afterwards. There were conversations last week-end in New Delhi between the Standing Committee of the Chamber of Princes and a number of invited representatives of British India. Much of great interest appears to have passed across the table. Thus Pandit Malaviya is reported to have said: "that a federation of British India and the Indian States was a possibility, and that in such a federation autonomy of the Indian States might be recognised, and a Supreme Court might be established to decide upon questions arising between British India and the States. He suggested that in place of the Chamber of Princes they might set up a Federal Council, distinct from the two Houses of the Indian Legislature, to deal with matters of common concern, so that they could visualise a United India." An informal committee was appointed, consisting of Sir H. S. Gour, Sir Ramaswami Iyer, Mawlana Mohamed Ali, Col Haksar, and Sir Manubhai Mehta, to settle the issues that arose out of the discussion, and to make proposals by June, before the Assembly meets.

Mr. Gandhi.

A Government press-note on the subject of the resignation of village officials on the line of Mr. Gandhi's march (the number is one way of gauging the success or failure of that war-like operation) states that one *talati* and 74 *patels* have handed in their resignations. A number of them have since asked permission to withdraw their resignations, and others, who nominally resigned, are carrying on their work as usual. We have had something also from Mr. Gandhi himself about this matter. I take this from the *Pioneer*: "At a meeting at Anklesvar the resignations of 20 village officials were announced. Mr. Gandhi said he would like to know whether these resignations were given willingly or through force, whether they were sent to the Collector, whether new village officers had been appointed, and, if so, whether people respected the authority of the new village officers. The resignation of village officers should mean almost the disappearance of every sign of Government. If the resignations of village officers were not real, if they did not give an impetus to the people, Mr. Gandhi considered them to be scraps of paper." It appears that Government, as a first measure, intend to see that no chance is given to the civil resisters to violate the Salt Act, and to this end labourers have been ordered to destroy salt crystals on the shore.

Satyagraha.

Take this as covering the rest of the Gandhi field: "In an interview Mr. Gandhi reiterated his full faith in *satyagraha* on absolutely non-violent methods, and stated that, if Government did not take any 'mad' action, there would be no violence. He was for complete independence, which meant severing all connexions between England and India, but he added that he would be inclined to reconsider his position in case of a real change of heart, which could only be indicated by accepting his eleven demands. If, however, no such change was imminent, he would fight to a finish, meaning that, if he succeeded in breaking the Salt Act without any resistance from Government, he would follow it up by breaking other Acts that in his opinion were oppressive." The Viceroy this same week has said in replying to an address: "In the name of non-violence there is much violence of speech and thought, and angry passions are being invoked which it may be more easy to arouse than to allay." It is very true that, if violence in speech is to be counted, there is a great deal of it for Mr. Gandhi to count, and do penance for. It seems also true that a smaller wave of angry passion has been or is being aroused than one would have predicted.

THE SITUATION IN INDIA.

Owing to pressure upon our space, the concluding portion of the "Letter to an Indian," in which the author —Mr. H. F. Morshead—expounds an interesting way of approach to the solution of the Indian constitutional problem, is unavoidably held over until next week's issue.—ED.

THE WEEK AT HOME

London, Tuesday Morning.

Eastertide.

Of all Easters since the War this has been the most memorable, because of its almost perfect ugliness. For a time, indeed, everything was "wearing white for Eastertide," but not with blossom like Housman's cherry-tree. For snow and hail mixed with the rain to make the season utterly cheerless.

For an hour or two on Saturday evening, it must be admitted, the sun shone on a countryside that looked glorious enough, but the light was of that peculiarly intense kind in which everything appeared clear-cut and cast most definite shadows—a pleasant but ill-omened sight. I had been to a Point-to-Point meeting at which nearly everyone who had cars stayed in them! For once the old jibe did not hold good that an Englishman is truly happy only when in the foulest conditions he is watching something that is invisible!

As for the thought of Cricket—perish it! Yet the Australians are arriving to-morrow!

The I.L.P.

Nor was there anything exciting in the week-end news to cheer our lot. True, the Independent Labour Party met in conference, to lament the essentially Liberal nature of the Government, and to demand again the granting of "Socialism in our time." But I doubt whether anyone paid very serious attention to this "fourth party," as it is called. For there is little real chance of its affecting large issues.

That it possesses able and likeable men is freely admitted; that it also possesses fanatics and most unlikeable men is also true. Rebels, however, rarely hang very long together unless some success comes their way, and it is not easy to believe that the official Labour Party will make the way of these rebels smoother. The fact that they demand, and occasionally exercise, the right of voting against the Government, must cause in the Labour Party more annoyance than admiration. Their existence, indeed, receives so much attention at the present time only because of the Government's minority position. One might say that, as the political situation clarifies itself, they will probably be noticed less and less.

IRRIGATION and RECLAMATION WORK IN GREECE

In the great enterprises that are in progress for the drainage and reclamation of marshy areas in Macedonia, Thrace, Thessaly, Epirus and other parts of Greece, the Greek Government counts on finding a solution of two pressing problems of State—the provision of land for a population seriously cramped for space since the arrival of the refugees from Asia Minor, and relief for large tracts of country from the scourge of malaria, which has proved no less disastrous to the newcomers than it was to the Allied Forces operating during the War on the Salonika front. With a thoroughness that is altogether praiseworthy, if it does not impose too heavy a financial strain on the State Exchequer, Greece has launched all her projects simultaneously; the Vardar Valley reclamation was entrusted to the Foundation Company of New York in 1926, the contract for the drainage of the Struma was signed in the autumn of 1928, and this year will see the preliminary work begun on the big irrigation and land reclamation contract awarded last year to Messrs. Henry Boot and Sons, Ltd., of Sheffield. The total cost of these enterprises, together with the other public utility work now in progress, the endowment of Athens with an adequate water supply, will approximate £20,000,000; but there can be little doubt that in five or six years' time, when all four projects, it is hoped, will have been completed, Greece will be already well on the way to reap the benefit of a wise and courageous expenditure.

SALONIKA PLAINS RECLAMATION.

The work entrusted to the Foundation Company, New York, by the Greek Government for the reclamation of the vast area known as the Salonika Plain consists of the design and construction of flood protection works, regulation of rivers, drainage and irrigation works and reclamation of Lakes Ardzan, Amatovo and Yenitza within the area west of the town of Salonika defined by the 50-metre contour lines, and traversed by the Rivers Galikos, Axios, Loudias and Aliakmon.

The total area of this plain is some 800 square miles, or 512,000 acres. Of this area, when the works now in progress are completed, 178,000 acres will be reclaimed, and an additional 148,000 acres protected from periodical floods, making a total of 326,000 acres or 500 square miles. The remaining 300 square miles will become healthier as the result of the works and greatly improved in agricultural value. The total value of the works to be executed is about 4¾ millions sterling, and it is hoped that the whole scheme will be completed by 1934.

The immense area of the Salonika Plain may be described as the breeding place of malaria, which greatly affects not only the few settled areas within the plain where there are already established some thousand refugees, but also the surrounding areas within or on the edge of the 50-metre contour line, where many of the largest refugee villages have been established. Some of these villages are at a level of 150 feet or more above the Plain, and the land available for cultivation at a reasonable distance is third-rate.

In order to support this very congested population of Macedonia in the Salonika area, the lands to be reclaimed by the works of the Salonika Plains Reclamation Contract will offer the only available means of settlement for those families not already provided with homes, which it is understood, number 10,000, and will also meet the growing needs of those already temporarily settled there, together with the surplus population of Salonika and other large towns.

At the most reasonable basis of computation the total area of this land to be reclaimed will support at least 15,000 families, probably very many more, and will add materially to the well-being of the very large population already settled in the surrounding areas.

The reclamation of the Salonika Plain entails very radical alteration to the course of the Rivers Axios and Aliakmon, the course of the River Axios being entirely changed from the point where the Salonika-Athens Railway line crosses it to the sea. It also necessitates the construction of drainage canals connecting Lakes Ardzan and Amatovo with the Axios, the clearance of the Loudias Channel, from Lake Yenitza to the sea, and the construction of an immense circulatory canal, 20 miles long, at the western extremity of the project, the maximum bed width of this canal being 180 feet. The total excavation involved on the whole contract is 40,500,000 cubic yards.

DRAGLINE EXCAVATORS. WORK IN MAIN DRAINAGE CANAL.

To cope with this huge quantity the most modern excavating plant has been obtained, and there are at present on the works 5 Draglines, whose bucket capacity is 6 cubic yards each, 3 with a bucket capacity of 2½ cubic yards, and 5 varying from 1 to 1¼ cubic yards. Two suction dredgers capable of discharging 360 cubic yards and 575 cubic yards per hour are also being constructed.

The re-alignment and widening of the rivers entails the reconstruction of the Greek State Railway bridges across the Rivers Axios and Aliakmon and also a new bridge where the railway crosses the Circulatory Canal. The total length of these bridges is 1,550 yards; the longest, that across the Axios, 687 yards, having 17 spans of 114 feet each and the bridge across the Aliakmon 490 yards of 9 spans of 156 feet each. There are over 3,700 tons of steel in these bridges.

There are also numerous ferro-concrete road bridges to be constructed of a total length of over 900 feet. In addition to the bridge work, weirs and other water regulation works are to be built at various places.

The rivers of the Salonika Plain are subject to periodical floods, especially in the spring when the snows of the Yugoslav mountains start to melt. Heavy thunderstorms in these mountains, in the summer, also cause sharp rises in the rivers and consequently precautions have to be taken to safeguard the words under construction. As regards the foundations for the bridges, all these structures have to be erected on an alluvial deposit; each pier is surrounded by a steel sheet pile coffer dam, the actual foundations of the pier being built on 12 by

Digitized by Google

12 timber piles spaced about 3 feet apart. The plant used on the bridge work consists of 16-ton caterpillar cranes and pile driving hammers varying from 3 to 5 tons.

The preliminary work necessary to get a contract of this nature going is in itself a big undertaking. Quarters for both the Greek State officials and the Contractor's staff have had to be constructed, and at Yalajik and Verria small settlements have sprung up comprising offices, houses, workshops, etc. Materials and stores are sent up to the area from Salonika to various points on the Greek State Railways, and from there are handled entirely by motor transport; and notwithstanding the absolute lack of good roads, the modern motor vehicle has proved its efficiency.

The Salonika Plain is not exactly a health resort, but owing to the anti-mosquito precautions taken both in the building of quarters and the sanitary arrangements the health of the personnel has been excellent.

The first portion of these works—the drainage of Lakes Ardzan and Amatovo—is nearing completion, and a considerable area of land will soon be available for cultivation.

HYDRAULIC WORKS IN GREECE.

Big Schemes for Thessaly, Epirus and Crete.

In addition to the reclamation works associated with the Vardar and Strymon Rivers the Greek Government in December, 1929, concluded an agreement with Messrs. Boot and Sons, Ltd., of Sheffield, for the study and execution of hydraulic works in Thessaly, Epirus, Crete, and elsewhere. The comprehensiveness of this contract makes it of particular interest, for, in effect, the Greek Government vests the British firm with sole responsibility for the realisation of the nation's hopes in regard to the future development of that considerable portion of the country known as Central or Continental Greece. The work entrusted to Messrs. Henry Boot and Sons, whose Chairman, Mr. Charles Boot, personally conducted the negotiations with the Greek Government, is the elaboration, under specified conditions, of general preliminary studies, and complete final studies, for the construction of reclamation, anti-flood, river and stream control, irrigation and hydro-electric works in a number of stipulated areas, as well as the eventual construction of these works. The areas concerned are the following :—

1. Thessaly and the adjoining watershed and lakes.
2. Watershed of R. Louros and R. Arachthos (Epirus).
3. The watershed of the River Acheron and the Margariti marshes in Epirus.
4. Watershed of Lakes Yanina and Lapsista (Epirus).
5. The plains of Platania and Kalimbari in Crete.
6. The watershed of Lake Kurna, in Crete.
7. The plain of Messara, in Crete.
8. The area of Kephisus, in Boeotia.

To round off the work in Central Greece the contractors were requested at the eleventh hour to include in their sphere of operations Boeotia as well, or such part of it as may not already come within the scope of the Lake Copais scheme, a reclamation work that has been in progress for many years under the auspices of a British company.

For each of the areas mentioned above a separate preliminary study has to be prepared within two years which will include the following plans and data :—(1) A general map, drawn on a scale of 1 :50,000, on the basis of topographical plans drawn on a scale of 1 :5,000, showing the general layout of the works to be constructed, inclusive of the irrigation works and those necessary for hydro-electric installations, and supplemented with the necessary soundings of the lakes and swamps. (2) General longitudinal sections of rivers and tributaries, of the main drainage and irrigation canals, of the adduction and evacuation canals, as well as of the pipes under pressure. (3) Characteristic cross-sections of the streams to be remodelled, as they are at present, as well as the types of the sections proposed for the remodelling of the streams, cross-sections of the drainage and irrigation canals to be constructed, and cross-sections of the adduction and evacuation canals of the water to be used for the production of electric power. (4) General types of the most important of the technical works to be constructed. (5) A general approximate measurement of the works to be executed. (6) A general approximate estimate of the whole of the works of the area, computed in a way that the cost of the works that can be executed independently may appear separately. (7) A programme and diagram showing the order of execution of the various works and the respective duration of them. And, finally, a general report in which will be set forth and justified the hyrological conditions of the hydraulic area where the works will be constructed, the general system of anti-flood, reclamation and irrigation works, the general data on which will be based the proposed hydro-electric installations, the hydraulic observations, the hydraulic calculations, as well as the alternative solutions which have been studied, together with the approximate cost for each solution.

Of the four regions covered by the contract, only Thessaly and part of Boeotia have previously been surveyed. In the case of Epirus and Crete Messrs. Boot and Sons will have to carry out their own surveys for the purpose of the detailed topographical diagrams. They will have to establish the necessary hydrological and rainfall stations, undertake their working and inspection and collect the relative hydrological observations. All the data supplied by the contractors, the inscriptions on the diagrams and the explanations have to be in Greek, and

RE-ALIGNMENT OF THE RIVER AXIOS. NEW BRIDGE UNDER CONSTRUCTION.
This photograph is a continuation of the view appearing on the opposite page.

Digitized by Google

all written communications with the Government must be in the same language.

The preliminary studies for the different areas have to be submitted separately when completed, and at intervals of at least two months, the submission of all the studies to be completed within the time limit of two years. As soon as the preliminary study of any area has been approved by the Greek Government, or after an interval of two months from the date of submission, when approval, if not notified, can be taken for granted, work is to be begun on the final studies of the works of that area. These again are to be submitted separately for each area, and at intervals of at least two months, the submission of all the final studies to be completed within ten months from the communication of the approval of the last preliminary study submitted by the contractors. These final studies comprise a topographical survey of each area, an engineering study and complete plans, with detailed estimates, of the proposed works. The financial report will set out the financial advantages accruing from the execution of the works, having regard, on the one hand, to the cost of the works to be executed and, on the other hand, to the benefits which are anticipated from them. With regard to the cost, not only the amounts to be expended for the works are to be taken into consideration, but also the intermediate interest up to the completion of the works and the amounts necessary to complete the amortisation of the capital necessary for the works, up to the time when the revenue ensuing from the execution of the works will suffice for this purpose.

Payment for the preliminary and final studies is made by the Greek Government on the basis of a fixed percentage on the approved cost of the works to be executed.

With regard to the execution of the works, should the Greek Government decide, within ten years from the date of approval of the last preliminary study, to proceed with the execution of one or several or all the works in the various areas studied by the contractors, it has the right and is obliged to entrust the execution to Messrs. Henry Boot and Sons. Should this period of ten years elapse, both the Greek Government and Messrs. Henry Boot and Sons have all their rights, and are free from any obligation as to the execution of the works that shall not have been entrusted to the contractors at that date. The Greek Government undertakes to carry out at its own expense all the expropriations necessary for the works or the studies. With the exception of foreign qualified engineers and experts, whom the contractors will employ for the study and the execution of the works, the contractors are to recruit their technical, auxiliary and working personnel by preference among Greek citizens who shall be experienced in the class of work to which they are assigned in so far as this be possible and practicable, and at least one-fifth of these are to be war veterans or reservists, provided that competent men of this class are available.

After an elaborate analysis of all payments that are to be reckoned as the cost of the works, the agreement states that the contractors are to be paid for their general expenses and fee a percentage equal to nineteen per cent. on this cost. The contract and all documents connected with the execution of the works, as well as all fees, profits and payments to the contractors are to be exempt from all duties and taxes whether now existing and that may be hereafter imposed in Greece.

Apart from the advantages that Greece stands to gain from this agreement, the arrangement between the Greek Government and Messrs. Henry Boot and Sons is of importance as a sound and reasonable solution of the difficulty that many States in the Near and Middle East experience in regard to public works during times of economic stress. The need for certain works is recognised in a general way, but no definite expert opinion on the subject is available, and the Government concerned either hesitates to commit itself to a comprehensive scheme and does nothing, or it may try to tinker with the job and spend money in unprofitable directions. The Greek Government has made sure of obtaining at a minimum outlay expert opinion on what is required for the proper development of large tracts of territory, and only when it has all the necessary information at its disposal, as well as a clear insight into the expenditure involved and the advantages to be derived from the different enterprises, does it commit itself to the big outlay, with every prospect of a return for the money spent.

In the regions that are to be examined by Messrs. Henry Boot and Sons there are thousands of square miles under water, forming marsh lands. Not only are they at present uncultivable, but in summer time, instead of producing crops, they are breeding mosquitoes and acting as forcing grounds for malaria. The reclamation of these areas will add considerably to Greece's agricultural land, and will also play its part in freeing the country from the curse of malaria. Thessaly itself has an area of about 4,100 square miles, of which less than a quarter is at present under cultivation; but much of this land is liable to floods, and 250 square miles may be said to be generally under water. The subject of dealing with these lands has been under consideration in Greece since 1885, and it is well that a start should at least be made with the actual work of reclamation.

The fact that the contract has taken nearly two years to negotiate affords some indication of the thoroughness with which an important matter has been threshed out, and both parties may be congratulated on the final ratification of the contract by the Greek Parliament, which took place on February 7.

The ELECTRIFICATION OF PALESTINE

THE JORDAN POWER SCHEME.

The name "Jordan" (*HaJorden* in Hebrew, meaning "the Descender") aptly describes this remarkable river situated in the cradle of civilisation. The Jordan in its comparatively short course from Lake Tiberias to the Dead Sea falls down 200 metres. It is 170 metres above sea level at its source in the springs of Dan, and it is 430 metres below sea level at the Dead Sea. This river provides, therefore, an exceptional supply of water power in a country devoid of any natural fuel.

The concessions held by the Palestine Electric Corporation Ltd., grant an exclusive right for a period of 70 years for the utilisation of the River Jordan and all its affluents for the generation of electrical energy and for its distribution and sale for all purposes throughout Palestine and Transjordan, with the exception of the territory in and around Jerusalem. The Corporation has also irrigation rights in the Jaffa district from the River Auja.

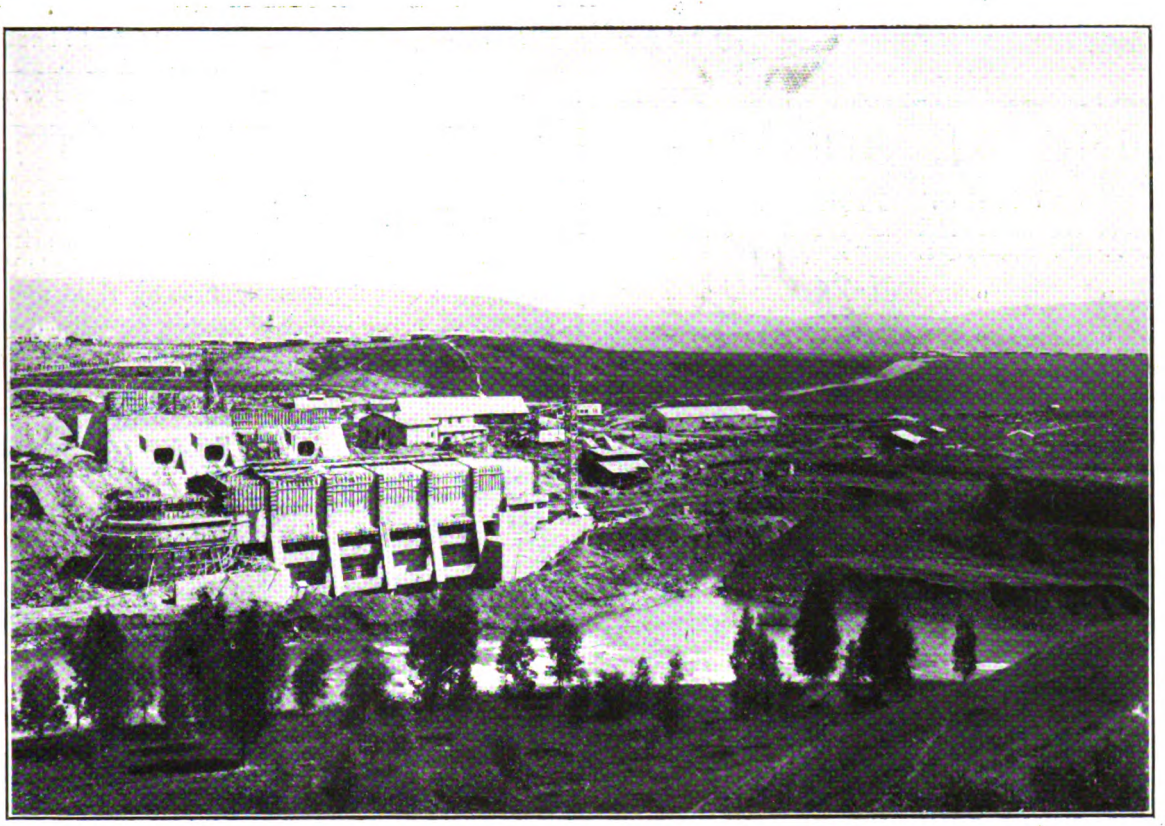
The comprehensive scheme which has been worked out contemplates the utilizing of the entire water resources of Palestine for power generation and irrigation. The first section of this scheme involves two power-houses which will utilize the fall of 50 metres in the Jordan River between its exit from Lake Tiberias and Jisr-el-Mujamieh, about 10 kilometres lower down where the Yarmuk River flows into the Jordan. The first power-house, which is now rapidly approaching completion, is situated on the Jordan at Jisr-el-Mujamieh. The civil engineering works involved comprise:—

(a) A dam across the Yarmuk River about 14 metres high, forming an intermediary reservoir 1,200,000 metres in area, with a maximum water level 223 metres below sea level. This dam is provided with two sluice gates 10 m. by 4 m. each capable of discharging 800 cubic metres per second. The remainder of the dam for a length of 103 m. is in the nature of an overflow weir with a discharging capacity of over 200 cubic metres per second when the water level reaches 222 metres below sea level.

(b) A second dam, 8 metres high, constructed across the Jordan at Delamieh village, which impounds the Jordan waters to a level of 225.75 metres below sea level to form a reservoir about 3 kilometres long and 250 metres board. This diverts the Jordan waters in a concrete-lined canal 1,800 metres long and of 60 cubic metres per second capacity, which conveys the Jordan waters into the Yarmuk reservoir, passing under the Haifa-Damascus Railway and under the Semakh-Beisan Road.

(c) A concrete-lined head race canal 400 metres long and of 160 cubic metres per second capacity for conveying the water from the Yarmuk reservoir to the pressure basin, penstocks and turbines of the power-house.

The power-house is designed for four 8,500 h.p. turbine generator units and will, for the present, utilise the unregulated waters of the River Yarmuk, supplemented in the summer from the Jordan waters stored in Lake Tiberias through a regulating dam on the Jordan, near Bitania.



THE FIRST JORDAN POWER-HOUSE: UNDER CONSTRUCTION.

At a later stage when the full capacity of the present power-house is reached, the waters of the Yarmuk will be deviated into Lake Tiberias, thereby storing the Yarmuk flood waters at present going to waste. The Jordan outlet will then be dredged to the depth required so as to convey all the waters, both of the Yarmuk and of the Jordan, stored in Lake Tiberias, through the turbines of the second power-house which will be built at Abadieh on the Jordan above the first power-house, and then through those of the first power-house at Jisr-el-Mujamieh lower down the Jordan.

Power will be generated by 6,300 volt alternators and stepped up 66,000 volts for transmission over a duplicate 3-phase line on steel lattice towers to sub-stations at Haifa and Jaffa. The high-tension switchgear and transformers at all three stations are of outdoor type. At Jaffa and Haifa an intermediate step-down transforma-

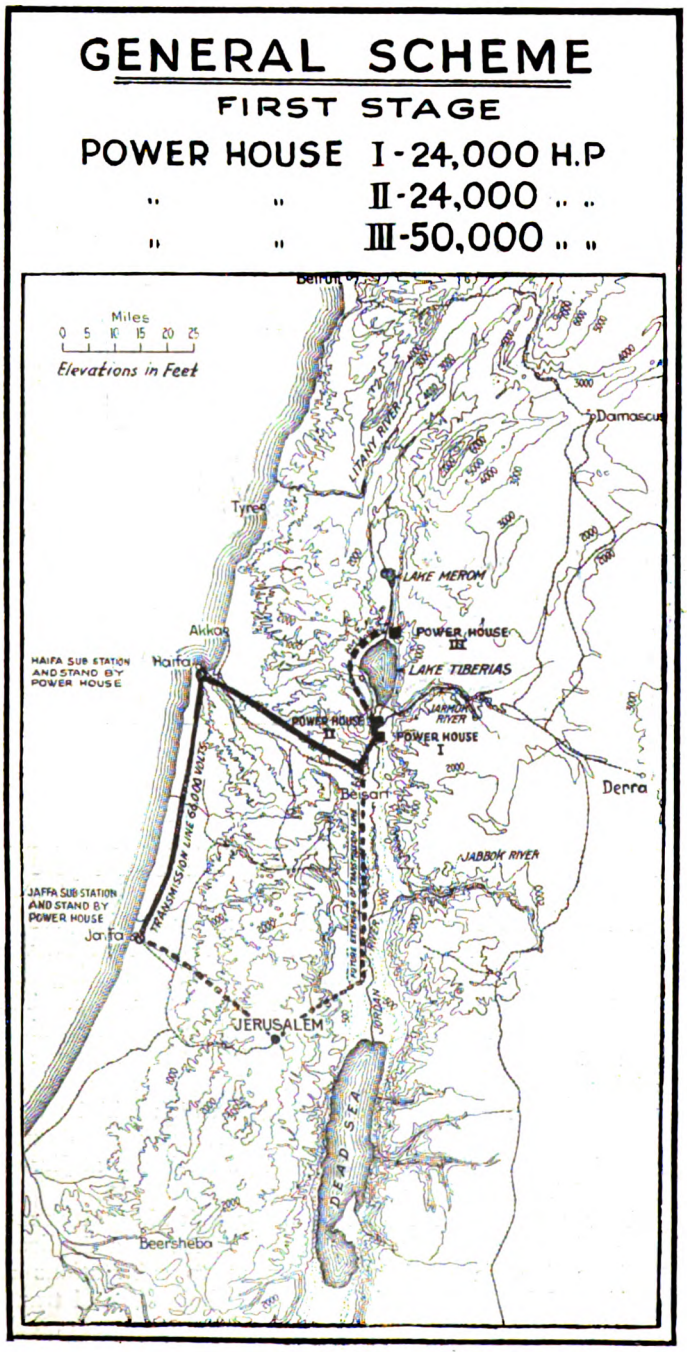
Digitized by Google

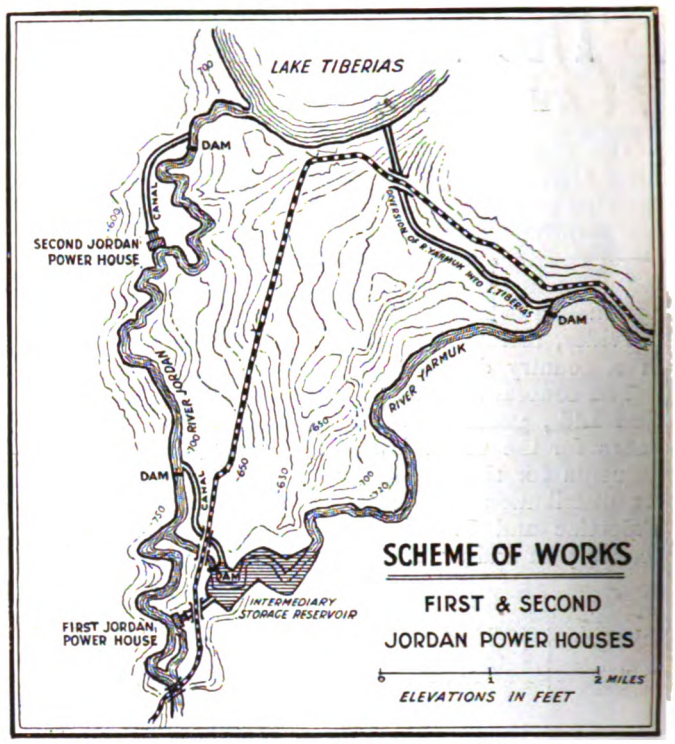
tion will be made to 22,000 volts and ultimately to 220 or 380 volts for urban distribution. The power-house is a monolithic concrete structure of modern and striking design and will be surrounded by gardens. The site of the works and labour camps occupies an area of 6,000 dunams, i.e., approximately 1,500 acres.

Thirty concrete houses of an attractive design were built at an early stage to accommodate some of the workers. To these were added twelve larger houses for the engineering staff and a large building embodying the requisite office accommodation. The whole of these buildings have been laid out with gardens and plantations, so as to constitute a self-contained model settlement.

At an early stage in the work a central camp kitchen was installed together with dining rooms, recreation and rest rooms, disinfection station, laundry and shower baths — very necessary comforts, having regard to the fact that during a large part of the year the climatic conditions are sub-tropical.

The administration had to cope with very strong malarial conditions, inasmuch as the river bed and adjoining marshy tracts afford ideal breeding grounds for malaria-carrying mosquitoes. In view of this, no effort has been spared in the direction either of malaria eradication or prophylaxis, with the fortunate result that the percentage of malarial sickness on the works has been reduced to considerably below the normal for the district. It may be added generally that by rigid regulations in respect of diet, exercise, mosquito prevention and general hygiene, the health of the camp has been maintained at an extraordinarily high standard.





The average number of workmen employed at the works was approximately 600 men, both Jews and Arabs, and at no time during the course of the work has there been any friction between the different elements of labour.

As far as possible the works have been conducted so as to give the maximum of local employment. For instance, the whole of the steel lattice towers and poles for the distribution lines have been made on the spot from imported steel bar stocks. The whole of the cement employed is of Palestinian manufacture. The entire hydro-electric plant, switchgear, workshop-equipment and plant for the civil engineering works are, with one or two quite insignificant exceptions, entirely of British manufacture.

Nag Hammadi Barrage.

(Continued from page 468.)

native labourers who have been employed on the scheme each season. Thus it has been necessary to open two quarries, one of them 55 kilometres downstream, also sandpits about 44 kilometres upstream, and seven tugs have been employed for transport to the site. It is estimated that in the finished Barrage 70,000 tons of cement, 180,000 tons of sand, and 550,000 tons of limestone will have been used. The problem of communications between the east and west banks of the river was solved by the construction of a series of cableways, which are believed to be 20 per cent. longer in span than any ever built before. In this final season, when the work is concentrated on the east bank, the cableways are, of course, of even greater use than they have been in the previous seasons. Their varied uses include the transport of men and materials, the removal of the wet sand from the Nile-bed, and the placing in position of the concrete of the foundations. Finally for the staff and labourers a settlement had to be constructed, complete with a hospital and recreation facilities.

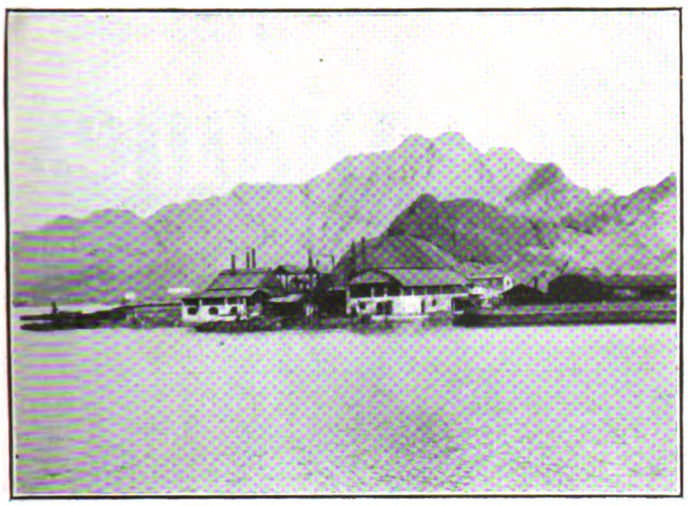
PORT DEVELOPMENT AT ADEN.

Like most Eastern centres, Aden has had a chequered history through the ages. At various periods it has enjoyed a flourishing commerce, at others the wheel of fortune has turned in the opposite direction. Thus there is a reference to it in Ezekiel where it is stated that its merchants were among those who traded with Tyre "in all sorts of things, in blue clothes, and broidered work, and in chests of rich apparel, bound with cords, and made of cedar." It remained an important commercial place in the early centuries of Islam. The subsequent



VIEW OF ADEN,
Showing the Offices and Storehouses of Messrs. K. L. Kalis, Sons and Co., Ltd.

history of Aden is a record of vicissitudes, and its condition in 1839, when it was captured by Great Britain, was deplorable. "The little village (formerly the great city) of Aden" wrote Captain Haines, "is now reduced to the most exigent condition of poverty and neglect."

Under the British connexion, its former prosperity has returned. The actual area of Aden is, of course, very small, being restricted to the peninsula, which is fifteen miles in circumference, with a diameter ranging from three to five miles, and a small tract of land beyond the isthmus, the total area being 80 square miles. But while the local trade is naturally restricted Aden has become an important distributing centre for the neighbouring regions, and a large part of the Arabian trade with Africa passes through it, while it is also the chief *entrepôt* for European commerce. Its new development as a trade centre may be said to date from 1850 when Aden was made a free port by the Government of India, a step which brought to it trade which had previously passed through Mocha and Hodaidah. Since then its commerce has gradually expanded until a position has been attained in which it would be true to say that the port's trade statistics are an index to the prosperity or otherwise of those parts of the Middle East which it serves. But the port is not without rivals for the extensive regional trade, and in the last few years the advance of Jibouti, Massowah and Hodaidah has been very marked. Through one cause or another these ports have succeeded in attracting a part of the trade which would normally flow through Aden, but despite this competition the commerce of the port has continued to expand.

It follows, however, that, if Aden is to maintain its predominance in the regional trade, the port facilities must be kept fully up-to-date. The harbour, commonly known as the Aden Back Bay, lies between the two peninsulas of Jebel Shum Shum and Jebel Ihsan. It extends eight miles from east to west and four miles from north to south, and a spit of land divides it into two bays, the depth of water in the western bay being from three to five fathoms, with a depth of ten to twelve fathoms two miles outside. The bottom of the harbour is sand and mud, and there is a constant tendency to siltation, so that from time to time dredging operations are necessary. At the present time important works are being carried out at the harbour by Messrs. K. L. Kalis, Sons and Company, Ltd., of London, with whom a contract was placed in August, 1928, by the Aden Port Trustees for the extensive dredging required. The work consists of deepening and extending the inner harbour. No dredging had been carried out previously for about fifteen years, and the situation had reached a point when something had to be done in order to keep the port open for the large steamers using it. As is well known Aden is a port of call for all vessels using the Red Sea, and an important coaling station; the general traffic of the port may be gathered from the figures for 1927-28 when the vessels using the harbour totalled 1,575 of 5,707,205 tons.

The estimated quantity of silt, etc., required to be removed by the contractors was something over three million cubic yards, and the estimated time for carrying out the work was about three years. The contractors started operations in the last days of 1928, approximately three months after the signing of the contract, and considering that new plant, partly constructed, had to be completed, and this plant had to be transported from Europe to Aden, it will be evident that very little time was lost in setting up the preliminary organisation. The plant employed consists of a powerful bucket dredger, two tugs, and a number of towing hopper barges and sundry small craft.

Owing to the distance from the contractors' base in Europe, it has been necessary to make the Aden contract self-contained as far as possible, and a large accumulation of spare parts and stores with the necessary shore organisation had to be set up. Living quarters on shore had also to be constructed for the European employees as it was not considered advisable from a health or comfort point of view that they should be domiciled on board the floating plant. For this purpose the company constructed a large and comfortable bungalow to form living quarters for some sixteen European employees, in addition to which a bungalow was supplied for the Engineer-in-

IN ADEN WATERS: DREDGING PLANT.

Charge, which also serves as the company's offices. The other labour required for the work is supplied by the native Arabs in Aden.

Since the beginning of the work at the end of 1928 the operations have proceeded night and day with very few interruptions, subject only to the necessary stop for docking and repairing the plant from time to time, and such good progress has been made that the contractors are now well ahead of their schedule time. All the material dredged is dumped at sea, some three miles from the entrance to the port, in such a position as obviates any possibility of any of it being washed back into the channel. The completion of the work will put Aden in a position to provide for the inevitable expansion of the trade of the region.

Strowger Dial Telephones

THE development and exploitation of new areas demands facile communications. Strowger Automatic Telephones, representing the most modern practice in this field, play a prominent part in such development. Already the number of Strowger Dial Stations in service is approximately *one-fifth of the World's telephones,* and, as pioneers of the Strowger system within the British Empire, and the largest Automatic Telephone Engineering and Manufacturing Organisation therein, the Company is admirably equipped for production on any scale.

Additional manufactures include Signalling Equipment for Mines, Supervisory Control Apparatus for Power Stations, Fire Alarm Equipment, Telegraph Apparatus and the A.T.M. All-Electric Racecourse Totalisator.

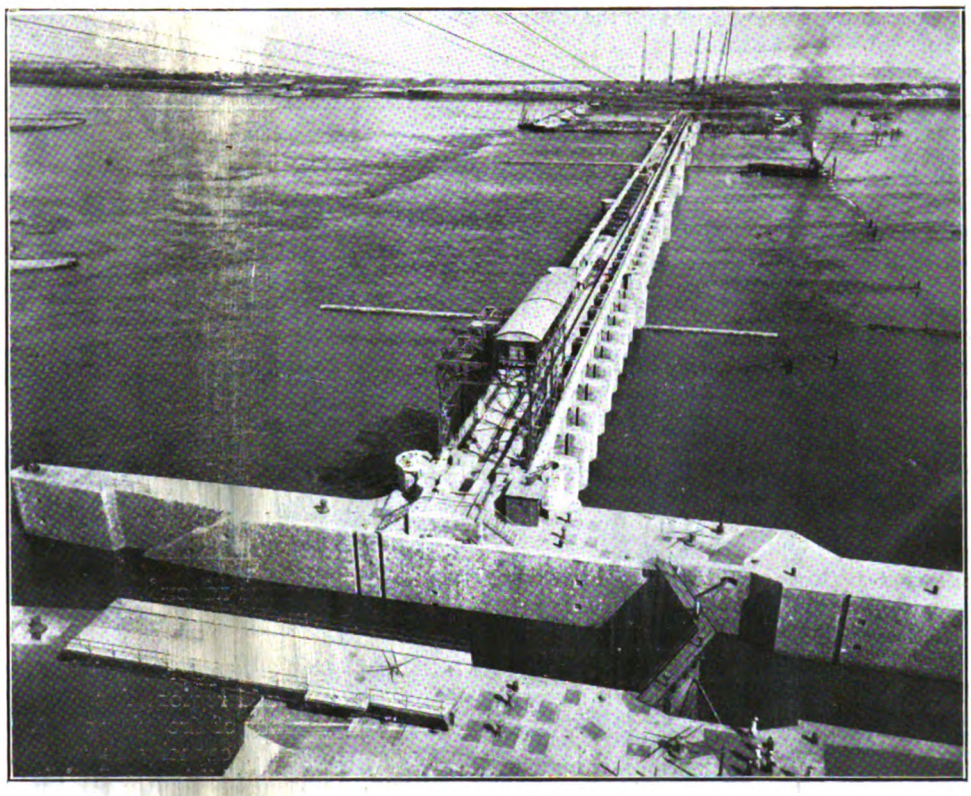
NILE IRRIGATION WORKS

Last Stage of the Nag Hammadi Barrage.

After the completion this summer of the Nag Hammadi Barrage the works which are being undertaken for the heightening of the Aswan Dam will constitute the only irrigation project of the first importance to be carried out in Egypt itself for the development of the resources of the Nile. But an extensive programme still remains to be fulfilled outside Egypt itself before "the river which is Egypt" can make its fullest contribution to the development of cultivation in the lands through which it runs. First among these works comes the White Nile Dam at Gebel Aulia in the Sudan, the expenditure in connexion with which is being undertaken by Egypt. This is one of the fundamental projects for the control of the Nile waters. The dam will be just above the junction of the Blue and White Niles, and it will provide for the storage of what may be termed the ponded water on the White Nile which results from the rapid rise of the Blue Nile. Its effect, in short, will be to lessen the volume of water in the Nile at the time when the Blue Nile is in full flood, and the stored water will be released when it is most needed. According to the pre-War schedule this work should have been completed five years ago, but developments since 1914 naturally made it impossible to adhere to the programme. The issue of the contract by the Government for the dam was fixed for the end of last year, but it is as yet uncertain when the tenders will be called for and the work begun, as the position is complicated by the political situation. After the construction of the White Nile Dam three other main works have still to be carried out. These are a reservoir on the Upper Blue Nile to increase and equalise the flow of water, a reservoir at Lake Albert to provide for Egypt's ultimate requirements, and a by-pass in the Sudd region to provide a channel for the water from this reservoir. The first of these works, which has crystallised in a project for a dam at Lake Tana in Abyssinia, has been held up for some years owing to political considerations, but it has now reached the practical stage, and, as already recorded in these columns, a preliminary agreement has been reached with the Abyssinian Government, and engineers of Messrs. J. G. White and Co., Ltd., are now to carry out an investigation from the engineering standpoint, following which negotiations for a final agreement are to be undertaken. It is, therefore, a reasonable assumption that the scheme will go forward, and that within two years or so work will be actually in progress on the Tana Dam. There is bound to be some misgiving at the construction of the Upper Blue Nile Dam outside Sudan territory, just as there will be considerable regret that the work will not be carried out by one of the British firms of contractors who have to their credit such notable enterprises in the Near and Middle East and in India. But the end is the chief thing, and if the work is considered essential for the development of cultivation in the Sudan, the important thing is that it should be carried through as speedily as possible. The remaining two works the reservoir at Lake Albert and the "by-pass" round the Sudd area - are not yet matters of immediate urgency, though they will be needed in the next decade or so.



GENERAL VIEW OF THE NAG HAMMADI BARRAGE AND LOCK.

It must be remembered that the whole purpose of the works scheduled is to make adequate and timely provision for the irrigation needs of Egypt and the Sudan. Egypt's need is the greater at the present time owing to the relatively small inhabitable area and the rapid growth of the population. Three years ago the Egyptian population numbered 14,168,756, and at the present rate of increase the total will amount to something like 20,000,000 in 1955, by which time it is estimated that the country will be utilising its total cultivable area. It will thus be realised that there is not much time to be wasted in carrying through the necessary irrigation projects. The

Digitized by Google

position is different in regard to the Sudan, and it is not anticipated that the maximum cultivable area of this region will be utilised before the end of this century.

The Nag Hammadi Barrage is being constructed by the famous firm of contractors, Sir John Jackson, Ltd., who were responsible for the Hindieh Barrage and are carrying out the Singapore Naval Base contract for the British Admiralty. The Barrage is being constructed in three stages, the present being the third season. It is designed for two purposes. In the first place it will enable the conversion from basin to perennial irrigation of a fertile region of about 500,000 feddans. At present in some years about two-thirds of the area has either remained unwatered or has received only about half the requisite supply of water. Secondly, it is a necessary corollary to the Gebel Aulia Dam scheme which will have the effect of lowering the level of the Nile, and the Barrage will provide against the danger of certain lands being left unwatered. The first season's work on the Barrage, which will be about 825 metres long, with a lock on the western bank, consisted of the lock and the western section of the Barrage. The work of the second season comprised the middle section of the Barrage, while work on the third section, which will connect up with the eastern bank, began last autumn.

Details of this great project may be briefly summarised. In general outline the Barrage follows the lines of the Assiut and Isna Barrages, but it will have various features of special interest which are not found in these undertakings. Thus it will have 100 vents, 6 metres wide, as against the 120 vents of 5 metres wide, of those Barrages. This does away with the necessity for constructing twenty piers, and there is a corresponding economy in masonry. Sluice gates are fitted to each vent to control the flow of the river, so that with all the gates raised there is a width of opening of 600 metres. The depths of the sluice gates vary according to their position, and are of 6.1 metres, 7.1 metres, or 8.1 metres. Abutment piers at each end of the Barrage and main piers at every tenth vent will divide the vents into ten groups of ten. The abutment piers are 14 metres wide, and nine main piers are 4 metres wide, and the intermediate piers are 2 metres wide, with the exception of the piers at the western ten vents, which are 2.25 metres wide. The piers are faced with dressed granite for the lowest 2-4 metres, and above that level with dressed limestone rubble masonry in 2 to 1 cement mortar. The arches joining the piers have a radius of 4.35 metres A feature of special importance is the width of the solid flooring in the Barrage, and the floor is much more substantial than that of the Assiut or Isna Barrages. The floor below the arched superstructure of the Barrage is formed of solid concrete throughout, as compared with the earlier practice of making it partly of concrete and partly of rubble masonry. Universal joist sheet piling has been employed for the full length of the Barrage on both sides. On the upstream side the piling has been arranged at a distance of 10 metres from the axis, while on the downstream side the distance is more than double. The piles have been driven 6 metres below the concrete foundation of the upstream side, and here there are two lines of piles, 1½ metres apart, the intervening space being filled with concrete-in-mass. On the downstream side the piles have only been driven 4 metres below the foundation, and on both sides the piles project 1 metre upwards into the concrete. The lock at the western end is 16 metres wide by 80 metres long, and will be crossed by a swing bridge to enable a tramway and a roadway to be carried over the Barrage. The roadway is 6 metres wide, and will have on it a 0.60 gauge line of tramway rails on which the winches for operating the sluices will be run.

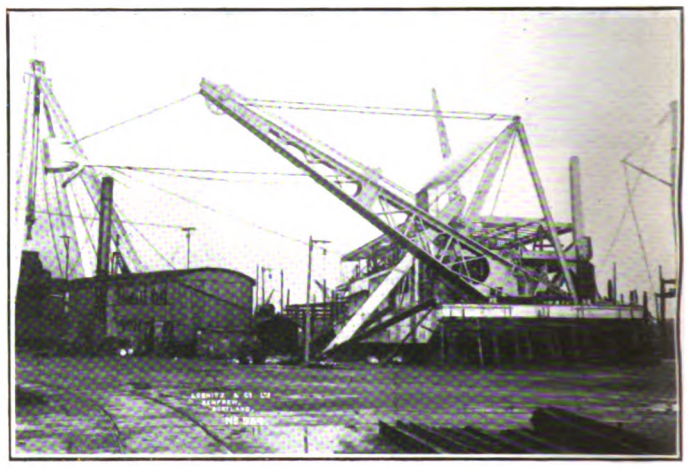
Such are the main features of this great undertaking which is scheduled to be completed this August. Naturally the work has called for a vast organisation both as regards the provision of material and equipment and to meet the needs of the European staff and the large number of

(Continued on page 462).

DREDGERS IN THE EAST.

The well-known firm of Messrs. Lobnitz and Co., Ltd., of Renfrew, manufacturers of dredgers, rockcutters, etc., have had a long and important association with the regions of the Near and Middle East. A considerable number of the great engineering enterprises that have been carried out in that part of the world have called for the use of dredgers, and Messrs. Lobnitz and Co. have been associated with many of them. One may recall for instance, the Sennar Dam at Makwar, where a cutter-suction dredger was employed. Nearer home the rock-cutters used by the Société Anonyme Hersent in the development of Piræus harbour are Messrs. Lobnitz and Co.'s patent.

The firm have recently carried out two of the most interesting contracts that they have yet undertaken. They have just shipped out two long-reach dipper dredges for the Upper White Nile project of the Egyptian Government, and are at present erecting them on the Nile, twenty miles above Khartoum. These dippers have an outreach of 85 feet (as shown in the accompanying illustration)—the greatest that has ever been constructed and can dump at a height of 25 feet above water level. They are fitted with spuds, and require no moorings or means of propulsion, being able to move about by means of



LONG-REACH DIPPER DREDGE,
For use on the Gebel Aulia Dam.

the spuds and the dipper backing rope. As they are to be used in the Sudd region, this gives them an advantage over all other kinds of dredging plant. The dipper bucket of 2½ cubic yards capacity is capable of digging hard material, and, in addition, a Lobnitz patent Rockcutter and guide have been supplied, which can be operated by the same wires and machinery as the dipper, when required, on any patch of rock met with. All the accommodation is surrounded by mosquito-gauze bulkheads, as also are the operating station, the workshops, etc. The vessels are fitted with refrigerating machinery and cold storage chambers and electric light, and other conveniences.

Two suction dredgers have also been supplied for work on the Sukkur Barrage on the Indus. These vessels had a draft of only 3 feet 2 inches, and were propelled by means of stern paddle-wheels, capable of giving a speed of 9 knots. They were equipped with a 20-inch suction pipe with rotary cutter on a frame in a forward well. The discharge was led to the stern of the vessel, where a floating pipe-line 2,000 feet long connected to a terminal pontoon, which enabled the discharge being made at 30 feet above water level, for filling behind coffer dams. The specified capacity of the dredger was 8,000 cubic feet of solids per hour, but on many occasions 10,000 cubic feet per hour was the regular output. Two spuds were fitted at the aft end for walking purposes, and a centre spud for use in canal locks and similar places. One of the terminal pontoons with the discharge pipe is shown in the illustration on the next page.

PALESTINE CEMENT.

Of the numerous industries which have grown up in Palestine in the last few years, by far the most important both as regards present production and potentialities, is the Portland Cement Co. (Nesher) Ltd., of Haifa. The production of cement was begun at the factory in 1926. The works were originally constructed to produce 60,000 tons per annum, but they have now been enlarged and the present possible annual production is over 100,000 tons, the greater part of which is sold in the country. A considerable quantity, however, is exported to Syria, Cyprus and Transjordania.

The company's works are in the Valley of Kishon, four miles from Haifa, and the company is fortunately situated as regards communications, as it has its own sidings on a loop line of the railway which passes through the company's property. Quarries close at hand provide the raw material necessary for the manufacture of cement. The company possesses its own electrical power station, and has its own mechanical workshops. Only English coal is used the factory. The cement produced is equal to the best brands of British cement. The company supplies cement to the Public Works Department and the Railways in Palestine. For the development of an export trade the company has two motor vessels of a very low draught.

The present staff of the works consists of about 350 workmen, both Arabs and Jews. As in other cases where the two nationalities are employed together, no difficulty of any kind was experienced during the August disturbances, showing that co-operation betwen Arab and Jew in the development of the country is possible. The company, it may be mentioned, is constructing a special settlement of concrete houses for its workers, to take the place of the village where they have been living. The outlook for the company for the present year, to judge from the expansion of building in Palestine in the last few months of 1929, is distinctly favourable.

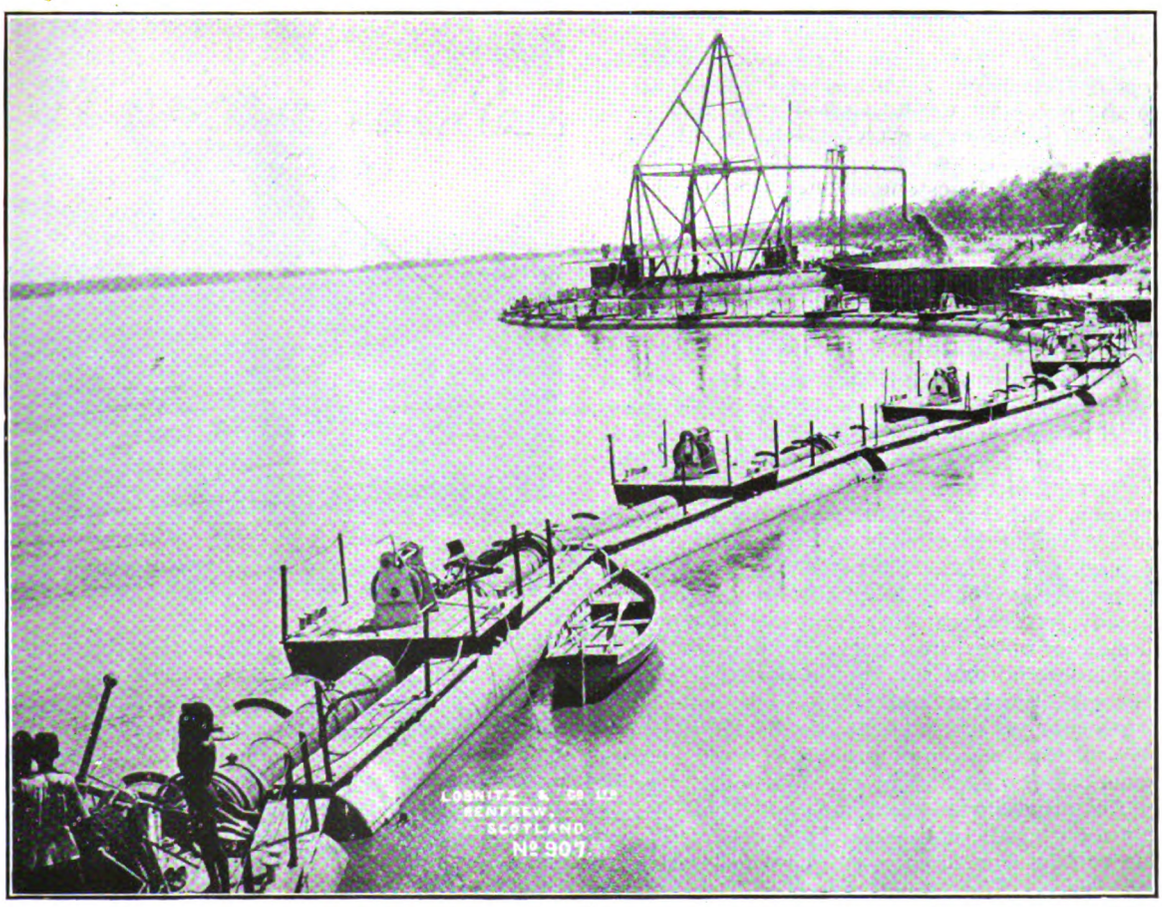
AUTOMATIC TELEPHONES IN THE EAST

Serving the telephone users of some 32 countries in both a public and private capacity, there are now upwards of 6,000,000 Strowger Automatic Dial Telephones in daily use throughout the world. In the Near and Middle East and in India they have become familiar through such installations as those at Simla, Lahore, Amritzar, and Bombay; Basra in Iraq; and more recently at Mansourah in Egypt. In private service for inter-departmental communication in mills, factories, institutions, office suites, plantations, etc., their advantages are less generally recognised than in Western countries, where Strowger Private Automatic exchanges are in general use, and have demonstrated their indispensability as an aid to modern business and social life.

The introduction of Strowger Dial Telephones into the Near East and India nearly twenty years ago was due to the enterprise of the Automatic Telephone Manufacturing Company, Ltd., Strowger Works, Liverpool, England, the largest Automatic Telephone Engineering and Manufacturing organisation in the British Empire.

First constituted at the beginning of 1912, as a British source of supply of Strowger Dial Telephones and automatic exchange equipment, one of the first public exchanges to be equipped by that company overseas was a 500-line installation at Simla, the Indian hill station. This contract was carried out in 1914 to the order of the Government of India, and it is significant of the immediate success of this, the first Strowger Automatic Telephone exchange in India, that several successive extensions of the original installation have brought the present total number of lines up to 2,100, whilst similar installations were completed for Lahore (1,700 lines) in 1918 and Amritzar (700 lines) in 1922.

In 1928 the example of the Indian Government was followed by private enterprise, the Bombay Telephone Manufacturing Company having commissioned the Automatic Telephone Manufacturing Company to equip two

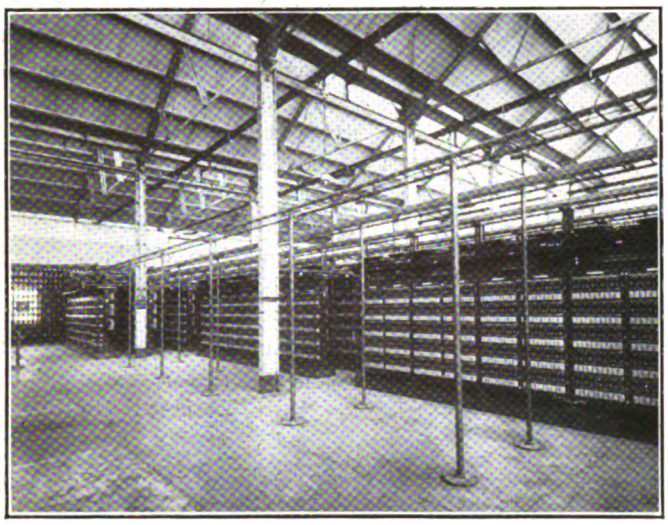


SUCTION DREDGER AT WORK AT THE SUKKUR BARRAGE ON THE INDUS,
Showing one of the terminal pontoons with discharge pipe.

Digitized by Google

exchanges in Bombay, Central and Gell Street respectively, with a total of 11,000 lines of Strowger Automatic exchange equipment, Central being equipped for 7,000 lines, and Gell Street, the subject of our illustration, for 4,000. Both installations were completed and satisfactorily cut into service within twelve months.

Apart from the elimination of the operator, and the placing of the control of his own line in the hands of the telephone user—the more obvious advantage of an automatic telephone system—there are many equally important



AUTOMATIC TELEPHONE EXCHANGE, GELL STREET, BOMBAY.

gains accruing to the private user of Strowger Dial Telephones, which in the aggregate, speedily recoup him for the very nominal initial outlay involved. The substitution of electro-mechanical switching controlled by the calling dial on each telephone, does away with the errors, delays and petty irritations incidental to dependence on a third party for making and breaking telephone connexions. Wrong numbers, cut-offs, and lack of secrecy due to the ability of an operator to tap the line in the normal course of her duties, are unknown with the Strowger Dial Telephone, and the service is vastly accelerated and improved in consequence. It takes from three to four seconds to establish a connexion by dial with a disengaged line; ringing is automatic and immediate, as is also the engaged signal, if the desired line be "busy." Clearing is instantaneous on replacement of the receiver or handset, and a number of calls can be made without delay and in rapid succession, in far less time than would ordinarily be occupied in attracting an operator's attention and her subsequent manipulation of plugs, cords, and keys.

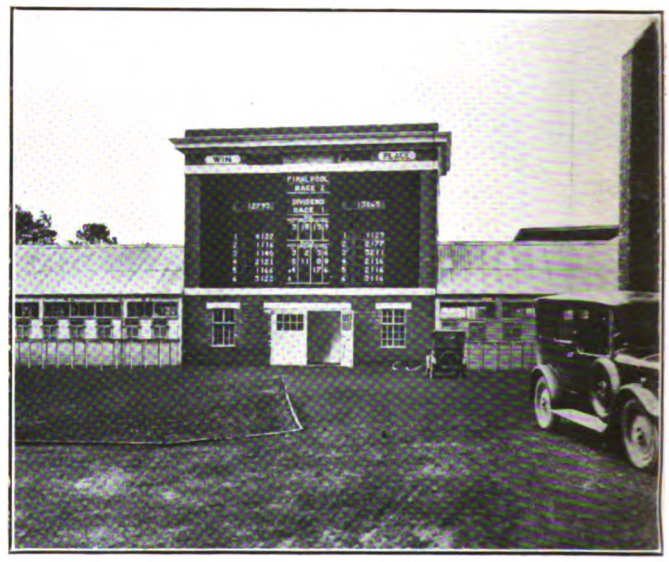
On the Strowger system it is impossible for a third party to break in on a conversation already in progress, thus absolute secrecy is insured. Moreover, service is continuously available, at all hours of the day or night, a vitally important factor in the case of fire, illness or other emergency, and that without additional cost, such as would be involved in the attendance of a night operator at the exchange.

Strowger private automatic telephone installations are available in any required capacity from five or ten lines for a small suite of offices, up to several hundreds in the case of large industrial undertakings, department stores, etc., where rapid, efficient and reliable telephone communication is a *sine qua non*. Due to the flexibility of the Strowger system the question of growth to meet increasing requirements of an expanding organisation is readily answered. An initial installation can be planned on the basis of immediate needs, and added to or extended from time to time without interference with or deterioration of the existing service. The robust character of the equipment, coupled with the absence of man-handling, incidental to manual switching, makes for exceptionally long life and minimises fire risks, whilst maintenance costs are negligible, the lightness of the moving parts of switches and relays employed, and the special durability of materials of which parts subject to wear are composed, ensuring a maximum period of service with a minimum of expenditure.

The Company also manufacture Auto Alarm Indicators; Beasley-Gamewell Closed Circuit, code signalling, and loud-speaking fire alarm equipment, including street boxes, fire station indicating and recording apparatus and fireman's call-bell equipment. Engine-room Telegraphs, Hand Lamps, and Tree-Light Traffic Control Signals, such as are coming into increasing use in busy cities and towns, are also among the Company's products, together with Selective Supervisory Control and Indicating Apparatus for power schemes. Auxiliaries to its Strowger automatic telephone manufactures are loading coils, Toroidal repeating coil and transformers, thermionic repeaters, selective ringing telephones, mine telephones and signalling apparatus. It also manufactures telegraph apparatus, including several designs based on colonial and foreign requirements.

Another branch of the Company's activities, carried on at subsidiary works in Liverpool, England, is the manufacture of Xcel Electric Domestic Appliances, incorporating electric irons, kettles, toasters, cookers, fires, tubular and immersion heaters, and electric suction cleaners, a speciality being the "Cosyglo" imitation coal fires with realistic moving flames and smoke effect.

One of its latest ventures, a direct adaptation of standard Strowger Automatic switching equipment, in fact, is an All-Electric Totalisator for the world's racecourses. The A.T.M. All Electric Totalisator fulfils the requirements of racecourse betting in all countries and is free from the inertia of the earlier mechanical models now in use. It is as rapid and reliable in action as the Strowger electro-mechanical switch mechanism of automatic telephone exchanges in every-day service for the past forty years, and has been adopted as their standard equipment



A.T.M. ALL-ELECTRIC TOTALISATOR, THIRSK RACECOURSE, YORKS.

for British racecourses by the British Racecourse Betting Control Board. The Company has just completed the installation of a Totalisator at Newmarket, England, in readiness for the Craven meeting in April, whilst other installations are commissioned for Cheltenham, Leicester, Folkestone, Pontefract, Wolverhampton, etc. racecourses.

Possessing well-equipped works, staffed by an experienced engineering and production personnel, the Automatic Telephone Manufacturing Company is in a position to undertake the manufacture, on mass-production and precision principles of similar small power and signalling equipment to that above enumerated, and will welcome inquiries of this description.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Public Works in the Near East.

The Public Works Supplement which we publish this week covers a number of the more important enterprises which are now being carried out or are being initiated in the Near and Middle East. Great undertakings such as the Nag Hammadi Barrage in Egypt, which will be completed this summer, the Rutenberg Electricity Scheme in Palestine, the great reclamation projects in Greece, and port works such as the dredging now being carried out at Aden are symptomatic of the steady progress in development that is being made throughout the Near East. Besides those I have enumerated, many other important undertaking are being carried out or are in contemplation. The effect that these various projects must have on the prosperity of the Near and Middle East is bound to be pronounced, and the increasing wealth that will accrue to the inhabitants will have an inevitable repercussion on trade expansion.

Turkish Finances.

The news is forthcoming that there are to be further discussions at Ankara between the representatives of the Turkish bondholders, Mr. Wyatt and M. des Closières, and the Turkish authorities. The action of the Turks in inviting this new conference is encouraging, and suggests that second thoughts have prevailed at Ankara and that it is realised that any premature action would have a fatal effect on the prospects of a loan. As I have all along emphasised, the first step towards financial reconstruction in Turkey ought to be the appointment of a foreign adviser, a departure which has proved so successful in the case of other countries. The suggestion of a foreign adviser has been made to Ankara, and it must remain to be seen whether this invitation to a further conference means that the Turks are now willing to adopt this course.

War on Locusts.

This month has witnessed one of the most serious invasions of locusts that the Near East has known in recent years. Palestine and Trans-Jordan, two of the affected countries, have had frequent experiences in recent years of the ravages of this pest, but this time the locusts have gone further afield and have attacked Egypt in such numbers that there has been great anxiety with regard to the cotton crop. Determined efforts have been made to localise the effects of the invasion, and as a result it is happily probable that the damage to cultivation will be relatively small. The present invasion will have, it may be hoped, the result of emphasising the need for preventive measures against this pest. All the evidence goes to point to the fact that of late the menace of locusts has been increasing, and it is obviously necessary that all the countries concerned should unite in remedial measures. An agreement was signed four years ago by representatives of Turkey, Iraq, Trans-Jordan, Palestine, and Syria for the establishment of an International Bureau of Intelligence, with headquarters at Damascus, for the purpose of collecting and distributing information regarding the movements of locusts and the methods of control. This is obviously the first step in dealing with this menace to agriculture, and its success must naturally be dependent on the way in which the various countries carry out the necessary measures.

Persia's New Currency.

Persia is the latest country to decide to establish a gold standard for its currency in place of the present silver standard. The reason is, of course, to be found in the fluctuations of silver, which have been such as to upset all calculations and have rendered its use as a medium for a currency basis a matter of extreme difficulty. The change in Persia's currency is not to take place immediately, but will presumably be introduced within the next twelve months or so. The Bill recently passed by the Majliss provides that the unit of the currency shall be the gold riyal, divisible into 100 dinars, instead of the kran. The riyal will contain 4.5 grammes of silver, and the silver coins will be half, one, two, and five riyals. The two gold coins will be the half-pahlavi and the pahlavi, equivalent respectively to 10 and 20 riyals. There will further be nickel coins of the value of 5, 10, and 20 dinars, and one and two dinar copper coins.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, April 22.

If extreme views on either side are eliminated, one may fairly sum up the attitude of the City towards Mr. Snowden's second Budget in this way: there is relief that it was not more severe and that it was free from the Socialistic traits for which Mr. Maxton sighs in vain; there is moderate satisfaction at the policy as regards the debt and banking fund and at the absence of "stunts" or improvisations that provide fortuitous revenue; but there is also, of course, intense dislike of the additional burden on industry represented by increased taxation. On the whole, there is a disposition to think that, given the huge bill which he had to meet, Mr. Snowden has made an honest, straightforward job of it. But at the same time there is everywhere a conviction that retrenchment in public expenditure is absolutely essential, and the part of the Budget statement which the City liked best was the peroration in which Mr. Snowden held out hope —almost a promise that no further increase in taxation will be imposed next year. This is taken to mean that so long as he is at the Exchequer he will withstand the pressure of certain of his colleagues for further extensions of social service extravagance.

The Budget and the Stock Markets.

It has been the fashion recently to declare that "Budget uncertainty" was largely responsible for the lack of activity on the Stock Exchange. The event has justified the view advanced in this column that the Budget would not make much difference either way. After the speech, the gilt-edged market sagged a little and some hesitancy developed, partly on account of delayed sales, but the effect of the Budget announcements was not profound. To some extent "certainty" has replaced "uncertainty," in that Mr. Snowden has declared that he foresees no likelihood of any tax increases next year. The position of the McKenna duties is not finally settled, but there is at least certainty for the next twelve months. The main feature of the Budget was, of course, the increase of 6d. on income tax. As pointed out a short time ago by a London daily, the number of "small men" who are capitalists or shareholders is very considerable, but the small man is not affected by the increase in income tax. Out of some two million income taxpayers only a little over half a million will pay increased taxes. To the small man, therefore, investments are as attractive as before. Brewery shareholders will lose the benefit of derating by the increase of 1d. per gallon in the beer duty, but otherwise they cannot claim to be badly hit; and in the motor car industry only some types of cars are in danger of foreign competition twelve months hence. These factors and the widespread efforts to achieve industrial reconstruction suggests that the Stock Exchange outlook still has tangible hopeful aspects.

To Finance Rationalisation.

The alleged conflict of interests between finance and industry, of which there has been much complaint in recent years, seems to be resolving in a truce with the creation of the new Bankers' Industrial Development Co., Ltd. As a result of several moves in high quarters this company has been formed especially to give assistance to any industry which can show that with monetary assistance it can make itself efficient The £6,000,000 capital of the Bankers' Industrial Development Co. is held as follows: 45 shares of £100,000 by a number of financial institutions and 15 shares also of £100,000 by Securities Management Trust, a subsidiary of the Bank of England. The directors of the company are the Governor of the Bank of England, as chairman, and directors of old-established private banks and issue houses with considerable experience of this sort of business. The company's connexions should ensure adequate support for any scheme it approves; it is now up to industry to produce such schemes.

Margarine and Soap Profits.

One of the largest mergers in the world took effect as from January 1, 1930, with the merger of the Margarine Union and Margarine Unie combine with Lever Bros., also leaders in the margarine, oil and soap industries. The size and significance of this combination is more easily realised by consideration of the accounts for both parties for last year to December, 1929, which were published last week. Unilever (formerly the Margarine Union) and Unilever N.V. of Rotterdam (formerly N.V. Margarine Unie), show an aggregate profit of £3,524,784. The combined profit for the previous year was only £1,666,849. Lever Bros. also recorded almost as remarkable progress, the 1929 figure for net profit of £6,213,505, being £939,430 more than that for 1928. Both companies are utilising these funds conservatively. The Unilever companies are increasing their total reserves to £8,969,018, by the allocation of a further £1,500,000, while the £500,000 to be utilised by Lever Bros. for this purpose compares with £200,000 in 1928. The dividend distributions on the ordinary shares are to be 10 per cent. for Unilever and Unilever N.V., the same as last year, while Lever Bros. ordinary shares, which are entirely held by the Unilever companies, receive 10 per cent. Naturally the recent amalgamation should give added attractions to the shares of these companies. Increased profits may be expected as economies of all descriptions are effected in most branches. Margarine Union ordinary shares have therefore very favourable prospects, reflected in their low immediate yield of £2 15s. per cent. On the other hand, an attractive prior charge investment whose security should much improve is Lever Bros. 20 per cent. Cumulative Preferred Ordinary shares which at present yield about £7 5s. per cent. In the last accounts these were covered about 3½ times as to dividend.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended April 16:—

Egyptian Futures.

Sakel Contract.—Throughout the greater part of the week values in this contract have shown a declining tendency, liquidation of cotton bought higher up and reactionary American markets finding little support in evidence. Week-end news to the effect that the tariff bill had passed the committee brought in a large inquiry from America for cotton out of our stock for immediate shipment, and whilst many of the expected orders failed to materialise, the resultant buying was sufficiently important to influence a healthier undertone. This in turn has latterly induced a fair amount of short covering, so that we close above the week's low levels, but with near months 21 to 28 points and distant positions 27 to 33 points lower than our last circular rates. With stocks of tenderable cotton at this side previously at a very moderate figure, the further inroads made during the week leave near months in a very susceptible position, and the present tendency is for the establishment of a wider premium over old crops. Just how far the movement will extend depends largely on a continuation of the present demand, but taking all circumstances into account, we do not consider any excessive manipulation will be witnessed. The free trading position, November, in Alexandria has lost ground compared with the corresponding delivery at this side, the probability of the imposition of the tariff being construed as an ultimate "bearish" point.

Home trade reports, as far as the fine section is concerned, rather indicate less demand than previous weeks; the tone, however, remains more cheerful, and with the Budget out of the way, business should develop after the holidays. With the Government holding so much cotton, the course of the market depends almost entirely on their policy, and as no idea can be formed at what basis they are going to start selling their stock, it is impossible to forecast the course of values.

Upper Contract.—In spite of the declining tendency in the American markets, near positions in this contract have shown great strength during the past week, heavy shipments to America calling for consistent repurchasing of hedges. New crops have been little affected, and show a decline approximating with other markets on the week. Only a moderate local demand has been experienced, and as supplies here are much reduced, we fear that those buyers who have been holding off will find the basis moving against them.

Egyptian Spot.

Futures have again been a depressing feature, but, in spite of this, a large business has been done both in Egyptians and Sudan Sakel. The bulk of the business has been for export to America, and buying has been of a somewhat hurried description, with a view to getting the cotton into that country before the imposition of the 7 per cent. tariff, which is expected to become law in a very short time. It is some years since we have seen the Egyptian spot sales quoted as 2,000 and 3,000 bales, and it has been a cause of surprise that our futures markets have not responded more quickly to the improved offtake for actual. Probably, the reason is to be found in the fact that the new American tariff is really a "bear" point in the long run, and also there are fears that the Egyptian Government may shortly commence to dump cotton in this market.

The registered office of the Lake Copais Company, Ltd., will be removed to-morrow to Pinners Hall, 106, Old Broad Street, E.C.2.

The Chartered Bank of India, Australia, and China announce that at an extraordinary general meeting of shareholders held on April 16 the resolutions passed at the extraordinary general meeting held on March 26 in regard to the new charter and deed of settlement were duly confirmed.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended April 12:—

Grain.—The news from consuming markets was, contrary to expectations, disappointing throughout the week, prices for both barley and maize having reached a very low level. Whilst, however, the majority of grainholders, in their anxiety to obtain the highest prices for their grain during the improvement, missed the opportunity of realising, others were able to cover old but cheap sales with hardly any loss. At the end of the week a certain inquiry from English ports set in for April shipment, and this is not only maintained but also shows signs of developing. Chartering from the Danube was active, and several Greek steamers have been fixed during the week at 14s. Antwerp Rotterdam, 14s. 6d. Antwerp Hamburg range, both for April and early May loading. An Italian steamer of 4,500 tons, 10 per cent., secured 6d. more. Spot rates were maintained at about 12s. at the beginning of the week, but in consequence of the unfavourable news from grain markets, the demand for room has practically ceased, and it is feared that lower rates will have to be accepted, the more so as the amount of chartered tonnage and liners seems to be rather in excess of the probable requirements. At Constantza, owing to the temporary shortage of tonnage, 8s. 6d. to 9s. for the Continent was paid, which rate, however, will hardly be maintained in consequence of the arrival of several steamers at that port lately.

Timber.—Some quiet business is being done at the rate of £6/£6 5s. for Greece; £6 Alexandria; £7 £7 5s. Syria and Palestine; £7 5s. Sicily; whereas rates for other destinations are only normal at about £7 10s. West Italy; £8 South France; £10 10s. Spain.

Weather and Crops.—Abundant rains fell throughout the country from April 6 to 8 and were followed by intermittent showers during the remainder of the week, especially in some eastern districts which are usually less favoured. The temperature has risen steadily, but not excessively, and the autumn-sown crops are stated to be everywhere in a very satisfactory condition, although it is reported from one county that more rain is required in a few localities. Spring ploughing and sowing have proceeded actively in favourable circumstances. Although grain prices are still abnormally low, the favourable auspices for the new crops have caused a wave of optimism in agricultural circles, and raised hopes of an earlier improvement in commerce.

Suilna.—Bar Depth.—Notwithstanding that the dredgers were prevented from working for four days during the week owing to stormy weather, the depth of water remains unchanged at 24 feet, and it is understood that conditions remain normal. River Depth.—The minimum depth of water in the river is still 24 feet.

Constantza.—Grain arrivals from the interior amounted to about 4,500 tons, and exports to over 8,000 tons. Exports of timber during the week to Piræus and North Africa amounted to 480 waggons. Fifteen vessels loaded over 66,000 tons of petroleum products and three took oil fuel for bunkers.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, May 16). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Matheran for Calcutta (Birkenhead, May 1).

Bibby Line.—S.s. Cheshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, May 14).

British India Line.—S.s. Manora for Colombo, Madras, and Calcutta (London, May 3); s.s. Warfield for Bombay (London, May 10).

Cunard Line.—S.s. Bantria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, April 26; Swansea, April 29); s.s. Bactria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, May 1; Liverpool and Swansea, May 3).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 10); s.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 31).

P. and O. Line.—S.s. Nankin for Calcutta (London, May 9); s.s. Comorin for Bombay (London, May 9).

Prince Line.—S.s. Lancastrian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus ports (London, April 30).

Ellerman and Papayanni Lines.—S.s. Lesbian for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 26; Swansea*, April 26); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, April 28); s.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, April 29). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Motors and Motoring.

(By Our Motoring Correspondent)

Speed of Motor Coaches.

Something has been said recently regarding the high speeds reached by motor coaches on long distance work, and figures have appeared which go to show that some of these vehicles attain speeds of 30 or 40 miles per hour at some portions of their journey. The implication is that such a high rate of speed is dangerous, although the majority of the critics say, when a similar charge is brought against them, as private car owner-drivers, that speed is not dangerous in itself and that they can drive as carefully at 40 or 50 miles an hour as at ten or a dozen. It is not easy to see on what basis they can condemn speeds for a motor coach which they agree are safe for a private vehicle. As a matter of fact, the drivers of omnibuses and motor coaches are easily the most careful drivers on the roads, and are as far superior, in that respect, to the average private driver as the professional billiards player is to the habitue of the local inn. The section of the community which is interested in tramways has also made its voice heard, and an authority says that it is too often the case even in towns that the petrol omnibus gives a higher average speed per hour than is the case with tramcars.

This higher omnibus speed is due to the granting of a 20-mile speed limit to those passenger-carrying vehicles shod with pneumatic tyres, whereas the tramcar is still subjected to various limits, ranging on most undertakings from 16 m.p.h. downwards. A contemporary objects to the higher speeds allowed to omnibuses, and apparently feels that tramcars should be allowed to travel at at least as high a speed, and says that the necessity for this arises from two causes. One is that the passenger does not care to see the car in which he is riding passed by other public service vehicles. The other cause is to be found in the fact that the Road Traffic Bill proposes to give the omnibus and coach a limit of 30 miles per hour. Even that does not satisfy the operators and they are asking that for vehicles exceeding 2½ tons a speed of 35 m.p.h. shall be permitted. Whether the lower or the higher maximum is granted by Parliament, says a contemporary, the situation will call for attention. It will not be possible to ignore the competition of the faster vehicle. It continues: "The Ministry of Transport must be approached with a request for fairer treatment, by individual undertakings. The greatest justification for an all-round increase is to be found in the fact that the tramcar is the safest vehicle and may be driven at any reasonable speed. Yet the highest average attained does not exceed 10 miles per hour and that distinction is claimed by a London company."

It will be interesting to hear what private car drivers will think of the road situation if tramway cars are to be allowed to travel at an average speed of even only 20 miles per hour as, with the frequent stops to which these vehicles are subjected, that would mean speeding at from 30 to 35 m.p.h. along fairly clear roads. Further, when the motor omnibus companies and the tramcar owners are fighting for higher speeds and bigger vehicles, they must not forget that the private car owner has some right to the road. It is true that, in these days of traffic congestion private cars should keep out of crowded city streets, but that is simply because their presence there increases congestion and is against the public interest. They have a perfect right to be there if they so choose.

Commercial Motor Bodies.

The subject of balance of commercial motor vehicle bodies is receiving rather more consideration to-day, and the need for a balanced design of body and truck as a unit for particular requirements is being recognised. There still remain, however, a few problems connected with proper load distribution, light weight body and flexibility. We generally find that all these have been duly considered in the design of light delivery vans, but that is due to the fact that these have all been carefully designed for mass production; naturally, therefore, the engineering departments have taken care that everything was quite right before manufacture was begun. Talking to the manager of one of the biggest manufacturers, he said that in special bodies things were less defined. The majority of these are not built by the makers of the engine and chassis, but are constructed to a customer's order by, in many cases, local body builders. The subject of load distribution, therefore, seldom receives proper attention and with the almost universal use of pneumatic tyres a certain element of danger is introduced thereby. As an instance of what is meant, let us take the case of a customer who has ordered a 2½ ton vehicle and had it fitted with a locally made body, designed as he and the body builder thought fit. The question of tyres comes up for consideration, and the prospective user decides that he will have 38 by 7 single front and dual rear. He makes that decision because he knows that the chassis will weigh about 6,800 lb., the body 2,500 and the load, at a maximum, 7,000 lb., a total of 16,300 lb. He decides on the size of the tyres because each 38 by 7 tyre will carry 3,400 lb., giving a carrying capacity for the six of 20,400. That, on paper, is excellent, but how does the customer know that, with a locally made body, the load of the vehicle will be so evenly distributed that each tyre will be doing its share and none will be overloaded? Suppose the chassis is of the usual 164½ inch length with a 12 ft. platform and a 13 ft. body is put in position, the load distribution will be extremely poor and the rear tyres will be overloaded by at least 17 per cent. If, under that overload, the tyres wear unduly rapidly, as they doubtless will, the customer will promptly blame the unoffending tyre maker, ignorant altogether of the fact that he and his body builder are to blame.

Why not visit
The SUDAN?

KHARTOUM can be reached either via Egypt or direct by steamer to Port Sudan and thence by train-de-luxe. The social life of Khartoum during the season (December to March), the scenes of Wild Life on the Southern reaches of the White Nile, or interesting short trips organised by the Sudan Government Railways and Steamers from Khartoum, offer a unique variety of experiences to those in search of something out of the ordinary. It is also a new route to or from UGANDA and KENYA, involving neither difficulty nor discomfort. To the Sportsman it is Paradise.

Notes of the Week.

The Anglo-Egyptian Negotiations.

While this issue of THE NEAR EAST AND INDIA is being printed the negotiations between the Egyptian and British Governments, that stood adjourned over the Easter holidays, will have been resumed. During the interval the Egyptian Delegates have been in communication with the members of the Cabinet left behind in Cairo and are understood to be in a position to say their final word on the subject of an Anglo-Egyptian treaty. The desire for the conclusion of an honourable agreement between the two countries remains strong in Great Britain; but it would be hard to find any considerable body of British opinion in favour of an agreement that went beyond the limits set in the Government's proposals last year. The Egyptian Delegation had, no doubt, hoped to advance the question of the Sudan beyond the stage where it was left last August, when the retention of the *status quo* was agreed upon, until such time as new conventions might be concluded; but it has been well advised, if it is content to accept the favourable terms already accorded and to leave the future to take care of itself. The footing on which it is now sought to place Anglo-Egyptian relations is essentially that which is known as "a gentlemen's agreement." In the exchange of Notes last year there was, indeed, a specific reference to this feature, when the Secretary of State for Foreign Affairs stated that, if the treaty is worked in the same friendly spirit in which the proposals were negotiated, the British Government will be prepared to examine sympathetically a proposal for the return to the Sudan of an Egyptian battalion simultaneously with the withdrawal of the British forces from Cairo. Too little attention, it would seem, has hitherto been paid in Egypt to the potentialities which will be opened up to the Egyptians when they have been able to point to an adequate period over which the treaty will have been worked "in a friendly spirit."

The Croat Trial in Belgrade.

Almost inevitably attention paid abroad to the trial now taking place in Belgrade will fasten on the charges brought against the Yugoslav police. If the accuracy of these should be established, it may be supposed that the revelations will be as unwelcome to the present régime as they are disturbing to the nation as a whole. The case for the prosecution is that a series of outrages pointed to some master organisation aiming at the overthrow of the Dictatorship. In the persons of two or three of the accused the authorities believed that they had discovered the brains of the organisation, and they accepted the evidence that these men provided of the guilt of alleged accomplices. It might have been expected that, when the Croat leader, Dr. Matchek, was incriminated by such testimony, the authorities would have become suspicious and would have taken special care to check the value of the evidence. Few countries can hope to escape altogether from some of the worst forms of public crime, but it argues a fairly primitive state of affairs where the head of a political party offers himself as Treasurer to a frankly terrorist organisation. For this is the main charge on which Dr. Matchek is arraigned; he is accused of having supplied with funds the youths who were to indulge in indiscriminate murder as a protest against the Dictatorship. For the sake of Yugoslavia it is to be hoped that the prosecution in this particular will fail to establish its case. Indeed, the best that could happen in the interests of the country is that over-zeal on the part of the police should be proved, and that it be shown that the outrages were more probably the work of irresponsible hotheads. Convictions that might be held to rest in any way on tainted evidence could hardly fail to bolt and bar the door to a Croat-Serb *rapprochement*.

Anxiety in Palestine.

That all the festivals which fell in Palestine this year about the time of Easter should have passed off quietly is very creditable to all concerned, and particularly to the authorities who had to make provision for all possible incidents, including, of course, quite accidental clashes. Observers should not be misled, however, by this successful piece of administration. The atmosphere in Palestine, so far as we can judge it, is still very tense, and a general feeling of uncertainty and anxiety is almost tangible. Two considerations appear to be uppermost among the Arabs. The first concerns the Arabs who have been sentenced to death for murder during the riots of last autumn. In this

Digitized by Google

matter the element of premeditation is, of course, of the utmost importance to the Arab mind. Whatever be held as to the efficacy of Ottoman laws in this instance, the appeals of the condemned Arabs have been dismissed, and there remains between them and execution nothing now but the Executive Council of the Government of Palestine. This problem of the execution is terribly difficult and delicate. The second consideration concerns the reward of the Arab Delegation now in London. Arabs in Palestine are apparently building considerable hopes on the Delegation's attaining something quite concrete in the shape of political status. But in regard to this, as to the other matter, little can profitably be said at this moment. In the meantime, it is commonly reported that both Arabs and Jews are arming (though not every case, as with Jews at Haifa a short time ago, finds its way into the Press), and that, were a second clash to break out, the consequences might be much more serious. It is profoundly to be hoped that the authorities at Home will act with dispatch and firmness. Having made up their minds on the policy they intend to be pursued in Palestine, let them boldly enunciate it and secure to the Palestine Administration whatever means are necessary for carrying it out. They should recollect how often in the Middle East since the War the position has been imperilled by delay and drifting and neglect.

Anglo-Iraqi Relations.

The tone of a certain section of the Press in Baghdad continues to be far more bitter towards British officials in Iraq than might reasonably be expected of a State "friendly to and bound by gratitude and obligation to Great Britain." This fact is particularly unfortunate in view of the negotiations now proceeding between the Cabinet headed by Nouri Pasha al Said and the British authorities for the drawing up of a new Treaty to govern Iraq's admission into the League of Nations in 1932. The Iraq Prime Minister has published in broad outline his policy, in the form of a letter addressed to King Faisal on March 22. Although he pointedly referred in that letter to the recommendation of the British Government (circulated on March 1 to all British officials employed with the Iraq Government) in which was explained the necessity of placing apparent and real responsibility on the shoulders of the Iraq Government by easy stages, from now until 1932, when Iraqis should assume full responsibility for the administration of the affairs of State, he certainly cannot have foreseen that during this interval these Englishmen who have served the Iraq State faithfully and well would come in for abuse. But so far has the Press been from taking the advice of Nouri Pasha not to injure the feelings of British officials, that he has had actually to castigate it publicly for a display of grossest bad manners. In a *communiqué* issued last month the Iraq Prime Minister said: "I am profoundly grieved to notice that some of the newspapers are still severely criticising those officials in articles which I do not believe correspond with the good qualities inherent in the Iraqi nation, or with our acknowledged gratitude." Quite obviously this campaign of abuse will not make any easier realisation of the Iraq Government's desire to dispense with the services of certain British officials. It is a timely step that Nouri Pasha has taken in thus rebuking the Press, and it is to be hoped that his words will have effect.

INDIAN NOTES.

A Sound Step.

Lord Milner wrote of the Egyptian question: "It has one radical defect—that it is never simple; it has one radical charm—that it is never commonplace." The dictum is even more applicable to India, because of the immensity of the country and the magnitude of its peoples; but its truth has seldom been more forcibly demonstrated than by the events of the past few weeks. The task of those whose duty it is to interpret for the benefit of English readers the day-to-day developments in a rapidly changing situation is one of extraordinary difficulty and delicacy—their responsibility a heavy one. At the moment the issue is still undecided. The civil disobedience movement, whatever may have been the real or professed objects of those who launched it, is rapidly developing, as we anticipated, into violent resistance to constituted authority. Once convinced of the gravity of the emergency, Lord Irwin has again acted promptly and with decision. The revival of the Press Act of 1910, with such amendments as the conditions of the present time appear to require, is undoubtedly a wise step. Nothing has operated so powerfully to promote the spirit of revolution and lawlessness as the writings in the vernacular Press, many inciting openly to revolutiondary violence; others by consistent and hysterical praise of every manifestation, however futile, of defiance of the law. The resignation of Mr. V. J. Patel, and the much heralded announcement by Mr. Gandhi of his latest plans are of relatively minor importance. No one who worked, as the writer did, with the late President of the Assembly, ever doubted the real motive behind his acceptance of that office. The Viceroy's hope that Mr. Patel and those with whom he will now be "openly associated" will yet recognise the grave wrong which they are inflicting upon the country, for whose interests they profess so zealous a regard, is, we fear, foredoomed, but at least the Government of India will be relieved of a strange bedfellow, whose real character is only too plainly indicated in his letter, to which the Viceroy has made so admirable and fitting a reply.

Politics and Practice.

The fresh outbreak of violence at Karachi will come as an unwelcome surprise to those acquainted with Sind as the quietest and most communally friendly portion of India. The truth, however, is that the geographical position of Karachi has attracted to it many diverse elements from other parts of the Bombay Presidency, while the firebrands of Sind itself have there collected. The distance of Karachi from the headquarters of the Bombay Government, and the curtailment of the authority of the Commissioner, have combined to permit of the

THE BELGRADE TRIAL.

The interest attaching to the trial, before a Special Court in Belgrade, of twenty-four Croats, who are accused of being concerned in a terrorist conspiracy against the Dictatorship, centres more in the light that the proceedings are likely to throw on the present situation in Yugoslavia that in the persons of the defendants. The conduct of the trial, the nature of the evidence and the relation between the judgment of the Court and that evidence will all be carefully scrutinised, with a view to enabling an opinion to be formed, whether under the conditions imposed by the Dictatorship the antagonism between Croat and Serb has now been reduced to a few irreconcilables, or whether the Belgrade Government has abandoned all hope of conciliating the Croats and is at pains to protect itself in the face of real danger. The early stages of the trial have been marked by sensational revelations regarding the actions of the Yugoslav police. As it cannot have been the intention to have its police methods held up to universal execration, the Government, it will be argued, must have been kept in complete ignorance of those methods, and, in authorising the trial, acted on the assumption that the evidence against the accused could be relied upon, or it is cognizant of the methods of its police force and sees nothing incongruous in making use of them to achieve the end in view. The interests of the country, therefore, will call for a complete refutation before the end of the trial of the evidence elicited at the beginning, if one unfortunate effect of the proceedings is not to be to invest with credibility the very worst charges that have been alleged against Yugoslav officials in South Serbia and elsewhere. It may have been entirely a coincidence that one of the leading counsel for the defence was himself placed under arrest a few days before the trial, but it might be thought that the authorities in all the circumstances would have preferred to leave him at liberty for the period of the trial, in the certainty that he would always be available for arrest while it lasted. This incident, however, pales into insignificance compared with the evidence given by one of the accused on the second day of the trial.

As the case for the prosecution appears to be based mainly on declarations made by the accused themselves, special weight, it may be supposed, attached to the statements of Bernarditch, the first man cited as having turned King's evidence. He recanted the whole of his previous story and described the methods by which it had been extracted from him. He had, he said, been ill-treated by the police for nearly twelve hours. His wrists and ankles had been tied together behind his back, and he had been suspended head downwards, until he fainted; he had also been soundly beaten, and kicked when lying on the floor. As soon as he began to "confess," the Chief of the Zagreb police, who had previously superintended these third-degree methods, intercepted them, gave the accused "a good dinner" and pressed him to inculpate Dr. Matchek. All the declarations that he had made to the police, he said, were false; he denied that he belonged to any terrorist organisation, or that he knew of the existence of one. Finally, M. Trumbitch, who is counsel for Dr. Matchek, elicited the information that Bernarditch had been asked three or four months previously by the Chief of the Zagreb police to become a police spy, but had refused. It has yet to be seen whether this man's statement has to be believed, or whether the police are able to refute it. Related of any country outside Eastern Europe the story would seem incredible; but unfortunately it describes a condition of things all too familiar to students of Balkan history. Two years ago the state of affairs in Yugoslav prisons was the subject of serious denunciation throughout the country, and the Government of the day could not do otherwise than promise a thorough investigation and the necessary reforms. The Dictatorship which has materially improved conditions in a variety of directions, would have given, it was supposed, special attention to the state of the prisons and to police methods. If it be established that there is any foundation for the statement made by Bernarditch, the present régime in Yugoslavia will be shown to have neglected a very urgent reform. The present trial has many points of similarity with another Belgrade trial of September 8, 1899. On that occasion also the prosecution relied for its case against the twenty-seven accused on the testimony of certain of their number. One of the accused was reported to have committed suicide on the eve of the trial. On the opening day the chief witness, who had turned King's evidence, retracted his former statements. The next day he declared that his original depositions were true, but before the end of the trial he had again reverted to the previous declaration that what he had said under duress was untrue. The chief political figure in the trial of 1899, corresponding to M. Matchek to-day, was M. Pashitch, who received sentence of five years' imprisonment, only to be liberated the following day, when he was able to send a telegram to the King renouncing the errors of his past career.

In passing judgment on Balkan affairs it is necessary to bear in mind that Western standards do not yet hold good in that part of the world. The will for better things is, undoubtedly, present; but reform in certain directions still tarries. One conclusion which, it is to be feared, may have to be drawn from the trial is that the reconciliation of Croats and Serbs is not yet an accomplished fact. Before the arrest of Dr. Matchek there was good reason to suppose that the Dictatorship had exercised a favourable influence on Serbo-Croat relations. Many of its methods were resented; it had done nothing to make things easy for any Croat leaders who might wish to work loyally with the new régime, for it had been content with the approval of a few Croats, without taking their standing with their own people into consideration. As time passed, however, the actual achievements of the Dictatorship made an impression on the Croat people, and there was greater readiness to judge the Government on its merits. Then came the arrest of M. Pribitchevitch, which went a long way towards restoring his waning reputation, and now the arrest and trial of Dr. Matchek. The enforced idleness of politicians under the Dictatorship could not fail to impair their personal popularity; but it is enough that one should be singled out for persecution to rally the bulk of Croat opinion to his support. If the Government can bring any serious charges against the Croat leader and can support them by convincing evidence, his followers may be expected to give him credit for good intentions, but will not at least associate themselves with his mistaken policy. Anything in the nature of a faked trial, however, is calculated to inflame Croat passions anew and to undo much of the good already accomplished under the Dictatorship. There is no reason to suppose that terrorist methods meet with any wide sympathy in Croatia; on the other hand, indefensible conduct on the part of the police will be cited as a fresh illustration of the gulf between a mediaeval Serbia and enlightened Croats. If the Bernarditch story should be found to be true, we could imagine no course more calculated to bring about a lasting *rapprochement* between Croats and Serbs than the early quashing of the proceedings at the instance of King Alexander, the liberation of the accused and a radical purging of the whole police system of Yugoslavia.

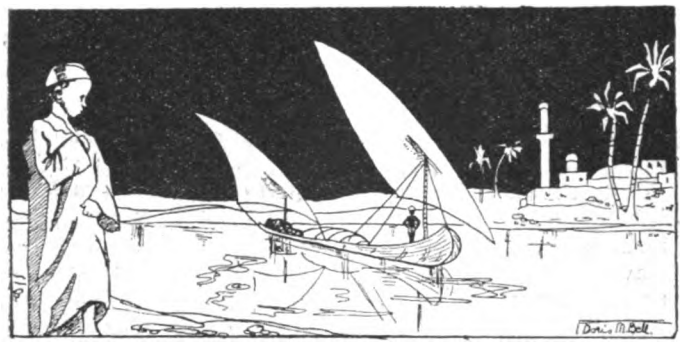
From Our Own Correspondents.



EGYPT.

Cairo, April 19.

The Prince's Visit.

The Prince of Wales arrived in Cairo on April 17 and leaves to-morrow for England, sailing from Port Said on board the P. and O. s.s. Rawalpindi. His Royal Highness, who is accompanied by Colonel the Hon. Piers Legh, the Hon. Denis Finch-Hatton and Capt. J. Aird, left Khartoum by air on the morning of April 16 and arrived at Assuan in the afternoon. He left Assuan by air shortly before 8 a.m. the following morning and arrived at Heliopolis aerodrome at 1 p.m. He was met at the aerodrome by Mr. H. R. Hoare, Acting High Commissioner, Lt.-General Sir Peter Strickland, Air Vice-Marshal Scarlett, Air Commodore Board, and Lt.-Col. Auld, commanding the Welsh Guards. He lunched at the Residency with Lady Loraine and members of the Diplomatic Corps. In the afternoon the Prince visited the Gezireh Sporting Club, where he played squash and afterwards had tea. In the evening he dined with the Colonel and officers of the Welsh Guards, of which Regiment he is Colonel-in-Chief, at their mess in Kasr-el-Nil Barracks. Yesterday he was entertained at luncheon by King Fuad at Abdin Palace, and a number of senior officials and leading British residents were present. In the afternoon King Fuad called at the Residency to return His Royal Highness' visit. This morning the Prince reviewed the 1st Battalion the Welsh Guards. A large number of the British community will be at Cairo station to-morrow on the occasion of his departure.

Serious Locust Invasion.

The locust invasion is still continuing, although it is thought that the situation is now in hand. It has been by far the most serious that Egypt has experienced for many years, and had it not been for some desperate work on the Egypt-Sinai frontier, might easily have resulted in a serious catastrophe. One of the leading officials in the Plant Protection Society has stated that the number of "hoppers" killed round about El Arish would at maturity have been sufficient to destroy the vegetation in more than a quarter of the Nile Valley. It is almost impossible for people who have not experienced a locust invasion to realise what it is like. Figures in themselves cannot convey any real significance, but when it is stated that a mass of locusts about seven miles long came down from the sand dunes of El Arish, it will, perhaps, be realised how grave the situation was. A force of over 500 men, gathered from units of the Egyptian Army, the Frontiers District Administration, the Camel Corps and the Police, fought the invaders for four days and four nights before the advance was checked. Trenches a mile long were dug, flanked on each side by tin screens, hastily fashioned from old petrol tins, a mile long. The young locusts fell into these trenches and were immediately set on fire, with the assistance of hundreds of gallons of paraffin. As fast as the trenches filled and the hoppers were burned, they were thrown out to make room for the next batch. Parties with flame guns attacked all the bushes in the neighbourhood, where locusts shelter during the night, and each spurt of flame accounted for about half a million insects. When the battle was over there was an area of two square miles completely covered by charred bodies, in places as much as four inches deep. It was possible to cope with this swarm as the locusts had not reached the flying stage, but once they take the air their extermination is a much more difficult matter.

The Negotiations.

When the Egyptian Delegation left for London to enter into negotiations with the British Government it was accompanied by a large number of Egyptian journalists, almost every native newspaper sending a representative. As nothing official has yet been made public, these journalists are sending their papers columns of rumour and conjecture. Each paper has each day a leading article upon the subject; most of them are written on the hypothesis that Great Britain is only too anxious to concede everything that Nahas Pasha asked for. Enormous stress has been laid on the "friendly and cordial atmosphere" and there was an air of shocked surprise evident when news came through that there had been a hitch on the question of the Sudan. It is quite obvious that the Delegation is fighting desperately to get something just a little better than Mohamed Mahmoud Pasha obtained, and the Wafd papers are publishing the most distorted accounts of the progress. On April 17 *Al Balagh*, the chief Wafd organ, stated that an agreement had been reached on the question of the defence of the Suez Canal. This agreement, it stated, was on several points, the first of which was that "Egypt alone would be entrusted with the defence of the Canal." That this particular development was not to take place until 20 years had elapsed was not explained until later in the Article. Nahas Pasha has now followed the precedent set by Zaghloul Pasha in 1924 of asking for an interval to allow him to consult his colleagues in Cairo. Whether this is a sign that he feels that the nation really wants any treaty which will give the country peace remains to be seen. Certain it is that until one side or the other makes an official statement the flood of rumour and counter-rumour, so dear to the Egyptian, will continue.

Belgrade, April 17.

The New Patriarch.

Patriarch Dimitri, first Patriarch of the United Serbian Orthodox Churches, died on April 7 and was buried with great ceremony three days later, at the Monastery of Rakovitza, some three miles out of Belgrade. King Alexander attended the service in the Cathedral and walked bareheaded behind the hearse as far as the Royal Palace. A body of several hundreds of Orthodox priests in many coloured vestments and a group of a dozen Bishops, with jewelled crowns and elaborately embroidered robes, made a picturesque sight in the bright spring sunshine.

The new Patriarch was elected on the Saturday. In accordance with the new regulations laid down by Royal Decree, an election committee composed of the hierarchy of the Church and a number of Government representatives elected three candidates, from which King Alexander nominated one as Patriarch. Mgr. Varnava, Metropolitan of Skoplye, was in this way nominated Patriarch. The new head of the Serbian Church was born some fifty years ago in the Sanjak, was educated in Russia, and then spent most of his life working for his Church and nation in South Serbia. This largely explains the King's choice, and the Patriarch himself, on election, declared that he considered his nomination not so much as a personal honour as an honour for South Serbia, where he spent over twenty years of his life, his first service being during the Turkish reign there.

Yugoslav-Bulgarian Relations.

On the surface there are still more signs of a sincere desire for closer friendship between the Serbs and the Bulgarians. Two representatives of the Bulgarian Holy Synod, Metropolitan Pavle and Archimandrite Sofroniya, attended the funeral of Patriarch Dimitri and the enthronement of the new Patriarch. They were given a very warm reception both by their Serbian colleagues and by the people of Belgrade, and were decorated by King Alexander with the Order of St. Sava of the second degree. In presenting the decorations the Patriarch Varnava mentioned the service of St. Sava, whose work and death served to show that Serbs and Bulgarians were brothers, sons of one nation. In reply, Metropolitan Pavle promised that his Church would pray to St. Sava for the brotherhood of all Orthodox Serbs and Bulgarians, and that he would work sincerely to show that the two peoples are brothers by blood and sentiment.

On April 13 a Bulgarian football team played the representatives of Yugoslavia in Belgrade. The Bulgarians put up a very plucky fight, but were beaten by six goals to one. The crowd was enthusiastic in its reception of the Bulgarian players, who were given a very good time while they were in the Yugoslav capital. For years now it has been very difficult for Bulgarian teams to get permission to play in Belgrade or for Yugoslav teams to go to Sofia. Renewed contact through the Church and through sport cannot but have good results.

But the usual crop of spring rumours, suggesting dangers of bloodshed and disorder, are to be heard throughout the Bulkans. It is very persistently stated in Belgrade that after May 1 a new series of outrages by Bulgarian *komitajis* is to be expected, probably by agents sent through Albania, whose frontier with Yugoslavia it is almost impossible to guard securely. This would be a most dangerous development, for not only would peace between Yugoslavia and Bulgaria be threatened, but also peace between Yugoslavia and Albania, and thus Italy might be involved. It remains to be seen, however, whether "trouble in the spring" is more likely to be realised this year than on the many previous occasions when it has belied the prophets.

Aerial Routes.

Belgrade's classical rôle as a centre for international transport between East and West and between North and South, is to be revived, it would seem, by the growth of aerial transport. The situation of Belgrade, together with the wonderful aerodrome which has been constructed on the wide, level plain near Zemun, is making it a converging centre for aerial routes. It is stated that from May 1 onwards it will be possible for passengers to reach almost every European capital from Belgrade in one day. Furthermore, a new service is soon to be opened to Constantinople, while a few days ago the first plane of the Imperial Airways England to India service passed through on its way to Skoplye. From Skoplye passengers and mails will proceed by train to Salonika, and thence by seaplane to India.

Miscellaneous News.

"Journey's End" has now been produced in Belgrade in a Serbian translation. The reception it received was even greater than that given to the production in English given by the English Players from Paris a week ago. The Serbian actors tended to be slightly more emotional than the British, and the production has a trace of sentimentalism in it, due probably to the influence of the German production of the play, which is very considerably sentimentalised, to its disadvantage. The Belgrade Press gave the production a very good reception, and *Politika* suggested that the League of Nations Union, or some other anti-war organisation, should broadcast the German war novel, "All Quiet on the Western Front," and send out companies to perform "Journey's End" in every country in the world. But some of the people who saw the play rather took the line that, if that was the way British officers behaved, then they did not think much of them, and that, had the play been performed by players dressed in Serbian uniforms, the theatre would have been wrecked.

The Minister of Finance has left for Paris. It is believed that he will proceed from Paris to London.

GREECE.

Athens, April 8.

The Centenary Celebrations.

The celebration of the Centenary of Greek Independence began on March 25, with a *Te Deum* in the Cathedral, which was attended by the Diplomatic Corps and by members of the Government. It was noteworthy by reason of the attendance, for the first time in history, of the Turkish Minister, who had been specially ordered by his Government to attend. The celebrations will continue at short intervals until November in different parts of the country, the culminating event in Athens being the unfurling of the national flag on the Acropolis on April 27. Messages of congratulation have been

received from all parts of the world, with the somewhat pointed exception of Albania, who, as yet, has made no move to congratulate her neighbour, in spite of the fairly cordial relations which have existed between the two countries for the last few years.

New Air Routes.

Two new air routes are to be added to those already in existence. The more important is the new route of the Imperial Airways line to India, which will now follow the route: London-Cologne-Vienna-Budapest-Belgrade-Salonika-Athens; this has been found more convenient owing to the higher prices asked by the Italian Government for facilities in Italy. The new line enables travellers to reach Athens from London within 48 hours.

The other line is the Athens-Syra-Rhodes Service, run by the Aero Espresso Italiana, the company which has run the Brindisi-Athens-Constantinople line since 1926.

"Ahepa."

"Ahepans" to the number of 1,057 have arrived in Athens, on the Saturnia. This cryptic-sounding title is the pet name of the members of the American Hellenic Educational Progressive Association, the greater number of whom are Greek emigrants who have prospered in America; they have come to revisit their families and, it is said, to marry Greek girls. Their visit has a sentimental, rather than a national significance, as they are, for the most part, American citizens. They were given an enthusiastic welcome by the local authorities, and their somewhat bizarre costume, which combines national Greek costume with white trousers, is an interesting addition to the sights of Athens.

"The Athens Times."

A weekly newspaper, known as the *Athens Times and Anglo-American Review* has recently made its appearance in Athens. It is an interesting specimen of Levantine English, and does not appear to have any political views, either local or British.

Ecclesiastical Properties Bill.

The energetic deputy for Lesbos, now Minister of Education and Ecclesiastical Affairs, has, in conjunction with the Holy Synod, produced a measure for a long-overdue reform. The management of monastical properties is to be transferred from the monasteries to the National Bank, in return for which the Bank will receive a small fixed percentage of the total income. The remaining sum will be handed over to the Ecclesiastical Bank for general church purposes, especially for the increase of the salaries of the parochial clergy.

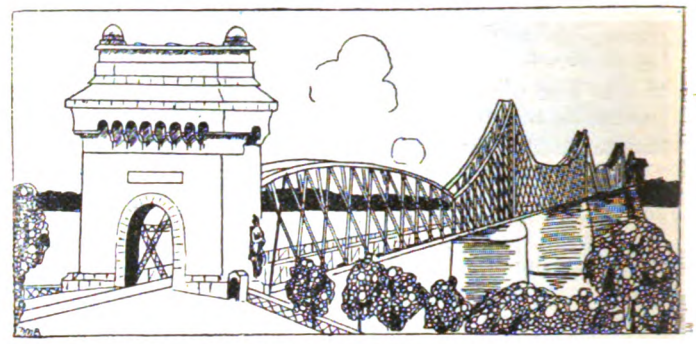
All monasteries containing less than four monks will be closed, and the occupants will be transferred to larger foundations. It is, however, provided that one monastery shall remain open in each diocese, and that exceptions are to be made of those possessing historic or religious interest. It is known that the hierarchy and the majority of the clergy approve the change.

Changes at the Press Bureau.

Government Departments in Greece have not always a reputation for efficiency, so it is pleasant to be able to record the extreme competence and courtesy with which M. Demetrius Kalopothakis, the retiring Director, has conducted the Foreign Office Press Bureau for the last ten years. M. Kalopothakis was for some years Athens Correspondent of the *Morning Post*, and is keenly alive to the requirements of Greek and foreign journalism.

A Stadium Celebration.

An imposing ceremony had been designed for the Stadium last Sunday, in connexion with the Centenary celebrations; it aroused only too fully the enthusiasm of the Athenian population. The enormous crowd, with and without tickets, poured into the Stadium through the gates and over the barriers; the enthusiastic welcome accorded to the Prime Minister perhaps compensated him for the expropriation of his and all official seats by enthusiastic refugees.



ROUMANIA.

Bucharest, April 24.

Home Politics.

The last fortnight has been more or less uneventful. General Condeescu, Chef de la Maison Militaire du Roi, has been appointed to the Ministry of the Army (as the former War Ministry is now called) in succession to General Cihosky, who resigned in circumstances already reported. The choice of General Condeescu has been very widely approved. He was highly esteemed by the late King Ferdinand, and, having distinguished himself during the War, he has had a brilliant career.

Dr. Vaida Voevod, Minister of the Interior, called a meeting of Roumanian and foreign journalists on the day of the closing of Parliament (for the Easter vacation) and gave them an account of the internal situation of the country, which is calm and satisfactory, in spite of the alarming rumours which the Opposition try to circulate. The regrettable incidents which took place as a result of a demonstration by a number of War cripples, and to which the Opposition has wrongly tried to ascribe a political character, did not have the importance which the Press has attached to them. As for Communist activities, though it cannot be denied that they exist, they need not be regarded as a serious menace. The Government is fully informed about them, and has taken severe measures to prevent any serious manifestations. Bessarabia, which is depicted as being troubled with revolutionary ideas, is the most anti-Communistic of the provinces, knowing too well, from its proximity to the Soviet borders, all the ills that would attend any such political move. The peasants, who own small parcels of land and who have suffered cruelly during these past two years from poor harvests, are building great hopes on this year's crop, which promises so far to be excellent.

M. Madgearu, Minister of Finance, in a Ministerial report, expresses his satisfaction with the financial situation. The taxes are coming in normally; there is a notable increase in comparison with the last quarter, and the balance of the Budget is maintained. Stocks are beginning to rise perceptibly. The prices of cereals are going up also; the demand is still in excess of the supply and exports have undergone a slight revival.

Party Activities.

The Liberal Party is very active and is making great preparations for its general congress which is to be held on May 4. The Central Committee is issuing throughout the country inflammatory pamphlets threatening disorders, if the Government does not resign. However, the Liberals themselves do not believe in their own propaganda, and it is only on principle that they are carrying on this violent campaign, to assert their position; for they well know that the National-Peasant Party is too strong and too popular still to be put out, or to be induced to retire of its own free will. Moreover the Government is taking all necessary precautions to prevent any excesses.

Digitized by Google

which, indeed, the serious members of the Liberal Party also wish to avoid.

At the end of the month, the other Opposition Party, that of General Averescu, is also planning a great public meeting.

Eastertide.

Holy Week and the Easter Feast are always kept strictly, according to the observances prescribed by the Church, as becomes the most important Church Feast of the year. On Good Friday, in all the Churches of the country the impressive "Service of the Shadow of Death" is held. At the Cathedral of Bucharest, where the Patriarch officiates, this service is attended with great pomp and circumstance. The Prince Regent and the other members of the Regency are present, as well as members of the Court, the Government Services, the Army and some favoured members of the general public. After the funeral procession, which is accompanied by the chants of the splendid choir, Prince Nicholas took the Crucifix in his hands and held it out to be kissed by the congregation, who approached one by one and received the blessing of the Patriarch.

At midnight between Saturday and Sunday, the priests, carrying the great symbolical wax candle, passed through the crowds that thronged the Churches "distributing light." They were followed by the clergy chanting the Easter passages from the Gospels while the bells of 360 Churches in Bucharest, including the deep bass of the great Cathedral bell, and a salute of 101 guns, proclaimed the Resurrection from the Dead of the Saviour of the world. The ceremony was carried out with the same pomp as that of the night before when the three Regents, the Court and all officialdom attended the divine service at the Cathedral. After the Mass Prince Nicholas and His Holiness the Patriarch, with the Cross in his hands, greeted each of the faithful who came up to kiss it, with the traditional formula "Christ is arisen." Then the Prince signed a parchment on which were traced the words of the Evangelist: "In the beginning is the Word . . . and the Word is God." Then this parchment was laid beside those that have been signed each year on Easter night by the Sovereign of the country and have been kept in the treasury of the Patriarchate since the days of Mircea the Old (in 1272), who resumed the ancient tradition of the Emperors of Byzantium.

After the religious ceremony there was a great supper at the Royal Palace, at which dignitaries of State and officials cracked coloured eggs with Prince Nicholas and offered him their good wishes.

This traditional supper was also served in all the barracks, where, according to ancient custom, the higher officers share the mess with the soldiers and crack eggs with them. In every Roumanian house throughout the country the same ceremony was performed, for Easter day is a day of general rejoicing.

An Easter Tragedy.

This year the general rejoicing was clouded by a terrible catastrophe. In one of the rich villages in the neighbourhood of Piteshti, while the Easter Friday service was in progress in the Church, the candles held by the congregation set fire to some of the wreaths decorating the church. In an instant there was panic. The frantic people rushed towards the door and pressed upon it, thus preventing it from being opened, for it swung inwards. The church was three hundred years old, entirely made of wood (beautifully carved) and within the space of a very few minutes it was a flaming torch and 110 people were burnt to death inside it, some 40 escaped with severe burns, or wounds. Not a home in the village but had lost one of its members, and in one case there was only the old grandmother left, the parents and seven children having been burned. Help was immediately brought for the unhappy victims. The Patriarch ordered a special Mass and Requiem to be celebrated in all the Church of Rou-

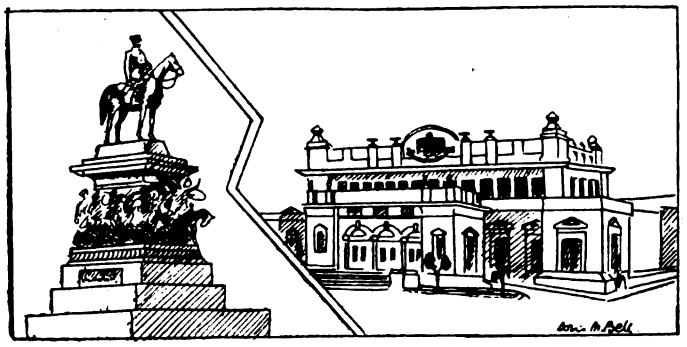
mania and the Government decreed national mourning and at once sent assistance in money, food and medical supplies, while subscription lists have been opened for the relief of the survivors of this fearful catastrophe.

Court News.

Queen Marie has returned frm her trip to Egypt and is in residence at her castle at Balcic, on the Black Sea. The King and Princess Helene are at their country seat of Scrobiste.



BULGARIA.

Sofia, April 15.

Communist Bandits.

The exploits of the notorious band under the Agraro-Communist Dotcho Ouzounoff, particularly that of the murder of the judges at Seliévo, will be remembered. Recently these bandits, five in number, have been tried by the Vratza tribunal, and sentenced to death by hanging.

In the course of the trial it was established that the band had been equipped through the help of the Yugoslav authorities of Pojarevatz and of Nish, who had sent them to Bulgaria to blow up the chief military bridges, to attack the Orient Express, and to kill all the Ministers, Deputies, officers, and chiefs of police whom they met so as to provoke Agraro-Communist troubles and to sow the seeds of anarchy in the country—which troubles, so it is alleged, the Yugoslavs hoped to utilise for their own ends.

British Diplomatic Representation.

The British Minister in Belgrade, Mr. Neville Henderson, recently paid a visit to his colleague in Sofia, Mr. Waterlow, to confer with him on the subject of Yugoslav-Bulgarian relations. Mr. Henderson was received by the Foreign Minister, M. Bouroff, and by King Boris himself, with whom he had a long interview on this topic and on the necessity of "blazing the trail" of a Yugoslav-Bulgarian *rapprochement* in the interests of peace in the Balkans. Bulgarian statesmen explained to the British representative the conditions, from the Bulgarian side, which constitute the basis of such a *rapprochement* and of consolidating peace in the Balkans.

The forthcoming departure of Mr. Waterlow for Athens is announced. There he will be the guest of Mr. Ramsay, British Minister, and will acquaint himself with the state of the relations between Bulgaria and Greece. The two countries are on the point of resuming the pourparlers which were begun over a year ago and were interrupted for the settlement of their claims and in general of all outstanding questions.

These movements of British representatives in the Balkans are interpreted here as an indication of the growing interest which Great Britain takes in Balkan affairs and of the evolution of British diplomacy, which is abandoning the passive attitude that it has observed up to the present. It is hoped that it will now intervene in the interests of a Balkan *entente*, failing which the peace of the Balkans could not be consolidated, but would be incessantly exposed to surprises—as, for example, Bulgarian-Roumanian relations have been upset as a consequence of the massacre, by Roumanian colonists, of twelve Bulgarians of the village of Bogdanovo, near Dobritch, in southern Dobruja.

INDIAN NOTES

(Continued from page 478.)

too great freedom allowed to the open preaching of defiance of the law. Tender-hearted people may regret that one of the most prominent agitators received a bullet in the thigh; but few will lament the fact that those who incited in the Press and from other positions in the rear have been promptly sentenced to exemplary periods of imprisonment. Meanwhile the claim that India can defend itself by land or sea, and that it can provide itself not only with a mercantile marine but with an adequate Navy, receives an illuminating illustration in the statement that no Indian candidate has appeared for the executive branch of the Royal Indian Marine. Even more significant is the fact that the population of the Ratnagiri district of Bombay, which has for generations supplied the faithful and well-behaved Lascars of the Indian Navy and Royal Indian Marine, will no longer do so, now that the force has been reorganised on a combatant basis. The point of view of the Ratnagiri people is, if not heroic, strictly logical. They are descended, whether Muhammadans or Hindus, from the Koli race, a seafaring but not a fighting stock. The work of fighting in the old days was done by European sailors or by Sepoys of the Bombay Army, and more recently by the ships of the Royal Navy. It is hoped to replace the Ratnagiri men from the warlike stocks of the Punjab, who will doubtless make as good a fighting force on sea as they have on land. The difficulties experienced show, however, that it is easier for Indian politicians to create institutions on paper than to give them a concrete reality.

The Pir of the Turban.

The trial of the Pir Pagaro, or the Pir of the Turban, at Sukkur, in Sind, is causing widespread interest in India, as his followers, who number several hundreds of thousands, are found in many provinces. His position is a curious illustration of the tendency of Indian Mussulmans, probably due in large part to their Hindu forbears, to deify their spiritual leader in spite of any injunction in the Quran to the contrary. The Pir claims descent from a Saiyyra who accompanied Muhommad bin Kasini, the first Muslim invader of India in 711 A.D. His ancestor at the time of the British conquest of Sind brought to light a forgery in the treaty of Mir Ali Murad, the ruler of Khairpur and the ally of Napier. The consequent reduction of the Mir's territory caused a bitter enmity between the successive Mirs and Pirs which has lasted to this day, and which necessitated the separation of the Pir's estate at Kingri from Khairpur territory. With succeeding years, the fanaticism of the Pir's followers became more marked. They wear peculiar clothing, salute no one but the Pir with their right hand, and impoverish themselves whenever he visits their villages. As such impoverishment is generally recompensed at the expense of their neighbours, the tours of the Pir have been for long prohibited. Although the Pirs have always shown themselves loyal to Government and have refused to join in any agitation, it cannot be doubted that many murders have been done in their name. In the nineties of last century, a regular campaign had to be conducted against the Hurs, as the Pirs followers are called. Some were hanged or sent to the Andamans and many hundreds placed in penal settlements in which a good many still remain. The present charges are, however, not against his unruly followers, but against the Pir himself. He is a very young man, of enormous physical proportions, who unfortunately declined with great firmness to allow himself to undergo any form of education. The allegations against him exceed anything almost that can be found even in Sir Cecil Walsh's stories of crime from Northern India. Whatever their outcome, the whole circumstances show the pre-mediaeval conditions that still prevail in the India for which full dominion status is so confidently demanded.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, April 10.

The Assembly Resignations.

There does not appear much to be gained by an analysis of the letters of Pandit Malaviya and the other members of the Assembly who have resigned; for those letters were intended for the political galleries, and the important thing to ascertain is why the Pandit thought he must resign. That thing cannot be learnt from the letters, nor from the leading articles on the subject of the resignations in the newspapers. It will be learnt by your Correspondent, if he ever learns it, in social talk with those he may happen to meet. He has only met one of the men from whom he might learn. Before I quote that man's view, let me say a thing. It will be remembered that Pandit Motilal Nehru supported the Congress "mandate" to the *swarajist* members throughout India to resign, and that he immediately afterwards did resign himself. I read his speeches, his letter. I heard the words, but in my mind's ear I heard another sound more distinctly. I happened to meet Pandit Motilal Nehru the day after he reached the Plains, after his departure from Simla after the last session of the Legislative Assembly that he attended there. He remarked that he had felt more difficulty than any time before in breathing at that altitude. He had felt enormous relief, the moment he got low enough down for it to make a difference. He told us this between violent fits of coughing: he had a cough that just racked him. It was that coughing that I heard in my mind's ear. I thought, reading the Lahore speeches about the futility of the proceedings in the Assembly (they are not futile): "But, my dear man, you know you can't breathe in Simla. That is really why you want not to be a member of the Assembly any longer."

Pt. Malaviya's Real Reason.

There may very well be something of the same nature as a difficulty in breathing at 7,000 feet above sea-level to induce Pandit Malaviya to wish not to be a member of the Assembly any longer. He is a very old man. His public life began forty-four years ago. But let that pass. The leader with whom I have had my only very recent chance of talking over things, while he quite agreed that the reasons given in the Pandit's letter to the Viceroy were not his real reasons, did not think that any question of his physical health had entered into his decision. This leader had recently been to Allahabad on a brief visit to Sir Tej Bahadur Sapru; so very possibly the opinion he expressed to me was partly also Sir Tej Bahadur Sapru's opinion. It embraced a wider matter than the resignations of last week. He began to talk, indeed, not of them, but of the *swarajist* resignations at the beginning of the year. All the men who have resigned, he said, will *have* to return to their places in the Assembly sooner or later; that is to say, they will *have* to change their tactics. They may do it before the Round Table Conference; they may not do it till after it; but sooner or later they must do it, or they will cease to have any political importance to the country. "Pandit Malaviya," he went on, "has taken this patently illogical step of resigning simply because he has found it too difficult to maintain himself in the position of leader of the Opposition. The party behind him is not strong enough either in numbers or in debating power."

No-Salt Tax.

My last newspaper has a cablegram in it from your side about the "Goosey Gandhi" proclivities of Mr. Gandhi and his followers, and yesterday there was a leading article, in the heading of which there was the word "fiasco." Mr. Gandhi is going to give up the forlorn hope at Dandi, where he was not, unlike those English martyrs in Bloody Mary's time, to light such a fire as would never go out, but to make such a pile as would prevent the sun's shining on the Government of India. A pile of salt, I mean. Mr. G. (I think that "Mr. G." would be name enough for him in future), before Government strike him (I speak figuratively, of course) and turn him into a warning pillar of salt, is to go off to wherever in India he is wanted. He has shown precious little generalship. He wanted to be arrested. Well, he has not been. He wanted his followers, including his sons, not to be arrested. Well, they have been. He wanted India to wax furious, if they were arrested. Well, India has not. He wanted the Salt Act to be violated as a protest against a Government established, as he believed, on no sufficient moral foundation. It was gesture against the Government, not against the salt duty. He did not want the question: "Is the salt duty a good revenue tax or a bad one?" (that is a question about which opinion is much divided) to darken and obscure and hide the great question: "Is this not an immoral Government?" (a question about which he hoped to find opinion not divided). Well, because of Mr. G.'s own muddled thinking, expressed in muddled speechifying, the relatively unimportant question has completely shut out the greater question. The simple-minded Indians among whom for the most part I spend my life, have for a fortnight now been arguing about the salt duty. Good tactics on Mr. G.'s part required that, if the gesture against the Government was not to be obscured as a gesture; if the gesture was not itself to breed a red herring to draw across itself, the law to be disobeyed should be one about the goodness of which, *qua* law, no one had ever raised a question. The Salt Act is anything but that law. But the man has no brains now for thinking; he cannot see straight in anything the least complicated. He goes so patently wrong, that one is almost as much tempted to say to him in a strong whisper: "That's not the thing to do, but this," as one would feel urged to prompt an actor on the stage, if one saw him hopelessly stuck in his part, and one knew the next words oneself.

Indian Representative Institutions.

I would call attention to these words of H.H. the Chief of Sangli State: "I think that at this time when constitutional changes of far-reaching importance to the future destiny of India are on the anvil, the States cannot afford to remain stationary. This is a juncture when the Sangli State ought also to move with the times and do what lies in its power to modernise its administration. I, however, feel that we ought to take into consideration our local circumstances, peculiarities, traditions and sentiments. The form of Responsible Government which has been accepted for British India is no doubt the best form of Government evolved by Englishmen, but it has as yet to be seen how far it suits in its entirety the special circumstances of India. We have our own cultural traditions, and ideals of Kingship and beneficent Government which, I venture to think, it would be a calamity to throw away in our enthusiasm for new ideas. I must not be misunderstood by this to mean that I bear any hostility to the declared goal of Dominion status for British India. I am in complete agreement with the resolution which the Chamber of Princes has affirmed and re-affirmed to welcome the attainment by British India of its due place among the Dominions of the British Commonwealth at the earliest date possible, consistently with necessary safeguards and reservations." Comment is superfluous.

"THE CASE FOR INDIA."

In the review of the above book, which appeared in the issue of THE NEAR EAST AND INDIA of April 17 under Indian Notes, the publishers' name and the price were inadvertently omitted. The book, "The Case for India," by John S. Hoyland, is published by J. M. Dent and Sons, Ltd., price 4s. 6d. net.

The King had been pleased to approve the appointment of Mr. John William Fisher Beaumont, K.C., to be Chief Justice of the High Court of Judicature, Bombay, in the vacancy to be created by the retirement of Sir Amberson Marten in June next. Sir Norman Kemp is at present Acting Chief Justice during the absence on leave of the permanent incumbent.

THE SITUATION IN INDIA.

By L. F. MORSHEAD, C.S.I.

In the following letter to an Indian correspondent in British India, a shrewd observer in touch with Indian politics, earlier extracts from which were given, and the origin explained in THE NEAR EAST AND INDIA of April 17, the British attitude towards Indian nationalism is described. After outlining the obstacles which caused us to hesitate to give effect to Indian aspirations, the author goes on to suggest that a line of advance should be sought outside the present conflicts and commitments; in brief, that the possibilities of the Indian States system should be explored in alternative to those of the British Indian system. The proposal having elicited a qualified but not unfavourable opinion from those to whom it was communicated, the author proposes in a subsequent issue to attempt a statement of the same case in the form of an open letter to an Englishman. This letter will deal with criticisms made by those, both in India and this country, to whom the subject has been mooted from time to time.

Letter to an Indian.

(Continued from page 429.)

March, 1929.

Let me state some further arguments:—(1) With a Prince you know what to expect: good, bad, and average. Public opinion and the care for a reputation, in these days of publicity, count for more than they did. You are not committing yourselves for a long voyage to an experimental vessel.

(2) An institution belonging to the country gives an element of stability. If to this you add the representative system, you combine the best you can take from the West with the most stable thing you have in India.

(3) You then have the nucleus of a constitution, in which the Prince, the representative element and the Courts each contribute something which the others do not: each furnishes a check upon the others, and the triple check so furnished is as good as you are likely to obtain.

(4) Such a nucleus is adaptable to varying conditions of political understanding at the commencement, and to varying rates of progress in the future. A very practical contribution of ours to constitutionalism is the experience that constitutions can grow. This experience is as good a guide as theory.

(5) If you are content with such a nucleus, you simplify procedure. Instead of dealing with the whole of India at once, you can have it dealt with area by area. One State after another can be set in being under a Treaty or a Sanad from our King to carry on, until the rest are constituted and the ground covered for a Federation. In the Treaty or Sanad can be laid down conditions for the representative system to the extent deemed applicable for the people concerned.

(6) You avoid too much uniformity, which has been a disadvantage of our system: too much rigidity of detail, which cramps development: too great a multiplicity of detail, which multiplies points in dispute and protracts a settlement.

(7) You not only provide homogeneous units for a Federation, but you also settle your relations with the present ruling Princes. What you both ask for is likely to receive more attention from us than what you ask for alone.

(8) You offer us and you gain for yourselves as good a guarantee as experience can furnish against communal dissension, because that has not been a cause of trouble in the Native States as it has been in British India. That experience is of greater value than all the theory I have laboured. You can go a good way towards the satisfaction of Muhammadan claims by arranging for Muhammadans to be represented on the *Gadi*.

To my mind these considerations carry weight. They do not of course carry you to the later problem which may, and, I suppose, will come in India, as it came in our country between King and Parliament: the question when and how the final control is to pass from the Prince to the representatives of the people. That is a problem which every State ought to settle for itself rather than have it settled for it, and it is a problem that can best be settled imperceptibly. If a crisis should be forced, it is to be hoped that that will not happen simultaneously in all States, so that there may be precedents for guidance; nor before there is a Federation in being to exercise a steadying influence; nor before State nationalisms have begun to develop and communal dissension to subside, nor, most of all, before you are free to envisage all questions from the view-point of the good of the country without the bias of the desire to be free from British domination.

Let me go a step further now in regard to the development of national feeling. Let me remark first that State nationalism is not incompatible with Indian nationalism, but complementary. Just as there ought to be a pride in the contribution of India to the world, so there ought to be a pride in the contribution of each State to India. Well then, for the growth of State nationalism there ought to be as few cleavages as possible. You cannot get rid of the Hindu-Muhammadan cleavage, because Hindus and Muhammadans live side by side in most parts of India. But in the Provinces, as they now stand, there are also racial cleavages between distinguishable areas. In the Province of Bihar and Orissa there are such cleavages between Bihar, Orissa, and Chota-Nagpore, setting aside the Sonthal Pargannahs. Is the development of a common State nationalism conceivable in such a conglomeration? Would it not develop more assuredly in Bihar, Chota-Nagpore and Orissa separately?

Take community of interest for another step. Are not the interests of North Bihar distinguishable from those of South Bihar? Would not a State nationalism develop more naturally in each separately than in the two together? Would not a separate Government for each be better able to study its particular interests than one Government for the two? So also would not separate Governments be better able to allay the ferment of communal feeling than one for both? Take the question of constitutional development. Is not Chota-Nagpore more backward than Bihar? Would not Orissa be better able to develop on lines suited to itself, if it were not harnessed to the bigger people?

You may say that if such arguments are driven home, almost every District ought to form a State. There must be a limit. That is quite true. For practical purposes every State must be big enough to afford a Government, not too big for the people to get to understand their politics, and there must not be too many to form a Federation. By the exercise of compromise and common sense it ought not to be impossible to determine a unit in each case that would satisfy the conditions and satisfy the people: a second best worth taking, if the best could not be had. You may also raise the question of the Sonthal Pargannahs and the Feudatory States in our own Province, but ways of dealing with such cases are suggested in my book. Bihar and Orissa exemplifies the problem for the whole of India.

Let me go on to the other difficulties I mentioned. British material interests, Defence and the Formula of 1917. As to our material interests, let me go back a stage. I set out with the reflection that action on the Indian side of a nature to dissipate such difficulties was the most promising course. My reflections since have been that, if you get the present ruling Princes on your side, you will gain a great accession of strength: that if you agree to Princedoms in British India you ought to have them on your side: that by agreeing to Princedoms you offer as good a guarantee as can be had against communal dissension. If to these considerations you add a readiness to meet us where our money is concerned, which means, I suppose, security for our investments and a preferential treatment for our trade, you ought to remove this difficulty also. Is, or is not, that worth while from the Indian point of view?

Defence has three aspects. There is defence against invasion: protection against fighting between States: and the security, which concerns us mainly, of the routes to Australasia and the Further East. The first of these, until you have an organised Federation, must be undertaken by us: thereafter it should be a matter of arrangement. For the second, a supreme Court or machinery for the arbitration of differences between States ought to meet the case. Could not a Court or a Committee of a High Council be constituted also to deal with the disregard of Treaty obligations or of misgovernment within a State? For the third, are your ideas of independence such that you could not meet what might be our requirements in regard to this?

There remains our commitment to the Formula of 1917. That unquestionably did not contemplate Princes as the heads of States in British India. But I expect that we should be glad to be rid of the incubus of the Formula, although we adhere to it so strongly now, so long as you did not wish to dissociate yourselves from the British Commonwealth. Would it pay you to do that? Do your people want it? If not, we could hardly force the Formula in its entirety upon your country against the wishes of both British India and the Princes. Nor could we say that Governments under Princes were incompatible with the development of responsible Government, any more than our system has been under our King.

Is not this line of action worth exploring? I do not say committing yourselves to, but worth exploring to the extent of proposing, in consultation with the Princes, the appointment of a Committee or Commission to examine the possibilities without prejudice.

THE INDIA COUNCIL.

The Secretary of State for India has appointed Sir Denys de Saumarez Bray, K.C.I.E., C.S.I., C.B.E., Indian Civil Service, formerly Foreign Secretary to the Government of India, to be a Member of the Council of India in succession to Sir W. S. Marris, K.C.S.I., K.C.I.E. Sir Denys Bray will take his seat at the beginning of May.

In the exercise of powers conferred on him by the Government of India Act, the Secretary of State for India has re-appointed Sir Robert Erskine Holland, K.C.I.E., C.S.I., C.V.O., as a Member of the Council on the completion, on April 20, 1930, of five years' tenure of this office.

INDIA IN 1928-29.

In the form introduced by Professor Rushbrook Williams, to which its present author, Mr. J. Coatman, Director of Public Information with the Government of India, has wisely adhered, and in several respects actually improved upon, the annual report on the moral and material progress of India has been described as the nearest approach to the ideal Blue Book that has yet been contrived. The latest volume of the series "India in 1928-29," incidentally the last for which Mr. Coatman, who has returned to this country to take up a lectureship at the London School of Economics will be responsible, certainly merits the somewhat eulogistic description, though the fact that the trade statistics are more than two years old is a serious defect in a publication of interest and value to the official, merchant and student alike.

The report opens, as usual, with a general survey of the outstanding features of an eventful year, viewed primarily from the political aspect, before proceeding in the ensuing nine chapters to more detailed analysis of the main currents of India's social and economic life. The reactions throughout India to the activities of the Statutory Commission and the somewhat chequered course of Hindu-Muslim relations are described and an account given of the attitude of the various political parties towards the Nehru Report, culminating in the rise and development of the Independence movement and the strenuous efforts of Mr. Gandhi to avoid a split in the Indian National Congress.

But at a time like the present when the major events and experiences of even two years ago are already old history and the political situation changes with kaleidoscopic rapidity the more permanent value of the work resides in its presentation of the economic position of the country. Thus the recent debates on the Cotton Tariff Bill and the practical demonstration of India's fiscal autonomy lend added interest to the chapter in which the tariff policy is reviewed in the light of the canons laid down by the Indian Fiscal Commission of 1921. The conflict in the Central Legislature between agrarian and urban interests when taxation questions of any kind are under consideration is recalled by the reminder that India is primarily a land of small villages and tiny hamlets. Those engaged in agricultural and pastoral pursuits are about 73.9 per cent. of the whole, while urban residents number less than 11 per cent. But though the lives of the villagers in so many of the half a million villages are lived away from the modern world of industry and highly-organised communications, the spread of railways and roads has done much to break down the ancient isolation.

"A majority of the people," Mr. Coatman remarks, "must, at any rate, have seen motor-cars, while millions of them have actually ridden in them at some time or other."

The pace of general progress is accelerating, and, if wireless broadcasting is fostered, a revolution will quickly be worked in the villagers' ideas and outlook. Developments in local self-government, improved communications, the spread of small industries in the country, and the sale of surplus harvests of India's "money crops"—tobacco, oilseeds, jute, cotton, tea—are among the influences tending towards improvement.

The report is accompanied by photographs, maps, diagrams and a useful index, and published in this country by H.M. Stationery Office, price 5s.

SCRAPS OF PAPER.*

It is no doubt desirable that the case of the Indian Princes and the grievances which they believe themselves, in some cases with undoubted correctness, to have endured, should be fully set out, and, so far as writing and invective go, it could not have been better done than in this volume. Whether it will quite attain its presumed object is, perhaps, more doubtful. The disappointment with the report of the Harcourt Butler Committee is somewhat too obvious. Those acquainted with the eminent administrator who presided over that Committee will be amused to learn that he is "imbued with the traditions and policy of the Political Department." However, Mr. Nicholson goes somewhat far afield in his efforts to blacken the record of the British Government in India. Few, for example, will defend the methods of Lord Auckland and his advisers in dealing with the Amirs of Sind at the beginning of the first Afghan campaign. But they were correct enough in believing that the acquisition of the line of the Indus was necessary for the safety and integrity of the British Empire in India; and the Amirs owed at least nominal allegiance to a foreign ruler in Afghanistan. The Amirs were not at the time under the paramountcy of the British Government, and their case cannot be properly compared with the position of the Indian States.

Mr. Nicholson has been well supplied with information and no obvious error due to ignorance of India can be detected, except his uncertainty as to the position of the Southern Mahratta States, which he seems to regard as identical with those of Mahi Kantha. More serious, because more generally misleading, is the suggestion that the attitude of the Government of India and of the officers of the Political Departments towards the States and particularly towards their Rulers, has been generally unfriendly. The statement that since the Mutiny men at the helm of Political Department, with few exceptions, seemed to lose the sympathetic touch is, we believe, contrary to the general fact. In the specific instances put forward by Mr. Nicholson, he so sets out his case as to suggest, even to the uninformed reader, that there must be another side.

Whatever the view taken as to past occurrences, however, it cannot be disputed that the position has altogether changed. The machinery of the States' administration has developed and improved. Recent legislation in British India, such as the imposition of high tariff duties, has rendered what was previously a negligible impost into an unfair burden and handicap. Above all developments in the British Provinces have placed, if not the whole power, at least the financial system, in the hands of politicians with whose aims and methods in the majority of cases the Princes for very good reasons have little sympathy. Finally, the direct connexion, whether allied or subordinate, between the chiefs and the Crown has been recognised. The whole situation must be reviewed, and even if the present volume is somewhat provocative, it certainly helps towards a wider appreciation of the issues at stake.

* "Scraps of Paper." By A. P. Nicholson. (Benn. 21s.)

Earl Russell, Parliamentary Under-Secretary of State for India, has appointed Mr. H. A. F. Rumbold to be his Private Secretary, *vice* Mr. E. P. Donaldson.

The total remittances from the Government of India to the Secretaery of State for India in Council during the year ended March 31, 1930, were £27,039,670, of which £15,215,000 was remitted by means of Purchases of Sterling in India and £11,824,670 transferred from the Paper Currency Reserve in England to the Home Treasury. From April 1 to 5, 1930, £250,000 was remitted by means of Purchase of Sterling in India.

Sir Arthur Hirtzel, K.C.B., Permanent Under-Secretary of State for India, has appointed Mr. E. P. Donaldson to be his Private Secretary in succession to Mr. J. P. Gibson, promoted.

The King has been pleased to approve the appointment of Mr. Hugh Rahere Panckridge, Barrister-at-Law, Standing Counsel, High Court of Judicature, Calcutta, to be a Puisne Judge of that Court in the vacancy caused by the appointment of Mr. Justice Arthur Page to be Chief Justice of the Rangoon High Court.

The King's Indian Orderly Officers for this year will be Subadar-Major and Honorary-Lieutenant Anthony, Queen Victoria's Own Madras Sappers and Miners; Subadar-Major Lasang Gam, 3rd/20th Burma Rifles; Subadar-Major Sangili Naidu, 1st/1st (King George's Own) Madras Pioneers; Subadar Sau Tu, 1st/20th Burma Rifles. They arrived at 49, St. George's Road, S.W.1, last week. The British Officers-in-Charge is Major V. E. W. Simpson, M.C., 1st/20th Burma Rifles.

Lord Lloyd arrived in Bucharest last week from Constantinople.

H. E. Mirza Sayyid Hasan Taqizadeh, who has been Persian Minister in London since last November, was appointed on April 17 to be Minister of Communications in Teheran.

The King has given authority for the wearing of the following decorations:—

Mr. George Edward Pennington, Insignia of the Fourth Class of the Order of the Nile, conferred upon him by the King of Egypt, in recognition of valuable services.

Mr. Lionel James Imossi, Insignia of Chevalier of the Order of the Phœnix, conferred upon him by the President of the Hellenic Republic, in recognition of valuable services rendered as honorary Consul of Greece at Gibraltar.

THE WEEK AT HOME

London, Tuesday Morning.

A Political Straw.

Interest in politics at the moment is low. The I.L.P. have had their little fling, which, perhaps, had a better publicity than it would otherwise have had owing to the Conference being held at Easter, which, alike in news and sunshine, was a barren time.

The Fulham by-election, however, seems to be causing some little excitement. For one thing, Liberals and Labour are working hand in glove—the Liberals even withdrew their candidate in favour of the Labour one; and for another, the Conservative candidate has come out much more strongly than Mr. Baldwin appears to have done in support of Lord Beaverbrook's programme of Imperial Free Trade. Cynics are asking, indeed, whether a victory for the Beaverbrook-supported candidate might not be actually embarrassing to the Conservative leader! But, of course, there is no telling what the Conservative might do if he were elected. The desertion of Lord Beaverbrook by Sir John Ferguson at Twickenham, or as perhaps it should be put, his subsequent adhesion to Mr. Baldwin, will not have been forgotten. In any case, Sir Cyril Cobb is not yet in. But it may be mentioned that the estimates of Liberal support for Conservativism in the South is about sixty per cent.; whereas in the North it is precisely by that amount for Labour.

Rationalisation.

There is a good deal of nonsense talked about "Rationalisation." By some it is regarded as the remedy for all industrial ills, as the "open sesame" to prosperity. By others, chiefly politicians, it is used as a convenient slogan to cloak thought, or, rather, lack of it. By yet other men it is seen to personify all that is inhuman, impersonal, machine-making in the Capitalist system.

A very striking move was made last week by Mr. Angus Watson, who has resigned from the Chairmanship of Angus Watson and Co., of Newcastle, and Associated Canners, Ltd. He declared that a "vital issue" existed between him and other shareholders. He denounced the "rationalisation that would treat men and women as cogs in a machine," and stated his belief that the human touch in business was the most important, that there was, in fact, "no other way to true success in business than by

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. L. Maxwell, Christchurch, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R. Deccan. Fees 40 guineas per term, including all necessary extras, with reductions for sons of Clergy and Officers. Supervised holidays arranged for boys from abroad, at seaside or elsewhere.

personal touch and understanding between those who lead and control and those who make up the body of workers."

These words are so obviously true that one wonders why more has not been made of the incident in the Press. Is it because the Press itself is so largely syndicated, or because its advertisers are? Obviously the process of rationalisation will have to be very carefully supervised indeed—so keen are shareholders on mere money—if very considerable suffering is to be avoided.

The Poet Laureate.

The death of Robert Bridges last week was a signal for the usual display of ignorance by Englishmen on verse. Bridges was not, of course, a popular poet, and the fact that he did not even attempt to make concessions to what certain journalists imagine is the duty of the Poet Laureate increased the hostility which was born of insensitiveness to the more subtle kind of verse. Bridges' fame, however, is secure. Much of his experimentation, admittedly, will be considered of academic interest only. He might, perhaps, be called the Debussy of literature, for, as the Frenchman went back to the whole tone scale of the Greeks for new sonorities, so Bridges returned to the Elizabethans for new rhythms.

For his successor everybody appears to be ready with a name—unless he belongs to that section which, despising the very idea that any poet should be connected with "occasions," advocates the abolition of an institution which such men as Shadwell, Cibber, Southey, and Austin have defaced. If achievement alone be counted, I personally would mention only three, Yeats, Housman and Chesterton. The first, however, is an Irishman, now politically connected with Ireland; the second will probably write no more verse; and the third has political opinions which might conceivably decide the issue against him.

It is not known that any poet particularly wants the office, but one rather feels that, if anyone is to have it, he will be of the Watson or Noyes or Newbolt type—that is, an estimable, correct, but derivative decoration.

Sport.

Once more we begin to live laborious days, for evidence of every kind of sport is all around us. To deal first with the moons that are waning. Last Saturday was the Final of "the Cup," or (because in post-War years it has become so largely a Northern possession), "'T Coop." This time, however, it fell to the South, personified by Woolwich Arsenal. Yet in this rich team, there was, I believe, only one Londoner! It might, for all I know, still be possible for the Northerner to claim that he produces the Cup-tie winners, for the Arsenal's team has been purchased from all over Great Britain. It is strange yet true that *hoi polloi* on these occasions have their pronounced favourites, as if the ability of one Club to purchase members from a less-favoured one were something quite creditable.

Of lesser interest, but an event that roused considerable enthusiasm, was the final of the "Seven-a-Side" Rugger at Twickenham on Saturday. This form of Rugger has caught on amazingly during the past few years: it certainly can be a very thrilling spectacle, though it is a terribly punishing pastime. The winners this year were London Welsh, a side which, though not quite in the highest rank, has had a wonderfully successful season and thoroughly deserves the publicity it has now won.

The summer games have started encouragingly from an English point of view. At one time it looked as if our much-vaunted young Davis Cup team were to be beaten by the Germans, but at the critical moment they came up to expectations and justified the selectors. Our national self-respect, after quivering, so to speak, in the balance, is now happily restored.

But the real news is that that music which sounds responsively in every true Englishman's ear—the sound of the bat against the ball— is again to be heard by town and village. Hundreds and hundreds of men, of all ages, are at this moment wondering why—for they feel so stiff—they eagerly seize the first opportunity of flogging and chasing the "leathery Duke." The weather so far has been unkind, but most people seem to have seen, or read of, or tried to emulate the Australians in the nets at Lords.

Village Colleges.

A movement of quite exceptional interest has just been made public by the Cambridge Education Committee. It is the organisation of rural life, mainly by the provision of advanced education. In Cambridgeshire there are to be eleven colleges, in which post-primary education will be given. In addition, however, these Colleges will be the focus of the social services of the County Council, and also of the various local voluntary organisations. They will have, too, playing fields for educational and general purposes.

It sounds a most attractive scheme, and one entirely in keeping with the de-urbanising need of modern England. The crux is, of course, money. Cambridgeshire, where local patriotism is strong, is particularly lucky, for in addition to her own voluntary gifts, she has persuaded America of the excellence of the plan. Even so, it is said that half the money will have to be provided by the ratepayers and by the Boards of Education and Agriculture. But one can think of few things more worthy than this scheme of village colleges for which rates might be increased. The instincts of our agriculturists are—whatevere some of our clever novelists of the "fantasy school" may say—good and healthy, but there should be provided the chance (which most town-dwellers already possess) for their minds to grow.

ALTER EGO.

Sig. Roberto Cantalupo, the newly appointed Italian Minister to Egypt, presented his credentials to King Fuad at Abdin Palace on April 16.

Gallipoli Day (April 25) was observed in London with the usual ceremonies. The "Anzacs" taking part in the service of commemoration included members of the Australian cricket team.

On April 10 King Faisal of Iraq opened the Bada Regulator, in the Muntafiq Liwa, a most important irrigation project. He was accompanied from Baghdad by the Prime Minister, the President of the Senate, the Minister of Irrigation and Agriculture, and the Director and senior officials of the Irrigation Department.

The Air Ministry announces that as a result of an accident at Heliopolis (Egypt) on April 23 to a Fairey 3 F machine of No. 47 Bombing Squadron (Khartoum), Pilot Officer Francis Slade Barron, the pilot of the aircraft, and 364,028, A.C.1 Cyril Fred Davis were killed.

IMPRESSIONS OF ZIONISM.

"PALESTINE TO-DAY AND TO-MORROW." A Gentile's Survey o Zionism. By John Haynes Holmes. (London: George Allen and Unwin 10s.)

The author of this book is an American Gentile who paid a short visit to Palestine at the beginning of 1929. He went to the Holy Land in the spirit of Mr. Nathan Straus, prepared, that is, to admire and to encourage the work of the Zionist settlers, but never to forget that there were in Palestine non-Jews who must be helped to progress if the Zionist movement were to be worthy of itself.

It is an interesting study to watch this Gentile's reactions to the facts of the Holy Land; it is particularly interesting to watch Mr. Holmes in possession of knowledge and then failing, it would seem, to apply it logically. He went to Palestine, admittedly, as a keen Zionist, and he returned to America a keen Zionist. But in three weeks he learned many things.

It is not for lack of knowledge—though in certain places his account of things in Palestine is extremely misleading—that Mr. Holmes fails to convince: it is rather because of a lack of comprehensive, practical grasp of the realities of the situation.

He begins well enough by recognising that Palestine has never been the physical "Home" of more than a percentage of Jews:—

> Long before the loss of Palestine, the Jews had established flourishing communities in various parts of the Roman Empire. It is estimated that, at the opening of the Christian era, there were some four million Jews living in these various centres of trade and culture in Egypt, Syria, Greece, Italy, even Spain, as compared with only some seven hundred thousand in Zion.

He then analyses the return of the Jews to Palestine. First, he mentions the *pilgrims*—people returning for definitely personal reasons; next, the refugees, who started for Palestine in the 'eighties of last century; and thirdly, the self-conscious movement back to Palestine by Jews whose aim was to restore Zion. Of this last movement he writes sympathetically and well, though he overstates the case when he says that "Zionism, or the return, may be said to express the aspirations of the modern Jew." Were this really so, were it not for those numerous Jews who are either hostile or completely indifferent to the Zionist idea, the Zionists might be burdened with far fewer difficulties than they are.

Mr. Holmes believes definitely that the Jews are a people, not merely a religion. He is, it seems, an apostle of Ahad Ha-Am, whom he quotes as saying that Palestine must be:

> a natural spiritual centre of Judaism, to which all Jews will turn with affection, and which will bind all Jews together; a centre of study and learning, of language and literature, of bodily work and spiritual purification; a true miniature of the people of Israel as it ought to be.

But, as will be seen, the methods which he advocates to attain this noble end are the methods associated with the "Liberal" or "Defeatist" school of Zionists, that very section which is abused by orthodox Zionists for having dared to use the name of Ahad Ha-Am in support of its policy.

The most interesting section of Mr. Holmes' book is undoubtedly that in which he discusses the problems which the Zionists have to contend with in Palestine. First among these, one gathers, is the presence of "Imperialist" England in Palestine. Mr. Holmes belongs emphatically to that type of American pacifist idealist who has ready-made solutions for ugly realities. That the Jews should march to Palestine "in the wake of armies, and reaping the blood-fruit of the sword" shocks his conscience profoundly: yet he does not suggest how the Zionists could have populated Palestine except under the ægis of the Power which conquered the country from the Turks. It is all very well for him to say that:

> It may well be discovered, before the tale is done, that the English conquest of Palestine, and the English government of Palestine under the Mandate, constitute together the greatest tragedy that ever befell the Zionist movement.

or that

> This intrusion of the Great War into the Holy Land, with its consequent identification of Zion's future with the might and power of the British Empire, was in essence a calamity.

or that, particularly,

> The very name, Balfour, should have been enough to stir doubts and conjure fears within the Jewish heart. This distinguished English nobleman never had an unselfish emotion in his life, and never anywhere served any great humanitarian cause. He has been as consistently cynical in his statesmanship as he is agnostic in his philosophy. The common people, Gentile or Jew, have never existed in his world, save as a nuisance and occasionally a danger. He would harry the Jews of Palestine to-day as ruthlessly as he harried the patriots of Ireland yesterday, if they disturbed the interests or threatened the force of British rule. To think of this man sharing the hopes of the Jews for Zion, or serving these hopes except as incidentally they served the Empire, is utterly fantastic. Nothing of all I saw in Zion so disturbed me, so disquieted me, as the elevation of "Bloody Balfour" as one of the patron-saints of Zion.

—but he might reflect that but for Great Britain, but for the Balfour Declaration, he would have seen little in Palestine in 1929 to awaken his enthusiasm.

From these three extracts it will be seen how far the author, and, presumably, that section of Zionists whose opinions he shares, differ from other Zionists who recently and sincerely mourned the death of Lord Balfour. One is forced to ask oneself, moreover: is there any touch of realism in this kind of writing? Is Zionism at all realisable except as part of a policy of a Great Power? Can a country in these days of grace be transformed, not only physically but racially, unless there be a guarantee of force behind such realisation?

Mr. Holmes' answer, and the answer of all those who are said by more militant Zionists to be suffering from "Magnesia" is, that if such authority and force are really necessary, then Zion is a failure. It is, in fact, the "Empire, with its power, its pride, its high self-interest, that is a disturbing element in the life of Zion," which Mr. Holmes hopes one day will pass out of Palestine. He foresees Arab-Jewish co-operation, for he is by no means blind to the claims of the Arab. These claims, indeed, he largely admits, and he thinks it incumbent on Zionists also to admit them.

> At present (he says) the Jews are in the unhappy position of a minority, deliberately denying to a majority, from motives of selfish advantage, their basic rights as a proud and independent people. This is wrong in principle, and fatal as a matter of policy. For what chance is there that the Arab will allow the Jew, when or if the latter is in the majority, to take over that power of self-government which he himself was denied by the Jew when he (the Arab) was in the majority? From such a situation of mutual *impasse* there can come nothing but civil war.

He believes, however, that a solution is possible, that, just as the American Constitution of 1787 safeguarded the interests of the small States as against the large States, so the Jewish minority can receive guarantees. From this position, nevertheless, he seems at times to retreat, for he is obviously in favour of increased immigration. He admits the justice of Arab claims, but he might shrink from the implication of their being granted. He deplores the tendency among certain Zionists to advocate "a diaspora of the Arabs, to follow the diaspora of the Jews," but he does not clearly indicate how, if

CENTRAL ASIAN SOCIETY

(in which is incorporated The Persia Society.)

Founded in 1901 to study the politics, commerce, geography, history and archæology of Asia. Authoritative lectures are given, and a quarterly Journal published.

The subscription of £1 per annum entitles members to a copy of each issue of the Journal, tickets for all meetings, and the loan of books from the library.

Applications for membership, stating occupation and connexion (if any) with Asia, to be addressed to the Secretary, 77 Grosvenor Street, W.1

a "Jewish National Home" is, even peacefully and in collaboration with the Arabs, to be built up, such a dispersion can be avoided. What he appears to rest his hopes upon is a movement of self-determination, undertaken by Arab and Jew in common, as against Great Britain; for he thinks that the forces making for unity among the peoples of Palestine are strong. Optimism is not an absent virtue with Mr. Holmes.

We would conclude by recommending the reading of this book. Mr. Holmes catches glimpses of the truth, across which, however, there blow from time to time clouds of sentimentality and prejudice, obscuring the view. His description of the Zionist ideal is an excellent one, as his description of Zionist achievement in Palestine is good. His hopes of a united Palestinian people ring sincerely. The realists, whether English or Jew, will not relish him; they will surely condemn his pious unpracticality. His book is, nevertheless, a contribution to a subject about which too much cannot be known, so rife is it with hope, danger, and despair.

FIFTY YEARS OF CONSTANTINOPLE.

"UNDER FIVE SULTANS." By Dr. Mary Mills Patrick. Illustrated. (London: Williams and Norgate, Ltd. 15s. net.)

It is unfortunate that the publishers should give the prospective reader of this book a wrong idea of its author and her theme by announcing that it is the "autobiography of one of the most remarkable women of the age." The book is, we greatly regret, in no way an autobiography, and Dr. Patrick, whose modesty is so conspicuous, must have writhed on seeing herself described in his way. Indeed, it is intolerable that an effort should be made to drown the great reputation which she has so well earned in Turkey, Bulgaria and the Near East in fatuous verbiage. Fortunately, however, her reputation is such that it is in no danger. The results of her long life of wise and unselfish work are not likely to be lost even in the maze of recent political change, and the Constantinople Women's College, her creation, is a monument of which she may well be proud.

But all this makes one inclined to be more than a little fastidious about a book on Turkey by such an author. It must be in her power to write on this subject much that would be of permanent value and much that would throw new light on historical events. It was, at least, certainly in her power to tell us an interesting story about herself and her beloved College. Instead of this we find ourselves reading a rambling narrative, gentle and kindly, bearing on the fifty-three years spent by her in the country indeed, but never once going an inch beneath the surface. We presume that it was written to meet the requirements of the huge army of American magazine readers who have, presumably, no knowledge at all about Turkey and no desire to exercise their brains unduly. To such readers the book will certainly appeal, but it is emphatically not the book which we have a right to demand from the author. While we are grateful for a few hours of pleasant reading, we trust that we may look on this as a mere *parergon*, and that her real book or books will not be too long in making its or their appearance. C. S-W.

THE STORY OF CYPRUS.

"A CHRONOLOGY OF CYPRUS." By Sir Ronald Storrs, Governor of Cyprus. (Cyprus: The Government Printing Office, Nicosia, and the Crown Agents for the Colonies, London, S.W.1. 2s.)

This very useful little chronology has been a labour of love to Sir Ronald Storrs, who happily prefaces his compilation with the words: "The future of Cyprus must not be sacrificed to the past, but the past dedicated to the future." What the Governor has really done is to pick out the bare bones of a history of the island, which has been rich in romance. Like Palestine, ancient Greece, and the Italian States of the Renaissance, Cyprus is small physically but rich historically and even creatively. For she was, as Sir Ronald points out, the original clearing house of the primitive civilisation of the Eastern Mediterranean.

This compilation is conveniently divided into several sections, namely, the Bronze Age, starting at 3000 B.C., the Iron Age, Classical Period, Ptolemaic, Roman, Byzantine, Lusignan (which is very fully dated), Venetian, Turkish, and finally (whether definitively or not, who knows?) British.

On the whole a nice sense of proportion is displayed. It is not easy to discuss the historical importance of passing events, however easy it be for historians to repeat themselves.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

EUROPEANS IN HAYIL.

To the Editor of THE NEAR EAST AND INDIA.

Sir, —In your issue of February 20, in the letter from the Hijaz, under the heading "An Explorer Foiled," is written the following: "Mr. Rutter, in his disappointment, has the satisfaction of being the first Englishman, or indeed, European perhaps, to visit Hayil since Gertrude Bell did so in 1914." This is incorrect. Your Jidda Correspondent might have known that Herr Muhammad Leopold Weiss, an Austrian Muslim, who is a journalist, lived in Riyadh for more than five months, as the guest of King Ibn Saoud, and visited Hayil in the autumn of 1927, on his way from Mecca to Riyadh, travelling *via* Madina, Hayil and the Qasim. From Riyadh Herr Weiss travelled through Ranya and Bisha—which places, I believe, have not been visited till now by any other European. The accounts of the journeys of Herr Weiss were published in the *Kölnische Zeitung* (Cologne), the *Neue Zuricher Zeitung* (Zurich) and the *Telegraaf* (Amsterdam). I believe that during the course of this year Herr Weiss intends to publish a book on his travels in Arabic.

—I am, etc., S. MUHAMMAD HUSAIN.
ex-British Vice-Consul at Jidda.

Madina, March 28.

SURVIVORS OF KUT.

An April 26 there was held at Anderton's Hotel, Fleet Street, the first Reunion Dinner of the survivors of the siege of Kut-al-Amara. Major-General Sir Charles J. Mellis, V.C., presided. Major-General Sir Percy Cox proposed "The Survivors." The Townshend family was represented by Mr. Erroll Sherson, a cousin of General Townshend.

A delegation from the French Tobacco Monopoly arrived in Salonika last week to study the tobacco market with a view to increasing Greek tobacco imports into France.

Two forests are being planted in Palestine in honour of the late King Peter of Yugoslavia and of President Masaryk of Czechoslovakia by the Jews of those countries.

The Armenian Patriarch of Jerusalem, Mgr. Elisee Turian, who had been translated to Jerusalem from the see of Constantinople, died in Jerusalem on April 27. His Beatitude was elected to the See of Jerusalem in 1921, and was the first Patriarch to have his election ratified by a British Sovereign. Mgr. Turian, who was gazetted a K.B.E. at the New Year, enjoyed a reputation for high classical and Armenian scholarship.

The death occurred on April 12 of Abdul Rahman Pasha Haidari, of the Haidari family of Iraq. He was very well known in Baghdad. In the Naqib's first Cabinet he was Minister without portfolio. For many years he was Rais Baladiyah of Baghdad. At his funeral King Faisal was represented by Tahsin Beg Qadri. The Cabinet Ministers and many other prominent officials attended the ceremony. The Pasha, who was 73 years of age, was buried in the Gailani Mosque.

The sixth official Anglo-Catholic Congress pilgrimage to Palestine and the Near East left London on April 29. The pilgrims, who are sailing from Marseilles in the Lotus, will visit Alexandria, Jaffa, Jerusalem, Nazareth, Cyprus, Ephesus, Constantinople, and Athens. They will return to Marseilles on May 25, arriving in London on the following day. The president of the pilgrimage is the Bishop of Nassau (Dr. Shedden).

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Development of Cyprus.

In his address at the opening of the current session of the Cyprus Legislative Council, extracts from which will be found elsewhere in these columns, Sir Ronald Storrs made it abundantly clear that if in recent years substantial progress has been made in developing the Island's resources a very great deal remains to be done. Communications, the water supply, and forests all present serious problems which must be solved if the Island is to become a really prosperous unit of the Empire. Sir Ronald Storrs explained the steps that are being taken in regard to these matters. As regards communications, an extensive road programme has been prepared which provides for the reconstruction of about 600 miles of roads. Then the improvement of the railway service is being taken in hand, and he pointed out in this connexion that recent statistics showed that there is adequate ground for believing that the line may prove an asset of considerable value to the Colony. In addition, the development of Famagusta Harbour is being undertaken, while attention is also being paid to the improvement of the facilities at other ports. The search for water is being steadily pursued, and Sir Ronald Storrs was able to point to the considerable measure of success that has attended the artesian boring in the past two years. An interesting development of the forest policy has been the introduction of specimens of a breed of goats from Malta, said to be harmless to young trees and vegetation. The success of this experiment and the replacement of the existing goats by the Maltese goats would mark a notable stage in the protection of the forests in the Island. One of the most encouraging features on which Sir Ronald Storrs touched is the marked expansion of the trade of the Island with the United Kingdom. Of the increase in the export trade in the past three years nearly half is accounted for by larger sales in the United Kingdom.

Italy and the Near East.

The economic penetration of Albania by Italy is only one of various indications that have pointed to the fact that the latter country is looking to the Near East generally to provide it with openings for commercial expansion. A recent development of Italy's relations with the Near East is provided by the activities of the company which was established last year by three Italian banks for the furtherance of foreign enterprise. This company is already associated with projects in at least two Near Eastern countries, and it is interesting to note that it is particularly concerned with Turkey. It has obtained a concession for the supply of electricity to certain towns, and it is also understood to be taking an interest in projects for railway construction and reclamation work in Turkey. Thus it would appear that in Italy at any rate there is no doubt of the ultimate future of Turkey, and it would be well if British concerns also would take an equally long-sighted view not only with regard to Turkey but also as regards the Near East as a whole.

The Importance of the Harvest.

In our Sofia Correspondent's letter, reference is made to the outstanding importance of the coming harvest from Bulgaria's point of view. Situated as Bulgaria is, the value of a bumper harvest is obvious, but in greater or lesser degree the outcome of the next harvest is a vital matter to every part of the Near and Middle East. So far as present indications go, the prospects for a satisfactory yield in the Balkans are good, though farther afield it is to be feared that the outlook has been altered for the worse by the remarkable invasions of locusts. Unfortunately as things are to-day a satisfactory harvest is not the ony factor required to bring prosperity to the Near East and give a renewed impetus to the trade movement. For crop yields to be really good it is also necessary for it to be possible to dispose of the produce at remunerative prices in the world markets. And here is the doubtful factor for, so far as can be seen, there is no immediate prospect of any marked rise in the prices of grain and other produce. The world still has too large supplies (though, of course, conditions in one quarter or another may materially affect the situation), and while that position obtains a good harvest will not mean what it should to agricultural regions. Still, even at present prices really bumper crops should help to a considerable extent to restore the prosperity of the Balkan countries.

Sudan Trade.

The figures for the trade of the Sudan for the first month of this year show a slight falling off as compared with the total for the corresponding month of 1929, the volume of trade being £E851,186 as against £E889,893, a decrease of £E38,707. There was an increase in both Government and public imports, Government imports being £E28,695 up at £E174,145, while public imports showed an increase of £E8,300 at £E417,734. The decline in the total trade was due to a decrease in both exports and transit trade. The value of the exports was £E225,720 as against £E278,007, but there were no exports of Sakellarides cotton in the month, whereas in January, 1929, the exports of this cotton were valued at £E97,404.

THE PROGRESS OF CYPRUS.

A comprehensive review of developments in Cyprus was given by the Governor, Sir Ronald Storrs, at the formal opening of the Session of the Legislative Council on April 15. As there was no formal opening last year, Sir Ronald Storrs dealt in his speech with the past two years. We give the following extracts from his address dealing with the economic position of the Island: –

Economically, development during the past two years has proceeded on sound lines, without, I believe, unwarranted extravagance on the one hand, or on the other, that timidity which is an effective hindrance to all progress. The years 1928 and 1929 were fiscally prosperous, indeed, the best in the recorded history of Cyprus. The actual receipts in 1928 exceeded those of 1927 by £57,760 and this sum in turn was surpassed by a further £43,360 in 1929. The average revenue for these two years was over £112,000 above the average for the five years ending on December 31, 1927. The Government has thus been able to devote large additional sums to the further development of agriculture, forest and village roads and to provide more liberally for essential services of Health and Education. As a result of conservative budgeting and a good year (which unfortunately shows for the moment no signs of repeating itself) the accounts showed on December 31, 1929, a favourable balance of £116,000, but the position must nevertheless be faced that, owing to the ever widening activities of the Government in developing the resources of the Colony, current expenditure exceeds current estimated revenue by some £60,000.

Definite loan proposals have been laid before the Secretary of State in respect of certain development works which he has approved in principle. The works and their estimated cost are as follows: Roads, £300,000; Agricultural College, £75,000; Famagusta Harbour, £150,000; making a total of £525,000. An additional £75,000 is required for local irrigation and water supply works of a limited nature preliminary to major works. The total then that it is proposed to raise by loan is £600,000 and legislation will be necessary to empower the Government to raise this sum as and when the time arrives to expend it.

Trade Expansion.

The imports for 1928, amounting to £1,840,442, showed an increase of £254,502 over 1927. Again during 1929 they showed an increase of £143,391 over 1928, their value being £1,983,833. One of the most important increases was that of machinery, valued at £158,377 and £168,877 in 1928 and 1929 respectively. Although the increase is partly accounted for in imports by mining and other industrial companies formed during the two years, a great deal of it comprised agricultural machinery owing particularly to the ever growing demand for oil engines, pumps and wind mills used for water raising purposes, and also to the increased use of tractors, threshers and other such machines. Another noticeable feature indicating the prosperity of the Colony (though not necessarily of the best employment of that prosperity) was the large number of motor vehicles, nearly one thousand, imported. Most of them were passenger cars, showing the higher standard of comfort and despatch now required by the Cypriot travelling public; but a fair proportion were commercial trucks which are gradually displacing the former cart and donkey conveyance for quicker means of transport of the produce of the island. Owing to the shortage of the Cyprus wheat crop in 1928 large quantities of flour were imported, to the value of £253,021. In 1929 this decreased by £30,493, but still an inordinate quantity came in having regard to the fact that Cyprus is a grain producing island. As against this it is curious to note that there was a fair increase in the export of Cyprus wheat in both years, due to purchases from Greece and Turkey for seed purposes.

The exports for 1928 showed a decrease of £107,103, from £1,542,870 in 1927 to £1,435,767. It must be remembered, however, that 1927 was a record year for island exports. This decrease was more than made up in 1929, which showed an increase of £199,969 over the previous year and established a new record of £1,635,736. The 1928 decrease was accounted for principally by reduced exports in carobs ((£67,873) and barley (£52,721), owing to short crops of both. The short crop of carobs continued in 1929 and there was a further decrease in exports of £65,242. This further decrease was, however, partly due to low prices in England and elsewhere, and partly to witholding of stocks owing to large production in other countries of cattle-feeding stuffs. The net result of trade during these two years was an excess of imports over exports of £404,675 in 1928 and £348,097 in 1929. To these figures must however be added invisible imports and exports to arrive at the true state of the Colony's financial position. The production of tobacco is still on the increase, 167,963 okes were produced in 1928 as against 141,302 in 1927. The figures for 1929 are not yet ready, but a close estimate gives 266,000 okes, an increase of 58 per cent. over the previous year. Unfortunately conditions prevailing on the external markets from September to January prevented the full benefits from the crop being realised. These conditions particularly affected the carob market (which decreased in export value £65,242) and that of raisins (which decreased in value £12,203). It is thus that the world repercussions of the financial crisis of 1929 in America

and England, and the general fall in the price of commodities, are being felt in Cyprus.

Trade with United Kingdom.

The Office of the Trade Commissioner for Cyprus has now been established for nearly three years, and the Island is beginning to enjoy the results of its work. This is reflected in the exports from Cyprus to the United Kingdom, which in the last three years have increased more than threefold:—

	Total Exports.	Exports to U.K.
	£	£
1926	1,103,571	... 97,966
1929	1,635,736	... 306,855
Increase ...	532,165	... 208,889

The United Kingdom has accounted for nearly half the total increase of exports from the Island. The importance of these figures cannot be overestimated, for whereas it was possible to find markets in neighbouring countries for the limited produce of former years, greatly increased production has made it essential that new markets should be found. For produce of good quality the Trade Commissioner is able to find markets sufficient to absorb more than this island can produce, but it must be remembered that Great Britain, almost the only free market in the world, receives the products of every competing country, with the result that every competitor finds it necessary, if he is to have any hope of doing business there, to ship goods in the finest possible condition, and that any source of supply wishing to create a business in this market must conform to these conditions.

Communications.

During the two years ending 1929 road traffic has increased by forty-two per cent. This increase is mainly due to growth of motor traffic which has risen in the same period by 14 per cent. and now represents half the total traffic on the roads. Improved road surfaces are necessary to withstand this additional traffic and to reduce costs of transport. The road programme after being delayed by the impossibility of recruiting staff for the salaries originally offered has now and indeed none too soon, been begun, for many miles of road are completely worn out and the condition of some of the worst stretches has sunk almost to the standard of main roads in the Balkans. A scheme has been prepared and approved by the Secretary of State for the expenditure of £300,000 on the reconstruction of about 600 miles of existing Government roads. Of these 343 miles will be asphalted and 270 miles water-bound macadam.

As I had the honour of announcing last December, His Majesty's Government have made, from the Colonial Development Fund, a gift of £500,000 towards the enlargement and modernising of Famagusta Harbour. The project provides for lengthening the existing quay by 850 feet and widening the existing harbour by 100 feet so as to give more room for manœuvring of steamers. The whole of the harbour extension will be dredged to a depth of 24 feet. The land behind the new quay wall will be reclaimed and will provide an additional 6½ acres of quay space as compared with the present area of 5 acres. It is also proposed to widen the entrance to the harbour by 100 feet to a total width of 150 feet to enable steamers to enter with greater safety. Cyprus material such as stone, gravel, timber, etc., will be used to the largest possible extent and it is anticipated that directly or indirectly employment will be given to 300 or 400 men. The preliminaries of this work of capital importance to the commercial development of the Colony have already been begun, and the necessary survey is at this moment in process of execution. The cost is estimated at a maximum of £200,000, half of which will be expended upon materials and employment in the Colony. As an immediate result, steamship lines which have not visited Cyprus for years have announced their intention of resuming relations and there are even prospects, by the establishment of bonded warehouses, of attracting some of the British entrepôt business at present compelled, for lack of an alternative, to utilise the facilities already afforded by Syria.

But although Cyprus cannot afford more than one large-scale port, the obviously indicated expansion of Famagusta by no means implies the neglect or abandonment of the other harbours. A consulting engineer from Egypt has visited Larnaca. His report was referred to the Colonial Office consulting engineer and provision is made in the current Estimates for the purchase of a small dredging plant and barges to start on the work required inside the sheltering arm as well as for a new turntable for the jetty to expedite the working of the tramway. At Limassol a barrel slipway consisting of an iron jetty 150 feet long has been constructed. The extension of the export sheds and quay space began last year and will be completed this; and steps are being taken to provide improved baggage facilities, a carob jetty 440 feet long, and two new cranes for the pier to serve the lighters on either side. At Paphos the jetty has been widened, new tram lines laid, the quay wall extended, and improvements provided for the Customs sheds. At Kyrenia it is proposed to construct a sheltering parapet wall on the Eastern Mole to reduce the danger to shipping and facilitate the interior dredging operations which will eventually be necessary. Considerable extensions and improvements have been introduced on the jetties of Evdhymou, Pissouri, and Boghaz, and an export store has been constructed at Karavostasi.

Irrigation.

The first and greatest problem the grower of crops in Cyprus has to face is irrigation. The expectations of the consulting engineers have been in the main verified as regards the existence of large subsoil water supplies, but to a certain extent disappointed by the prohibitive cost of raising and distribution. The Government, maintaining in this all-important matter (as in many of less moment) a policy and attitude of discontented optimism, continues to follow up every indicated and many suggested sources of possibly supply. In view of early successes artesian boring was pushed forward during the two years under review. Three new drilling machines were purchased and two expert drillers engaged. Thirty-three borings were made for Government schemes with 20 successes, and 41 for private individuals with 12 successes, giving totals of 32 successes out of 74 borings, and producing from Government borings 1,539,800 gallons and from private 1,096,800 gallons per day, with a total of 2,636,600 gallons per day. The search for water by drilling will be continued, and in addition it is proposed to explore possible sources of supply in the Kyrenia foothills by means of adits or tunnels. Exploratory drilling work will also be carried out at Pera, partly in the hope of finding good supplies there and partly in order to throw more light upon the possible existence of deep-seated supplies in the Messaoria plain. The question of a geological survey with special regard to water supplies is also under consideration, and the well-known geologist, Professor Cullis, is now in the Island to give advice. The water supply of the capital is still a preoccupation. Numerous test borings have been made in the hope of finding a good supply near at hand, but so far without success. A sufficient quantity was, however, found to ease the extreme shortage of water during the last two summers. If the search in the Kyrenia range results in the discovery of a plentiful supply, one of the first uses made of it will be the water supply of Nicosia.

A Warsaw message states that the Persian Ministry of Railways has engaged M. Cichanowilecki, a well-known railway construction engineer, to act as Persian Government Inspector during the construction of the line linking up the Caspian Sea with the Gulf of Persia. The line is being made by a syndicate composed of American, British, German, and French contractors.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, April 29.

The short week after the Easter holiday, which has included the settlement of a three weeks' account, has seen an uncertain movement in prices and a definite decline in the volume of business. Prices in many cases were lower, but little selling occurred. It is generally agreed that the Budget exerted only a minor influence and that the week's movements had a psychological rather than an economic basis. Gilt-edged stocks were lower on balance though there was a slight recovery towards the end of the week as a result of the slight improvement in the sterling-dollar exchange. Foreign bonds and home rails were idle, the latter being marked down after the publication of disappointing Easter traffic. Industrial markets were quiet, the general tone being one of caution, but oil shares were firmer on an agreement for further restriction. As regards the immediate outlook for markets in general, there does not appear to be any prospect of a substantial increase of activity, though now that the cloud of Budget uncertainty has been cleared away a gradual strengthening of confidence may be anticipated.

"Tax Free" Investments.

With the increase of 6d. in the standard rate of income tax, and the addition to super-tax, wealthier investors are searching for securities which, if possible, will give them a return free from tax. This can be done to a certain extent by the selection of a fixed interest security maturing at a fairly early date and standing well below the redemption price. Here a large proportion of the gross return is redemption profit, which is not subject to tax, and tax is paid only on that portion which is represented by the interest received. Some of my readers may be tempted to think that shares bearing "tax free" dividends afford an opportunity of evading the tax collector. This is not so. The profits of any company are subject to tax. The difference between a dividend "subject to tax" and one "free of tax" is really one of method of declaration. Where the rate is "subject to tax" it appears higher than in the other case, because in the latter the declared rate is that after tax has been deducted. In either case, however, the tax has to be paid, and in that the tax must come out of the proceeds of the business, the ordinary shareholder must bear the burden of the increase in taxes. The case of the preference share whose dividend is paid "free of tax" is different. Here the company has to pay the tax, the shareholder gets the same return still, in spite of the increases. Among such preference shares which may be of interest to some of our readers are Tarmac 5 per cent. cumulative participating preference which return about £7 per cent., free of tax, now equivalent to about £9 per cent., and Guest Keen 5 per cent. cumulative preference on which the return is around £4 15s., free of tax, which is equal to £6 2s. per cent. gross.

Swedish Match.

Progress is reflected in the accounts just published in full of the Swedish Match Company. The net profits, which amounted to 40,436,616 Swedish kronor for 1927, rose to 48,961,568 kr. for 1928, and last year showed yet another increase to 54,242,103 kr. The carry forward in the present accounts is 37,229,908 kr., against 28,645,463 kr. a year ago. The dividend on the shares remains at 15 per cent. for the whole year, as in recent years, and in this the company is obviously adopting a conservative policy. It is reported that in most of its markets Swedish Match has been able to sell more matches and at slightly higher prices. The only disturbing com-

EXPLOSIVES

TIME and Science have wrought many changes in the control of fire, ever a good servant but a bad master.

Modern commercial explosives are a symbol of the harnessing of fire. With their aid feats of construction, as well as the winning of the wealth beneath the surface of the earth, are rendered possible in the interests of the rapid growth of civilisation.

Enquiries concerning modern commercial explosives should be made to—

IMPERIAL CHEMICAL INDUSTRIES LIMITED

petitive factor has been the output of matches from Soviet Russia, and in some areas something of a price war is taking place. The Russians apparently aim at harassing the Match combine into an arrangement with themselves. As is well known, the Swedish Match entends its interests either directly or indirectly into almost every country of the world—in Great Britain its interests include Bryant and Mays—and all branches have made satisfactory progress, including the International Match of U.S.A., which is in the combine. The company has continually to face the problem of tariffs being set up against foreign matches, but this is usually circumvented from the company's point of view by setting up factories within the protected country. The Swedish Board is certainly to be congratulated on its successful administration of an organisation extending to nearly every country of the world, each presenting special problems.

A Good Head.

Despite the increase of 1d. per gallon in the duty on beer, from which Mr. Snowden hopes to get an additional £3 million of revenue, brewery shares have advanced in value since the declaration of the Budget. It is believed that the new duty still leaves some benefit to brewers as a result of de-rating and they should be passed on in profits. It is also remembered that in spite of increasing duties in the past, brewery profits have continued to expand, and therefore shareholders are undismayed by the increase of 1d. per gallon in the beer duty. The reports recently issued by leading brewers all show signs of good business during the last twelve months or so. It should be remembered that the trade has for some years now been quietly rationalising itself and is in a very strong commercial position. Among the larger companies investors may find satisfactory investments in Barclay, Perkins ordinary £1 shares, of which there are 1,781,570, yielding £6 per cent., and about the same yield is obtainable from Bass, Ratcliff and Gretton ordinary shares, of which there are £2¼ million. Guiness ordinary stock of £7½ million also has a large market and the stock is available in £1 units; the yield is higher than the others, being about £6 12s. per cent. Some of the smaller breweries also have attractive ordinary shares, such as Benskins or Tamplin's offering a yield of over £8 per cent., and Tadcaster Tower ordinaries yield over £9 per cent.

Mr. Chas. Baehler, Director of the Egyptian Hotels Company, has left Egypt with Mrs. Baehler on a visit to America.

Yugo-Slavian Concession has been registered as a private company with a nominal capital of £5,000 (2,900 £1 Ordinary and 42,000 1s. Deferred), to adopt an agreement with Michael Vinogradoff, to acquire any petroleum or oil-bearing lands, to sink wells, and to carry on the business of a light and power company, etc. The registered office is Imperial House, 80, Regent Street, W.1.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, in their last report state :—

Currants.

Greek.—The present year opened inauspiciously, and the trend of events during January and February proved very disappointing, witnessing declining prices, though it must be admitted that when account is taken of the abnormal quantity of fruit selling, values stood the strain extremely well. Confident hopes had been formed of an improvement coinciding with the turn of the year, and the failure of this to materialise was discourageing. The month now closing has followed on similar lines, accentuating the gloom, until the last few days, when a distinctly brighter outlook has become possible. So much talk was heard not only of bad trade, but also of dear money exercising an adverse influence, that there is some reason to feel more hopeful now that the Bank rate has dropped to so low a level. The financial crises which created so great an upset are no longer such recent events as they were, and as time passes the bearish attitude of buyers should give way to other influences.

It was felt by many that if values had to decline before the subsequent improvement came about, then the best thing that could be wished for was to have the bad time at once, and get through with it. The brighter prospect now apparent allows us to hope that we have turned the corner, and that the future holds out more promise than for quite a long time past. It now rests with holders to make the best of the opportunity by building up the confidence of dealers and steadying values. If this is done trade should follow in due course. After so prolonged a period of stagnation a reaction is natural, and we believe it is commencing, though the turnover still leaves much to be desired.

S.s. Bothnia and Bosnia arrived with fresh quantities, but very little business was passing and a sagging tendency developed, the response from the country being of quite a retail character. Sales comprised Pyrgos 36s. 6d., Amalias 37s. 6d. to 38s. 6d., Zante 38s. to 39s., Patras 39s. to 41s., Gulf 40s. to 48s., Vostizza 48s. to 58s. Duty-paid clearances from opening of season to date :—1930, 10,085 tons; 1929, 11,364 tons.

Sultanas.

Smyrna.—The market continues in the same dull state, business being on a very small scale with further reductions in values. Sales were :—Rain-damaged, 27s. 6d. to 29s.; ordinary to good, 36s. to 46s.; Cretans, 55s. to 65s.; Greeks, 37s. to 43s. up to 60s.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, May 16); s.s. Circassia for Bombay (Birkenhead, May 30). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Masirah for Calcutta (Birkenhead, May 10); s.s. Malakuta for Calcutta (Glasgow, May 8; Birkenhead, May 20).

Bibby Line.—S.s. Cheshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, May 14).

British India Line.—S.s. Manora for Colombo, Madras, and Calcutta (London, May 3); s.s. Warfield for Bombay (London, May 10); s.s. Morvada for Colombo, Madras, and Calcutta (London, May 17).

Cunard Line.—S.s. Bactria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, May 1; Liverpool and Swansea, May 3); A steamer for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, June 7; Swansea, June 10).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 10); s.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 31).

P. and O. Line.—S.s. Nankin for Calcutta (London, May 9); s.s. Comorin for Bombay (London, May 9).

Prince Line.—S.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Syrian Coast, and Cyprus ports (London, April 30).

Ellerman and Papayanni Lines.—S.s. Lesbian for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, May 17; Swansea*, May 17); s.s. Voluturno for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, May 20); s.s. Gerano for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, May 24; Swansea, May 29); A steamer for Gibraltar*, Algiers*, Oran*, Syra*, Smyrna, and Constantinople (Liverpool, May 31). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to :—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, April 15.

Debate on the Budget.

The Budget is now being debated in the Sobranye. The discussion began with a detailed statement by M. Molloff in which he analysed the Budget he presented. It does not differ much from that of last year, and totals about seven milliard leva, a total fixed by the Finance Committee of Geneva. But it is precisely that which constitutes its weak point, for, because of the very grave economic and financial crisis of the country one looks to see a very different Budget presented to the Sobranye—one adapted to the needs and the possibilities of the new situation, resulting from the impoverishment of the nation. Failures have been taking place on such a scale that the Chambers of Commerce have asked the Government to decree either a moratorium, which could only be introduced by the legislature, or at least a general postponement of the payment of private debts, and it is to be doubted whether as a result of the reduction in the resources of economic corporations (merchants, artisans, and industrialists), the Budget estimates can be realised, and a considerable deficit is anticipated. This prospect has coloured the discussion in the Sobranye.

The debate has undergone this year a very important innovation, since it bears almost exclusively on the economic situation, the political position being only touched on as a corollary. Naturally the Opposition speakers have not failed to suggest the responsibility of the Government for a large part of the sufferings which the country is undergoing, but the change which they have advocated only represents in their own eyes a means of appeasing popular discontent and of improving the general state of feeling by giving to the people the hope, clearly illusory, that a new Government would remove the difficulties by creating some form of business activity. What is wanted is not so much an economic and financial solution, which would call for time and patience, as a psychological solution, which will raise the morale of the nation and will strengthen its power of resistance while waiting for a real improvement in the situation as a result of the measures envisaged, the programme of which is not yet drawn up. One notes already a certain improvement brought about by the increasing reduction in imports and by the recovery of exports. What will save the country is especially a good crop this year, but no certainty on this score is as yet possible. That is why the Government has been greatly criticised for not making serious economies in the Budget so as to avoid an ultimate deficit and for not carrying out certain reductions which would enable the people to support more courageously the sufferings of the existing crisis. In brief, while the Government believes that the situation will improve by itself with the aid of measures which are now under examination, the Opposition takes the view that it is much too late with these measures, and that, as it has not been able to carry out economies, it has no other qualification for directing the struggle to overcome the economic crisis which is at bottom, so it is estimated, a crisis of confidence. So the proposal has been put forward for the establishment of a special Economic Council which will take in hand the conduct of economic affairs as well as the suppression, in the public expenditure, of all that is not absolutely indispensable, devoting the resources thus liberated to the strengthening and intensification of agricultural production.

In the course of the debate there was a good deal of criticism of the policy of the National Bank which, since its recent transformation into a bank of issue wholly independent of the State, with the support and under the control of a foreign technical adviser, who is the representative of the League of Nations, has not had, it was suggested, a very satisfactory policy. The bank was strongly attacked for having, on the morrow of the Stabilisation Loan, expanded considerably and without reason the credits granted to merchants and industrialists, partly directly, but in the main indirectly, through the medium of the private banks, and for having subsequently, from the month of July last year, that is to say, on the first indication of a very inadequate harvest, sharply contracted its credits and even ended them, so one speaker declared, in a way which could not fail to increase the panic in economic circles.

As a result of these sharp criticisms, and as a result also of the disquieting situation created by the bank as a consequence of the progressive decrease in the covering of the notes of circulation which from 48 per cent. last year has fallen of late to 36 per cent. with a tendency to reach soon the indispensable minimum of 33 per cent., the Governor of the bank, M. Assène Ivanoff, has shown a desire to retire from his post. It is hoped that he will not give effect to this intention, since, as has already been recorded, the situation now shows a marked improvement.

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, report as follows for the month ended March 31:—

Arrivals in Kordofan Stations and Tendelti amounted during March to 1,832 tons, which shows an improvement against January and February. The tendency of arrivals has been very irregular.

Prices at El Obeid.—During the first four days of the month the market was closed owing to holidays following Ramadan. On the 5th and 6th prices closed at the same limits as they closed on the last preceding market day, February 27. From the 8th to the 10th there was a fall of 3s. 4d., on the 11th prices fell 5s. 9d., and on the 12th 13s. 11d. The total fall was 23s. On the 13th prices rose 10s. 2d., and from the 15th to the 22nd there were almost daily increases which totalled 9s. 5d. From the 23rd to the 27th prices fell 9s. 3d., but between the 29th and 31st they rose 3s. 11d. The net fall for the whole month was 8s. 9d. per cwt.

Generally speaking, demand has been extremely slack. There were times when a general revival seemed likely, but this was usually followed by inactivity in the course of a few days.

There was a good deal of gum which locally changed hands early in March which no doubt helped out exporters to whom native dealers had defaulted, but generally speaking the arrivals of the month have been largely bought up by exporters and dealers in the hope of later demands and still higher prices. Whilst the total crop is undoubtedly small as against the big average of 1923 to 1928, the actual quantity of gum which might come in during April, May, and possibly June is possibly of great variation.

The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.
Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches
The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — **SOFIA** — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roser is made under the control of the Bank in all rose-growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

Electricity Mains.

The progress of the work of the Central Electricity authorities is being watched with interest in commercial quarters, and at the present time a good deal of speculation is being indulged in as to the immediate and ultimate value of many of the extensions that are being made. In many districts work is being done which, so far as can be seen, must be unremunerative for years. These mains are to act as feeders, links, balancers, and so on. It is to be hoped that in every case strict economy has been studied and that not a single foot of unnecessary cable has been run in connexion with this big super-power station scheme which is in progress.

Theoretically, the linking-up of power stations is all to the good; the only question is as to whether the cost of so doing may not be too high in proportion to the benefit derived. In other words, it is false economy to spend five pounds a year to save a shilling a week. One wonders sometimes whether that fact is realised by every Government Department. An illustration may be given which seems rather timely. Some years ago, on either bank of a river stood an electricity plant. At one station coal cost 16s. per ton delivered, and at the other 16s. 2d. per ton. The river provided an adequate supply of condensing water. One station served a large suburban district with electricity for all purposes except electric railway work and the other served a somewhat similar district with rather more residential property but a better day load so far as heating and cooking, etc., were concerned. One of the stations was called old-fashioned; it had three different makes of reciprocating engines installed and two types of generators, and the age of the undertaking may be imagined when it is mentioned that the dynamos were belt-driven. The other station prided itself on being up to date, and so it was, comparatively speaking. It had only one type of engine and generator, all direct coupled units, and the older station had a capacity of about 2,150 kilowatts as compared with about 4,700 for the newer undertaking. An analysis of the returns showed that the older station was generating at a total cost of about ⅝d. per kilowatt-hour and the newer at the merest fraction over ½d. per kw.h. The output of the older plant was 2,785,000 units per annum and of the newer 5,953,000. From these figures it will be seen that the combining of the stations, or rather the scrapping of the older and the enlarging of the newer undertaking resulted in a saving, in cost of production, of about £1,364 per annum, representing a return of 5 per cent. on an outlay of a little over £27,200. Of course, there are certain other things to be taken into account: cost of labour and management was decreased considerably and the load factor of the newer and enlarged station was considerably improved, but it cost over £50,000, so I understand, to bring about the alteration.

Timber Structures.

Very few details are available as to the cost and life of timber structures. That is a pity, as, in view of the high cost of certain materials and the cost and difficulty of transport, many structures are of necessity being built, in outlying districts, of timber. The following account of the erection of a timber bridge has just reached the writer, from one of the outposts of Empire. The bridge is built of timber and wood piling, and every scrap of material was treated with 12 lb. of creosote oil per cubic foot by the empty cell process. Each "bent" consists of five piles capped by a 10 in. by 10 in. timber and carrying a double set of 3 in. by 8 in. by 24 ft. sway bracing. Span lengths are usually 15 ft. and 17 ft. centre to centre, with 13 and 15 lines of 4 in. by 14 in. stringers respectively for a 24 ft. roadway. The floor of the bridge is built of 3 in. shiplap, and is covered with a 4 in. layer of clay and loam to protect the floor from traffic wear, but eventually this will be replaced by an asphalt carpet. The temporary surfacing material is held in place by a 4 in. by 8 in. retaining strip at each side. The abutments are also made of 3 in. shiplap for water-tightness. All pile cut-offs were treated with hot oil and two coats of burlap and hot bitumen, all bolts were well painted and all nails were galvanised. The untreated handrail was given two coats of whitelead paint and one of colour, and the structure is carefully watched by the patrolman, who reports at once any sign of decay in any part of the bridge. It is said that some of the wooden bridges in the vicinity, which are still in good condition, must have been built over 150 years ago.

New Type of Bucket Dredger.

Particulars are to hand of a new type of bucket dredger, operated by a crude oil engine, which will soon be seen at work on the Grand Union Canal. So powerful is the dredger that it will do the work of three of the older type, and the reason for its introduction is that it is hoped that bigger barges will be induced to use the canal. So far the cost of canal transport has been comparatively high owing to the small vessels employed for the work. Bigger barges mean vastly bigger loads carried at little if any more expense, and canal traffic may yet rival road transport so far as cost is concerned. The economies resulting from the dredging of canals were discussed in an interview the writer had recently with Mr. W. H. Curtis, chairman of the Grand Union Canal Co., Ltd. He said: "In our Regent's Park section we initiated dredging in 1917. A coal barge could then carry only an average of 65 tons. Last year barges went through carrying 75 tons, which means that last year 4,813 barges carried 364,560 tons, a total freightage which would have required 5,467 barges to handle it in 1917. Thus, last year, as compared with 1917, 654 lock operations were saved, with a consequent saving of water, wear and tear. As the capacity of our canals is limited to the number of barges which can be taken through our locks in a working day, dredging thus yields a large increase in toll-earning capacity. All new barges now being built for use on our Regent's section are of 100 tons capacity. This indicates how our waterway provides a cheap means of goods transport for, year by year, a greater volume of material. We are dredging our other canals as deep as we are able."

Charing Cross Bridge Scheme.

From an engineering point of view there are difficulties connected with the proposed Charing Cross bridge scheme. It is as well to make that clear in view of the growing opposition to the proposal. The Severn proposals died, not because the work could not be done, but because it would have been costly, uneconomical, and unprofitable. The Charing Cross scheme suffers from the same disadvantages. The time is not ripe for the spending of so much money; the bridge, if built, would do little or nothing towards relieving traffic congestion and an extraordinary amount of inconvenience would be caused to Londoners generally were the Southern Railway station moved to the south side of the river. At the moment, the scheme appears to be dead; it is to be hoped that nothing will be allowed to bring it back to life.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended April 19:—

Grain.—Although prices offered from abroad continued to fall throughout the week, grainholders were able to keep the local market somewhat above parity owing to the lack of spot cargo and restricted arrivals. In consequence the demand for space was limited to the barest necessity in order to cover April sales, and practically no fresh prompt business was possible. The approaching holidays have also had a detrimental effect on the market. In spite of this state of affairs, however, freights for the Continent have remained steady at about 11s. 9d. to 12s., and the interest for West Coast U.K. has been maintained, an appreciable quantity of cargo having been placed for ports in the latter district at rates in the neighbourhood of 14s. A larger volume of business is expected to take place after the holidays, but as a considerable amount of tonnage has been fixed for end April and early May there is little hope of any improvement in freights. Tonnage, mostly Greek, has been fixed during the week on the basis of 14s. Antwerp/Rotterdam, 14s. 6d. Antwerp/Hamburg range, and 15s. U.K., full terms. There is no change to report in the position at Constantza.

Timber.—Business is still very quiet although producers are anxious to sell, and prices have generally declined. Some transactions are reported to have been concluded in beech wood for Spain, where Roumanian produce seems to have given satisfaction. Other markets are quiet, and there is practically no change in freights.

Weather and Crops.—According to an official report of the Ministry of Agriculture for the period April 9 to 15, the temperature during the last week rose considerably throughout the country. Abundant atmospheric precipitations have been registered everywhere. The autumn sowings show in general very satisfactory progress, and appear to be in excellent condition. Spring sowings are being executed in normal conditions and on a large scale. The favourable atmospheric conditions continued this week, copious showers alternating with bright sunshine; southerly and westerly winds have been prevalent and there has been a further rise in the temperature. In some districts the rain has been accompanied by squalls, lightning and hail. A slight earthquake shock was felt in Galatz on Thursday evening.

Sulina.—Bar depth. Stormy weather prevented the dredgers from working on four days during the week, but from information received the bar depth remains unchanged at 24 feet. River depth, the minimum depth of water in the river is still 24 feet.

Constantza.—Exports of grain during the week ending April 16 amounted to 6,000 tons, and on that date two steamers were loading a further quantity of 13,000 tons mostly for Hamburg/Rotterdam. An 8,000 tonner was waiting for berth to load for Rotterdam/Weser. Nineteen ships loaded 61,000 tons of petroleum products, and six took about 1,900 tons of oil fuel for bunkers.

Bulgarian Report.

Bourgas, April 12.—There has been a marked revival on the local market. About 6,000 tons of maize and barley have been booked between Varna and Bourgas for Rotterdam and Hamburg, at rates from 9s. 6d. to 10s. 6d., and there are about 2,000 tons available for Antwerp, all April shipment. The weather has been changeable, generally cloudy, and frequent showers of rain are reported to have fallen in all parts of the country.

JOHNSTON LINE
Mediterranean, Black Sea and Danube.
REGULAR SAILINGS from:
Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

and FURNESS, WITHY & CO., Ltd., Royal Liver Building, Liverpool

NEAR EAST MARKET REPORTS.

The following cabled reports have been received by Barclays Bank (Dominion, Colonial and Overseas):—

Alexandria, April 14.

Egypt.

General.—Trade conditions have improved during the past month, although the overstocking prior to the application of the new import duties is still affecting the market.

Cotton.—There has been a noticeable improvement in the market during the past month. Tenders for March totalled 650,000 kantars, and the first tender for April 393,000 kantars, making the amount now held by the Government approximately 1,750,000 kantars. The mid-season statistics show that the world consumption of Egyptian cotton this season has been larger than for many years past, and has resulted in the withdrawal of supplies from stocks held abroad, which are now becoming depleted. This fact, combined with the feeling that the heavy tenders to the Government have relieved the market, has favourably influenced sentiment abroad, resulting in a noticeable improvement in demand. Upper Egypt cotton in particular has been in request and premiums have sensibly hardened. The Sakel market has improved, but remains quiet. The other most noticeable feature has been the threat of a locust invasion of Egypt; heavy swarms have swept across from Sinai and Palestine and have constituted a real danger to the new crop. All possible precautionary measures have been taken by the Government to cope with the danger, but it is too early to say how serious it may become. Cotton arrivals from September 1, 1929, to date are 7,459,930 kantars, compared with 7,325,317 kantars in the corresponding period last season, while exports are 4,606,523 kantars, against 5,444,792 kantars. Stocks are 3,957,464 kantars, against 3,036,847 kantars.

Onions.—The market continues to be very weak. The first shipments to England realised very low prices, owing to the heavy stocks of Dutch and Valencia onions. The weakness was strongly reflected here, and the prices paid for low-grade onions scarcely covered the freight from Upper Egypt. Consequently, a considerable portion of the crop has been left in the fields pending an improvement in quotations.

Khartoum, April 11.

The Sudan.

There has been no real change in the state of the markets, which remain dull, although price levels are still somewhat uncertain. In gum the situation is steadier, and it is thought that the crop cannot be larger than that of last year. The sesame market has been quiet and there are still 3-4,000 tons in the country; prices are £E13 for white and £E12:500 for red per ton Port Sudan. Quotations for groundnuts have been better. Business in imports continues slack, owing to the general dullness and to the poorness of the Gezira cotton crop. Improvement in this market is not expected until native cultivators receive payment for their product and a revival in the export trade occurs.

Jerusalem, April 9.

Palestine.

The situation remains practically unchanged compared with a month ago. The orange season is nearly finished and prices are still very low, ranging between 7s. and 16s. per case in the United Kingdom and 13s. to 14s. in Continental markets. Shipments to the United Kingdom during March amounted to 491,602 cases, the total for the season to the end of that month being 2,184,606 cases. The season has not proved satisfactory to the exporter. The locust invasion is assuming very serious dimensions, and, in spite of the very active steps taken by the Government, fears are entertained as to whether the situation can be adequately controlled.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended April 23 :—

Egyptian Futures.

Sakel Contract.—We have experienced a series of quiet markets with relatively unimportant price movements since we last wrote, the intervention of the Easter holidays having the effect of reducing trade and speculative operations for the time being. The chief feature of the week has been the strength shown by near positions, the recent shipments of tenderable cotton to the U.S.A. leaving a much reduced stock to protect the contract. This position has been made the most of in certain quarters, with the result that at the time of writing Mays have been forced to a premium of 38 points over November. We doubt whether the operators responsible for the recent widening would face even moderate tenders, and on this account it appears a sound policy for those who have "long" cotton to take advantage of the present difference by putting forward to new crop a certain proportion of their holding. No further news has come to hand regarding the American tariff, and there has been no resumption of last week's buying orders for that country. The rush shipments totalled approximately 15,000 bales of Egyptian (Sakels and Uppers combined) and 10,000 bales of Sudans. Local trade reports since we last wrote have been rather colourless, but this is probably mainly due to the vacation, and we would hesitate to say that any set-back has occurred unless the prevailing quietness extends over the coming week. With the American markets showing a reactionary tendency, we are not optimistic regarding the course of values in our contract but at the same time we must remember that the outlook mainly rests with the Egyptian Government, and any material decline here cannot be looked for unless they commence to release their stocks below the purchase price.

Upper Contract.—Only a moderate amount of business has transpired in this option during the past week, operations being mainly confined to new crop positions. Near positions have been relatively good, covering against sales of actual for export taking contracts out of the market. The local demand continues on a moderate scale, but with offerings now much reduced and the basis hardening, we think old crop positions will hold their ground. New crops will probably continue to be governed by the action of the American markets.

Egyptian Spot.

The three days covered by this report have included the final efforts of buyers to purchase cotton for shipment to America prior to the imposition of the new tariff, and as a result sales have reached a large total. This hurried buying now appears to be over and the demand has resumed more normal proportions. In spite of the large business done, quotations have reacted surprisingly little.

Sakels.—A better business has taken place; most of the inquiry has been for cotton at about 140 to 200 on. The medium and lower grades have not received so much attention.

Uppers.—A good business has again been done; practically all qualities from pass to 80 on have attracted interest. There has also been a fair inquiry for the "off" qualities, but business has been more limited for these lower grades.

Pilion.—Slightly more inquiry has been in evidence, but sales have been few.

Nahda.—There has been some small recrudescence in the inquiry for this cotton also, but buyers appear to be in a very low key and seem to be more or less at an experimental stage at the moment.

Maarad and White Cotton.—These growths have shared in the improved inquiry, but we doubt whether very much actual business has resulted.

Tokar Sakel.—Slightly more interest has been shown and we are hopeful that after last week's clearance this cotton will attract an increasing amount of attention.

Sudan Sakel.—A good inquiry has been in evidence, and on one occasion a large line changed hands. This particular sale was old crop cotton and finally disposed of last year's carry-over. The new crop continues in favour and buyers are realising that there is plenty of good cotton to be had for the selecting.

C.i.f. Business.—Only a moderate amount of business has passed so far as we can ascertain. Forwardings were returned at 4,009 bales Egyptian and 1,133 bales Sudan. Spot sales have been estimated at 7,300 bales Egyptian and 9,000 bales Sudan Sakel. Quotations of Sakel show a net advance of 30 points, and those of Upper and Pilion are 5 points higher. F.G.F. Sakel to-day, 14.30d. F.G.F. Upper to-day, 10.47d. F.G.F. Pilion to-day, 11.00d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report as follows for the week ended April 17 :—

Since our last report the futures market has been very active, with wide fluctuations in prices. The week's summary of price movements is as follows:—Sakellaridis: May, 28.03 dollars, 0.09 dollars down; July, 27.90 dollars, 0.21 dollars down; November N.C., 26.07 dollars, 0.48 dollars down; January N.C., 26.42 dollars, 0.35 dollars down. Ashmouni: June, 19.87 dollars, 0.07 dollars down; August, 19.38 dollars, 0.19 dollars down; October N.C., 18.08 dollars, 0.47 dollars down; December N.C., 18.37 dollars, 0.46 dollars down; February N.C., 18.75 dollars, 0.45 dollars down.

Persia Five per Cent. Sterling Loan, 1911.—Coupon No. 37 due May 15 will be paid on and after that date at the Imperial Bank of Persia, 33-36, King William Street, E.C.4, or at its bankers, Messrs. Glyn, Mills and Co., 37, Lombard Street, E.C.3.

Barclays Bank (Dominion, Colonial, and Overseas) have received the following cable from their Cairo office:—"The statistical figures for Egyptian trade from February 1 to 16, when the old Customs tariff expired, are as follows:—Total imports, £E8,709,281; total exports, £E1,933,863; cotton exports, £E1,525,757."

At the Court of the Council of the Corporation of Foreign Bondholders, held on April 24, the Vice-President, Mr. Cecil Lubbock, was elected President for the ensuing year in the place of Mr. Charles E. Barnett, who expressed his wish to retire. The office of Vice-President was filled by the election of Mr. H. A. Trotter.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Loose Leaf Post Binders.—The Survey of Egypt invites tenders for the supply of 3,500 loose leaf post binders. May 19. (D.O.T.)

Metal Cabinets and Safes.—The Survey of Egypt, Ministry of Finance, Cairo, invites tenders for the supply of metal cabinets and safes. May 24. (D.O.T.)

Incinerator, etc.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for supplying and erecting an incinerator and drying press at Amiria. June 8.

Cement.—The Main Drainage Department, Ministry of Public Works, invites tenders for the supply of cement for the year 1930/31. May 19. (D.O.T.)

General Stores.—The Director-General, Main Drainage Department, No. 2, Sharia Maleka Nazli, Cairo, invites tenders for general stores required during 1930-31. May 24.

Rails, etc.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of rails and angle irons for 1930-1931. June 28.

Weighing Machines.—The Physical Department, Ministry of Public Works, Cairo, invites tenders for the supply of weighing machines, counter scales, and Beranger balances. June 2. (D.O.T.)

Waterworks Plant.—The Egyptian Ministry of the Interior invites tenders for the supply and installation of pumping machinery, filters, and an artesian well, etc., for the waterworks at Samanoud (Gharbieh Province). May 20. (D.O.T.)

Rails and Angle Irons.—The Survey of Egypt, Ministry of Finance, Cairo, invites tenders for the supply of 13,000 tons of new or second-hand tarred rails and 177 tons of new or second-hand angle irons. June 28. (D.O.T.)

INDIA.

Pumping Plant.—The Indian Stores Department invites tenders for the supply and erection of 2 vertical shaft low lift centrifugal pumps, 2 horizontal shaft multi-stage high lift centrifugal pumps, hand-operated overhead travelling crane, piping, valves, switchgear, etc. Alternatively, gear-driven, triple throw ram pumps may be submitted. May 26. (D.O.T.)

Power Plant for the Haripur Central Jail Power Station.—The date for the reception of tenders for the above contract has been extended to May 12. (D.O.T.)

The directors of the Anglo-Egyptian Oilfields recommend a dividend of 22½ per cent., less tax, on the "B" shares for the year 1929.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended March 20 amounted to £E9,150, making the total from April 1 £E341,895, as against £E321,080 for the corresponding period of the previous twelve months.

Why not visit

The SUDAN?

KHARTOUM can be reached either via Egypt or direct by steamer to Port Sudan and thence by train-de-luxe. The social life of Khartoum during the season (December to March), the scenes of Wild Life on the Southern reaches of the White Nile, or interesting short trips organised by the Sudan Government Railways and Steamers from Khartoum, offer a unique variety of experiences to those in search of something out of the ordinary. It is also a new route to or from UGANDA and KENYA, involving neither difficulty nor discomfort. To the Sportsman it is Paradise.

Notes of the Week.

The Anglo-Egyptian Negotiations.

A definite decision in regard to a treaty between Great Britain and Egypt will have to be reached this week, as the Secretary of State for Foreign Affairs is due to leave London at the end of the week for a meeting of the Council of the League of Nations at Geneva. At the moment of writing (Tuesday) it is impossible to say how the negotiations will end. They have been narrowed down to the single subject of the Sudan. The attitude of the Egyptian Delegation is understood to be that Clause 13 of the Proposals for an Anglo-Egyptian Settlement, which stated that "While reserving liberty to conclude new conventions in future modifying the Conventions of 1899, the High Contracting Parties agree that the status of the Sudan shall be that resulting from the said Conventions," contemplated a return to the actual position in the Sudan as it was before the expulsion of Egyptian officials as a result of the murder of Sir Lee Stack. This view is not shared by the British Government, which holds that the meaning of the clause is that there can be no change in the present position until new Conventions are concluded, which will take into consideration the 1899 Convention. The closing sentence of the Clause: "Accordingly, the Governor-General shall continue to exercise on the joint behalf of the High Contracting Parties the powers conferred upon him by the said Conventions," not to mention the exchange of Notes on the possible return of Egyptian troops, is considered to confirm the British interpretation. Unfortunately for the success of the negotiations, Mahmoud Pasha on his return to Egypt last year claimed the Clause as an indication that Egypt had liquidated the Stack murder. The British Government's version of the Clause was not asked, but an official statement was made in Parliament to the effect that the pamphlet issued by Mahmoud Pasha explaining the Proposals and the course of his negotiations was "correct in substance." If a treaty be signed leaving the position in the Sudan just as it is to-day, without the prospect of an early return of Egyptian officials to the Sudan, the Delegation fears that it will be accused by its fellow-countrymen of having secured from the British Government less than was promised to Mahmoud Pasha. It would seem as if the two countries would have to "carry on" for the time being without a treaty and a satisfactory adjustment of Anglo-Egyptian relations. That need not mean that those relations do not continue to be as smooth and as friendly as they have been for the last two years.

Roumanian Politics.

The present phase of the struggle between parties in Roumania is better understood when it is remembered that the fall of a Government is not usually brought about by an adverse vote in Parliament, but by an intimation from the King, or at the present time from the Council of Regency. In 1928, it is true, M. Vintila Bratianu did not wait for his dismissal, but is supposed to have sought to force the Council's hand by offering his resignation, in the confident expectation that it would be refused. In his case, too, the position of the Government had been assailed outside Parliament rather than within; but the general attitude of the Roumanian people, particularly in the new Provinces, left little room for doubt in the Regents' mind that M. Bratianu's Ministry had outlived any popularity it may have had originally. It can be said with some certainty that the present Government has not succeeded in living up to the high expectations built upon it, but on its behalf it may be urged that the reasons are to be sought very largely in circumstances outside its control. It has suffered from the fact that it is a coalition of two parties, and M. Maniu has not always found it a simple matter to adjust divergencies of views in the ranks of his followers. Again, the heritage of economic stringency or worse left the Cabinet by its predecessor has necessitated a drastic fiscal policy which has pressed hard on the people. Yet the Regency Council can hardly be satisfied as yet that popular support has definitely deserted the National-Peasant Party and is prepared to attach itself again to the Liberals. If the Council had no doubt on the subject, there would be no need for the Memorandum that it has recently received from a Senator and ex-Minister. The document, which must be regarded as a serious contribution to the political life of Roumania, made by a responsible member of society, constitutes a double-barrelled impeachment both of the Government and of the Regency Council. The latter, it is pointed out, has been "terrorised and annihilated" by the Government, and three instances are cited. Finally, the doubt is expressed whether the Council is really acting up to its mission, if it fails immediately to dismiss the Government,

Digitized by Google

Regents, presumably, in Roumania do not expect a quiet life, any more than ordinary politicians; it is evident that the present Council is not likely to have one.

Progress in Cyprus.

Circumstances have tended to concentrate attention on the political side of the affairs of Cyprus, to the exclusion of the far more important aspect, the economic well-being of the Island. In this particular the speech delivered on April 15 by the Governor at the opening of the session of the Legislative Council provides a welcome corrective. Sir Ronald Storrs took as the subject of his remarks the economic, industrial and social progress of the Colony during the last two years, and presented the affairs of Cyprus in a sounder perspective than is usual when they come up for discussion outside the Island. He reminded the Council that the foundations of the economic well-being of any body politic are laid in the education and healthy condition of the people of the State, and he was able to show that the steady advance in the material progress of Cyprus was being accompanied by the strengthening of those foundations. While devoting large additional sums to the further development of agriculture, forestry and village roads, the Government had been able to provide more liberally for essential services of Health and Education. Comparatively large sums had been allocated to improvements of permanent value to the whole community in the matter of communications. The importance of the latter is shown in the importation of a thousand motor vehicles—a noticeable feature indicative of the prosperity of the Island, although, as the Governor shrewdly added, "not necessarily of the best employment of that prosperity." Not the least striking development of recent date is the introduction of an intensive course of Agricultural and Co-operative Credit training arranged for schoolmasters and mistresses, with a view to inculcating in the children of an essentially agricultural island a love for agriculture and knowledge of its principles and practice. It is significant that, while on the one hand a section of the population is clamouring to be associated more and more with the higher offices of the Administration, the Government and the Commerce and Industry of the Island are in urgent need of qualified accountants, engineers and agriculturists, "but are confronted in their search for such by the serried ranks of the professional classes—lawyers, doctors and teachers." In these few words the Governor seemed to place his finger on the source of the agitation which has done so much to retard the progress of Cyprus in the past.

The Palestinian Problem.

Quickly, but not too soon, the Government are giving effect to one of the recommendations of the Palestine Commission of Inquiry. The Report, under the heading "Land," recommended that "a scientific inquiry should be undertaken by experts into the prospects of introducing improved methods of cultivation in Palestine. Land policy could then be regulated in the light of facts ascertained by these scientific investigations. It is of vital importance that in any scheme of land development adopted as the result of expert inquiry, regard should be had to the certain natural increase in the present rural population." We welcome, therefore, the dispatch this week to Palestine of Sir John Hope Simpson, who is to report to the Government on questions relating to land settlement, immigration, and development. Sir John Simpson, whose record in India as a Civil Servant, and, latterly, with the Refugee Settlement Commission in Greece, is admirable and well-known, is an excellent choice for the Government to have made. He knows the land and its problems thoroughly; he has already dealt with questions of immigration that were far vaster than anything Palestine can now present; in short, he is a man, entirely without *parti pris*, in whose report one can have absolute trust. For the time being other things are monopolising attention in Palestine—the question of the execution of the murderers, of the Delegation in London, and so forth—but the fundamental questions are really those which Sir John Simpson is being sent out to investigate. It is to be hoped that the Government will soon be able to announce further developments of the Palestinian situation, as, for instance, the composition of the Wailing Wall Commission, and its intentions in regard to the Arab Delegation in London, who appear to have survived the somewhat disappointing experience which they were reported to have undergone when first in contact with Whitehall. Recent statements indicate that the first gloomy account of their reception at the Colonial Office has been offset by later interviews with the Prime Minister and Lord Passfield.

Feminism in The East.

It is curious to observe how unequally the advance of feminism is taking place in Islamic countries. Side by side with the appointment of two women as Judges in Turkey, and with the permission in Palestine for women advocates to appear in Courts of Law (except on religious and tribal matters), and with the holding of a sports day at the Central Girls' School of Baghdad, comes the news that a judgment has been delivered in Cairo against an Egyptian woman claiming, as against her husband, an allowance for the education of her daughter, the Judge being alleged to have held that, since there was in the canonical law of Islam no provision for the education of girls, girls should not be educated. It seems improbable, however, that this case has been correctly reported, for we are unaware that Muslim canon law does so neglect the interests of daughters. But it is true that Egypt often presents an extraordinary combination of enlightened and of obscurantist conduct. If there is one thing certain in the development of Islam, it is that the long-held theories on the duties and rights of women will gradually disappear. To suppose that "Westernisation" will quickly bring about "the emancipation of women" would be foolish, but that women must more and more play a part in the decision of modern States is certain. In proportion as Islamic countries maintain contact with the West, so their women will emerge from the obscurity in which, however pleasing it be to the philosopher to contemplate, they have too long lain. It is sometimes boasted by Muslims that women have frequently been most prominent in their history, but it is generally to the early centuries of Islam that reference is made. During the Ottoman domination of the Near and Middle East, at any rate, women had practically no direct influence on public affairs.

Efficiency in Persia.

The cynic may smile at the thought of corruption disappearing from public life in Persia, but there is little question that steps are being taken, under the stimulus of Riza Shah Pahlavi, to eradicate the worse forms of what has long been, in the eyes of many Western observers, a stumbling-block to real reform in Persia. The fact that Prince Firouz Nosrat ud Daulah, an ex-Cabinet Minister, has just been tried and found guilty of accepting even so comparatively small a bribe as £387, and that he has been sentenced to four months' imprisonment and a fine of £1,160, and has been deprived of his political rights, cannot fail to make a considerable impression in Persia. Corruptibility is perhaps not so great a curse, provided that there be unswerving patriotism: the history of eighteenth-century England is a striking example of how a State was well led by patriotic men who, by every modern standard, were hopelessly corrupt. But when it is in the very nature of things, when men's conduct can be completely changed by bribes, the problem assumes another complexion. We have little doubt that this sentence on a most eminent Persian official has been decreed *pour encourager les autres*; and we hope that it will. But integrity in public life in Persia is a plant of very tender growth, and will need most careful handling, if the weeds that have been having it all their own way for centuries are not to choke it.

THURSDAY, MAY 8, 1930.

THE END OF A CHAPTER.

With the arrest, on Monday last, of Mr. Gandhi the first stage in the campaign of civil disobedience launched by the Indian extremists may be considered to have come to an end. The campaign has been in active operation for about a month, a sufficiently long period to prove conclusively that "non-violent non-co-operation" is to-day just as directly provocative of violence and lawlessness as it was when it was originally introduced in 1920. After his much advertised and theatrical march to the coast, Mr. Gandhi openly bade defiance to the Salt Law on April 6; and his associates in various parts of India—but mainly in the Bombay Presidency—have since been busy following his evil example. So far as regards the Salt Law neither their action nor his seems to have been of any very great importance. The contraband salt which has been manufactured is reported to be, for the most part, unfit for human consumption, and, notwithstanding all the efforts which have been made to arouse the people, it does not appear that illicit salt manufacture is proceeding at any very alarming pace. There is not apparently that boundless enthusiasm for it which its promoter anticipated. A boycott of foreign cloth has had to be organised to help the campaign along; and it was stated, immediately before his arrest, that Mr. Gandhi was evolving other and more desperate forms of mischievous activity. The real significance of the movement does not, of course, lie in the particular form of law-breaking that may be practised. Neither Mr. Gandhi, nor any one of his friends, cares in the very least whether the Salt tax is maintained or repealed. Their object is to arouse the illiterate masses to such a pitch of excitement and fury as will make the task of governing the country extremely difficult, if not impossible. To attain this object they will use any weapon that is available; and if their defiance of the Salt Law does not succeed, they will try something else.

Regarding their efforts from this standpoint, the Extremists can claim that they have not been altogether unsuccessful. For disturbances, more or less serious in character, have occurred at various centres, for example, Karachi, Chittagong, Calcutta, Peshawar and Madras. The trouble at Peshawar must be considered to be the most serious. It took the form of a riot following on the arrest of a number of the local Congress leaders. Order was eventually restored, but not until after troops had fired on the rioters. The worst feature of the incident was that the conduct of the two platoons of the troops employed was unsatisfactory. At Chittagong the armoury of the local battalion of the Indian Auxiliary Force was attacked by a gang of armed raiders, who were evidently members of the Anarchist Association which has existed in Bengal for many years. The gang burned down the armoury, stole the rifles, and murdered the sergeants in charge. On their being attacked by the Police and the Auxiliary Force, many of them made good their escape to the neighbouring hills. The disturbance at Karachi occurred during the trial of six of the principal Sind leaders of the civil disobedience movement. A crowd broke into the Magistrate's Court, and the Police were forced to fire before control could be re-established. At Calcutta a violent outbreak of rioting followed the arrest and conviction of the Swarajist Mayor on a charge of reading aloud seditious literature. At Madras the Police were compelled to fire in order to disperse a riotous crowd assembled for a public meeting. In addition to these outrages there have been, as was to be expected, numerous minor clashes with the police at points where illicit salt manufacture, or some other variety of law breaking, has been attempted.

It would be foolish not to recognise the gravity of the general situation as thus disclosed. But at the same time we fail to see that there is ground for any very serious alarm. Indeed, it appears to be questionable whether the present movement is really more formidable than that which was engineered by Mr. Gandhi some ten years ago, and which was successfuly controlled by Lord Reading's Government. The resources at the disposal of the Government of India are more than sufficient for the restoration and maintenance of order throughout the country. Although it is true that Lord Irwin has been exceedingly patient and forbearing, the vigorous action which he is now taking makes it perfectly clear that he does not shrink from strong measures at the proper time. As was to be expected, the delay in arresting Mr. Gandhi gave rise to criticism. But it is obvious that the Government of India must be in a better position than anyone else to decide as to the time when such a step should be taken. It seems to us to be not improbable that further, and perhaps serious disturbances may now occur in various parts of the country. But there would appear to be not sufficient reason why such should not be satisfactorily dealt with; and the preliminary measures which the Viceroy has wisely adopted will conduce to that end. For example, his decision to re-enact the expiring sections of the Bengal Criminal Law Amendment Act will undoubtedly have a steadying effect. These sections confer exceptional powers of arrest and detention powers which are imperatively necessary in an emergency such as that which now exists. They were on the point of being withdrawn, and their prompt re-introduction by Ordinance is a wise step. The re-enactment of the Press Act is even more welcome, as it cannot fail to have a sobering influence over the whole country. The unbridled licence of the newspapers is one of the most potent causes of unrest in India. For the daily dissemination of lying attacks upon the Government, and upon the British generally, always leads eventually to violence. The Press Act, which was passed in 1910, proved to be of considerable value in restraining the activities of seditious editors. But since 1922, when it was repealed, the newspapers have been increasingly reckless and dangerous. They have maintained an unending stream of revolutionary propaganda deliberately calculated to excite the people against the Government. It may be anticipated that this will now largely cease, if the Press Act is applied. Indeed, if the reports which are being received from day to day are correct, the beneficial influence of the Act is already becoming apparent. In the meantime Lord Irwin has definitely stated, in a letter to Sir Prodyot Coomar Tagore, that the policy of the Government to meet representatives of India in conference stands firm. But he points out that no progress can ever be achieved by India by teaching her people to hold the law of light account; and he adds that "the duty of myself and of my Government to maintain the authority of the law is plain and we shall discharge it."

*The Near and Middle East

From Our Own Correspondents.

PALESTINE.

Jerusalem, April 26.

Agriculturists' Burdens.

One of the oldest grievances of the Arab population, and one which everyone admits to be well grounded, and yet one which no serious administrative measures have been taken to cure, is the chronic condition of financial depression that exists among the *fallahin* land workers and small farmers, owning or leasing their land. It is generally allowed that this is due primarily to the very unfair incidence of taxation, which is a nightmare to the agriculturist, but only a slight burden to the town dwellers, while the comparatively well-to-do foreign residents come out of it virtually unscathed. To this there is to be added the Arab peasant's primitive methods of agriculture, his victimisation by the money-lender and the entire absence (among the Arabs, at least) of facilities like mutual loan associations and co-operative organisations. For years there has been a demand for a Government-supervised Agricultural Bank; though even if this is started, as now seems to be the Government's intention, it is alleged by some, who ought to know, that the only gainers will be the wealthier, large-scale land proprietors, while the small, wholly illiterate peasant owners will fight shy of the almost inevitable red-tape entanglements of an officially run financial venture, and even prefer the evils they know of. Recent legislation has tried to come to the help of debtors by reducing the period of imprisonment for debt from ninety days to twenty-one; but it is protested that this will only make it worse for the would-be borrower, who will have to submit to an even higher rate of interest imposed by the private money-lender.

That the Government has in mind further legislation to help the depressed peasant is indicated by its appointment, two days ago, of a Committee, consisting of Mr. W. J. Johnson, Deputy Treasurer of Palestine, and Mr. R. E. H. Crosbie, Assistant District Commissioner, Southern District, to "examine into the economic conditions of agriculturists and the fiscal measures of Government in relation thereto, and to make recommendations."

Palestine and the Report.

The local Arab and Hebrew Press has, naturally, been busy during the past two weeks in publishing translations of the Shaw Commission's Findings. The Hebrew *Davar* has published it serially in its entirety, and the other newspayers in long extracts. Even so, the Report in its entirety will remain unknown to the very large majority of the population, who will have a close knowledge of nothing beyond the short official summary, which was most promptly and systematically broadcast in English, Arabic, and Hebrew to every part of the country, however remote; for the rest—and the summary was certainly such as to leave a very large "rest"—the various communities will form their judgments very much as their newspapers tell them to. Judicious selections from the Commission's large assortment of well-rounded arguments is sufficing to bolster up quite a number of divergent views, especially around that storm-centre—the relative guilt or innocence of Mufti and Arab Executive. Another interesting game, popular in Jewish circles after they have tasted the full enjoyment of the Commission's picture of King Herod destroying his own Temple seventy years after his own death, is to gauge the degree of "twist" which the official summary gave to the actual Report (itself, in Jewish eyes, a thoroughly twisted presentation of the case). Study along these lines proves to their satisfaction that the summary was delicately drafted so as to avoid the appearance of harsh accusation against any of the three parties concerned, and so to provide a common bromide before the imminent and incipiently dangerous religious celebrations.

Immigrants and the Labour Federation.

Jewish indignation is mainly aroused by the charge formally brought by the Commission, on the authority of the Chief Immigration Officer, Mr. A. H. Hyamson, that blank immigration certificates are supplied to the Palestine Jewish Labour Federation, which allots them only to individuals of whose political principles it approves, regardless of their particular suitability for admission into Palestine. This Federation retorts that it does not receive and never has received immigration certificates, earmarked or blank, and that the Immigration Officer's statement "from beginning to end is not in conformity with the facts." And both Mr. Hyamson and the Federation ought to know.

More Jewish Complaints.

On the two questions of immigration and land-settlement the Commissioners are charged with gullibility and amateurishness in approaching the complicated subject of Palestinian economics. In a statement to the local Press the Zionist Executive said in effect that it did not so much object to the Commission's grossly exceeding its prescribed limits, but that once it had resolved to *report* on the more remote of the alleged causes, it was its moral duty to warn the Zionist side to enable them to put their case; whereas on the land question the Arabs were able to put up a bluff before the simple-minded foreigners and to get away with it, and on the immigration question the Commissioners consented to hear and accept as true certain evidence *in camera* which had no business to be heard *in camera* and which was demonstrably false. Again, the solemn sounding recommendations to the Government to carry out research in revised methods of land cultivation ignored the fact that the Jewish land settlement was already based entirely on such revised methods, in which the Jews had throughout taken the initiative and set an example which the Arabs were learning to follow.

Signs of Improved Relations.

It is only right, in conclusion, to point out that Arab-Jewish relations are beginning to be less bitter. Responsible Jews state that they prefer to look to the future and forget about the past—although they still confess to a feeling that a "National Home," however whittled down its interpretation, ought never to mean a place where they can be murdered with comparative impunity. A reassuring support of Mr. Snell's belief in the "temporary" as opposed to the "fundamental" nature of Jewish-Arab ill-feeling is the fact that in a labour census taken last month no fewer than 3,300 Arab labourers were at work in the six colonies, Petah Tikvah, Khedera, Rishon le Zion, Nes-Ziona, Rehovoth, and Zichron Jacob.

EGYPT.

Cairo, April 26.

The Prince of Wales' Visit.

Every time the Prince of Wales visits Egypt he astonishes local residents by his abounding energy. Anglo-Egyptians, as a whole, take life very easily, and the manner in which the Prince fills in every moment of the day rather takes their breath away. Always begun early in the morning, the Prince's day consists of a series of visits, games, luncheons, games, dinners and dances. The visit which finished last Sunday was no exception, and on the Saturday after a very strenuous day, including a review of the Welsh Guards in the morning, a luncheon party and squash and polo at the club in the afternoon, H.R.H. attended the usual Saturday evening dance at the Gezireh Sporting Club. Arriving at 10 p.m. with a party of 20, which included Lady Loraine and Princess Ileana of Roumania, who is spending a short holiday in Cairo as the guest of the Roumanian Minister and Mrs. Lahovary, the Prince did not leave until well after 3 a.m.

On Sunday morning he attended divine service at St. Mary's Pro-Cathedral, and in the evening left for Port Said. There was a very large crowd at the station to see him off, including the Acting High Commissioner, the Residency staff, leading members of the British community, Said Zulficar Pasha, Grand Chamberlain, representing King Fuad, and Ahmed Hassanein Bey, who accompanied him in the special train to Port Said. The Prince sailed at midnight on board the P. and O. Rawalpindi.

The Easter Holidays.

The whole of Egypt's mixed population was on holiday last Monday, for Easter Monday coincides with the Coptic feast of *Shem el Nessim*. Although this is primarily a Coptic occasion, it is celebrated by Muslims. It signifies the coming of spring and a literal translation of the name *Shem el Nessim* is "The Smelling of the Breeze." Once upon a time it was the custom for all employers to give their native servants a sheep, and while that custom is not so generally followed, many sheep lost their lives last Monday. This year the day passed quietly, and not nearly so many accidents as usual occurred. There was, however, one very sad boating accident on the Nile. About 25 young Egyptian labourers hired a small sailing boat, capable in ordinary circumstances of holding ten persons. They set sail to the accompaniment of the usual singing and shouting, and made for mid-stream with the sides of the boat almost flush with the water. A bottle was produced and handed round, and then the fellow who held the bottle retired to a corner with the intention of taking his pull. The other occupants of the boat thought he intended to finish the bottle and made a rush at him. The sudden transference of weight capsized the boat and in a moment they were all struggling in the water. Only one man was saved alive, and so far about a dozen bodies have been found.

Unseasonable Weather.

The weather during this week has been terrible. Last Friday we had a severe Khamseen, and since then all kinds of weather have been experienced. A gale blew for three days, causing serious dislocation to the shipping, many boats being unable to leave, and the Alexandria harbour had to be closed for two days. The weather then turned exceedingly cold, and rain fell in both Cairo and Alexandria.

The Negotiations.

The Prime Minister's Private Secretary arrived in Egypt by air on Tuesday, carrying despatches to the Cabinet from the Delegation in London. Immediately on his arrival he saw Mohamed Fahmy el Nokrashy Bey, Minister of Communications, and a Cabinet Meeting was hurriedly called. Since then there have been about two meetings daily and the whole country is buzzing with rumours. Nobody here will say anything definite, but from what I have heard I understand that it is the general wish that the Sudan question should be settled at once, even if it means breaking off negotiations While it is quite evident that the more responsible Egyptians would like to see the vexed question of Anglo-Egyptian relations settled, there is a very considerable body of irresponsible opinion, chiefly students, who evidently imagine that the Delegation has only to insist a little strongly and they will get all they want, if not now, a little later, and they are absolutely against coming to terms, unless all the Egyptian demands are granted. Yesterday morning circulars printed in blood red letters were being distributed in Cairo. They were headed: "The Word of the Motherland," and called Nahas Pasha a traitor and said that Saad Zaghloul would turn in his grave, if the treaty was signed on its present terms. Violent attacks on Mohamed Mahmoud Pasha continue, and are growing even more violent, as it is realised that the Wafd may not obtain anything much better than he obtained. The strictest secrecy on the subject of the actual course of the negotiations is still being maintained in official Wafd circles.

EGYPTIAN GOVERNMENT.

EGYPTIAN MINISTRY OF EDUCATION.

APPLICATIONS are INVITED for ASSISTANT MASTERSHIPS for teaching Commercial Subjects in the Intermediate Schools of Commerce.

Applicants must possess a Commercial University Degree (preferably with honours) and some experience of teaching.

The salary offered is £E450 a year for applicants with at least two years' experience, and £E415 for applicants with less than two years' previous experience.

The appointments are on contract for five years, and renewable at the end of that time.

Full particulars and form of application may be obtained from The Director, Egyptian Education Office, 30, Victoria Street, S.W.1.

EGYPTIAN GOVERNMENT.

EGYPTIAN MINISTRY OF EDUCATION.

APPLICATIONS are INVITED for ASSISTANT MASTERSHIPS for teaching English in Egyptian Government Secondary Schools and Intermediate Schools of Commerce.

Applicants must either possess a Degree (preferably with Honours) from a University, and (preferably) have had some teaching experience in Secondary Schools, or possess a Teaching Certificate from the Board of Education and have had at least two years' experience as teachers.

The salary offered is £E405 a year for Assistant Masters with a University Degree, but no previous teaching experience, or less than two years' experience, or with a Board of Education Teaching Certificate and between two and five years' teaching experience; and £E450 a year for those with a University Degree who have at least two years' previous experience or the Board of Education Teaching Certificate and at least five years' teaching experience.

The appointments are on contract for five years, and renewable at the end of that time.

Full particulars and form of application may be obtained from The Director, Egyptian Education Office, 30, Victoria Street, London, S.W.1.

TURKEY.

Istanbul, April 16.

The Sarcophagus of Alexander the Great.

As an agreeable and refreshing variation from acrimonious disquisitions on the probable fate of the Naval Conference, statistical formulæ destined to reassure harassed holders of Turkish Unified Bonds and the usual forecasts respecting the chances of the various racing-strings which are shortly to make their appearance at the Spring Meetings at Ankara, Smyrna, and Istanbul, the local papers have been lately indulging in speculation on the authenticity of the famous sarcophagus known to archæologists as that of Alexander the Great, which is housed in the Imperial Museum of the former Turkish capital. The question has come to the forefront as the result of an announcement to the effect that "Sir Carter," the discoverer, with the late Earl of Carnarvon, of the tomb of Tutankhamen in the Valley of the Kings, is now excavating on sites situated in the vicinity of Alexandria, Rossetta, and Damietta in the hope of discovering the actual resting-place of the Macedonian potentate. Hewn out of the solid marble in the shape of a Greek temple, the remarkable casket which graces and adorns the Istanbul Museum is unquestionably the choicest example of the sculptor's art among that group of sarcophagi known as the "Sidonian Collection," which was discovered in 1887 at Saida on the Syrian coast, then a Turkish Province, in what is believed to have been the Royal Mausoleum or Necropolis of Sidon, the capital of Phœnicia, by the late Hamdi Bey, the erudite Founder and Curator of the Imperial Museum of Antiquities in Istanbul.

Although the likeness of Alexander appears in both of the larger panels which adorn the sides of the coffer and which depict battle and hunting scenes, the consensus of expert opinion has always held to the view that the casket was neither intended for, nor ever contained the ashes of the Macedonian ruler. From the fact that it was found in the Sidon Necropolis with other tombs, some of them unquestionably royal, the deduction has been made that it probably contained the remains of Abdalonymus, the last Phœnician sovereign to whom history makes any reference, and who was placed on the throne by Alexander himself. The sarcophagus now resting in Istanbul, incidentally, has been attributed as a last resting-place successively to Parmenio, one of Alexander's generals, to Mazalus, a Persian satrap, to Laomedon of Mitylene, a friend of Alexander, and to another Persian, Kophen, son of Artabasis, but in the absence of any inscription on the casket or of any historical record, these varying theories must all remain purely hypothetical.

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY

The sculptor of this work of art probably belonged to the school of Scopas, a contemporary of Praxiteles, who flourished in Athens towards the end of the fourth century B.C. From the choice and vigorous treatment of the subjects depicted on the panels, the work would appear to approach most nearly to the style of Lysippus; but here, again, theory rests on no more than conjecture. Lysippus, at all events, was at the height of his fame during Alexander's lifetime, and it is recorded that the great Macedonian often entrusted to his consummate art the representation of himself and his generals in marble.

One of the lateral panels of the casket depicts a battle-scene between Greeks and Persians, probably the battle of the Granicus. On the extreme left, Alexander wearing as head-dress the panther-mask, which is so conspicuous a feature of the coins which bear his effigy, is mounted on a charger which has been wounded. He is in the act of riding down and spearing a Persian horseman. On the extreme right is one of his generals, Parmenio, and, in the centre, a younger officer, possibly Cloitus. The remaining figures represent Greek and Macedonian soldiery overwhelming the Persian forces.

To be appreciated the masterpiece must be seen, as, although photography may convey a faithful and vivid reproduction of the remarkable freshness and the force of action which characterises all the figures, even to the very expression of the faces, it obviously fails to portray the delicate skill and beauty of the colouring. The latter, it is true, is slightly bleached with the passage of fifteen centuries and possibly by the mephitic atmosphere of the Necropolis, but is still distinctly perceptible, from the soft, harmonious tones of the garments, the subtle flesh-tints of the bodies, down to the congealed blood of the very wounds.

It was currently reported during the early days of the Allied occupation of Istanbul, that the Turkish Treasury, the coffers of which just then were almost completely depleted of funds, had declined to part with the sarcophagus to the late Earl of Carnarvon for a cash payment of £500,000. It would thus seem that Mr. Howard Carter is a partisan of the theory which holds that the remains of Alexander the Great never rested in the sarcophagus which lies in the Istanbul Museum.

The Turkish Mercantile Marine.

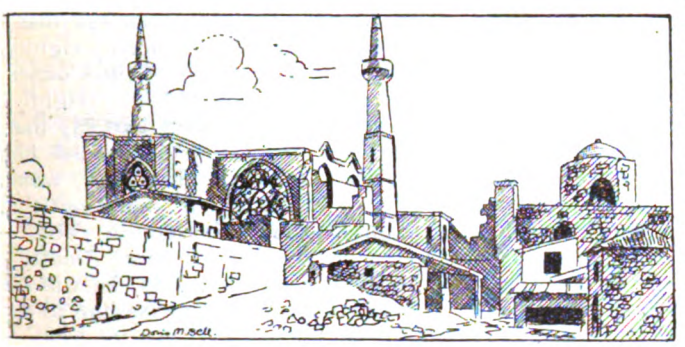
It has been obvious for some time past that matters affecting the administration and expansion of Turkey's mercantile marine have not been progressing as satisfactorily as had been at one time anticipated. With the expiration of the delay provided for in the Treaty of Lausanne for the complete emancipation of Turkey in the matter of the coast-wise carrying trade, second and third-hand vessels, some only fit for the scrap-heap, were hurriedly purchased abroad and numerous small Turkish steamship companies sprang into existence, as if by magic. The almost inevitable result was a serious freight and fare-cutting campaign which led to the laying up of some of the vessels flying the national colours. The Khedivial Mail Line, which has run a regular service of fast mail steamers between Constantinople and Alexandria for many years past, lately gave up this service and turned its vessels over to the Red Sea passenger and cargo traffic. An Egyptian news-sheet has lately addressed an open letter to the General Manager of the Seir-i-Sefain, or Turkish National Steam Navigation Company, pointing out the great advantages and the very appreciable profits which would accrue to the latter, if the Company stepped in and rapidly organised a Constantinople-Alexandria regular service, with vessels flying the Turkish flag, whilst the Khedivial is out of the running as a potential competitor. The General Manager alluded to has stated in a Press interview that the proposition is not as simple as the Egyptian paper would have one believe, and that the matter would call for the most careful and painstaking consideration before any decision could be arrived at.

The President of the Turkish Mercantile Marine Union goes a step further by adducing certain arresting facts.

Digitized by Google

which should materially assist the Seir-i-Sefain in rapidly making up their minds one way or another. The President of the Union declares that about 60 passages were effected in 1919 by Turkish vessels between Turkish and Egyptian ports, that in no single instance were the financial results satisfactory, and that a regular service would probably involve any Company undertaking it in a loss of about £400 per trip.

The Khedivial Mail Line will resume its services in June with fortnightly sailings instead of the weekly sailings which have hitherto been the rule.



CYPRUS.

Nicosia, April 22.

The Legislative Council.

The Legislative Council was opened in the afternoon of April 15, with the usual formalities, in the presence of a large assembly, including the Greek Archbishop and leading members of the Turkish, Greek, and other communities. The opening speech of Sir Ronald Storrs occupied over an hour, and included a full survey of the Island situation, and of matters affecting its development. It is the subject of much comment in the Press, the tone of which is rather one of dissatisfaction than of approval. The Council should have a busy session, which will include consideration of 37 draft measures, as already notified. The following members were appointed to draw up a reply to be delivered on April 25: the Commissioner of Nicosia, the Chief Collector of Customs, M. S. Stavrináki (a member of the late Greek Deputation to London), Munir Bey, M. Sevéri, and M. G. Emphieji.

The Turkish Language.

From June 1, the Turkish version of all laws, Orders in Council, rules and regulations, will be published in the new characters, as adopted by the Republic of Turkey. From that date or as soon as practicable, all other documents and official forms will be issued in both old and new characters until January 1932. Muslim Government officials, village headmen (*Mukhtars*), and Imams must, by January 1, 1932, make themselves conversant with the new characters. The Government is considering a proposal that courses of instruction in the new characters shall be given throughout the Island in Turkish villages, to facilitate a change that will inevitably present difficulties to many.

Cyprus Tobacco.

There seems to be no longer any doubt regarding a distinct improvement in Island-grown tobacco, and there should be no reason why Cyprus cigarettes should not compete very favourably with others, especially in view of the much lower price at which they can be, and are, sold. There is now a strong feeling that the Government should introduce a measure which would render it obligatory on the part of tobacco manufacturers in the Island to include in their stocks and manufactures a portion, say 25 per cent., of Island-grown tobacco. A member of the Legislative Council will introduce a draft measure to that effect. The area under tobacco cultivation continues to increase.

School for the Blind.

The School for the Blind, found through the energy of Lady Storrs, has been able to make good progress, thanks to subscriptions and donations, including £150 from herself and Sir Ronald Storrs, which continue to be made. Contributions from those who sympathise in the establishment of this excellent institution would no doubt be welcome, and gratefully received.

The Museum Committee.

At the last meeting of the Committee, Sir Ronald Storrs stated that he was in correspondence with the Crown Prince of Sweden, and had invited His Highness to visit Cyprus. It was probable that he would do so next autumn. Professor Breasted, the distinguished Egyptologist, having applied for permission to excavate in the acropolis of Amathus, the ancient Phœnician town of the south coast, about six miles from Limassol, it was decided that permission should be given, subject to the existing laws.

General News.

The report of Professor Troup on the forests of Cyprus will, it is said, be laid before the Legislative Council very shortly. The recommendations to be submitted are awaited with much interest.

During a visit of Sir Arthur and Lady Crosfield to Athens, the Greek Archbishop, by telegram, invited them to visit Cyprus.

The resolution protesting against the new Education Law, which was passed at the first meeting of the new Education Board, was duly forwarded to the Governor, for transmission to the Secretary of State.

In the year ended December 31, 1929, the value of exports from the Island amounted to £1,635,742 as against £1,435,976 in 1928; and of imports to £1,984,296 as against £1,850,338.

NEWS IN BRIEF.

Hassan Khan, the Mushar ul Mulk, Persian Minister of Finance, has resigned.

A Yugoslav law has been promulgated providing for the organisation of the Lutheran and Reformed Churches on the basis of freedom of worship on the same terms as other denominations in Yugoslavia.

The Vice-Chancellor of Cambridge University has published the offer of a studentship by the managing committee of the British School at Athens. Applications are to be made by June 7.

The Italo-Turkish Tribunal in Constantinople on April 22 rejected the claim for £2,500,000 made by the heirs of the late Sultan Abdul Hamid in regard to the estates and houses situated in Italian Tripoli and Benghazi. The rejection was made on the grounds that the claimants had lost their Turkish nationality. Italy was represented on the tribunal by Signor Montana, who was Italian Ambassador to Turkey five years ago.

Brigadier Stephen Seymouth Butler, who, since 1926, has been Inspector-General of the Royal West African Frontier Force, has taken up his appointment as Kaid el 'Am, or Commander-in-Chief, of the Sudan Defence Force. He replaces Ferik H. J. Huddleston Pasha, who is retiring from the service of the Sudan Government, and has held the appointment of Commander-in-Chief since 1924.

Three Arabs of Hebron, in addition to those already sentenced, were recently convicted of the premeditated murder last August of six Jews for the sake of plunder. They have been condemned to pay jointly the same of £P1,700 to the families of their victims. Two of them have also been condemned to death; the sentence on the third has been postponed pending the receipt of medical proof whether or not he was under 18 years of age at the time of the crime.

The recent invasion of Trans-Jordan by hordes of locusts having imposed a serious strain upon the financial resources of that country, at present at rather a low ebb, an effort is being made to raise the necessary funds for combating the evil through the sale of a special issue of postage stamps. This takes the form of the contemporary Trans-Jordan stamps from 2 milliemes to 500 mil. expressly overprinted in Cairo with the words "Locust Campaign." The locust stamps are remaining on sale for a period of two months only—namely from April 1 to May 30—and it is hoped by this means not only to raise a considerable sum of money from philatelists and others, but also to encourage the natives to renewed efforts in fighting the plague.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, April 17.

Troubled India.

The cablegrams will have informed you of the arrests of Jawaharlal, Sen Gupta, and so many others, and of the sentences passed on them; they will have informed you of the rioting in Calcutta and Bombay. You may have been made to think of the "very favourable reception" of the Viceroy's announcement of October 31, and of the satisfaction thereat of the Secretary of State for India, the European Association, and other public bodies, and of my own immediately expressed fear that the Viceroy had gained little or nothing at a great price.

"I Told you So."

The refined man never says: "I told you so," I admit that. In a very critical state for his country, and if he has something nobler as an end to serve than puffing up himself, I would let the most refined man there is say: "I told you so": for *then* you might listen. I met a man in a Calcutta hotel last Christmas, a stranger to me; but one of the leading Indians in Calcutta, a man who made a great name for himself at Balliol, having made a great point of wanting to introduce me to the man, I set to work immediately to make him no stranger to me. In other words, I laid my cards as a writer on Indian politics immediately on the table for this man to see, hoping that he would immediately show me his. He did. First he told me that he was born in India, but was of pure English blood; that he had lived all his life among Indians, his father having come out to manage the estates of one of the leading noblemen in Bengal. He was a deeply interested student of Indian politics. "The times are very critical," he said. "They are too critical for the ordinary rules to hold good, as for instance that you must trust the men on the spot. I'd say in any less critical time that we must leave things to the Viceroy and his Council, and trust for the best; but I cannot say that now. The only people I am now ready to leave things to and trust are those who know the Indians well." "Who are they?" I asked; "where are they to be found?" "Ah, that's it," he said. "The officials who have been here for thirty years, and are now at the top, are Governors of Provinces, of course they know a great deal of the details of the administration; they know a great deal of India, as compared, say, with the Viceroy; but does it follow that they know the Indians?" "It does not," I returned. "To know the Indians means more than to have been long years in India. An Englishman may have been thirty years in India, and then retire, but knowing very little more of the Indians (however much he knows of India) than he knew at the end of his first year, and knowing nothing of the Indians to compare with what a Pierre Loti, with his extra sense, will know of the Indians at the end of six weeks."

The Problem.

What exactly is the Indian problem? It is this: the British-Indian connexion has endured for three hundred years. It may endure for another three hundred; but it will only do so, if the right new foundation is laid very soon. Who knows what that foundation should be? It can only be known to those who know the Indian character, temperament, and nature well. That means that it cannot possibly be known to those who have had no better chance of learning what the Indians are than Sir John Simon and his colleagues had, unless this one or that one had that extra sense, that sense of Loti. We may rule that out as a probability. It is too improbable. That, then, rules out the Simon Commission. It rules out its Report as the starting-point of the discussions of the Round Table Conference. It rules out the Viceroy. Lord Irwin, great gifts as he has, cannot be said, I maintain, to have, would not himself claim to have, a sufficiently clear insight of his own into the Indian psyche, to know certainly what the new foundation should be. There are members of his Executive Council, some of them Europeans, some of them Indians. I do not happen to have met all the Europeans. I cannot say for certain, then, that they are all as this or that former member of the Executive Council, whom I have known, first, before he was called to the Council, and after he left the Council to become a Governor of a Province. Those men (two or three in number, or even more) were all, as it happened, men who *did not know* the Indians, however clear their understanding of the facts of the administrative machine. I have not met, as I have said, all the European members of the Council of to-day, so I cannot say for certain that they are none of them men who know the Indians; but that, I may say, is my impression. I cannot say that I feel that we can trust them to advise the Viceroy rightly. Pass now to the Indians who are members of the Council. Are they to be trusted to advise the Viceroy rightly? They are not. I do know them well enough to say that. There is not one of them who, should the Viceroy ask him what action he would advise at this critical time, would not advise the Viceroy to do what he had made out that the Viceroy himself thought should be done. That is what you must always be prepared for from an Asiatic—if you ask him what he thinks you should do, he will say to himself: "What would he like me to advise him to do; for I will advise him to do that."

The Unconventional Man.

It would seem to be the hour for the unconventional man. Lord Irwin was sent out to be Viceroy. Lord Birkenhead gave him, let us assume, a body of general instructions, or he said: "By and by we are to send out a Commission, and we mean to be guided by what it reports." Lord Birkenhead was succeeded by Mr. Wedgwood Benn. He either gave Lord Irwin a new body of general instructions, or (it is more probable) he said: "The Conservative Government sent out the Statutory Commission, and meant to be guided by its report. We have decided to continue that policy in the main." What should have been said to the Viceroy was: "The times are most critical. We must send out a Commission, because that is laid down in the Government of India Act. In less critical times we should be guided by the Commission's Report. It will no doubt have much value. What, however, should be done will be for you to report confidentially. Please do not rely solely on your Council, nor solely on the Council combined with those Governors, formerly members of the Council, whom you would naturally consult. You must find and consult (keep the fact that you are doing so as private as you like) such a one as the late Charles Russell. He held no higher office than the Principalship of the Patna College; but all Oxford knew well that he had a mind little inferior, if at all inferior, to the mind of Lord Balfour. He was killed in the War, to the great loss of India and England. You must search India up and down for the next best man, to put it so. You may find him on a tea plantation. God knows where you might not find him. You must search: you must search; for everything depends on his being found. Consult him in private; let him see all the confidential papers. If you think it would be a good thing to do, send him to us as the bearer of your confidential report."

A New Spirit.

Lord Meston had this the other day at the end of an article in the *Saturday Review* entitled "The Crisis in India.": "In many respects it is profoundly true that, in the handling of the Indian situation, we have need of a new spirit. That spirit, we have little doubt, will be given to us; but it can move over the face of calm waters only, and not in a tempest." That was deeply interesting to me; for the other day I had an interview by appointment with one of the Governors of the Provinces. I sent him a confidential paper beforehand; which he was to read before the interview; then he would know what was

Digitized by Google

in my mind, and part of the brief hour of the interview need not be spent in my speaking. The point in the letter was just precisely what Lord Meston has said—the the Indian situation must be handled in a new spirit, or rather, for more than that is needed, the point of the letter was that the Indian administration must have a new spirit breathed into it. The Governor opened his mind to me; what stood out in it was his fear that you will never find Englishmen with understanding enough of the spirit required. "What you ask of us," he said, a little sadly, "is a thing too foreign to our English nature. We should have to be as men acting parts on the stage. We couldn't keep it up: it would impose too great a strain on us."

What the Spirit Is.

I think he was wrong about that. If you know what is the wrong spirit, surely you will be able to see what is the right? It is easy to say what is the wrong spirit. Let me tell a little story. The other day I took a guest I had, a professor from the Sorbonne, to a *majlis* at the Imambara. It moved us profoundly; it was a fascinatingly interesting spectacle. On the way from the Imambara we picked up the Principal of a college for Indian students, and gave him a lift to his bungalow. He said: "Don't take me all the way, but drop me at the corner. It would take you too much out of your way." I replied that we had just left the Imambara, where he had witnessed a "mad" *majlis*. "We're in the mood," I added, "for much bigger things than going a little out of our way." This Principal of a collage, who ought to have found out all about a *majlis* in his first month as a teacher among these people, who has now been trying to teach them for thirty years, said: "What is a *majlis?*" I replied: "A public reading or recitation of Urdu, Persian, or Arabic poetry." "How painful!" exclaimed this teacher, in his insular spirit. The man from the Sorbonne said: "Are you interested in Urdu poetry?" "Not the least bit!" said the Principal. He is trying to teach those whose interest in Urdu poetry is a passionate thing. When we were alone again the man from the Sorbonne said: "You see! You have only to be with one of them for three minutes, and he will say something that gives the whole show away." That was true. That Principal's spirit is utterly the wrong one.

THE SITUATION IN INDIA.

By L. F. Morshead, C.S.I.

(Continued.)

In the following Open Letter to an Englishman the author develops his earlier suggestion—raised in the correspondence with an Indian that we have published in recent issues—that a line of approach to the Indian problem should be sought outside the present conflicts and commitments. Briefly stated, Mr. Morshead seeks a solution in the gradual evolution of the Indian States and British India into an All-India Federation, with the central control and overruling authority vested in a Durbar. The scheme is an exceedingly interesting and instructive proposal on which the views of readers of The Near East and India will be welcomed.

Letter to an Englishman.

February 20, 1930.

I must pass over your criticism that Indian State Government compares unfavourably with ours. The relative merits and demerits of the two as they are would take too long to amplify, and the real comparison is more difficult, because we have to suppose both systems working without us, and the withdrawal of the British element would make a great deal more difference to the one than to the other. It is enough for my argument that it cannot be said that the Indian State system offers no promise of good government.

Objections to splitting up the Provinces are to be expected from the Indian side rather than from ours. The main point is that, if we or Indians, whichever of us takes the lead, mean to go wholeheartedly for an All-India Union by way of a Federation, there must be a readjustment of units in the Indian States, and there ought to be in British India. We cannot hope to combine six or seven hundred States with our Provinces without a readjustment, nor could States with a population of a few hundreds or thousands be combined with Provinces of many millions in a balanced union. If federation be the aim, there must be a levelling up on the one side, and there ought to be a levelling down on the other, until there results a workable number of units, each capable of holding its own in a federal system.

The levelling up can be done in several ways: (1) by adding British territory to any individual States of sufficient importance which are more or less surrounded by British territory; in some cases at one time such States covered more territory than they now include; (2) by grouping petty States, with the addition of British territory intervening or adjacent, into one unit under one Ruler, giving compensation to the Rulers of the rest, in the shape of landed property and rank in the new State, such as they might be willing to accept in return for the surrender of their prerogatives as Chiefs; or (3) by grouping the smaller States, with or without the addition of British territory, into subordinate federations, with an arrangement for representation as one unit in the major system; (4) by the absorption of States too isolated to be combined with others, and not of sufficient importance to form the nucleus of a unit, into a new State to be formed from British territory, with compensation as above; and (5) by arranging for States of which the Rulers are not willing to come in, or which could not be brought in by any plan of the kind, to remain outside the Federation. If a substantial majority could be provided for, exceptions would not make a material difference to the system.

The objections to be expected to the levelling down of the Provinces are, I should say, mainly sentimental, and where the sentiment is national I would not belittle it. If it should be a cloak to the desire to pull a disproportionate weight in the Union, even so would not two or more States of the same nationality pull more weight than one? That is a consideration for Indians rather than for us. But in a federal system the number of States constituted out of British India ought not to be less than the number constituted out of Native States, and should be more, because British India contains a much larger population and covers a wider area. I have seen it stated that Sind could not afford a separate administration. No more it could, perhaps, with all our paraphernalia and with a scale of expenses based on the requirements of a highly paid Civil Service from England, but Indian administration can be run on more economical lines. The actual process of division is facilitated by the fact that our districts in British India are self-contained administrative units.

You raise the question of our vested interests in the country, interests which we are justified in taking measures to protect. Would they not be better secured under treaty with Princes, than without treaty under shifting democratic governments? But what about the observance of the treaties?

That brings us down to something fundamental. Before we contemplate this or any other scheme, we ought to be clear about the line we mean to take and the length to which we are willing to go. Hitherto we have made announcements which are open to different applications. In the announcement of 1917 we speak of "responsible government in India as an integral part of the British Empire." By the one it is interpreted to mean Dominion Status; by the other it is understood that it is not intended to let India go. The Viceroy in his recent pronouncement says Dominion Status, which is applied by Indians to mean Dominion Status as the immediate goal, whereupon we say that it is a distant goal. I am not speaking of the justification of the interpretations or of the intentions with which they were made, but of their liability to be applied with widely different implications. Indians, or some of them, have now raised their terms to independence. What is the difference? The bond of attachment under Dominion Status is made up of sentiment, good will and mutual interest. Between Indians and us the sentiment is on a weak foundation. There is a loyalty to the Crown to be made the most of, but we depend mainly on good will to cement the mutual interest. Good will on our side ought to invite good will on the Indian side; but ours ought not to be a blind good will, because that will not win respect and will invite advantage being taken of it. It ought to be of a kind prepared to analyse the risks, to take precautions with common sense, and to meet the event, which will depend upon the good will, with courage. What then is the event? If we say Dominion Status we have to reckon with an option to make it independence. Very well, then, we must show that we are not afraid of independence. The question whether Dominion Status is to be near or far depends on when it can be made feasible. If a workable plan can be devised the time has come.

Where, then, does the strength of our position lie? It lies in the vested interests themselves, and in our obligations as trustees for the defence of the country and the maintenance of peace and justice. But if we wish to uphold these interests and obligations we need to have a clear idea of all they cover and of the measures necessary to protect them. Clear thinking must be presupposed.

It may be assumed that our requirements will be reasonable. Well then, we can stipulate in a treaty with a Prince whatever may be thought necessary, whether for the protection of British interests, or for compensation to men in our Services displaced, or for the protection of minorities, or for representative institutions, or for financial adjustments and relations in general with the central government, for a limited privy purse, for an independent judiciary, or for anything else needed in the interests of justice and good government and the exercise of its responsibilities by the central control. We must then ensure that the central control will be strong enough to uphold its responsibilities to the point of resuming charge of a State

Digitized by Google

if other means fail. That control is the keynote of the system, and is our responsibility during the period of transition. If it fails during that period there is more danger of anarchy than from any other cause. What it involves over and above the normal defence force of the country, and a concentration of British personnel in the central government during our time, is the reservation of areas for cantonments and other military needs, strategic points, frontier and coast defence requirements, lines of communication and the like, which are a matter for expert determination.

As to the central government itself I prefer to call it the Durbar, because that is a word well understood in India. A Durbar covers all the function of government and is capable of any degree of modernisation. Besides, it is convenient to distinguish the new authority from the Government of India in being. The name is equally appropriate for State Government, for which it is commonly used; but in speaking of the Durbar, unless otherwise apparent, I shall be referring to the All-India Durbar. I prefer to sketch its course of evolution, rather than to attempt to define its form and institutions. Let me suppose a general agreement by Indians representing British India, by the rulers of the Indian States in being, and by our Government that the scheme is worth investigation: the appointment of a Commission to investigate: a favourable report outlining the framework of the system, and a general acceptance of the framework. We start then with the Government of India dealing with the affairs of India as a whole and of British India in particular, and a Political Department under the Viceroy dealing with the affairs of Indian States: an outline of the framework of the new system and a Commission that has made itself familiar with the problem. Let it be supposed that the outline suggests tentatively the number of State units to be ultimately in being, possibilities in regard to adjustments of territory, the main features of the State Durbars, variations to suit different degrees of political advance, exceptions that may have to be reckoned with, reservations likely to be required for the central control, financial adjustments and relations generally between the States and the All-India Durbar, the constitution of the All-India Durbar, and a tentative selection of those greater existing States which might be invited to enter the system as separate units without a change. Let it be supposed that the Commission, having studied the problem, is retained as an All-India Commission to superintend the working out of the details, with power to co-opt members and to appoint Provincial Commissions and corresponding Indian State Commissions to collaborate in the process. Let it be supposed that the units in regard to which the least difficulty is apprehended are determined first by the subordinate commissions; that the agreement of the Princes and Chiefs affected has been obtained, without a material number of exceptions: that the proposals are passed by the All-India Commission, the treaty conditions prepared, the Princes of the new States selected, the approval of the Viceroy accorded, the sanction of the Crown obtained in the constitutional way, and that the new States are thereupon brought into being.

Here, then, is a set of States, some old, some new, ready for association under a Durbar. Let it be supposed that, in anticipation of this stage, proposals have been approved for the constitution of the Durbar to deal with the affairs of these States on lines which will fall in with the lines contemplated for its final form: but that the Government of India continues to function for the affairs of India as a whole: that the representative bodies for British India, both Imperial and provincial, are reduced in proportion to the areas transferred: and that the jurisdiction of the Political Department over the Indian States incorporated is transferred to the Durbar: that arrangements are made to enable the Durbar to be consulted by the Government of India in matters of All-India concern: and, finally, that the purposes of British control are served by a sufficiently substantial proportion of British personnel in the institutions and offices of the Durbar, and by the defence force still under the Government of India. Here, then, is a stage reached in the process of transition at which the Durbar is in an inchoate form, whilst the Government of India continues to function for the affairs of India as a whole, and for the remainder of British India, and the Political Department for the remainder of the Indian States.

Let it be supposed that when the next set of States is ready for incorporation, the balance is turned in favour of the Durbar: and that the Durbar is expanded, again with a substantial proportion of the British element, to assume charge of the affairs of India as a whole with the exception of Defence: that as the treaties are with the Crown, all that is included in Defence is placed under the Viceroy as the representative of the Crown, responsible for the observance of the treaties. Here, then, is a second stage reached at which the Durbar will have become the predominant partner. The Government of India will have ceased to function for the affairs of India as a whole, but from it there will be constituted a central authority to deal with the affairs of so much of British India as remains still outside the system, whilst the Political Department will continue to function for the residue of the present States. The arrangement will then be for the authority for British India, and the Political Department for the residue of the States to be consulted by the Durbar in matters of All-India concern.

The third stage will arrive when the remaining units are constituted. Let it be supposed that upon the constitution of these units, so much the greater part of India will have been incorporated in the general system that the exceptions do not matter. There may, on the one hand, be some of the present States which are unwilling to be brought in, or which, for the time being, it has been found impracticable to bring in, and for these some special arrangement will need to be devised for a continuance of their relations with the Crown: on the other side there may be areas in British India which for some special reason are better left unincorporated, and these might pass under the direct administration of the Durbar. There will also be the reservations needed for the defensive system, and others required for the functioning of the Durbar as a central government.

Now, during these processes there will have been time to test the working of the system and the constitution of the Durbar, and to make good such defects as have been detected: so that by the time the third stage is completed, the system ought to have been placed in running order. To defer, then, the transfer of the central control is likely to invite irritation and distrust, which will discount the value of any further experience gained. I would argue, therefore, that as soon as this stage is completed, the transfer ought to be made, and if the institutions of the Durbar have been cast on the lines designed to stand for the system when completed, the process will involve a minimum of dislocation. It will include the following main features: (1) the substitution of a treaty with the Durbar, as representing the States, for the treaties held by them: (2) a mutual engagement by the States to respect the authority of the Durbar, and to continue to carry out the conditions accepted in their treaties with us: (3) the transfer of the defensive system to the Durbar: (4) the withdraw of the British troops from that system: (5) the withdrawal of the British element hitherto employed in the Durbar, on terms of compensation: (6) provision for the appointment or election of a Prince to be head of the Federation, either as an hereditary institution, or for life, or for a term: (7) the replacement of the Viceroy by a diplomatic representative. The withdrawal of British troops is rather a mouthful. But I do not see how we can undertake to maintain the Durbar by British force without emasculating its sense of responsibility when we are no longer in control. Doubtless provision would be made in the treaty with the Durbar for assistance from us in the event of danger from invasion. But for purposes of internal control the Durbar ought, I think, to be prepared to meet eventualities with the Indian troops in being at the outset, and to supplement them later, if the necessity should arise. That seems to me to be an unavoidable risk.

I grant you that there are large assumptions in the scheme, and that the process must not be expected to work out as smoothly as my sketch may seem to indicate. But you will see that the trend of the plan is to substitute simplicity for complications. Undoubtedly complications remain, but in so far as constitutional checks are concerned, they are reduced to a minimum by making the central control, first by us, then by the Durbar, the main safeguard. You may object that it is all very undemocratic, but you cannot make democracy by announcement. It must grow, and it *can* grow under a king. It is a matter of taste, but I think it looks better under a king. And what about Iraq and Egypt? Doubtless there are special circumstances in this two cases, but they are not the same in each; and if circumstances justify a departure from the principle, it becomes a matter of argument whether circumstances of a different kind again do not exist in India. The main thing for us to do is to find a constitution under which Indians can carry on without us.

I think that our trouble really is that we have changed as a people during the last hundred years a great deal more than the mass of the great Indian population has changed. That, to begin with, and, next, that we have not all realised the implications of the change equally. When we took charge of India, imperial rule was not in conflict with our principles, but the question whether a continuance of the rule is consistent with the democratic principle has been forced to the front with the acceptance of that principle. There are plenty amongst us who hold to the imperial tradition, plenty more who are impressed with the risk of disaster to Indians and of damage to ourselves if the rule is relaxed and plenty who stand by the democratic principle regardless of the risk. We suffer, therefore, from divided counsels, and the hesitation that results reacts upon our capacity to rule, just as hesitation and uncertainty react upon an individual in a position of control. That in itself is a strong argument for a change. This Indian State plan may not be the best from any particular point of view, but it seems to me to offer a second best from a good many points of view.

May I add a few words at the finish? As a stage between government by us and government by Indians, we have been trying government by persuasion, which was introduced by Lord Morley in the hope that it would rally support in India. Well, government by persuasion has been a process of moving, under persuasion ourselves, from position to position in each of which we intended to stand fast; accompanied by embarrassments which have affected the administration. The alternatives are government by us or government by Indians. The first is a perfectly understandable policy, but *all* the implications need thinking out, and I have not seen that attempted. I believe in the second myself, for the reasons, amongst others, that we stand committed to it, and that I believe that there is plenty of governing power in India if it can be brought out. But if we mean to pursue that policy we ought to go straight for it. It is too late now to fight shy of the risks, which were there before we embarked on the policy, and are not a matter of a few years more or less, but will be there the same, if not more acute, however long we hold back. The best we can do is to take precautions with our eyes open in the most practical way we can, and aim at something which will be tolerably compact, and calculated, as far as possible, to stand the strains which will be put upon it. For British India and the Native States to remain severed is to me unthinkable. But the first necessity is to obtain some measure of agreement between British India, the Rulers of the States and us upon a joint line of advance.

Book Reviews

CASTE IN INDIA.

"CASTE IN INDIA." By Emile Senart. Translated by Sir E Denison Ross (Methuen: 8s. 6d.)

It is nearly 40 years since the original publication of this brilliant essay, but its value from the political and psychological standpoint has risen with the years, and is increased for the English reader in this excellent translation of M. Senart's somewhat compressed line of thought. No attempt has been made by author or translater to bring the essay up to date. Ethnologically this is perhaps to be regretted, because, though M. Senart is probably correct in claiming that the principles laid down by him have not been greatly altered by fresh revelations, still much has been done both by European and Indian writers to elucidate the points contained in the great problem of the origin of caste.

If M. Senart were to write his essay to-day he would probably allow more force to aboriginal influences in the formation of castes. He acknowledges the force of aboriginal traditions and customs, but he cannot persuade himself that caste has sprung from the aboriginal tribe. He will not agree that caste was either wholly racial or wholly occupational. He holds that it was the normal continuation of the ancient family institutions, varied by environment in India. He does not, however, explain why the development should have been so different in India from its course in Iran, Greece or Rome, and he admits that caste exists only in India, and is the fruit of the Hindu mind. The so-called outcastes in India have, however, as M. Senart observes, a most elaborate system of caste, and the fact that this system constantly approximates to the Brahmanic code is no proof that its origin was not different, or, indeed, that it was not the model, which the Brahmans with their usual ingenuity adopted and adapted to ensure their own permanent ascendancy. It is surely not without meaning that the Indian village system, formerly regarded as an Aryan institution, has been found in its most permanent form in Southern non-Aryan India. It is also significant that the strongholds of Hinduism, and therefore of caste, are in the South and North-East where the non-Aryan element is at its strongest, while the great defender of caste is to be found in Mahatma Gandhi, a product of the extreme South-West.

The interest of the essay, however, lies chiefly in its picture of the psychology and the political bent of the Hindu: and above all of the predominance of the Brahman. He alone of the three great Aryan classes has survived: and he is still the brain of India. Where he has been submerged politically, as in Madras, there has been no one to take his place: and it may be doubted whether even there his submergence is more than temporary. M. Senart points out the Hindu's liking for classification and contempt for facts. He never hesitates to make generalisations regardless of indispensable reservations. He is especially liable to succumb to the temptation of coining history from legend. All this is as true to-day as when M. Senart wrote it forty years ago, and is indeed the compendium of the distrust with which the moderate man, whether European or Indian, regards Mahatma Gandhi and all his works. India demands self-government; but, built on a basis of caste and Brahmanism, will it be a democratic self-government?

TWO ADVENTURE STORIES.

"THE HUNDRED DAYS." By Talbot Munday. (London: Hutchinson. 6s. net.)

"THE MINE IN THE DESERT." By David J. Footman. (London: John Long. 7s. 6d. net.)

A hundred days is the time given in which to find ransom when the American man and girl, whose adventures make up Mr. Mundy's story, are kidnapped on the North-West Frontier of India. Before they are saved the adventures come thick and fast. The story moves briskly; the figures in it are conventional. Ramsdon is strong, brave, and rather stupid. Joan Angela is a "good sport." We leave them still the best of friends, not engaged to be married. King, of the Khyber Rifles, and Grim, another American, hover in the background and come forward at critical moments.

"The Mine in the Desert" tells what happens to Ashton, the mining engineer, who goes out to take the place of a man who has disappeared at a mine in Syria, which—as we learn in the exciting Prologue—had been worked by the Romans in the year 637 A.D. The people in this book are well drawn and have successfully come to life. They are also most amusing. The picture of the big Levantine Port, near which the mine is situated, is extremely vivid and diverting. We are just as interested in Ashton's career and in his love affair as we are in the solution of the mystery. The fear and horror occasioned by the secret of the mine are well conveyed. This is a thriller worth reading not only for the thrill, but also because of the local colour and the delightful conversations between the characters.

PROFESSOR NICOLAI YORGA.

Among the foreign delegates to the International Historical Congress at Cambridge was Professor Nicolai Yorga, of the University of Bucharest. When the honorary degree of Doctor of Letters was conferred on Dr. Yorga by Oxford University on May 4, he was presented by the Public Orator as *Vir plurimarum artium, et quidem "polygraphostatos,"* the Livy of Roumania, who had written history in four languages, composed historical plays *socco et cothurno,* been a leader in politics and President of the Chamber of Deputies. Nor was it only Roumanian history and antiquities which *Pliniana curiositate percensuit,* but he had written a history of the Ottoman Empire and conducted research into the customs and institutions of all the nations of South-Eastern Europe: *adeo nihil Romani, nihil Transsylvani, nihil Ottomani, nihil (prope dixeram) humani a se alienum putat.* He could not say for which of his works Dr. Yorga felt most affection: *quodsi, ut mater filium, sic ille quem primum peperit librum, cum in deliciis habet,* he would recall the biography of Philip de Mézières, which he wrote as a young student in Paris. It was not inappropriate that one who had recently written a history of the Crusades should come to Oxford on the anniversary of the discovery of the Holy Cross.

Dr. Yorga was addressed by the Vice-Chancellor as *Vir literatissime, qui cursum rerum cum in tua ipsius patria tum in imperio Ottomanico, gestarum, indagator indefessus, tanta arte ordinavisti.*

The Yugoslav Government has published the new law regulating the Yugoslav Free Zone at Salonika, which to be controlled by the Minister of Trade.

A cinema house in Jerusalem and two cinemas in Tel Aviv have completed arrangements with the Western Electric Company for the installation of the "talkies" apparatus.

BENGALI SELF-TAUGHT

By Suniti Kumar Chatterji, M.A. (Calcutta) D. Lit., London.

Containing the language: Script and pronunciation. Conversational Sentences and Phrases. Commercial Terms. Classified Vocabularies. Travelling by Railway and Steamer. Specimen of Bengali. Eras Employed in Bengal.

Red Cloth 4s. Blue Wrapper 3s.

Sold by all BOOKSELLERS. ***Write for Catalogue No 26.***

PERSONAL AND GENERAL

TO-DAY

May 8, 1930 (New Style).
April 25, 1930 (Old Style).
Dhulhijja 9, 1348 A.H., of the Muslim Calendar.
Iyar 10, 5690, of the Jewish Calendar.
Ordibehesht 18, 1309, of the Persian Calendar.

Lord and Lady Dawson of Penn and the Hon. Rosemary Dawson have returned to 32, Wimpole Street from Yugoslavia.

The Prince of Wales received Sir Percy Loraine, Bart., His Majesty's High Commissioner for Egypt and the Sudan, at St. James's Palace on April 30.

Sir Alexander and Lady Roger sailed in the Olympic on April 30 for the United States and Canada, and will return to London early in June.

Sir John and Lady Stavridi and the Misses Stavridi returned to 33, Lennox Gardens last week from Yugoslavia.

Husain Beg Afnan, with Mrs. Afnan and their child, are now at the Iraq Legation in London, where, in the absence of a Minister, he is in charge.

Mr. Leonard Stein lectured to the Central Asian Society last night (May 7) upon "The Report of the Commission on the Palestine Disturbances."

Sir Arthur and Lady Froome arrived at Marseilles on April 18 from India. They are staying on the Continent until the middle of May.

On the occasion of the anniversary of the coronation of Riza Shah Pahlavi, the Persian Chargé d'Affaires and Madame Nabavi are holding to-night, at 9.30 p.m., a Reception at the Legation, 10, Princes Gate, S.W.

The Roumanian Minister in London, M. Titulescu, who has been attending the Conference for Oriental Reparations, which concluded on April 30 in Paris, has returned to London, and has resumed his duties at the Legation.

Prof. L. F. Rushbrook Williams left Southampton on May 3 in the Berengaria for New York. He will spend a month in the United States and return in the Olympic, which is due on June 6.

The Anniversary meeting of the Royal Asiatic Society will be held at 74, Grosvenor Street, W.1, on May 15 at 4 p.m. During the afternoon the Public School Gold Medal will be presented.

Mr. H. C. Luke, Chief Secretary of the Government of Palestine, will represent the Palestine Government before the Permanent Mandates Commission at Geneva, which meets on June 3. He left London for the Continent on May 5.

The Secretary of State for the Colonies has appointed Sir John Hope Simpson, C.I.E., late of the Indian Civil Service, to proceed to Palestine on a temporary mission in order to confer with the High Commissioner and report to His Majesty's Government in questions relating to land settlement, immigration, and development. Sir John left London on May 6.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. L. Maxwell, Christchurch, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R. Deccan. Fees 40 guineas per term, including all necessary extras. with reductions for sons of Clergy and Officers. Supervised holidays arranged for boys from abroad, at seaside or elsewhere.

Field-Marshal Sir Claud Jacob had an audience of the King at Windsor Castle on April 29.

Lieut.-Col. Sir Stewart Symes will arrive in London at the end of May from Aden. He and Lady Symes will be at 6, Tor Gardens, W.8, until July.

Mr. C. Leonard Woolley is to give an illustrated lecture to the Central Asian Society on May 21, at 5 p.m., on "The Excavations at Ur, 1929-30." The lecture, which has been arranged in conjunction with the Royal Asiatic Society, will be delivered in the Royal Society's Hall, Burlington House, W.1.

THE ACADEMY.

Mr. Charles W. Cain has two dry-points in the Royal Academy this year: "Ctesiphon Arch," and "A Persian Bazaar." The second is a very notable example of this artist's skill in depicting Eastern scenes.

Mr. Fred Richards, the etcher who recently visited the Hijaz, is represented by "Way Down Manchieh, Alexandria," and "The Citadel from the Nile."

Mr. James M. Wilson is notably represented in the Architectural Room by "Entrance Hall, Post Offices, Iraq."

THE ARAB HORSE SOCIETY.

At the April meeting of the Council of the Arab Horse Society the following new members were elected:—Colonel J. Cookson, 30, Park Road, Bromley, Kent; R. J. Fagan, Sunny-Ridge, Mandurama, New South Wales, Australia; Captain F. W. Hartman, Ravenswood, Kingston Hill, Surrey; F. Lee, How Caple Cross, Hereford; and J. B. J. Timmermans, Grootestraat 258, Waalwyk, Holland.

Reports on slavery questions from Persia and the Anglo-Egyptian Sudan are among the supplementary items for the 59th session of the Council of the League of Nations to be held at Geneva on May 12.

The Egyptian Department of Public Security recently ordered the seizure of all translations into Arabic of the works of a well-known writer on birth-control.

The King has given authority to Mr. John Edward Montague to wear the Insignia of the Fourth Class of the Order of the Nile, conferred upon him by the King of Egypt, in recognition of valuable services.

The High Commissioner for Palestine has appointed a committee of Government officers to examine the economic condition of agriculturists and to consider what fiscal measures should be taken to deal with the situation.

Where to stay in the East

THE WEEK AT HOME

London, Tuesday Morning.

The Royal Academy.

Exhibitions at Burlington House always seem to be judged by the number of masterpieces they contain, and the general verdict of the critics on this year's show, which opened yesterday, is that it is poor, dull, and uninspired. It is true that there is an appalling amount of dreary works—stereotyped, unimaginative, dead; but there is also a quite adequate residue of really interesting stuff, both by well-known and lesser-known artists.

Portraits abound, of course; the number of commissioned works is ludicrously overdone. But it always is; complaint, therefore, is superfluous. But even in this *genre* there are things that are extremely accomplished, and occasionally more than that. Orpen has magnificently virile works; John paints like the virtuoso which he surely is; the President, Sir William Llewellyn, does his duty handsomely. There is no space here to single out portraits. I would merely mention, as likely particularly to interest readers of this journal, Gerald Kelly's portrait of Sir Henry Dobbs, in which, though the painting is carefully finished, something is lacking in the eminent pro-Consul's height and presence; and Lavery's portrait of Lord Melchett, an excellent piece of characterisation.

Landscapes are of rather less interest than usual, though men like Arnesby Brown, Talmage, Priestman, Dodd, keep up a high and pleasing standard. The pictures which will, presumably, be most talked about, will be Glyn Philpot's "Creation of Man," in which this artist's leaning towards pre-Raphaelitism is even more pronounced, Mark Symons' "Were you there when they Crucified My Lord?", John Keating's "Homo Sapiens" ("problem pictures," these last two), and the works of Dod and Ernest Procter and of Laura Knight.

Those who visit the Academy for other than social reasons, however, are likely to find delight in searching for the less obvious things; and I suggest, as beacons in this search, Sylvia Gosse's "The Silver Cord," Isabel Codrington's "Beggars are Coming to Town," Madeline Green's "Glasgow," Frederic Whiting's "March Wind," James Durden's "Fantasy," and Briscoe's "Fog Lifting." There are many other works, chiefly in oils and small, which will be "spotted," if the traveller be assiduous enough.

Though the water-colours are less exciting than usual, and though the sculpture has few things of really memorable interest, the drawings and engravings are strongly represented. Men like Griggs, Brockhurst, Short, Rushbury, Osborne, Dodd, Cain, John, Walcot, make handsome contributions. This is a section of which the Academy can be justly proud.

Taken in all, it is fair to say that there is, despite the repetitions, the staleness, the lack of novelty, a very considerable variety of things to see in this year's Academy; and I think it will be far more popular than its decriers assert that it deserves to be.

May Day in London.

Englishmen make poor revolutionaries. The attempt of the Communists to turn May Day into a day of demonstration and protest will never succeed. One had a sort of psychological insight into the matter last Thursday in London, where a procession of children dressed in red and carrying red flags marched through the town, or, rather proceeded in carts.

On the carts were all kinds of incomprehensible slogans, which their designers can have known little about. Such things as "Defend the Indian Revolution," "Release the Meerut Prisoners," adorned the rather picturesque conveyances. Occasionally some one, an Indian student or so, would drop a copper into the collecting boxes, but one's dominant impression was that the Communists, particularly the children, were enjoying an unusual treat, and that the general populace, always ready for something unusual to look at, regarded them with good-humoured toleration.

No; our revolutionaries will be laughed out of existence before they become serious.

The Plight of Clubs.

Ever since the War, clubs in London have had an anxious time, for in the economies necessitated in every man's budget by hard times, taxation, and the rest of it, the first thing, almost, to be cut down is expenditure on clubs. It is said that at the moment half the clubs in London are losing money. They have tried various expedients, such as suspending the entrance fee, but still membership declines, and there is no waiting list.

Service clubs and political clubs are perhaps the worst off, but there are very few indeed in which the managements can look upon the membership and the amount spent by members in the club with satisfaction. Business clubs and sports clubs are, of course, exempt from this general depression.

It is being loudly asserted—and it will doubtless be vigorously contradicted—that the only clubs which really stand a chance of survival are those which are prepared to welcome lady members. That, to many men, would be an appalling prospect. Ladies and clubs are, in the opinion of the die-hards, almost a contradiction in terms. If this development comes about, all one can say is that prosperity will have been gained at the cost of the death of the club. For if a club is not inhabited by (temporary) misogynists, it is surely uninhabitable.

Fixing Prices.

The Government, it appears, are flirting with the idea of fixing prices for articles in common use—food, clothing, fuel, and so on—and they have devised a Bill, the Consumers' Council Bill, which will set up a Council to supersede the Food Council.

The motives of this measure are obvious. Profiteering, whatever the fanatics on the question of individual enterprise, competition, and the rest of it, has been going on in the necessaries of life; and the Government, by inquisitorial methods if necessary, intend to check this profiteering.

The question is, however, can the Government fix prices to order? There is in this country a profound mistrust of Government interference. Not that there would be any public resentment at Government investigation of commercial secrets—far from it; but there is a deep-rooted conviction that Governments cannot enter business successfully, that, in particular, no official body could not so arrange the demands and the supplies of the market as to keep prices down.

THE GEOGRAPHIC BASIS OF BALKAN UNITY.*

My remarks this afternoon are concerned particularly with the geographical aspects of peace in the Balkan States. To me this approach is not only a wise one, but also most logical and significant. The history of a nation can be stated only in terms of geography; the origin of people, ther characteristics and ideals bear a close relation to the land which they inhabit. Yet neither country nor people lives to itself alone, since world civilisation is not only affected by, but also permeates the political, social, religious and economic life of each State. No longer it is possible to conceive of any political or non-political unit as either isolated from all other regions, or as self-sufficient under itself; therefore, the past, the present and the future of any country can be clearly appraised only in terms of its relations with its neighbours as well as with more distant lands.

As a geographer I assert positively that all land boundaries are artificial. The silent yet powerful forces of nature underlie all of life's activities, yet the land stage on which we dwell is too often neglected, owing to the great emphasis placed upon human motives and passions. The territorial limits of modern nations are established more by economic consideration than geography, and are more political in feature than either economic or geographic. However, the forces of geography cannot be thwarted merely because they are so grossly ignored by politicians and statesmen. A boundary by water, especially in the case of location on important littoral such as Greece possesses, is a logical development. Land boundaries, however, are constantly advancing, retreating, and wavering, for the simple reason that nature's gods refuse to be content with boundaries made by men. It should become readily apparent to the wise, therefore, that geographic considerations must be cogently studied in all matters of public and private concern. Whether of war or peace, unfortunately no person has ventured to prepare and publish books on the subject, either of the geography of War or the geography of Peace. Until we know more definitely and concretely regarding these momentous questions we must continue to remain more or less blind to the great issues of life's existence. It is my personal belief that the most satisfactory technic to follow in reaching a Utopia is to approach the subject and all its intricate problems from the standpoint of regional geography. This analysis of mine means that a country's location is the focus of international relations.

It is no new discovery to you to be advised that the most intimate foreign relations pertaining to Greece are with the neighbouring countries. This general statement is true of practically all countries, yet conspicuously so here, because of the unusually high degree of coast line with respect to land area, and of the fact that there are no land boundaries except on the northern frontier. While it is doubtless true that the Great Powers will continue to take an interest in Balkan affairs, frequently other than that of meddling, as they have done in the past, no thoughtful person can reach any conclusion other than that the prospects of stability and peace in this part of the world rest squarely upon the countries most concerned. There is no Balkan State which is strong enough either in area, population, natural resources, industry or finance, to assert its case in the manner which it desires or deserves. Therefore, it becomes clear that the only logical way in which each country can benefit itself is to establish closer relations with its neighbours. The present need is more pressing than ever before, due to the startling growth of new and independent States since the world War, together with the startling appearance of revolutionary and radical progress in political, social and economic thought. One result is that the outside Powers are individually weaker, hence less able to exercise and influence their protection over the affairs of small countries. To meet this changed condition in world affairs, therefore, the most sane procedure is for weaker units to link themselves together in order to produce as strong a chain as possible as a result of connecting the individual weak links. This chain might assume countless forms, in order to achieve varied purposes; but nevertheless a chain of some type is necessary, in order to provide established contacts which are necessary to produce strength. In this day and age we are not content to accept the philosophical dream of the small State, so idealized by Aristotle and Plato, for on this globe numbering approximately two billion peoples, the race is to the strong. History teaches us that the larger the area under one political or non-political control the greater becomes its independence and the less the dangers of internal troubles. What form this league, confederation or Zollverein might take is of less importance than that some such organisation might be created. Speaking as an outsider who is fairly conversant with the recent growth and present status of national States, I believe that Greece has everything to gain and nothing to lose in endeavouring to reach an accord with those countries whose interest concur with hers, namely the Balkan States. Propinquity, climate, topography and productions are quite similar, yet they are more complementary to each other than competitive. Aside from the purely economic considerations, there is the broad question of strategy such as natural alignment of these continuous countries. Geographically speaking, therefore, it becomes axiomatic that the extent to which human actions interfere with the laws of nature, to that same degree the political units which make up this region suffer not only collectively, but also individually.

To give you a definite conception of the size of a Balkan union, let us consider the totals involved in the case of Albania, Greece, Yugoslavia, Roumania and Turkey—for all these States might properly belong in such a confederation. On the basis of population alone, the numbers are a trifle larger than for either the United Kingdom, France or Italy, namely about 50,000,000. On the basis of territory, the area would be six times that of the United Kingdom, two and a half times that of France, and five times that of Italy, or over 550,000 square miles. What a vast unit this would appear! Economically speaking, the present figures give scant clue to the possibilities, once frontier barriers are lowered and political administration is lessened. The Balkan countries are, each of them, characterised by an undeveloped state of agriculture. Thus far, relatively little seems to have been done to develop the sale of Greek products in neighbouring countries. For example, soap, wines, currants and olive oil.

In return, since Greece imports over twice as much wheat as any other product, here is an opportunity for Bulgaria, Yugoslavia, and Roumania. In the case of agricultural output, the greatest possibilities arise based upon climatic and general seasonal differences. But eventually, promising trade promotion would result from the fostering of primitive industries such as Greece possesses now, for nowhere in the Near East are there manufacturing localities of much importance. The possible export of chemicals, cheap textiles, soap, etc., should appeal to business interests of the Balkans in which respect the sea location of Hellas gives her a distinct advantage.

It is my belief that the time is ripe for an active formulation of a Balkan entente, dictated by other than military and political considerations. I am impressed with the apparent lack of knowledge which the Balkan peoples have of each other; the absence of communication of ideas as well as tangible things is a barrier to mutual understanding and good will. It is no secret, moreover, that the outside countries have not a great deal of patience with unfortunate happenings in this region. Many of them may be said to assume an unsympathetic attitude, which means that more than ever before in history, the welfare of this part of the world depends upon its own sincere efforts to combat this present attitude towards Balkan

* Text of an Address delivered by Professor Eliot G. Mears at Parnassos Hall, Athens, on March 26, the day following the opening of the public festivities in celebration of Greece's Centenary of Independence.

affairs. There seems to be no way out other than the proclamation to foreign countries that this important area not only appreciates the present situation, but also is in earnest regarding taking such steps as it can towards the betterment of local questions. It is noteworthy that the most satisfactory progress in international affairs during these recent years has come through the growth and development of regional organisations. It is my conviction that the world would welcome heartily a positive exhibition of a local wish to consider, study and decide upon matters of mutual concern. I believe, moreover, that this evidence would in itself be sufficient to interest certain foundations, to help promote and finance the cause. While I am not in a position to state positively, action might be taken by the Carnegie Endowment for International Peace which I have the honour of representing. I can assure you that such a move would have my hearty endorsement, which I would be happy to communicate to the officials of the Carnegie Foundation and also other organisations as well. It would be necessary, however, that there should be definite evidence that the countries most concerned were willing to take a conciliatory attitude towards their neighbours, in order to work for the good not only of themselves, but of all mankind.

America stands as a country without political ambitions in this part of the world, and in her further reduction of armaments and for world peace she stands ready to lend a helping hand to peoples who are sympathetic with her ideals. Perhaps you would be interested in what appears to me as a possible basis of Balkan co-operation. These ideas of mine, which are dictated by both geographical and non-geographical considerations, are sound in theory and eminently practical. They rest upon the organisation and administration of a regional group in which each country will be suitably represented. The plan calls for the establishment of a secretariat or central clearing-house established at some convenient location, sponsored and supported by representatives of the member States and receiving such aid from neutral organisations as may seem desirable. In brief, no country belonging would forfeit any of its political prerogatives; national activities would be supplemented and abetted by this new organisation which should be as far as possible of a non-political character. The emphasis at the outset should be upon those problems which are common to the greatest number of members and which are judged as of most significance to themselves and to the world outside.

The site of a secretariat is always a difficult problem. There are advantages in establishing these headquarters at some outside centre not too far from the member countries. Theoretically, it would seem most advantageous, if some place could be found in the Balkans which would be central and convenient to the various capitals. In order to consider this possible site I have been measuring the kilometric distances and find that a logical meeting point, radiating from Athens, Sofia, Belgrade, Tirana, would be established in the general neighbourhood of Salonika and Monastir. If possible the selection of a single site touching Bulgarian, Serbian and Greek territory, which might be set apart as an international zone, would serve the purpose most satisfactorily. Turkey also should be a member of this entity, although her inclusion affects greatly the choice of a central and convenient location, which might then be placed at Istanbul on account of its geographic position, various populations, means of communications and its historical past. In view of the present status of Balkan relationships, it would be unwise to establish the secretariat at any of the national capitals.

There is no limit to the amount and kind of activities which might be undertaken by the secretariat, working in unison with the national groups located in their respective countries. Among the most obvious topics for immediate consideration are matters relating to public health, such as the study and eradication of malaria. It is no secret that a co-operative study undertaken by interested groups under such an organisation would make a distinctly favourable impression upon the Rockefeller Foundation that might lead to prompt and effective financial assistance. The subject of cattle disease relates also to public health, as well as to a basic industry in the Balkan region. Other aspects of agricultural economics which are of vast importance are land titles, systems of tenure, and the possibility of extending the idea of co-operative organisations which would comprise matters of production, credits, handling, and sales methods.

Due to transportation inefficiencies as well as to other trade restrictions, this region is cheating itself of much production and business which should normally accrue. Omitting all mention of non-economic activities, it is perfectly clear to me that better opportunities of earning a livelihood, and the enhancement in the standard of living, would be a certain and early result of a thoughtful and unbiased consideration of significant aspects of agriculture, industry, trade, and finance, as a result of mutual participation.

The constructive work of this new organisation would be speedily enhanced by the collecting and publication of news items, which could reach an interested audience through newspapers, periodicals and, if possible, a regular publication devoted to Balkan affairs. The establishment of a statistical bureau would produce a degree of confidence abroad which would surprise most of this audience. It would not be necessary for the organisation to start on an elaborate scale, but I repeat, if the local countries and peoples evince a sufficient interest and exhibit a proper attitude towards a scientific and frank consideration of their own problems, it is certainly not outside the range of probability that this new departure in the Balkans may secure immediate recognition and possibly quick financial support. Peace in the Balkans or in any other part of the world can come about only through your willingness to consider the interests of other people as well as those of your own citizens. Furthermore, it is my firm conviction, that willingness to ascertain and act upon the wishes and feelings of one's neighbours results almost inevitably in a miraculous benefit which is shared by each and every contributor.

There is no doubt that history attests that the sponsoring and success of such sacred endeavours always had its origin in Greece. And is it not true that the Balkan union was the dream of your poet Rigas a hundred years ago? And is it not true that the Amphictyonic League of the past, and the greatest in existence to-day, the United States of America, were nurtured by the Greek ideal? In these epochal times, I believe there can be undertaken no nobler step for Greece than towards the realisation of a Balkan Union.

According to a decree promulgated at Addis Ababa, the full style of the new Emperor is:—"His Majesty the Emperor Taffari, King of Kings of Ethiopia, Haile Sellassie I."

On April 25 the Court of Appeal in Palestine dismissed the appeal made by Joseph Urfali, the only Jew to have been sentenced to death for murder during the riots in August, 1929.

The action for defamation of character brought by the Turkish Minister of Justice, Mahmoud Essad Bey, against Haidar Rifat Bey, a lawyer of Constantinople, has been adjourned, after two days' hearing, to May 15.

The International Peace Bureau in Geneva has informed the Peace Association of Athens that it has decided, in view of the resolution passed by the Peace Congress held in Athens, to organise annual Balkan conferences to deal with question interesting to Balkan States, and prepare a Balkan Confederation, the first conference to be held in Athens at the end of September.

The new sloop Folkestone, completing at the works of Swan, Hunter and Wigham Richardson on the Tyne, will proceed to the Persian Gulf as soon as possible after her completion, about mid-July, to replace the Crocus, which has been condemned owing to furnace and boiler defects. The Crocus was paid off at Bombay recently, and, according to *The Times*, her crew are returning to England by merchant vessel. The other sloops now in the Persian Gulf, the Cyclamen and Lupin, are also to be relieved later in the year by new sloops of the Folkestone class. The new vessels, which are turbine-engined and burn oil fuel only, are a great improvement on the War-built sloops like the Crocus, which have reciprocating engines and burn coal. The Lupin, however, was specially converted as an oil-burning vessel. She is to be utilised for a while longer on another station

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

A Yugoslav Export Association.

The past year brought home to the Balkan countries the fact that it is possible to have an excellent harvest, and yet, owing to external conditions, be unable to reap a satisfactory profit from it. I have already referred to one important step taken to meet the position by an agreement between Roumania, Yugoslavia, and Czechoslovakia with a view to the maintenance of grain prices. Another notable departure is contemplated by Yugoslavia in the establishment of a "Privileged Export Association" for the organisation of the export of the country's agricultural products, for which purpose a credit of 50,000,000 dinars is included in this year's Budget. Tobacco in the chief producing countries in the Balkans and currants in Greece are dealt with on similar lines, but I believe that this is the first time that the attempt has been made to deal with the whole agricultural produce of a country in this way. As the experiment has been quite successful when applied to one commodity there is no reason why it should not prove equally satisfactory when tried on a larger scale. After all, in an age of combines and rationalisation, a development of this character is only in accord with the fitness of things.

The Outlook in Turkey.

It is refreshing to find quite an encouraging view of the situation in Turkey expressed at a recent luncheon of the British Chamber of Commerce of Turkey. Mr. B. Tubini, in welcoming the newly-appointed British Consul-General, Mr. James Morgan, asked whether conditions were quite so bad as they were painted. The new Customs Tariff, he pointed out, had at first disorganised business and had resulted in heavy losses, but traders had bought in excess of requirements and the failure of certain crops had curtailed the demand. In his opinion the British trader has not much to complain of with regard to the tariff itself, and he thinks in some lines it has distinctly helped the trader. Dealing with the point that Turkey has not sufficient industries to produce the commodities hitherto imported, he pointed out that new industries are being encouraged to start and that two British concerns and several Continental companies have erected factories in the country. As regards the exchange position, Mr. Tubini's view is that Turkey is simply going through what other countries, such as France and Germany, have gone through, and he anticipates that if the harvest is good this year the situation will be normal again by the time the export season arrives.

The Ankara Negotiations.

It remains to be seen how far this view of the outlook for Turkey will be reflected in the new negotiations at Ankara between the representatives of the bondholders of the Ottoman Debt and the Turkish Government. Obviously an improvment in the exchange in the autumn would ease the position considerably for Turkey, but harvests are notoriously uncertain factors, and while the prospects are good now, it is impossible to forecast with any certainty what they will be in a few week's time. Meanwhile, Turkey's trouble is a serious financial stringency, the solution for which is obviously to be found in a loan. But the effect of Ankara's policy on confidence abroad has been such that it is quite certain that a loan cannot be forthcoming except on conditions. While no official statement has been made with regard to the negotiations, it may be taken for granted that the question of a loan will have come up for discussion. Hitherto the essential preliminary to a loan—the appointment of a foreign financial adviser—has proved unacceptable to Ankara, but signs have not been lacking that the attitude of the Turkish authorities is not quite so intransigent on this question as it was, and if they can only find it possible to meet foreign opinion on this point they are not likely to experience any difficulty in obtaining the necessary financial assistance.

Yugoslavia's Tourist Traffic.

Yugoslavia is now numbered among the countries of the Near East which reckon the tourist traffic as one of

their most important industries. The money spent in that country by visitors last year is estimated by the Yugoslav Federation for the Encouragement of Tourists at 1,586,000,000 dinars, the significance of which sum will be realised when it is pointed out that the excess of exports over imports was no more than 327 million dinars. Broadly speaking, it would be true to say that each country has its own type of visitors. Those who desire the settled round of sight seeing, and only wish to follow well-beaten tracks, will doubtless eschew the Adriatic coast, but those who hope to get a little away from the trammels of civilisation will find there their ideal holiday amid surroundings that would move the most unpoetic to rhyme. Not that the tourist has to rough it in that region, for the hotel and other facilities are good, and are being added to each year. But the country itself as a whole is as yet unspoiled by the levelling touch of civilisation, and there, if anywhere, it is possible to get "far from the madding crowd."

The Dalmatian Cement Industry.

The expansion of building that has been going on throughout the world since the War has naturally given a great opening for cement production, and the important cement industry of Dalmatia in consequence now promises to become an economic asset of great value for Yugoslavia. The two essentials for the development of an export trade in cement—factories on the coast and the existence of the necessary raw materials locally—are both present in Dalmatia, where all the five cement factories are by the sea. Naturally, the Mediterranean regions offer the principal market for Dalmatian cement, but the product is even exported to America and Japan. Plans are in train for the extension of the plant of the existing factories, and for the erection of new ones, and a marked further expansion of the export trade is looked for as a result.

Russia and the East.

Details of the trade of Soviet Russia for 1928-29 show a considerable expansion of the export trade with Persia and Turkey. For 1927-28 Russia's exports to Persia totalled 156,665 metric tons of the value of 71,464,000 roubles, but for 1928-29 the exports were 182,246 tons of the value of 74,061,000 roubles. The exports to Turkey for 1927-28 totalled 245,931 tons, but in 1928-29 they rose to 394,492 tons. The Persian Gulf region is now also a growing market for Soviet goods, and while it has been traditional for Russia in the past to give an Eastern trend to her policy, it would seem clear that Soviet Russia to-day is looking to the Near and Middle East to provide her with the markets that she cannot obtain in Europe.

Mining in Cyprus.

In his speech at the opening of the Session of the Cyprus Legislative Council, to which I referred last week, Sir Ronald Storrs dealt in detail with the important mining industry of the Island which has made an important advance in the last two years. He pointed out that the export of pyrites from Skouriotissa was over 280,000 tons, while the producing stage was reached at Mavrovouni in October, and it is anticipated that the output from this mine will be equal to that of Skouriotissa within the next eighteen months or two years The Cyprus Mines Corporation, which controls these mines, employed an average of 2,331 persons per day last year. Then the Cyprus Asbestos Company, which employed an average of 3,538 persons per day last year, exported 13,796 tons of asbestos, an increase of more than 2,000 tons on the 1928 figures. Sir Ronald Storrs added that the export figures for other minerals such as terra umbra, gypsum, etc., again surpassed those of previous years. In 1929 the royalties from the mines amounted to £21,607 as compared with £6,761 four years ago. He regards the outlook for mining in the Island as excellent, pointing out that in addition to the continued expansion of the mines mentioned, the Cyprus Sulphur and Copper Company at Lymni have begun what are likely to prove large operations for the extraction of pyrites and the subsequent leaching for copper precipitate, while further prospecting has received an impetus by the advent of several large mining companies.

Sale of Second Hand Ships.

The long-drawn-out shipping depression has led to the question being raised of the advisability of the sale of second hand ships to other countries. The point is that these vessels are disposed of at low rates and on easy terms, and the new owners cut freight rates and thus make business worse for British owners. A large number of these vessels are sold to the Near East, and these ships, after their change of ownership, have been playing an active part in the outward trade from British ports. It is undoubtedly hard lines on British shippers that they should have to suffer from cut rates, and it might be possible to overcome this problem by a freight rate agreement at the sale.

Roumania's Oil Industry.

Last year witnessed a further marked expansion in the oil production of Roumania, and the statistics for the current year so far available show that the development is still proceeding. A comparison of the production for the past few years brings out very clearly the rapid expansion of production that has been going on. For 1925 the production was 2,316,504 tons, which compares with 1,885,619 tons for 1913. For 1927 the figures were 3,166,360 tons, for 1928 4,268,541 tons, and for 1929 4,827,278 tons. The exports in 1929 totalled 2,882,900 tons, easily the highest figure ever recorded, while 1,540,481 tons were consumed in the country. The value of the exports was 9,552,326,000 lei as against 8,033,988,000 lei in 1928, motor spirit and illuminating oil being the chief contributors to this total with 5,314,349,000 lei and 2,160,904,000 lei respectively. Drilling in 1929 totalled 302,745 metres, an increase of 24 per cent. on the figures for 1928. It is interesting to note that there is a considerable change in the destination of Roumanian exports as compared with the pre-War period. To-day Italy is Roumania's best customer, taking 20.36 per cent. for 1929 as against 16.51 per cent. in 1928, while the next highest percentage in 1929 was no more than 10.63.

COMMENTATOR.

A Bulgaro-Roumanian conference was held last month at Bucharest to consider the scheme for a bridge over the Danube from Giurgiu to Rustchuk.

At a meeting of the East India Association to be held on Tuesday, May 20, at 4.30 p.m., at the Caxton Hall, Westminster, S.W.1, Sir Alfred Chatterton, C.I.E., will read a paper on "India's Progress and India's Poverty." The Hon. Sir Maneckji B. Dadabhoy, K.C.I.E., will preside. A discussion will follow.

ROAD CONSTRUCTION IN GREECE.

As in other regions of the Near and Middle East, the key to development in the Balkans is the provision of adequate communications. Up to the outbreak of the War there was no part of Europe worse served with roads, for the very good reason that little attention had been paid to them since the time of the Romans, who, as was their practice in other territories that came under their rule, made a network of military roads which has lasted to this day.

The extent of serviceable roads differs considerably in the various countries in the Balkans, but the problem of better communications is common to all. It is merely a question of degree. In Greece the need for the extension of roads is particularly serious, and this country, whose progress in many directions has been so marked in the last few years, was quick to recognise the advisability of undertaking a vast programme of road construction. The finance necessary for a comprehensive scheme could not be provided by the ordinary Budget, so the Government decided to devote for the purpose a portion of the general loan for productive works raised under the auspices of the League of Nations. The concession for the road scheme was granted in 1928 to the P. G. Macris Trading and Industrial Company, and the terms of the agreement provided for the production of all necessary surveys, plans, and designs for technical works to be carried out by the company, where they did not already exist, in addition to the actual construction of the roads. Out of the first portion of the loan £1,300,000 was earmarked for road construction up to March 31 last, against which was offset a sum of £410,000 originally advanced by the concessionaire. It is estimated that Greece requires 10,000 kilometres of national roads, and on the basis that the cost of construction is about £2,000 per kilometre it is obvious that the sum of £6,000,000 will not be nearly enough to cover the programme, and indeed will only suffice for about 3,000 kilometres of roads. It may be pointed out that of the roads in existence only 4,000 kilometres are in a comparatively satisfactory state.

As surveys had to be made, and work in connexion with these was greatly delayed by adverse weather conditions, the actual task of road construction began only in March of last year. During the year work has been in progress on eight roads. These include Salonika to Zanthi *via* Kavalla (170 km.), Yanina to Trikkala (130 km.), and Yanina to Higoumenista (57 km.). In view of the mountainous character of the country the task of road making is, as might be imagined, a most difficult undertaking, involving the construction of many small bridges, cuttings, embankments, etc. The roads are being made of a standard width, with a road bed of 6 metres and a paved surface of 4½ metres in width. Ditches are provided on one or both sides of the roads with adequate culverts to cope with the flow of water. Owing to the nature of the terrain the water problem is, of course, serious, for in the wet season allowance has to be made for a considerable volume of water in many districts. In the plains where flooding is general, the road surface is placed on embankments which range in height from 0.80 metres to 2.00 metres. In certain places where reclamation work has not yet been carried out, the greatest care has to be taken to guard against damage to the roads and embankments from the periodical inundations. Most of the roads are being constructed of water-bound macadam with a bituminous seal coat, but in the case of a few roads of special importance, which are being made of greater width to cope with the traffic they will have to carry, there will be a type of bituminous surfacing.

CYPRUS CROP PROSPECTS.

The report on Cyprus crops for April gives the following details:—

Sudden variations in temperature during the month resulted in irregularity of the growth of wheat. Light dews and moist conditions favoured the development of rust, of which a severe outbreak has occurred in the Paphos District. The general outlook is hopeful, and there is an increased demand from millers at low prices.

Harvesting of barley is in progress in certain areas, and the crop is now secure. The market is stagnant; prices are 1s. 2d. to 1s. 8d. per bushel.

The growth of the new crop of potatoes is satisfactory. There is small demand for export. Retail prices are 3d. to 6d. per stone.

Planting of cotton progresses favourably, and the prospects for increased production are good. Prices have fallen, but the bulk of last year's production is now in the hands of the merchants. Prices are 2s. 6d. per stone for seed cotton.

There is practically no demand for carobs. Prices are nominal, and advance sales for the new crop are reported to have been made at £4 10s. per ton.

The export of Lefka oranges is in progress. It is estimated that 6,000,000 oranges are still available at Lefka for sale and export. The market is rather slow. Prices are £2 10s. per thousand for "Jaffa" type oranges and £1 5s. per thousand for round oranges.

Owing to the unsold stock of tobacco still remaining in the hands of growers, the area to be planted is likely to be below that of last year. There are no quotations.

The total quantity of petroleum products exported from Roumania during February amounted to 237,206 tons, as compared with 243,498 tons in the preceding month, and 121,996 tons in February, 1929. Of the total quantity exported 185,608 tons were shipped from Constantza. The month's exports comprised 77,574 tons of motor spirit, 60,152 tons of illuminating oil, 27,381 tons of gas oil, 1,839 tons of lubricating oil, 1,377 tons of crude oil, and 68,851 tons of fuel oil.

An American sound film was exhibited in Zagreb in the latter part of 1929, on an American (sound on disk) equipment and was run for 17 days, a record figure for Yugoslavia. A number of sound films, American and German, immediately followed (says an American report). There are now about 15 cinemas wired for sound reproduction; 14 are equipped with American installations and one with a French apparatus. No German apparatus has been used up to now. Most of the big Zagreb cinemas are already wired, and the remaining few important houses will probably also acquire American apparatus. As to the great many smaller cinemas, seating 300 to 400 people, none of them can afford to purchase a sound-reproducing apparatus costing more than £300 to £400.

BANQUE FRANCO-BELGE ET BALKANIQUE

Joint Stock Company

Capital - Leva 150,000,000 fully paid up.

Affiliated to the Banque Belge pour l'Etranger (a foundation of the Scciété Générale de Belgique), Banque de l'Union Parisienne, Wiener Bank Verein, Oesterreichische Credit Anstalt für Handel und Gewerbe, Ungarische Allgemeine Creditbank.

Head Office: SOFIA.

Branches at Doupnitza, Haskovo, Lom, Pleven, Roustchouk, Varna, Vidin.

Affiliated Banks: **BANQUE DE PLOVDIV AT PHILIPPOPOLIS.**
BANQUE BULGARO-BELGE AT BOURGAS.
BANQUE BULGARE DU NORD AT SVISTOV.

Banking business of every description transacted. Discounting of trade bills. Advances against securities. Endorsements and guarantees issued. Dealings in foreign exchange, securities, coupons etc. Special service of private safes

Cable Address: FRANCOBELG.

BRITISH CHAMBER OF COMMERCE OF TURKEY.

The report of the British Chamber of Commerce of Turkey (Incorporated), for 1929, presented at the recent annual general meeting at Istanbul, shows that the membership of the Chamber at the beginning of the present year was 369 as compared with 340 a year previously. With regard to the new Turkish Customs Tariff, which came into force on October 1, the report points out that with a view to avoiding the heavier duties, during a month or two preceding the date when the new tariff came into force, goods of all kinds were imported greatly in excess of the country's requirements. In the case of cotton goods from the United Kingdom, the imports during three months were exactly double their volume during the corresponding period of the year 1928. Imports from other countries were in like proportion, and in the case of certain articles on which the new tariff was known, or expected, to be, prohibitive, the proportion was much greater. Coupled with the decreased purchasing power resulting from the failure of certain crops, it has added to the difficulties of the market and resulted in many failures.

The report also touches on the question of the taxation of commission agents, and points out that the recent introduction of a number of new Turkish legal codes, and the tendency to extend the area of taxation in Turkey, have together combined to cause the fiscal authorities of this country to issue regulations which have for their object the interpretation, from the point of view of taxation, of the definitions of the various classes of representatives and commission agents to be found in the new codes. These regulations are of such a nature as to cause considerable apprehension lest local traders having dealings with firms situated abroad, may be inflicted with the obligation to pay taxes in Turkey on the profits made in Turkey by the foreign firms with whom the local traders have dealings. The Council is giving this matter its closest attention and is co-operating in this respect with other foreign Chambers in Istanbul. It is also benefiting by the advice and assistance of the British Embassy and is, through the latter medium, actually in touch with the Turkish Government on this important problem. The Council, however, considers it to be inadvisable to make any pronouncement on the probable outcome of its efforts in this direction until such time as it is in a position to state exactly how British traders will be affected by the new regulations.

The total output of the Roumanian oilfields during March amounted to 480,000 tons, an increase of about 50,000 tons over the February production. The output of the principal operating companies during March was as under (in tons):—Astra Romana, 99,800; Steaua Romana, 69,962; Creditul Minier, 62,194; Phœnix Oil, 45,263; Rom.-Americana, 36,280; Sirius, 33,198; I.R.D.P., 28,391; Colombia, 20,218; Petrolul Romanesc, 11,542; and Concordia, 11,183.

ANCHOR LINE

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Electric Pumping Stations.—The Director-General, Mechanical and Electrical Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of 15 electric pumping stations complete with pumps, motors, switchgears, and pump-houses, etc., at the Isolated Basins, Upper Egypt, between Esna and Aswan. Capacity of pumps will be of 2, 1, and 0.35 cubic metres per second. Copy of specification, conditions of tender, and drawings can be obtained from the Office of the Chief Inspecting Engineer of the Egyptian Government at London. August 17.

Covers and Tubes.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of covers and tubes (motor car and motor cycle) to the Mechanical Transport, Egyptian Army, Abbassia, Cairo, for the period from July 15, 1930, to April 30, 1931. June 14.

Needlework.—The Egyptian Ministry of Education invites tenders for the supply of various needlework materials during the school year 1930-31. The schedule consists of 30 items. June 7. (D.O.T.)

Uniforms.—The Egyptian Postal Administration invites tenders for the supply of uniforms during the twelve months commencing May 1, 1930. July 7. (D.O.T.)

Plant for Waterworks.—The Egyptian Ministry of the Interior invites tenders for the supply and installation of pumping machinery, electric motors, filters, and accessories for the waterworks at Abou-Tig-Nekheila. June 25. (D.O.T.)

Pumping Engine, etc.—The Director-General, Main Drainag Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for the supply and erection of a steam pumping engine for Kafr el Gamous Pumping Station, May 10; and for the supply, construction, and delivery of cast-iron sealed sewage and air mains in Zagazig. May 27.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, May 16); s.s. Circassia for Bombay (Birkenhead, May 30). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Masirah for Calcutta (Birkenhead, May 10); s.s. Malakuta for Calcutta (Birkenhead, May 20).

Bibby Line.—S.s. Cheshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, May 14).

British India Line.—S.s. Warfield for Bombay (London, May 10); s.s. Morvada for Colombo, Madras, and Calcutta (London, May 17).

Cunard Line.—S.s. Bosnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, June 7; Swansea, June 10); s.s. Bothnia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, June 11; Liverpool and Swansea, June 13).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 31); s.s. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 24).

P. and O. Line.—S.s. Nagoya for Calcutta (London, May 23); s.s. Razmak for Bombay (London, May 23).

Prince Line.—S.s. Korean Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (Manchester, May 21); s.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus ports (Manchester, May 21).

Ellerman and Papayanni Lines.—S.s. Lesbian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, May 17; Swansea*, May 17); s.s. Fabian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, May 20; Glasgow, May 10 (agents, John Bruce and Co.); Swansea*, May 12); s.s. Gerano for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, May 24; Swansea, May 29); A steamer for Gibraltar*, Algiers*, Oran*, Syra*, Smyrna, and Constantinople (Liverpool, May 31); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, June 3). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outport via Piræus or other convenient port.

The Directors of the South Indian Railway Company, Ltd., have decided to pay on July 1 an interim dividend from surplus profits of 2 per cent., less income tax (compared with 2 per cent. paid on July 1, 1929), making with the interest guaranteed for the half-year ending June 30, 1930, namely, 1½ per cent., less income tax, a total distribution for the half-year of 3½ per cent.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, May 6.

The Stock Exchange has passed a quiet week, broken on Thursday by the annual May Day Holiday. The reduction in Bank Rate to 3 per cent., which was made while the House was closed, was not altogether expected in the Stock Exchange, though by Wednesday the Money Market position seemed to point the way to it. Early in the week business in the Stock Markets had been limited by the setback to prices in New York, and the absence of public interest here, but on Friday a better tone was evident as a result of the lower Bank Rate, which means that the deposit rate allowed by the banks is at the very low level of 1 per cent. Investment markets generally showed a little improvement, but the only prominent feature in the industrial market was the activity of Gramophone and Columbia Graphophone shares on the renewal of amalgamation rumours. Mining shares fell with the further weakness of base metal prices, and oil shares declined in the absence of support from New York and Paris.

The latest reduction in Bank Rate may have an advantageous psychological effect, but so far as industrial borrowing is concerned it may be mentioned that the rate charged on loans and overdrafts by the banks which, except in special cases, carries a minimum of 5 per cent., will not be affected. Whether the Chancellor of the Exchequer will take the opportunity to launch a conversion operation remains to be seen.

Two Important Chairmen's Speeches.

Among the speeches delivered at company meetings during the week, two—those of Lord Melchett, the I.C.I. Chairman, and of Sir Felix Pole, Chairman of Associated Electrical Industries—were of unusual importance. Both companies are leading examples of the practical application of principles of rationalisation, and both chairmen dealt with this topic. Lord Melchett answered criticisms that the widespread ramifications of I.C.I. made the merger top heavy, stating that central control had not prevented elasticity among the various branches. He also referred to the possibility of employing a highly skilled research staff, which has been particularly exemplified with regard to the dye industry. Sir Felix Pole also mentioned the work of research forces which the electrical merger has made still more efficient. Sir Felix also discussed another advantage of rationalisation in the separation of diverse functions among different branches of the group it permits. The Edison Swan Company is to be made the marketing organisation, this side of the business of British Thomson-Houston and of Metropolitan Vickers being transferred to it. While both speakers indicated that the processes of rationalisation have yet to bear full fruit, both also intimated that their companies were not ignoring possibilities of still wider co-operation. Lord Melchett emphasised the "large field for trade agreements" which he claims exists within the Empire. Sir Felix Pole referred to the agreement for exchange of patent rights and manufacturing information between Associated Electrical and the International Electric Company of America.

Dunlop's Better Year.

As indicated by the preliminary figures the Dunlop Rubber Company, whose full report has now appeared, enjoyed a much better year in 1929 than in the preceding period. While general trade conditions still remained adverse, particularly in the last half of 1929, total profits advanced by nearly £1,000,000, at £2,307,354, against £1,359,893, but earnings were still considerably below the 1927 level of £2,953,424. The demand for rubber has been very much curtailed by the poor condition of the American automobile industry after the Wall Street collapse, and with production increasing low commodity prices have naturally resulted. While the directors believe that bottom has been touched the reduction in stocks on hand from £2,941,495 to £2,579,606 is not entirely unwelcome for the outlook for rubber is not yet "set fair." Comparison of the balance-sheet position generally with those of earlier years is impossible owing to considerable changes in the setting out of the items. The present financial position, however, is reasonably strong. General reserve receives £150,000, and taxation reserve £225,761.

The Weakness in Metals.

Like various other commodities the leading non-ferrous metals have lately suffered a serious decline in quotations. Last week standard copper reached the lowest point witnessed for seventeen years, tin for eight, lead for nine, and zinc for some thirty years. In the case of copper the fall represents the aftermath of the "pegging" of the price at an artificial level by Copper Exporters, Inc., of the U.S.A. For some time endeavours were made to meet the position by a severe curtailment of production, but the growth in stocks which occurred despite those measures, with sales at lower levels by uncontrolled producers, enforced a cut in quotations. Although made to the tune of 4 cents per lb., equivalent to about £17 per ton, the reduction proved insufficient to tempt purchasers, and a further cut of 2 cents per lb. is looked for. The course of tin prices has been very different from what might have been expected in view of the success of the restriction movement. Here it would appear that supplies have been swollen by the transfer of metal from "invisible" stocks, and that output still waits upon consumption. Endeavours to maintain the prices of lead and zinc by cartels or selling agreements have achieved only temporary success. The time cannot be far distant when a partial corrective will be supplied by the shutting down of mines not payable under present conditions. Unwelcome as the drastic remedy must be to those concerned, from the point of view of the industries as a whole it is imperative to restore equilibrium.

Motors and Motoring.

(By Our Motoring Correspondent)

Popularity of Saloon Bodies.

It is difficult to account for the great favour in which saloon bodies seem to be held by the majority of motorists, but that the type is astonishingly popular cannot be denied. One has only to keep one's eye on the road or to glance over any parking place to see the immense preponderance of saloon over open bodies amongst the new models. A few years ago the tendency was all the other way and a motorist was regarded as being rather a "mollicoddle" if he drove, for choice, in a saloon. There are those who assert that the motorist of to-day is not so hardy as he was, that he has got soft and considers himself as likely to catch cold. Personally, I have no doubt that what is popularly called "side" has much to do with it; the same principle that leads a man to call his tiny suburban maisonette "Hillcrest Towers" or "The Castle" is at work, and the small car owner of to-day feels that he is rising in the social scale if he can talk about "my little saloon." Coming down to real motorists, it seems that there is a growing demand for freedom from the shackles imposed by those who fill the popular need, and that the car that is really wanted is a two-seater, with a dicky seat, capable of being converted from an all-open touring car into a comfortable and warm all-enclosed car with all saloon conveniences for bad weather. In other words, what is wanted is a drop-head coupé.

A car with that type of body is a little heavier than an ordinary open two-seater, but is, generally speaking, rather lighter than a saloon. It possesses a great advantage, in my opinion, over most other body designs, in that the conversion from open to closed body is quickly carried out; it is just the car for summer driving and for wet weather work, and driving out to social engagements, as theatres or concerts, the change is quickly made and the closed-up car possesses all the comforts associated with saloons. It has a minor disadvantage which must be mentioned. No matter whether the top is up or down, the blind spot formed by the forward screen pillars is rather more noticeable or more extensive than that of the ordinary two-seater touring body. At the same time, it must be remembered that the drop-head coupé has an advantage when the top is down, simply because the structure does not fold away as flat as a hood and the effects of back draught are not nearly so marked.

A body of drop-head coupé type should conform more or less to the following specifications: The roof should be double-lined, the outer lining being fabric and the inner to match the upholstery of the body. The roof members, collapsible, should be of stout, well-seasoned timber. The rear and side windows, the latter of which should be made to lift and lower, should be of safety glass and the fitting of these windows should be such that the joints are draught-proof. At the moment Lea-Francis, Peugeot, Renault, and Swift are making drop-head coupés, and Triumphs list a somewhat similar type in the close-coupled saloon landaulet, but probably the example of these enterprising firms will soon be followed by other makers.

Multi-cylinder Engines.

A little controversy has arisen regarding multi-cylinder engines, and inquiries amongst users of six and eight cylindered small cars seems to show that there is some idea afloat to the effect that an engine of more than four cylinders is more powerful than one of four or less. There are those who speak as though multiplicity of cylinders in itself spelt power, and it is not easy to ascertain how such an utterly mistaken idea could arise. As a matter of fact, a single cylinder engine of a given capacity is more efficient than any multiple-cylindered engine of a similar capacity, and the mere addition of cylinders, so far as power output is concerned, is merely reducing the efficiency of the engine. It is true that the action is smoother and the torque more uniform, but the power output is lower, and the chances of breakdown or of something going wrong are added to proportionately. All this is not to be taken as an advocacy of a return to the single-cylinder engine; far from it. A good four or a good six is a sweeter, more flexible thing to drive than any single cylindered car could possibly be. All that one is attempting to do is to show that the mere addition of cylinders does not mean addition to power output, but merely an improvement in flexibility at the expense of efficiency. As a matter of fact, for car work, I do not regard an eight-cylindered engine as being any improvement on a four-cylindered, any more than a twelve is in any way superior to a six. It may be that under certain conditions the power output is a trifle better or that there is some slight advantage; be that as it may, in my opinion it does not and cannot overweigh the added complications in valves, cams, plugs, and so on.

Whilst on this subject, I may quote a letter from a correspondent who writes: "What I should like to ask is, have we not gone four-cylinder crazy? I do not wish to suggest that multi-cylindered engines have no advantages, but what I do contend is that at least 50 per cent. of those owning light cars would be better off with a twin engine rather than with a four or six. For the man who wants economy and simplicity—and what light car owner does

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to the Secretary

WESTMINSTER BANK
LIMITED
HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

Digitized by Google

not?—the two-cylinder power unit has an enormous lot in its favour and very little against it. I am rather inclined to agree with him so far as cars of seven horse power and under are concerned.

For after all, what does this craze for multi-cylinders amount to? We have, with them, perhaps a rather more smooth flow of power and perhaps a little better torque, and for those doubtful advantages the motorist must pay more for his car in the first place, and more to run it, because his tax and his fuel bill will be greater than with a four of equal capacity. A protagonist of the multi-cylindered engines writes: "The multiplicity of cylinders represents progress up to a point." When he writes that, I feel that here we have one who argues that because a thing is new it must also be better, which is by no means a fact. Still, he continues: "It gives luxurious smoothness, silence and performance" and here again, he is woefully in error, because in the first place, the added smoothness of an eight over that of a six cylindered engine is so much a matter of imagination that very few drivers, and those only the more expert, could tell from the feel and any other indications they pleased, short of looking under the bonnet, whether they were handling a six or eight. The matter of silence has nothing to do with the number of cylinders, but with the design of the silencer, and the performance of any multi-cylindered engine of a given capacity is not equal by a long way to that of a single-cylinder engine of the same cubic capacity. He adds: "Nobody can deny that the average six-cylinder car has improved enormously," complicating matters still further. In the first place the average six-cylinder car, or any other six-cylinder car, has not improved at all; it has been improved, which is a very different thing. Further, the improvements referred to are in connexion with body fittings, springing, etc., which have nothing whatever to do with the number of cylinders in the engine. What seems really to be wanted in connexion with this matter is a little clear thinking.

A Fine Performance.

The Tilling-Stevens "Express" carried out a very fine performance recently in climbing Succombs Hill, which has a gradient of 1 in 4¼. As a matter of fact, it rather made light of this hill, which has long been somewhat of a terror to drivers. It started its climb in second gear and quickly began to pick up speed, and, by a smart piece of timing, the change to third was made at just the right moment and a speed of 20 miles per hour was attained before the vehicle reached the railway bridge. Going strong, as a famous advertisement has it, a change back to second was made, and then, almost immediately to third, and the steep part of the ascent was done at 11 m.p.h. Actually it was possible to use second gear for the major portion of the climb, and, during the actual stiff portion of the journey a maximum speed of 13 m.p.h. was made. The report of the driver was to the effect that he had no difficulty in getting the vehicle to do its best, that it was quite comfortable to handle and that he knew all the time that his engine could do the work.

ADVERTISING IN
"THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of ***all*** classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

LOWER IVORY PRICES.

Messrs. Hale and Sons report that the quarterly ivory sales held on April 29 and 30 comprised 37 tons (against 29 tons at the same time last year and 37 tons in January last), viz., 23¾ tons Zanzibar, Bombay, Mozambique, East African, Rhodesian, and Siam, 3¼ tons Abyssinian, 1¾ tons Egyptian (1¼ tons Alexandrian, ½ ton Malta description), 4¾ tons West Coast African and Congo, ½ ton Lisbon, and 3 tons land carriage, also 3 tons mammoth tusks, 1 ton sea horse tusks and boars' tusks, and ½ ton rhinoceros horns; total, 41½ tons.

There was a fair attendance of buyers. New imports since the last auctions have been small, viz., 20 tons of all kinds principally of the East African descriptions, but with the lots bought in at the previous auctions the total quantity was moderate. The demand was inactive and this quality was in excess of the trade's immediate requirements. Prices for soft large and medium tusks were lower, and some quantity was withdrawn as the sales progressed, but the prices for hard were fairly well maintained although only a comparatively small quantity of this description sold, sellers being firm. The Continent and America were the principal buyers; the Home trade bought rather sparingly.

Only a few lots of Abyssinian were sold, the bulk being bought in. Prices ruled as for other soft descriptions.

The quantity of Egyptian catalogued was small. Soft large and medium tusks were £6 to £10 per cwt. lower; hard were rather easier; scrivelloes were £3 to £4 per cwt. lower; ball scrivelloes were steady.

A drainage scheme is the subject of discussions between the Haifa Municipality and the Palestine Government.

The Egyptian Irrigation Department have given a contract to Messrs. J. I. Thornycroft and Co., Ltd., for motor lorries.

Automatic telephone operation is to be installed at the new head office of the Palestine Post, Telephone, and Telegraph Department which is to be constructed at Jerusalem.

The net revenue of the Oriental Telephone and Electric Company for 1929, after charging £27,142 for depreciation and renewals, was £99,521, plus £34,425 brought forward. A final dividend of 8 per cent. is proposed, making 12 per cent., tax free, on the Ordinary shares, to reserve for depreciation, special allocation, increasing fund to £78,685—£12,500, leaving to be carried forward £39,807.

The Yugoslav Government have given a contract to the Batignolles Company of Paris and the Guttehoggnungshutte Company of Obershausen for the construction of a bridge to span the Sava river between Belgrade and Zemun. The bridge, which will be 457 metres long and 18 metres wide, will cost about £680,000 and will take three years to complete.

A Cairo message states that the Egyptian Public Works Department has received 16 British and other European tenders for carrying out the North Delta electricity scheme. Callender's Cable Company submitted the lowest tender—namely, £E505,000—and the Enterprises Générales Electriques et Industrielles submitted the highest—£E1,196,000.

The report of the general manager of the Trepca mines for the six months to March 31 states that at the Stantrg mine development continued, consisting in the main of the completion of the opening up of the ore body on the 795 metre level and in the preparation of the mine for stoping operations. It is planned to start the principal stoping operations from the 760 metre level, and the first stopes opened will be at the extreme ends of the ore body. The necessary crosscuts, fill raises, and ore passes are almost completed. The deep level adit, at the 600 metre horizon, was commenced in November, and on March 31 had advanced to 393 metres. Diamond drilling has been continued with two drills. Further extensions of the ore body below the 760 metre level of satisfactory widths and grade have been established. The total drilled was 1,000 metres. At the concentrating mill the construction of a 1,250 kw. power plant is well advanced.

Valves for Waterworks.

A striking example of up-to-date British methods is an installation of pumps and valves just recently completed by Messrs. Gwynne's Pumps, Ltd., for the City of Mexico Waterworks, the order having been secured—against the most severe American competition—on a guarantee of delivery within two months, being ahead in this respect of any firm in the United States. The work was duly executed within the time, and Messrs. Glenfield and Kennedy, Ltd., of Kilmarnock, acted as sub-contractors as regards the valves, consisting of two 36 in. diameter electrically operated sluice valves, one 12 in. electrically operated sluice valve, one 6 in. relief valve, and one 36 in. multiple flap reflux valve with 6 in. by-pass. To supply heavy plant of this character in two months is, of course, a formidable undertaking, while the valves are also particularly interesting because they show the latest type of the firm's reduction gear for electrically operated "distance" valves, in which the motor is bolted to the face of the worm gear housing, constituting an extremely neat arrangement. On the usual lines the current for the motor is controlled by a set of push button controllers situated in the engineer's office or other convenient spot, the valve being automatically stopped at the extreme position of its travel by one or other of the limit switches provided, situated on the indicator hood and operated by the pointer. Also, as seen, provision is made for hand operation in the event of failure of the electric supply.

The method of valve construction follows the firm's usual practice, the body being of fine grey cast iron moulded in dry sand, which produces a very smooth finish. Also heavy gunmetal faces are fitted to the valve body and door, being securely held in position by screwed brass pins and hand-scraped to form a perfectly tight joint, while the operating screw is accurately machined from a forging of high tensile manganese bronze with gunmetal nut secured to the valve door. Further, all the gears are machine cut and operate in oil, while ball-bearing anti-thrust washers, circuit breakers, and reversing controllers are also included in the installation.

Valves of this character are manufactured in all sizes up to 108 in. diameter, and for any desired head, as much as 800 ft. or over, those for the high pressures being constructed with cylindrical bodies, and the principle of distant electrical operation is now being more and more used both for water and steam.

High Speed Electric Driven Planing Machines.

One is glad to note a considerable improvement in the machine tool trade, and noteworthy in this field is a large 24 ft. 6 in. long and 12 ft. 9 in. wide planed space, high speed, reversing, electric drive, planing machine, recently supplied by Craven Bros. (Manchester) Ltd., Reddish, Stockport, to Messrs. Fraser and Chalmers, Ltd., Erith, (English Electric Co., Ltd.). This is a fine example of modern British design and the total over-all length of the bed is approximately 41 ft. 9 in. and the over-all width 11 ft., while the height from the cross slide to the table is 10 ft. Two tool boxes are provided on the cross slide, and one on each upright, with the main motor drive operating through gearing and twin steel racks along with bull wheels, the main motor being 80 h.p. Also cross planing is arranged for on either one or both of the cross slide tool boxes by an independent motor of 15 h.p., and the feed is given by a 10 h.p. motor, all these being of "Lancashire Dynamo" make. There are two table cutting speeds, the low range being 10 to 40 feet per minute, with 30 to 60 feet return speed and the high range 20 to 80 feet per minute with a return speed of 60 to 120 feet, while the work is accurate in all directions with .00075 inch per foot.

As regards the cross planing the speed is 15 to 60 feet per minute with 60 feet return speed, while eight table feeds are provided 1-80 in. to 3-5 in., horizontal feeds 1-32 in. to 1½ in., eight vertical feeds 1-216 in. to 1-5 in. and eight side head vertical feeds 1-24 in. to 2 in. Many refinements in design are also included, and for example, the lubrication of the ways is by pressure system with the oil pressure applied directly under the ways so that no uncovered oil pockets are present to collect dust.

Craven Bros., Ltd., have of course long been known for a wide range of machine tools, especially planing machines, boring machines, lathes, as well as cranes of all kinds and testing machines, and at the present time they have in hand many important orders for overseas, while one of their most recent productions is a series of crank and axle turning machines for the motor and aeroplane industries.

NEWS FROM ALL SOURCES.

The Bulgarian Government proposes to increase the import duties on corn from 1½ to 6 levas per 100 kilograms.

During March 1,441 tons of locust beans were exported from Cyprus, reducing the present stock to 20,882 tons.

The Abyssinian Government has under consideration the construction of a new highway about 400 miles long, running from the port of Assab.

Near East Markets

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended April 26:—

Grain.—There is hardly any change to report in the situation. What with the Easter holidays and falling grain prices abroad, our market continued very depressed, the activity being limited to the fulfilment of a few April sales. Arrivals of grain have been running short of requirements, but probably in view of the recent fine weather the quantities will gradually be increased. Owing to the above situation the demand for room on spot steamers was very restricted, and freights consequently fell back. The last rates accepted on the berth were 11s. and 11s. 3d. for the Continent, but it is feared that should grain markets not improve a further drop is inevitable, the more so as the tonnage due to arrive in the Danube is for the most part unprovided for. The demand for U.K. ports has also fallen off. Chartering was also reduced this week; two 6,000 tonners have obtained 14s. 3d. full terms Antwerp/Rotterdam, 14s. 9d. Antwerp/Hamburg range, whilst yesterday 13s 7½d. and 14s. 1½d. respectively were accepted by a 7,000 tonner. A very small amount of business was done at Constantza at rates varying between 9s. and 9s. 6d. for the Continent.

Timber.—In spite of interruption of business by the holidays, several small steamers have been fixed for various Mediterranean destinations. A handy sized Dutch boat obtained £7 10s. for two Syrian ports, whereas a parcel of 200 waggons for one port Greece fetched £6, and a quantity of about 160 waggons for Port Said was placed at £6 5s. per waggon. The demand for Italy is still under the influence of Russian offers, and only small quantities are in the market for various parts; a cargo of 200 waggons for three ports West Italy was combined at £7 7s. 6d. There was a hope that after the holidays a revival of timber business would set in, but so far no news have been received from abroad to confirm this.

Weather and Crops.—The weather has generally been dry, bright, and hot, but the nights were very cool during the first part of the week, and in most parts of the country the ground has ample moisture as a result of the recent abundant rains. Field work has been actively resumed after the Easter holidays and is progressing under favourable conditions.

Sulina.—Bar Depth.—The bar depth remains at 24 feet. Dredging operations, however, have been interrupted throughout the past week by a swell, and as the water has been carrying large quantities of silt, it would be difficult to guarantee that the present depth will be maintained continuously. The minimum depth of water in the river is still 24 feet.

Constantza.—Owing to the holidays only about 2,500 tons of grain arrived this week. Shipments amounted to about 5,000 tons, mostly to the Mediterranean, and three steamers of 6/8,000 tons are now loading at the elevators for the Rotterdam/Hamburg range. Ten vessels loaded over 54,000 tons petroleum products, and two took oil fuel for bunkers.

Bulgarian Report.

Bourgas, April 19.—Owing to the continued low grain prices abroad, very few fresh transactions have been concluded. Between Varna and Bourgas there are about 7,000 tons under shipment, mostly for Antwerp and Rotterdam, the rates accepted being from 9s. 6d. to 10s. 6d. Generally the sky has been overcast, and abundant rains fell on Tuesday and Thursday throughout the country. The condition of the crops continues to be satisfactory.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows for the month ended April 30:—

There has been no influence during the month calculated to stimulate activity, and we have also had to contend with the disturbing effect of the Budget statement and the incidence of the Easter holidays.

Currants.

Greek.—On the whole, business during April followed on practically similar lines to those of the three preceding months. We started well, for the better tone and brighter outlook referred to in the closing days of the previous month were maintained, there being every indication that business would broaden. The adverse factors mentioned above tended to check buying, and operators have not shown any inclination to add to their stocks beyond actual requirements, which is surprising, as there is no good reason why they should be over cautious. Stocks in first hands are extremely moderate, and only small shipments of Australian are afloat to Liverpool. The weight of business actually transacted has been below expectations. Prices on the whole are unchanged, but certain grades have slightly depreciated in value. S.s. Etrib and Bantria arrived with about 250 tons. The principal business was in Vostizza and the lower grades, medium qualities being more difficult to move. Sales were:—Pyrgos, 35s. 0d. to 36s. 6d.; Amalias, 37s. to 38s.; Zante, 37s. to 38s. 6d.; Patras, 30s. to 41s.; Gulf, 30s. to 45s.; Vostizza, 48s. to 58s., few ½-cases 60s. Duty paid clearances from opening of season to date are 11,186 tons. Quotations are:— Pyrgos, 35s. 0d. to 36s.; Amalias and Patras, 37s. to 41s.; Zante, 37s. to 38s. 6d.; Gulf, 30s. to 45s.; Vostizza, 48s. to 58s.

Sultanas.

Smyrna.—There has been no particular alteration in the market conditions, with the exception of a slightly increased interest in colourv fruit. Some business is recorded at 40s. to 45s.; Cretans, 60s.; Greeks, 52s. to 68s.

FOREIGN EXCHANGES.

	Method of Quoting.	Parity of Exchange.	Latest Quotations
Alexandria	Piastre to £	97⅛	97⅛
Amsterdam	Florins to £	12.107	12.07⅞

According to a message from Aden, during the first three months of the year rain fell heavily on 60 consecutive days in the Al Hagaria district of the Yaman, and it has fallen copiously in Gahran. At Taiz the winter has been the coldest in living memory.

Yugoslavia's exports for February amounted in value to 385 million dinars, while the imports totalled 521 million dinars, leaving an adverse trade balance of 136 million dinars, as against one of 16 million dinars in February, 1929.

The Directors of the Peninsular and Oriental Steam Navigation Company announce a dividend at the rate of 5 per cent. per annum on the Preferred stock, less income tax, and a dividend of 5 per cent. (actual) on the Deferred stock of the company, free of income tax, for the six months ended March 31 last. Warrants will be payable on May 16.

The Soviet air service between Moscow and Teheran, via Baku, will now be operating during the whole year, including the winter months (says the *Bank of Russian Trade Review*). In the spring the number of Soviet 'planes which serve this line will be increased to ten. Beginning with the summer months, the air line between Moscow and Baku will be further strengthened and two flights will be made daily.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended April 30:—

Egyptian Futures.

Sakel Contract.—Outside interest in this market continues to be restricted and few features of interest have developed since our last report. Trading throughout the week has been on a somewhat restricted scale, and in the further absence of trade and speculative support values have gradually lost ground, to-night's close showing losses of 21 points for near and 22 to 24 points for more distant positions since last Wednesday's closing rates. The demand for both spot and forward cotton has again fallen to a disappointing level, and trade reports not only indicate a material falling off in volume, but also reveal a shrinkage in margins. The outlook under the latter heading is far from encouraging, as the situation in most of the overseas markets, particularly India, is such that tends to make it improbable that normal trading conditions will be re-established for some little time. With a free run, these factors would probably already have been discounted by a lower price level, but with the Government steadily accumulating the unsold balance of the crop, there is less and less pressure on the local contract position. The available local stock has fallen to a figure that makes trading in old crop positions more and more restricted, and with distant deliveries now standing at a material discount, speculative enterprise in these on the "short" side tends to become confined to unimportant proportions. We understand that the Egyptian Government have intimated that they are willing to sell their cotton at purchase price plus charges, and, as long as they adhere to this policy, we cannot anticipate values in our market falling much below the present level even for new crop months. With this in mind, it might be considered a fair risk to purchase Novembers against sales of October American, especially for those who have decidedly "bearish" views regarding the latter market.

Upper Contract.—We have to report a very quiet week in this department, operations being confined to a limited amount of business in new crop options. The demand from local sources has again been very moderate, but, in spite of this, near cotton has held fairly well, as apart from a limited amount of Pilion there is little in stock that can be placed on the contract without a material sacrifice. The November/October American difference remains at about last week's figure of 169 points, and there is nothing in the outlook to warrant any material change in this premium for the immediate future.

Egyptian Spot.

At the beginning of the week quite a good business took place in Egyptian varieties. This was probably the tail-end of the business for America. It did, however, appear for a short time as if the recent stimulus which the trade here has received had attracted local buying, but during the last day or two these hopes have been dashed, and the demand has fallen away in a remarkable manner.

Sakels.—A good business took place for a short time, particularly in the better qualities at from 150 to 200 on. Less interest has been shown in the medium qualities, which is hardly surprising, as the selection available is now very poor, but a good deal of searching amongst the low qualities has been apparent.

Uppers.—Most of the inquiry for this cotton has been for the better qualities at from 60 to 80 on, and for a few days there was a persistent inquiry for the "very best Uppers obtainable," a somewhat unusual feature these days. Cotton at round about the contract has received less attention, probably owing to the poor selection available, and the low and inferior qualities have been neglected this week.

Pilion.—The better demand referred to in our last report has been continued, but it has only been the low and medium qualities which have benefited. Sales have been moderate.

Nahda has been in fair request at from 10.75d. to 11.75d. Sellers are keener than buyers at the present time, however, and Egypt particularly has been pressing this cotton for sale. We rather gather that results have not been very encouraging up to date.

Maarad and White Cotton.—An improvement in the inquiry of Maarad cotton has been seen, and White cotton appears to be attracting an increased amount of attention.

Tokar Sakel.—Again more interest has been shown, but, so far, it has only been the "off" qualities which have met with favour, and sales have been very moderate.

Sudan Sakel.—A fair business has taken place at steady rate. The demand looks like improving.

C.i.f. business has only been of moderate extent. Forwardings were returned at 6,020 bales Egyptian and 680 bales Sudan. Spot sales have been estimated at 4,000 bales Egyptian and 327 bales Sudan Sakel. Quotations of Sakel show alterations—5 points up to 10 points down. Uppers have been reduced 17 points and Pilion 20 points. F.G.F. Sakel to-day, 14.20d. F.G.F. Upper to-day, 10.32d. F.G.F. Pilion to-day, 10.80d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report as follows for the week ended April 24:—

Since our last report the futures market has only been open on three days, owing to the Easter holidays. Fluctuations have been only rather moderate, the tone of the market being undecided. The week's summary of price movements is as follows:—Sakellaridis: May, 28.01 dollars, 0.02 dollars down; July, 27.70 dollars, 0.20 dollars down; November N.C., 25.97 dollars, 0.10 dollars down; January N.C., 26.27 dollars, 0.15 dollars down. Ashmouni: June, 19.84 dollars, 0.03 dollars down; August, 19.03 dollars, 0.35 dollars down; October N.C., 17.97 dollars, 0.11 dollars down; December N.C., 18.30 dollars, 0.07 dollars down; February N.C., 18.64 dollars, 0.11 dollars down.

Sakel.—Only a limited amount of business has been done during the three sessions of the week. The projected import tax of 7 cents per lb. on long staple cotton imported into America has not yet definitely been adopted, and the danger of damage from the locust invasion, if it has not up to now materialised, is still to be feared. These factors may develop, and our market will feel the corresponding effects. The demand from the trade has been very modest for old crop, and practically nil for new crop. It is expected that the Government will receive in May fairly large quantities of Sakel, as naturally no holder will take the risk of carrying over any cotton which can be tendered, with November standing at more than 2 dollars below May. The quantity of Sakel received by the Government against November, January, and March dockets amounts

to about 750,000 kantars, and, as is well known, it also holds some 230,000 kantars remaining from its Sakel purchases of four years ago, which cotton has just been shipped abroad on consignment. Conditions in the principal textile centres continue to be far from brilliant, and as existing supplies together with the crop of the coming year will be more than sufficient to meet the trade demand, even should it become more active, we maintain the opinion we have expressed for some weeks now, that the market will fluctuate round about present levels, with a rather weak tendency. The Sakel/Uppers new crop straddle (November/October) this week stands at 800 points, against 799 points last week and 1,338 points at this time last year.

Uppers.—The market has been moderately active, with an indifferent tone. Demand from abroad has been insignificant. Against the third April tender, dockets for 36,750 kantars were issued, bringing the total for the month up to 480,500 kantars, and the total of Uppers received by the Government during the present season up to about 800,000 kantars. As regards new crop positions, we think that our market will continue to follow the fluctuations of New York, with a certain narrowing of the straddle between the two market should the proposed tax in America definitely become law.

The Ashmouni/American new crop straddle (October/October) this week stands at 252 points, against 268 points last week and 355 points at this time last year.

The week's receipts amount to 139,754 kantars, against exports 162,678 kantars; the stock in Alexandria stands at 3,984,190 kantars.

Spot.—Our market was closed on Friday and Saturday last for the Easter holidays, and on Monday for the native festival of Shem-el-Nessim. The total turnover for the three remaining sessions amounts to about 5,000 bales, of which we estimate 2,000 bales Sakellaridis, 2,400 bales Ashmouni and Zagora, 300 bales Pilion, and 300 bales other varieties.

Sakellaridis.—There is little to report. Owing to the very small quantity of desirable cotton offering, buyers find great difficulty in fulfilling their commitments. Spot differences remain about unchanged.

Ashmouni and Zagora.—There has been a somewhat easier tendency for these varieties, sellers being anxious to place the remainder of their stocks, but the demand has not been sufficiently brisk to help them to any great extent.

Pilion.—The small demand for the better grades continues, but premiums have not changed from last week.

Other Varieties.—Nahda is still most in favour though the turnover has not been large, and spot differences remain unchanged.

Up-country.—The factories are still working, as ginning must cease on the 30th instant, and fairly large quantities of cotton are arriving in Alexandria daily. The total arrivals for the season will certainly be over 8,000,000 kantars, and if all the cotton still up-country can be ginned and forwarded to Alexandria before the closing of the ginning factories, the figure may even reach 8,150,000 kantars.

Crop, 1930.—Weather conditions have been rather variable this week, but without any damage to the crop. Locusts have appeared more or less everywhere, but, for the time being, have caused little or no real damage.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for April was 73,310 tons.

Notes of the Week.

The Anglo-Egyptian Convention of 1899.

In the negotiations between the Egyptian and British Governments the Anglo-Egyptian Convention of 1899, it is understood, came in for considerable discussion. Clause 13 of the Draft Proposals for an Anglo-Egyptian treaty submitted last year to Mahmoud Pasha read as follows: "While reserving liberty to conclude new conventions in future modifying the Conventions of 1899, the High Contracting Parties agree that the status of the Sudan shall be that resulting from the said Conventions. Accordingly, the Governor-General shall continue to exercise on the joint behalf of the High Contracting Parties the powers conferred upon him by the said Conventions." The Egyptian Delegates took up the position that this Clause was in effect a promise on the part of His Majesty's Government to revert to the position in the Sudan as it was after 1899, and they laid special stress on the preamble of the 1899 Convention, which ran: "Whereas it is desired to give effect to the claims which have accrued to Her Britannic Majesty's Government, by right of conquest, to share in the present settlement and future working and development of the said system of administration and legislation." They argued, from the reference to Great Britain's "sharing" in the administration of the Sudan, that there could have been no intention of excluding Egyptians from that administration, and that, accordingly, Clause 13 of the Draft Proposals entailed the restoration of a joint régime in the Sudan which would make Egypt *secundus inter pares*. The British rejoinder, it may be supposed, will have challenged the legitimacy of extracting clauses from their context and basing far-reaching arguments upon them. The 1899 Convention provided, it is true, for the appointment by Khedivial Decree of a Governor-General nominated by the British Government, but it left that Governor-General a local autocrat and contained no suggestion that any real share in the government of the country would devolve upon Egyptians. For practical purposes Egyptian officials were employed in subordinate posts, in the absence in those early days, it may be supposed, of British officials with the necessary linguistic qualifications. The system of government was essentially British, but the practice of allowing Egypt to finance the Sudan was persisted in, and the argument that it was to Egypt's interest to do so is not one that carries ready conviction to the Egyptian public. When finally the expulsion of Egyptian troops and Egyptian officials from the Sudan was decreed, the step, it is true, was imposed as a penalty for the murder of Sir Lee Stack, but the justification had been provided in the action of the Egyptian officials themselves in promoting sedition in the Sudan. If, therefore, Egypt aspires to a share in the administration of the Sudan, it is more likely to be achieved by the gradual evolution of proved administrators than by the claim to send to the Sudan a quota of officials who are inclined to regard their term of service as banishment from the fleshpots of Egypt.

The Kurds of Iraq.

There will be few outside observers of the progress of Iraq who will be disposed to question the wisdom of the step decided upon by the Cabinet of Nouri Pasha al Said, namely to recognise Kurdish as the official language of the northern liwas. It is intended that a Bill to this effect shall be introduced at the next session of the Majlis. This development not only signifies a recognition of the facts, but is also in accordance with the spirit of the recommendations made by the Commissioners appointed by the League of Nations to determine the boundary between Turkey and Iraq. In certain Arab quarters this concession to Kurdish rights is being deplored, and we notice that Maitre Ali Mahmoud Effendi, of the Nationalist Party, has described it as a false step, tending towards the disunity of Iraq. He even conjured up a time when Kurdish Deputies in the Majlis might not be able to expound their views in Arabic. But the Prime Minister had the honours of the argument when he recalled how Arabs themselves had often asked the Ottoman Government to recognise Arabic as the official language of the Arabic-speaking portions of the Empire. It was, he said, only fair that Kurds should enjoy this privilege, "for we want our brethren to love their Iraqi fatherland and defend it wholeheartedly." It will be interesting to see how this sensible decision is received in Turkey, which has always been suspicious of any sign of recognising Kurdish rights.

A Mission to Iraq.

Iraq may well congratulate herself on having secured the services of Sir Hilton Young as financial adviser for six weeks. Sir Hilton Young, who left London last week for Baghdad, five years ago drew up an admirable Report on the finances of Iraq, and since that time he has spoken in the House of Commons in favour of a generous treat-

Digitized by Google

ment of Iraq by Great Britain. It is all to the good, therefore, that a man in whom both Iraq and Great Britain can have complete trust should have consented to go to Baghdad. There he will not only set himself to the immediate task of making the Budget balance—no easy thing, when prices are very low, agriculturists depressed, and sometimes unable even to pay their taxes—but will also advise on the problems of establishing a national Bank. Whether at the same time he will be asked for his opinion upon the Financial Clauses of the Anglo-Iraqi Agreement is not known, but it is worth recording that, since he pronounced upon these questions five years ago, nothing has yet been done. It is to be hoped, therefore, that his mission will succeed not only in the immediate sense, but will also clear away the financial difficulties of the new Anglo-Iraqi Treaty.

Sir John Hope Simpson.

Owing to an unfortunate lack of co-ordination, the Jewish publicists in Palestine have been attacking the mission which Sir John Hope Simpson left London last week to fulfil, whereas the Jewish Agency in London has declared its full appreciation of the qualifications of this Scottish expert to investigate the problems of immigration, land and development. It is to be hoped, however, that these manifestations of disapproval will melt away in face of Sir John Simpson's manifest impartiality, and that every facility will be afforded him for probing to the bottom of this vexed question. We believe, indeed, that his report on the situation must be accepted as the final word on this particular aspect of the Palestine problem. That, however, is no reason for postponing the attempt to reach now a solution of other aspects of the problem. To think that all parts of the question are of a piece, that nothing can be done until this authoritative verdict on immigration and land is delivered, is absurd, and action, or inaction, in that belief might give rise to misconceptions that the British Government were merely playing for time.

Greek's Centenary Celebrations.

There has been a poetic appropriateness in the spreading by Greece of her Centenary celebrations over a long period. It is, in the first place, a concession to Greek individualism, as it enables various parts of the country to become the centre of attraction for the time being; it also provides more scope for the many-sidedness of the Greek character. The celebrations were inaugurated, very rightly, in the Capital, and whatever form the ceremonies took, whether academic or athletic, they will have carried on traditions for which the modern world is indebted to ancient Greece. The culminating point in the Athens festivities was a procession to the Acropolis and the unfurling of a flag on the Parthenon, which is to remain as a symbol of Hellenic unity. For the outside world nothing in connexion with the celebrations will have signalised more effectually the permanence of the Greek tradition than the Delphic Festival, which included the acting of two plays of Æschylus, the *Suppliants* and *Prometheus*. This festival was inaugurated three years ago, but on the present occasion was carried through, by common consent, with an *éclat* worthy of the occasion. Centenary echoes will continue to be heard in other centres, but the most appropriate celebration of all is to be found in the way that Greece has marked her entry upon a new era by introducing greater political stability than has been experienced for many years and by the inauguration of big productive works as the foundation of material prosperity.

INDIAN NOTES.

A Critical Period.

The trend of events in India since the arrest of Mr. Gandhi has followed generally the lines anticipated in these columns last week. Whatever may happen before these lines appear in print, the initial reactions to the Government of India's action have undoubtedly been favourable, more so probably than even the authorities dared to hope. There have been serious outbreaks at Calcutta and Delhi attended with violence and loss of life, but they were in each case of comparatively brief duration, and there is no reason to suppose that the police authorities have lost control of the situation at either centre. Even the Sholapur tragedy, like the Chauri Chaura incident in 1922, was an isolated outbreak and not connected with any premeditated plan. In other words, history has repeated itself to the letter, and Mr. Gandhi's arrest, as on the previous occasion, has failed to arouse any spontaneous and national movement in protest. The recent representations by the leading Indian commercial associations in Calcutta, Bombay and other centres need not be taken seriously. They know quite well that the violence and lawlessness inspired by Mr. Gandhi, and practised by his followers must, and will, be suppressed. And such being the case they feel that they are secure and will be able to pursue their daily avocations in safety. Confident in this security there is no reason why, they argue, as they argued in 1921-22, they should not be friendly to the extremists by protesting loudly against the Government's action, sure in the knowledge that their representations, in their own interests, will go unheeded. Unfortunately, and therein resides the real gravity of the position which confronts Lord Irwin and his advisers, there is no more reason to hope that either Mr. Gandhi or the other so-called Nationalist leaders will recognise the latest developments as fresh evidence of the patent hypocrisy of the non-violent creed. The undoubted suggestion of commercial influences being at work in the Sholapur affair is an added menace, the weight and significance of which cannot at this stage be estimated, but which it would be folly to ignore. The main point at the moment is that the restraint and statesmanship displayed by Lord Irwin have been rewarded. By holding their hand until now the Government of India have clearly exposed the futility of Mr. Gandhi's movement and his virtual isolation. Even greater credit is due to the authorities who, admirably supported by the non-official population, have faithfully and loyally carried out a policy, the execution of which they knew only too well from bitter experiences might be attended with the most serious consequences to themselves and their own personal interests.

The Two Peshawars.

The events of the past few weeks have shown anew how fatally easy it is for anyone who, like "Padgett, M.P.," has only the most cursory knowledge of conditions

EGYPT: AFTER THE NEGOTIATIONS.

Although the negotiations between the Egyptian and British Governments have not produced an Anglo-Egyptian treaty, it does not necessarily follow that they have served no useful purpose. In the first place the present leaders of the Wafd have been brought into official relations with the Labour Government in Great Britain. For many years representatives of the Wafd have been in touch with members of the Labour Party, when the latter has been in opposition, and there can be little doubt that, as a result, certain expectations were roused in the minds of Egyptians which have been found to be incapable of realisation when the Labour Party is in office. It is idle to inquire to-day on whose shoulders rests the responsibility for any misunderstanding. It may have been that the Wafd's expectations and policy would have remained the same, even if it had not imagined that it could count on the Labour Party's support for extreme claims; it is certain that views regarding Egypt and the Sudan expressed by prominent members of the Labour Party in opposition have found no place in the official policy of the Labour Government as enunciated by Mr. Henderson during the course of the negotiations. To some extent the Egyptian leaders are entitled to regard their disillusionment as a grievance. The long time taken to register failure on a point on which they could have learned before they left Egypt that they must fail may be attributed to their belief—not altogether unnatural in the circumstances—that where unofficial views clash with official views, it is the former that are genuine, while the latter represent concessions to expediency or any of the numerous considerations that hamper a Government's action, and may, therefore, be successfully countered. As a result of the negotiations, these misconceptions, based on unofficial and, in part, underground dealings, have been swept away. The Wafd leaders return to Egypt in the full knowledge that their programme in its entirety is unacceptable to any Party in England, and it will be the first time that they have realised this fact. To their credit it must be said that they have accepted the disappointment in an exemplary manner. Even when every allowance has been made for the exigencies of international comity, the official declaration of the Delegates after the failure of the negotiations contained certain striking passages. "Much as we regret the rupture of the negotiations, we do not in any way regret our visit to England. It has enabled us to establish the happiest of relations with the Foreign Secretary and other members of the British Government and British Parliament. It has, above all, given us an opportunity to appreciate at close range the sterling qualities of the British people, who have not been sparing in their hospitality and friendly sympathy towards us and our country. We have lost the treaty of friendship with Great Britain, but we have won her actual friendship, which is all important."

Between these words and the policy of pin-pricks against which the British Government had to complain when last the Wafd was in power in Egypt there is clearly a gulf which can never be bridged by the men who uttered them. For the present, therefore, there would seem to be no reason to regard the Anglo-Egyptian question too tragically. The differences of opinion between the two countries have been formally enunciated in conference and examined in a rational manner. They centre almost exclusively in the Sudan. The Wafdist leaders claim that the Sudan is a part of Egypt and belongs to her by some inalienable right. At first the claim was supported by insistence upon the complete dependence of Egypt on Nile water and its adequate regulation in the Sudan. When it was made clear beyond possibility of challenge that all Egyptian requirements in regard to the waters of the Nile could be met without possession of the Sudan, just as they would always have to be satisfied without the incorporation in Egypt of Abyssinia or of the head-waters of the White Nile, the ground for the claim to the Sudan was changed, and stress is now laid on the necessity for Egypt to possess the Sudan as overflow territory for her surplus population. To-day, however, this plea can only weaken the Egyptian case, as it conjures up a stage when it is intended to repeat the former exploitation of the Sudan for Egyptian benefit, with the accompanying misery for the Sudanese and the ultimate revolt of the latter against their taskmasters. A world that has accepted the League of Nations and welcomes the principle on which it was based will not endorse the Egyptian view of the rôle reserved for the Sudan, that of an eventual dumping-ground for Egyptians. Egypt in common with many other countries, Great Britain included, has to suffer for past mistakes. Her opportunity in the Sudan was deliberately thrown away fifty years ago, when conditions throughout the whole length of the Nile Valley compelled the intervention of a foreign Power. The time has come when that Power can lay down its task as far as Egypt is concerned and hand over the country to the Egyptian people; the time has not yet come when the Sudan can be handed over to the Sudanese, and there can be no question to-day of a bartering between Egypt and Great Britain of the lives and properties of the heterogeneous races of the Sudan, who have accepted British trusteeship.

There is only one contention which Egypt could advance to-day in the hope of substantiating before world opinion a claim to the Sudan. It would be that British rule entails misgovernment and retrogression, and that the substitution of Egyptian rule is necessary in the cause of good government in the Sudan and of the well-being and progress of the Sudanese. If no Egyptian Government can urge this plea with any confidence of success, common sense would seem to recommend an entirely fresh orientation of the Egyptian attitude towards the Sudan. Until Egypt should recover her independence—the independence offered her last year, accepted by the Wafd this year, but rejected last week by the Egyptian Delegation in London for reasons connected with the Sudan—hostility in Egypt to Great Britain could be considered as human and, therefore, comprehensible. With Egyptian independence once gained, by a judicious compromise between two incompatible ambitions, and the inevitableness of British interest in the Suez Canal at one end of Egypt and in the Sudan at the other confirmed beyond any reasonable prospect of successful challenge, it would be thought that Egyptian policy would aim at winning by friendship what it cannot hope to wrest from Great Britain by any other means. The stern logic of facts decrees that there can never be equality of partnership in the Sudan, until Egypt can produce administrators and officials of a calibre equal to that of the British now filling the positions concerned. To claim equality on any other basis implies ignorance of and indifference to the standard of the present administration, which of themselves further invalidate the Egyptian claim to the Sudan. With the policy of friendship with Great Britain to which the Wafdist Government is now committed through the mouth of its Prime Minister there should be ground for hoping that the Egyptian attitude on the Sudan question will gradually be subjected to reconsideration in the light of the wider knowledge gained by the Egyptian Delegates in London, and that then an Anglo-Egyptian treaty will be concluded.

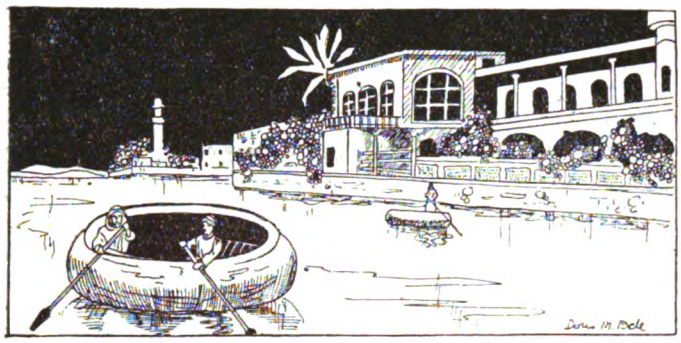
*The Near and Middle East

From Our Own Correspondents.



IRAQ.

Baghdad April 19.

The Cabinet.

Parliament having been prorogued until the autumn, the new Prime Minister, Nouri Pasha as Said, has addressed a letter to King Faisal outlining the policy which his Government proposes to adopt, and suggesting an early dissolution of Parliament in order to obtain the verdict of the nation on the main questions at issue.

The most important task before the Government, Nouri Pasha states, is the drawing up of the new treaty with Great Britain on a basis of complete independence. When the treaty has been negotiated, it will be necessary to obtain the opinion of the nation on its terms by means of new elections; and the question of the national defence law can similarly be put before the country's representatives. The fall in the price of grain has caused a serious economic situation in Iraq, which the Government will try to remedy by effecting drastic cuts in the 1930 Budget; this Budget has not yet been passed by Parliament, but the King is to be asked to sanction a temporary Budget by royal *iradah*—an expedient which has come in for a certain amount of criticism as unconstitutional.

As His British Majesty's Government has agreed that full responsibility for the administration of Iraq should be in the hands of Iraqi officials by 1932, Nouri Pasha proposes to draw up a plan for dispensing gradually with the services of British officials and replacing them by Iraqis, and to "effect a re-shuffle in the establishments of the State" before the nation has to shoulder its new responsibilities. King Faisal has replied briefly to this letter that the Prime Minister's plan of campaign has his full approval.

Nationalist Criticism.

At a meeting of the Nationalist Party, a severe attack on the new Cabinet's proposals was made by Muhammad Jafar Chalabi Abu Timman, formerly Minister of Justice, who denounced Nouri Pasha's suggestions as "ambiguous, and failing to embody any workable scheme for alleviating Iraq's difficulties." The decision of the Cabinet to conciliate Kurdish feeling by treating Kurdish as the official language of the northern liwas was also criticised, on the grounds that it was likely to derogate from Iraqi unity.

Anglo-Iraqi Negotiations.

Conversations on the new Treaty were opened on April 1, and were reported to be characterised by the utmost frankness and cordiality. The Prime Minister has announced that, as soon as the Treaty has been signed, the full text will be published in English and Arabic, but that until then no other announcement will be made unless it is thought desirable to make an interim communication to the public in the form of an agreed *communiqué*. This is very far from giving satisfaction to the Nationalists, who wish for the fullest publicity in order to criticise every stage of the conversations.

An official announcement published on April 8, stating that "the treaty which is being negotiated will come into force upon the admission of Iraq into the League of Nations," has been queried by a vernacular newspaper on the grounds that the fourth Saadun Cabinet had demanded that the treaty should come into force immediately on its ratification. This assertion was contradicted by an official *communiqué*, stating that the authorities "have not come across any document indicating that the Representative of the British Government had undertaken to support any such proposal What is on record is a declaration made by the British Government intimating their intention to support the candidature of Iraq for admission into the League of Nations in 1932, and to enforce the Treaty upon the admission of Iraq into the League of Nations."

British Officials.

With reference to the "bag and baggage" policy in regard to British officials, Nouri Pasha has sent a letter to the Press requesting journalists to refrain from publishing any remarks likely "to injure the feelings or *amour propre* of these officials, especially at a time when they are leaving this country for good, not only in consideration of the duty imposed upon us, but also to disperse any wrong ideas likely to be entertained by these officials as to the gratitude felt by the Iraqi national towards officials who have done good work in the performance of their duties since the early days of the establishment of the Iraqi Government." It is kind of the Pasha to wish to disperse these wrong ideas, and one hopes that he will be successful. [This letter was referred to in our "Notes of the Week" of May 1.—ED.]

Iraq and Palestine.

A deputation, under the presidency of a former Minister of Auqaf, and including among its members Yasin Pasha al Hashimi and the President of the Nationalist Party, is requesting the King, the High Commissioner and the Prime Minister to make representations to King George on behalf of the sixteen Arabs who were sentenced to death for participation in the recent riots in Palestine.

Jaafar Pasha.

Jaafar Pasha al Askari arrived in Baghdad on April 10, and was given a cordial reception by a large number of friends and supporters. The Pasha announced that he was a staunch supporter of conscription for Iraq, and emphasized the importance of her possessing an Iraqi army able to defend her frontiers and enforce internal peace.

Iraq Royal College of Medicine.

On April 4, King Faisal declared open the new buildings of the Iraq Royal College of Medicine, in the grounds of the Royal Hospital. The building consists of laboratories,

***Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.**

Digitized by Google

lecture rooms, and museum, all on modern lines and excellently equipped. If there are those who feel that Iraq has more pressing needs than the establishment of a highly expensive college for the training of twenty-four medical students, they can still note with satisfaction that the improvement of sanitary conditions and the prevention of infant mortality were expressly stated by one of its professors to be the chief aims impressed upon the young doctors. The ceremony was attended by a large gathering, including the High Commissioner and Lady Humphrys. A number of prizes, all it is interesting to note, given by British firms and banks in Baghdad, were presented to the successful students by King Faisal.

The Bada Regulator.

On April 10 King Faisal, attended by the Prime Minister and a number of officials of the Irrigation Department, went to the Muntafiq to open the new Regulator at Bada, one of the most important irrigation projects carried out in Iraq during the last decade. The regulator, which is designed to deal with the flow of water down the Gharraf, was undertaken by a French firm of contractors and carried out by Iraqi labour under the supervision of a Scottish engineer, using English machinery and cranes. It is an interesting fact that the work had to be done in a district entirely lacking both sand and gravel; the materials were, therefore, brought by river and rail no less than 350 miles from Qaraghan in Northern Iraq. The total cost of the regulator was seven lakhs of rupees. The fact that the work was completed sooner than the terms of the contract demanded enabled the Irrigation Department to make use of the new regulator for the first Tigris rise this year, and thus to save 57,000 misharas of crops valued at eight lakhs—more than the cost of the work.

General News.

A balance of over Rs.2,000 remains in the Gertrude Bell Memorial Fund after all the expenses in connexion with the memorial doorway at the Museum have been met. It has been decided to pay this into the fund for organising a School of Archæology in Baghdad, also in memory of Miss Bell, since a proportionate return to subscribers is not practicable.

A party of twenty British pilgrims has arrived in Iraq on a tour of the battle fields and war cemeteries. The arrangements have been made by the St. Barnabas Fund, and the pilgrims are visiting the ancient sites of Iraq as well as Kut, Amara, and Basrah.

Messages of friendship have recently been exchanged between the King of Iraq and Muhammad Nadir Shah, King of Afghanistan.

PALESTINE.

Jerusalem, May 1.

The "Brith Shalom."

The *Brith Shalom* ("The Covenant of Peace," a group of Jewish public workers and intellectuals of some eminence, who for the past three years have been working to find a basis for better relations with the non-Jewish population of Palestine, and braving unpopularity by preaching to their fellow-Jews a moderation in Zionist expression and ambition, and by pointing out that there are such people as Arabs in Palestine)—the *Brith Shalom* has now taken the extreme step (in local Jewish opinion) of sending a petition to the High Commissioner asking him to reprieve the Arabs now under sentence of death for their part in the August murders. This petition was sent in on April 23, before the final dismissal (on April 25) of the appeal on behalf of Urfali, the sole Jew on whom the like sentence has been passed. They base their petition on the obvious ground that no man is wholly responsible for his acts when under the influence of mob mentality; they also submit that the carrying out of the sentences will revive feelings of bitterness now quite noticeably, however slightly, on the wane.

Co-operation with the Arabs.

In view of the findings of the Shaw Commission on the land-settlement problem it is curious to compare the programme proposed by the *Brith Shalom*:—

> The Society considers that the settlement of Jews on land purchased from Arabs should be accompanied by measures in the following revised forms: (a) Those former tenants and squatters who so desire should be provided with small-holdings, the cost being in part provided from the compensation received under the Protection of Tenants Ordinance; (b) landowners who sell part of their land to Jews should be encouraged to cultivate intensively the remainder by proper use of the money received from the sale.

The Society also anticipates the Commission in advocating the adoption of a joint Government and Jewish programme of agricultural research and the publication of the results in both Hebrew and Arabic.

The following small point should not be passed over in silence. In its last collection of Essays just published in support of its standpoint, the *Brith Shalom* has gathered together a long list of incidents from the August riots when Arabs, Christian and Muslim, saved Jews from death, often at the risk of their own lives, and in one case at the cost of the life of a Muslim guardian.

Outburst on Urfali's Sentence.

Local Jewish feeling has been considerably moved by the Court of Appeal's final dismissal of the appeal on behalf of Joseph Urfali, an Oriental Jew convicted of the murder of two Arabs during the attack on Tel Aviv and at a moment when the Arab crowd was already being engaged by armed police. Urfali was convicted on his first trial, and when the appeal automatically followed, his case was sent back for re-trial on the ground that certain evidence in his favour had not been heard. At the re-trial he was again convicted, and the sentence was confirmed on appeal. Thereupon the *Doar ha-Yom*, the Jerusalem daily Hebrew paper which is accumulating fame as the organ of extreme Revisionist expression, relieved itself in the course of a violent leader of what must surely be a record use of the "freedom of the Press" even for this country. Referring to the frequency with which Arabs charged with the August murders have been discharged and the supposedly ill-prepared police evidence in the prosecution of Arabs, the paper argues that "whoever comes to murder us is assured in advance of freedom from blame in the offices of the Government [i.e., the Attorney General, who must decide whether there is a *prima facie* case], of the police, and of the [Criminal] Investigation [Department]; whoever would lay any charge against us is assured in advance of the help of the entire Government machinery." And it concludes that "the entire Jewish people will be horrified on reading the cables from Jerusalem about the harshest perversion of justice which will be put in the same category as the trials of Dreyfus, Halsman and Jacocovski."

An Extraordinary Claim.

Some foolishnesses are best ignored; others, verging on the disastrous, can only be pilloried. On April 27 Mr. M. Ussischkin, Chairman of the Jewish National Fund (the Zionist fund responsible for the major part of the Zionist Organisation's land policy), assembled the local Hebrew authors and journalists and addressed them on current problems, especially those arising out of the Shaw Commission and Findings. In the course of his remarks he said:

> "Here are three Englishmen who say that there is no more room in Palestine for Jews, and one Englishman who says that there is room. And just see which is the greater expert in statistics and calculations [Mr. Snell being a trained economist]. This system [proposed by the majority of the Commission] is catastrophic. We must proclaim persistently that we demand our land back again under our control. If the land is clear of occupants—very good! If there are occupants here, then they must be transferred to any other place there may happen to be, but we must get the land. Ours is an ideal greater and more exalted than the protection of a few hundred thousands of *fellahin*."

The Hebrew Press has passed over this outburst in silence with the exception of the same *Doar-ha-Yom*, which published the address—and there was much more in the same strain—in full. Zionists in general may still lack the courage to say so openly, but they must surely in secret be thankful for the existence of the *Brith Shalom*.

EGYPTIAN GOVERNMENT.

EGYPTIAN MINISTRY OF EDUCATION.

APPLICATIONS are INVITED for ASSISTANT MASTERSHIPS for teaching Commercial Subjects in the Intermediate Schools of Commerce.

Applicants must possess a Commercial University Degree (preferably with honours) and some experience of teaching.

The salary offered is £E450 a year for applicants with at least two years' experience, and £E415 for applicants with less than two years' previous experience.

The appointments are on contract for five years, and renewable at the end of that time.

Full particulars and form of application may be obtained from The Director, Egyptian Education Office, 30, Victoria Street, S.W.1.

EGYPTIAN GOVERNMENT.

EGYPTIAN MINISTRY OF EDUCATION.

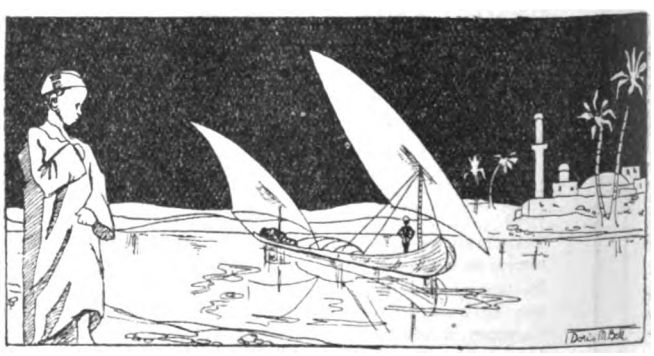
APPLICATIONS are INVITED for ASSISTANT MASTERSHIPS for teaching English in Egyptian Government Secondary Schools and Intermediate Schools of Commerce.

Applicants must either possess a Degree (preferably with Honours) from a University, and (preferably) have had some teaching experience in Secondary Schools, or possess a Teaching Certificate from the Board of Education and have had at least two years' experience as teachers.

The salary offered is £E405 a year for Assistant Masters with a University Degree, but no previous teaching experience, or less than two years' experience, or with a Board of Education Teaching Certificate and between two and five years' teaching experience: and £E450 a year for those with a University Degree who have at least two years' previous experience or the Board of Education Teaching Certificate and at least five years' teaching experience.

The appointments are on contract for five years, and renewable at the end of that time.

Full particulars and form of application may be obtained from The Director, Egyptian Education Office, 30, Victoria Street, London, S.W.1



EGYPT.

Cairo, May 5.

The Negotiations.

The situation with regard to the Anglo-Egyptian Negotiations grows more complex rather than clearer as time goes on. Egypt, as well as England, has been intrigued by the Saleh-el-Dine mystery this week; but a possible explanation is to be sought in the confident assertion of the Egyptian Press that the courier had left by air when, as a matter of fact, he was still in Cairo. What is known is that the Delegation and the Cabinet have been in constant telegraphic communication, and it is inferred here that Nahas Pasha was not satisfied with the Cabinet's

Digitized by Google

telegraphic answer to his question, and, preferred to await the return of his courier before resuming the negotiations. In any case, Saleh-el-Dine left on May 1 and will be in England before this letter. A rather significant fact is that some of the journalists who accompanied the Delegation have begun to drift back to Egypt, notably the representatives of *Al Ahram* and *Al Balagh*. *Al Ahram* is perhaps the most important Arabic paper, and *Al Balagh* is more or less the official organ of the Wafd. Both these correspondents published articles on May 1, and, reading between the lines, one might very easily imagine that they were attempting to pave the way for the unsuccessful return of the Delegation. The owner-proprietor of *Al Yome*, another important Wafdist paper, sent his paper a cable on May 2 couched in the most pessimistic terms and announcing the blackest pessimism in London. He stated that the position was extremely serious, but would not express a definite opinion until he had had time to see some more important people. The Arabic Opposition papers are making much of the fact that Nokrashi Bey, concerning whom questions were asked in the House of Commons recently, although the junior Minister left in Egypt, has been apparently assuming control of matters connected with the negotiations, and that it was he who was received in audience by King Fuad on the arrival of the Delegation's courier.

Egypt's Foreign Trade.

The report on Egypt's external trade for 1929 has just been published and shows that during the year imports exceeded exports by £E2,738,000, whereas during 1928 the exports were the greater by nearly £E4,500,000. The value of exports fell considerably owing to the very low prices for cotton, although actually more cotton was exported last year. Imports were larger every month during 1929 than during the corresponding month in 1928, and although the report states that that was due to merchants getting in supplies in anticipation of the new Customs Tariff, which was imposed in March this year, there must be another explanation. It is inconceivable that merchants should have prepared for the new tariff 15 months in advance, and it is significant that the months which showed the greatest increase were the first three of the year. Great Britain and her Colonies still remain Egypt's largest customer and supplied Egypt with 30½ per cent. of her requirements as against 30 per cent. in 1928. France, Italy and Germany came next in the list with the same percentage as in 1928, namely, 10, 9¾ and 7 respectively. Great Britain also receives by far the larger proportion of the country's exports, although the year 1929 showed a decrease in comparison with 1928. The percentage was 41 in 1928 and 37½ last year. The United States was second with 14 per cent., an advance of 3 per cent. over 1928. The other important consumers of Egyptian goods were France, Italy, Germany and Russia.

The figures for the year 1929 were: imports £E56,090,000; exports £E51,752,000 and re-exports £E1,600,000.

Cannibalism.

A curious incident is reported from an Egyptian village. An old man of 75 years asked his son for Pt.10 (2s.) to buy food. The son refused to give his father a millieme and so the old man rushed at him and during a struggle began to eat his son's fingers. Before they were separated the father had made a quite considerable meal, and two of his son's fingers were very badly damaged. He was sentenced to two months' imprisonment, but in view of his age the sentence was held in abeyance.

ALBANIA.

Tirana, April 30.

Progress in Tirana.

For those who knew Tirana five or six years ago the rapidity with which, both in its outward appearance and in its social life, it is discarding evidence of Turkish rule and influence and approaching to Western standards is an astonishing phenomenon. Wide and well-laid-out boulevards are either in course of construction or projected; and a good overhead electric light system exists. New public buildings, blocks of shops, and houses are springing up everywhere; and if the number of cars continues to increase with the present rapidity, Tirana may eventually be confronted with a traffic problem! There is at present an acute dust problem and the tarring of the streets cannot long be delayed. There are dances and receptions, and indeed an active social life is developing; and one can no longer feel that one is off the beaten track. The veil still lingers, but as often as not its wearer is dressed in a short skirt and flesh-coloured stockings—a curious compromise! European dress and military uniform predominate; and that abomination the felt hat has almost entirely replaced the black Albanian *qeleshea*.

Visit of an Italian Squadron.

During the last few days there has been a series of interesting social events in honour of the officers of the Italian squadron which visited Shen Gjin and Durrës (Durazzo); and Tirana was positively smothered with flags—Albanian and Italian—from Thursday morning until Sunday night. Commanded by Admiral Roberto Monaco, Duke of Longano, in the Andrea Doria, the squadron arrived off Shen Gjin on Thursday morning; and in the afternoon the Admiral and his staff were received in Scutari. On Friday the warships arrived off Durazzo, and in the afternoon the Admiral and his staff were received by the King. The Admiral afterwards declared (to me) that he was most favourably impressed both by His Majesty and by the evident progress being made in the country.

On Saturday morning flags were presented at the Italian Club to the children of the Italian school. The ceremony was attended by members of the Cabinet and other prominent Albanians, the Italian Minister and First Secretary, Generals Pariani and Ghilardi, the Duke of Longano and his staff, and some forty wives of Italian officials. The Admiral and other senior officers of the squadron afterwards lunched with His Majesty at the Palace. In the afternoon there was a most successful *thé dansant* at the Italian Club. In the evening the Admiral and his staff were entertained to dinner by the Albanian Cabinet at the Hotel Continental, and afterwards attended a ball given on behalf of the Government by M. Raouf Fitzo (the Foreign Minister) and Mme. Fitzo. It was a brilliant scene and a brilliant success; and M. Rrok Stani and those who assisted him to organise it must be congratulated. The majority of the Diplomatic Corps, including the British, Italian, Yugoslav, and American Ministers, the principal military officers, including Generals Aranitasi, Myrdach, Ghilardi, Pariani, and Sir Jocelyn Percy, and a large number of Albanian officials and their womenfolk attended.

On Sunday afternoon everyone of note in Tirana was invited to the Andrea Doria at Durazzo; and in the evening a ball was given at the Italian Legation, which was no less well attended than that of the previous night.

Agrarian Reforms.

The most outstanding political event of the last few months has been the passage through Parliament of the Agrarian Reform Laws, which were finally accepted on April 14 after much debate. Briefly, their main provisions are as follows:—Of the property of each landlord, 40

SITUATION VACANT.

THE ROYAL ASIATIC SOCIETY invites applications for the post of SECRETARY and LIBRARIAN vacant in the early autumn. The stipend commences at £200. The duties include editing the Journal and Publications, attending meetings, conducting the Society's correspondence and supervising the Library. A knowledge of French and German is desirable. Applications to be sent to the Secretary, 74, Grosvenor Street, not later than May 31st.

Digitized by Google

hectares are left intact. Of the remainder, one-third is expropriated by the Government, without exception, at 20 gold francs per hectare, while two-thirds remain in the possession of the landlord, provided that he participates with the tenant in the expense of development, cultivation, irrigation, and so forth, in accordance with definite regulations. Provision is also made for the formation of an Agricultural Bank with a national capital of 5,000,000 gold francs, which will be secured by additional taxes on alcohol, patents, rents, etc. Every public servant (including the King) will, within the next two years, purchase shares to the amount of one month's salary, and shares will also be issued in return for additional tithe.

The Budget has been under discussion during the last few days and will probably be published before the end of the week.

Albania's Relations with her Neighbours.

Albania has suffered grievously during the last few years from the circulation of false reports which have given a wholly wrong impression abroad of conditions in the country. The reports which have recently circulated to the effect that the King was seriously ill, and that he was being poisoned, may be given as an example. His Majesty seems to be in perfect health, although (not unnaturally, since his working day averages 18 hours) he appears tired. Perhaps these wild reports are circulated for the purpose of creating a belief that others, which actually are less untrue, are equally false. For example, the report that certain elements in Yugoslavia were preparing, some weeks ago, for an incursion into Albania, seems to have been correct. But on or about April 1 the Yugoslav Government issued orders to the frontier officials to prevent these preparations from being continued. Indeed, relations between the two countries are satisfactory, and the Yugoslav Government appears anxious to avoid any incident which should alter this situation.

A short time ago the Greek Press again published the hardy annual report that the Orthodox Christians of Albania are being persecuted. It is indeed astonishing that even the Greeks themselves should not have grown weary of this *canard*. Moreover, the occasion was singularly inopportune, since four of the six Ministers of the present Cabinet (including the Prime Minister) are Christians, and since the very liberal Agrarian Reform Laws—which are greatly to the advantage of the Christians—have been accepted. The Albanian newspaper *Ora* (the proprietor of which, M. Chekrezi, is himself a Christian) published an indignant reply to the Greek Press to the above effect.

The newly-appointed United States Minister to Albania, Mr. Herman Bernstein, and the new French Minister, Baron le Grand, both presented their credentials to the King on April 28. Mr. Bernstein, who is well known in journalistic circles, arrived in Albania on April 23; and three days later he told me that his first impressions of Albania have been very favourable.

THE "BRITH SHALOM" PROGRAMME.

We have received a copy of the programme of the *Brith Shalom* Society, for "Co-operation between Jews and Arabs." It is as follows:—

1. The policy of the *Brith Shalom* Society is based on the programme of Zionism, as recognised in the Balfour Declaration and in the Mandate, for the constitution of a national home in Palestine for the Jewish people.

2. The policy of the Society is also based on the resolution passed by the Zionist Congress of 1921, which "solemnly declared the desire of the Jewish people to live with the Arab people in relations of fraternity and mutual respect, and, together with the Arab people, to develop the homeland common to both into a prosperous community which would ensure the growth of both peoples."

3. The Society considers that Palestine should be neither a Jewish State nor an Arab State, but a bi-racial State in which Jews and Arabs should enjoy equal civil, political, and social rights, without distinction between majority and minority. The two peoples should each be free in the administration of their respective domestic affairs but united in their common interests.

4. The Society considers that one of the conditions essential for the realisation of the aim of Zionism is an agreement between Jews and Arabs on the political relations in future in the Palestine that is to be built and on the co-operation between them while the creation of the common country is still in process.

5. The Society considers that the creation of a Palestinian bi-racial State will be achieved only by a proper development of both peoples: by Jewish immigration on one hand and, on the other, by an improvement in the economic and cultural conditions of the Arabs. Co-operation of Jews and Arabs is necessary in all matters pertaining to the common homeland, and instead of racial antagonism, a Palestinian policy should be adopted.

6. The Society supports the gradual development of self-governing institutions in Palestine, with a view to training its citizens in the responsibilities of self-government and enabling the common interests of both Jews and Arabs to be represented in the administration of the country.

7. The Society advocates the inclusion of Palestinian members on the advisory boards attached to Departments of the Government, such as the Railway Board, the Harbour Board, the Road Board, and the Standing Committee for Commerce and Industry.

8. The Society also favours the development of municipal government in mixed Jewish and Arab areas. It considers that the municipal laws and the methods of municipal administration should be revised at an early date.

9. The Society considers that the needs of both Jewish and Arab taxpayers are inadequately protected in the present system of legislation. It considers that the legislature of Palestine should gradually be put on a representative basis, provided that no step be taken which will prevent the execution of all the provisions of the Mandate.

10. The Society welcomes the recognition by the Jewish Agency of the essential need for the development of friendly relations between Jews and Arabs.

11. The Society advocates an increase of agricultural education for both Jews and Arabs, the provision of agricultural credit facilities for both Jews and Arabs, an extension of the Co-operative Credit Society movement to Arab areas, a reduction in the incidence of taxation in agricultural areas, both Jewish and Arab, and the adoption of a joint Government and Jewish programme of agricultural research and the publication of the results in both Hebrew and Arabic.

12. The Society considers that the settlement of Jews on land purchased from Arabs should be accompanied by measures in the following revised forms:—

(*a*) Those former tenants and squatters who so desire should be provided with small holdings, the cost being in part provided from the compensation received under the Protection of Tenants Ordinance.

(*b*) Land-owners who sell part of their land to Jews should be encouraged to cultivate intensively the remainder by proper use of the money received from the sale.

13. The Society advocates the re-establishment of a Government Department of Commerce and Industry, the establishment of a joint federation of Jewish and Arab manufacturers, and the re-establishment of joint Jewish and Arab Chambers of Commerce in Jaffa and Haifa. It suggests that the campaign for the use of Palestinian products should advocate the purchase of both Jewish and Arab goods in both Jewish and Arab circles.

14. The Society supports the policy of the General Federation of Jewish Labour in the formation of joint Jewish and Arab Trade Unions. The Society considers that the total numbers of workmen and employees of each community employed by Government should be approximately proportional to the size of the community. The Society opposes the exclusion of Jewish labour from Jewish enterprises. It advocates the adoption of a moderate minimum wage to protect organised labour, both Jewish and Arab, from competition by unorganised labour.

15. The Society advocates a tariff policy which will take into consideration the needs of nascent industry, the effects on the cost of living of high tariffs on imported manufactured goods and the effects on the agricultural communities of low tariffs on imported agricultural raw materials.

16. The Society proposes that preventive health services in both Jewish and Arab areas should be maintained by the Government. It advocates the gradual devolution of hospital services on to local authorities.

17. The Society advocates the maintenance of Jewish bodies under Government supervision and the gradual establishment of a similar system for Arab education. The Society considers that, at the same time, greater financial and administrative responsibilities should be given to local education committees. The Society proposes that an advisory board of Jews and Arabs be attached to the Government Department of Education.

18. The Society proposes an increase in the study of Arabic in Hebrew schools and the provision of facilities for the acquisition of the knowledge of Hebrew by Arabs. The Society suggests, that an institute should be established for training Jewish and Arab candidates for Government employment, employing English, Arabic, and Hebrew as languages of instruction for all students.

Dr. Frederick Grenfell Baker, whose death occurred last week, was travelling physician to Sir Richard Burton during the three and a half years preceding the famous explorer's death. He was the founder of the Burton National Memorial Fund and was the author of special biographical sketches of Burton.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, April 24.

Troubled India.

There was, one supposes, a tacit understanding between the Parties in the House of Commons that there should not be another debate on the situation in India until after the publication of the Statutory Commission's Report. It was because the news coming from India was so exceedingly grave, that Mr. Fenner Brockway moved the adjournment of the House on that Thursday before Easter. That was last mail-day. For the same reason—because the situation had become so grave—I felt I must brush aside my ordinary duty to chronicle the happenings of the week, and must think about fundamentals. The news since, as from Chittagong, has been even more grave; so there is the same reason to think of fundamentals. We must all think of fundamentals now. What exactly has happened in a short week—how does it import to know that? Whether the rioting was here or there; whether twenty persons were killed or thirty, or how many—what does it import to know that? Aand the cables will have told you that.

Mr. Lansbury's Speech.

This was in my newspaper two days ago: "The situation in India was exceedingly difficult, declared Mr. George Lansbury in a speech at Bournemouth, when he emphasised that the Labourites' aim was Dominion Status 'whenever we are able to grant it safely to the Indian people.' He added that Lord Irwin and Mr. Wedgwood Benn, who were bearing the burden to-day, had, above any other two men in the world, the best, noblest, and most honest feelings towards the people of India, and, if given the chance, would do all that was possible to help Indians to realise the things uppermost in their hearts. Meantime Britain was faced with a situation which no Government could ignore, and these two men, who were dealing with the situation in a manful fashion, deserved the sympathy and encouragement of all."

The Truth.

We must look hard at things until, Heaven helping us, we see the truth. Mr. Lansbury spoke of the "things uppermost in the hearts of the Indians." The thing uppermost in the heart of a man may be clear to him, or the thing or the things may be such as those

> Blank misgivings of a creature
> Moving about in worlds not realised.

The thing uppermost in the hearts of two Indians—Mr. Gandhi, Pandit Jawaharlal Nehru—is a thing clear to them. It is that the British-Indian connexion is a thing to end, to get rid of, to escape from as an infection, a poison. They hate it. Mr. Gandhi hates it, because he is your born conspirator, and it is the nature of such men to hate. Pandit Jawaharlal Nehru, a man with a face that makes you thing of a saint, is a pure-souled patriot; there is a great deal in him of the spirit of Joan of Arc. His hatred is of a very different kind from Gandhi's. It is wrong even to call it hatred. The two men are alike, however, in this: that they are clear about the thing uppermost in their hearts. Their followers are clear also.

Practical Men.

The practical men, such as the Indian judge whom I remember quoting about eleven months ago, are just as clear, or are even clearer in their thinking. So are those Princes whom from time to time I have quoted. These all see that for as long as, even longer than, any of us can foresee, the British-Indian connexion must continue. They see with equal clearness, or most of them do—that judge certainly did—that an India as *one* Dominion, with as large a measure of self-government as Canada or Australia, is impossible. When they say "impossible," they mean "impossible." It is therefore, if those men are right, no use whatever to declare that Dominion Status for British India is the goal of Great Britain's policy in India, or even to say that the aim "is Dominion Status, whenever we are able to grant it safely." It could never be granted safely, and no good can be served by politicians' ignoring that fact. A Napoleon could govern most of Europe as one political unit; but who would dream of suggesting, Napoleon being dead, that as much as that of Europe should be made *one* Dominion?

The Unrealised World.

Those Indian politicians—there are many of them—who believe in Dominion Status as a possibility for India are moving about in a world unrealised, and all those in Great Britain, who sympathise with them, are moving about in the same world. India is really a "creature" full of "misgivings." What the misgivings are about is the point that it is most essential to understand. If you are intimately concerned with a creature full of misgivings, whom you see moving about as in somnambulism, you will not expect it to be able itself to lay all its troubles bare to you? You will not expect the trouble to be laid bare to you by a small body of members of two Houses of Parliament, sent out to investigate and report? You will not expect Viceroy or Secretary of State to lay all the trouble bare to you? They will certainly not be able to, and one thing that will prevent their seeing the trouble themselves—they must see it before ever they could show it to you—is that they will not think of tracing the trouble back to its beginning in the mistakes of the past.

The Mistakes of the Past.

Did Sir John Simon and his colleagues ask when the political unrest in India began, and to what mistakes committed in the nineteenth century we ought to attribute the beginning? But how if the only safe guide now (he *is* the only safe one) would be that unconventional statesman who should say: "Unless you are prepared to go back, and undo the mistakes of the past, you will never heal the political unrest in India"? So many seem ready to assume that the grant now of a Constitution for India that should be a sufficient advance on the present one, would end the political unrest. But what if the unrest had its beginnings in the granting of that measure of parliamentary government that the nineteenth century saw given to India? Then the further measure of parliamentary government granted as what History knows as the Minto-Morley Reforms could only have been expected to increase the political unrest? It did increase, you will remember, after they were granted. Most decidedly did it. And the Montagu-Chelmsford Reforms could only be expected to increase the political unrest. Did it increase after they were granted, Very, very much so. And what History will know as the Irwin-Benn Reforms, if they are not prevented from coming into being, will increase the political unrest? I should expect them to; you would find that they would. Yet there are men who think that along those lines you will reach peace.

The British-Indian connexion has lasted three hundred years. It may be made to last another three hundred. But it will not, unless the foundation is laid soon of the proper, new order. It will survive anything but our failure to lay that foundation; it will not survive—not for long—if the new Constitution is one that will only drive the roots of the now fifty-year-old political unrest deeper still.

The King has been pleased to approve the appointment of Mr. William David Russell Prentice, C.I.E., Indian Civil Service, Chief Secretary to the Government of Bengal, to be a Member of the Executive Council of the Governor of Bengal in the place of Mr. Arthur Norman Moberly, C.I.E., Indian Civil Service, who has requested permission, for private reasons, to resign his seat with effect from April 28, 1930.

THE PROBLEM OF INDIAN MINORITIES.

The Minute of Dissent, which was appended to the Report of the Indian Central Committee by Sir Zulfiqar Ali Khan and Dr. A. M. Suhrawardy, was mentioned in a recent issue of THE NEAR EAST AND INDIA. It has since been followed up by the publication of a Supplementary Note to the Report by Dr. Suhrawardy. In the Minute very strong expression was given to the views of the Muslims on the question of constitutional development, with particular reference to the thorny problem of communal representation. The authors insisted, in the most emphatic terms, that the existing system of separate electorates for Muslims must be maintained under any scheme of constitutional advance. This argument is elaborated, and re-stated with even added emphasis, by Dr. Suhrawardy in his supplementary note. And he does not restrict himself to the Muslim community. His contention is that all minorities must be protected against the results of a possible transference of power from the British bureaucracy to a majority which in practice would become "a narrow and selfish oligarchy, cruel, hostile, tyrannical, arrogant, domineering, proud, haughty, and unsympathetic to the hopes and aspiration of the minorities."

The problem of the minorities is, Dr. Suhrawardy maintains, the key problem of the situation, upon a satisfactory solution of which the further political advancement of India depends. In the case of the depressed classes, no less than in that of the Muslims, separate electorates are in his view imperative. "Except through the door of separate electorates" it is impossible, in his opinion, to ensure the representation of the depressed classes by men truly representative of those classes. "To give them representation, however large, in a joint electorate is to take away with the left hand what is given with the right." For under any such scheme the members of the depressed classes who would be returned would be, he is convinced, nothing but "the puppets and nominees and abject slaves of the high-caste Hindu majority and their subservient tools." Nor would he accept nomination. He admits that nomination by an impartial and neutral authority might work satisfactorily. But he foresees the likelihood of power becoming centred in the high-caste Hindus, which would make nomination impossible.

If Dr. Suhrawardy is emphatic regarding the depressed classes, he is naturally even stronger with reference to his own community—the Muslims. He sets forth in considerable detail "the wrongs and injuries and the sorrows and sufferings of the Indian Muslims under British rule." And he quotes the late Sir William Hunter's book, "The Indian Mussalmans," in support of his contentions. To his catalogue of these grievances he adds "the annulment of the partition of Bengal and the manner of that annulment which still rankles in the breasts of Muslims." Then as to the reforms, these, counting from the Morley-Minto scheme, are, Dr. Suhrawardy says, among the most irritating causes of Muslim unrest and discontent. "The history of the reforms is the history of Muslim anxieties and suspense, Muslim apprehensions and suspicions and Muslim doubts and fears." The Muslims are distracted, he says, by "the wavering and vacillating policy of Viceroys and Secretaries of State reflecting the changing policy of His Majesty's Government." And he is convinced that nothing but a definite guarantee that the system of separate electorates will be continued will allay their fears and suspicions. If this safeguard is not guaranteed to them, there is the risk of their joining hands with the Hindu Extremists, and demanding independence, which "would give the natural laws of the struggle for existence and the survival of the fittest a chance to find a lasting and abiding solution. The Hindu threat of civil disobedience may be met by Muslim military aggression."

It is unnecessary to follow Dr. Suhrawardy through all the arguments which he brings forward in support of his case. It will be enough to say that they all go to show what everybody who is acquainted with India knows already, namely, that Hindus and Muslims cannot unite to form one nation. This fact is candidly recognised by Dr. Suhrawardy. It is well expressed in one of the numerous quotations which he gives, and which he approves: "Within the frontiers of India live two nations, the Muslim and the Hindu, which entertain for each other the same feelings as do, for instance, the French and Germans, and who differ from one another more profoundly than do any two nations in Europe." That is the simple truth and there is no escape from it. There is much, therefore, to be said in favour of the system of communal representation, although it may not be strictly in accord with Western democratic principles. The Hindus are vehemently opposed to it. But they are the larger of the two nations, and they have everything to gain and nothing to lose from joint electorates.

During the last few years they have carried on a strenuous campaign against separate electorates; and, as was made clear in the report of the Indian Central Committee, their leaders would force joint electorates on the Muslims and other minorities. They regard joint electorates as the very essence of democracy. On the other hand, Dr. Suhrawardy asserts that the demand for communal representation "is universal and unanimous" among the Muslims. Without it "the reforms are to them a hollow name and a signal for strife. The insistence of the Hindu community for the immediate abolition of separate electorates in the teeth of Muslim opposition has aroused Muslim suspicions and reasonable apprehensions in their minds as to the sinister motive behind this agitation. It does not lie in the mouth of caste-ridden Hindus, who treat nearly 60 million human beings of their own faith as worse than pariah dogs, to talk glibly of democracy and of democratic ideals. It is an illustration of the mockery of words and the tyranny of phrases for a high-caste Hindu to use the catchwords of democracy. Modern Hinduism is a negation and denial of the principles of democracy."

PRISON ADMINISTRATION IN INDIA.

The treatment of prisoners in Indian jails has been before the public on several occasions recently. Special committees have reported on prison administration in the Punjab, Bengal and the United Provinces, and the Government of India in February last announced several important changes in the prison rules. Although it is confined mainly to conditions in his own province, special interest attaches to the account given by Lieutenant-Colonel W. G. Hamilton, late Inspector-General of Prisons, Bengal, at a recent meeting of the East India Association, of the improvements made in prison administration since the issue of the Report of the India Prison Committee, 1929, presided over by Sir Alexander Cardew.

Colonel Hamilton said that it was unfortunate that the report was published at a time of severe financial stringency and political unrest, which prevented the Government from taking up any reforms which were not absolutely necessary. Owing to want of funds any far-reaching scheme of reforms, such as the increase of cell accommodation or other building operations were out of the question and the work had to be carried out piecemeal. Nonetheless, thanks largely to the support of Lord Lytton, progress had been made in many directions and on the whole the result had not been unsatisfactory. During the past year the question of the alleged racial discrimination in favour of European prisoners had assumed an acute form and a few weeks ago the Government of India had ordered a new classification of various grades of prisoners in Indian jails which would, it was hoped, end a controversy which had given rise to considerable bitterness. There was, for example, no official recognition of the so-called "political prisoner," all being classed either as casuals or habituals. The term "political prisoner" was used by the general public when they

Digitized by Google

referred to *detenus*, who were, of course, treated under special regulations and are not, strictly speaking, prisoners in the ordinary sense. If the term were officially recognised it would, in the lecturer's opinion, lead to endless trouble.

Lord Lytton, who presided, after remarking that the financial difficulty was the chief cause of the failure of the Montford reforms themselves, said that in material respects he had nonetheless found that Indian prisons compared very favourably with prisons in this country.

THE SIMON REPORT.

Reports current in London over the week-end that the Report of the Statutory Commission might be available earlier than originally anticipated were confirmed on Monday, when Mr. Wedgwood Benn announced in the House of Commons that while the actual date of publication, which would take place simultaneously here and in India, must depend upon the completion of the necessary arrangements, the anticipated dates in the case of the two volumes, would be June 10 and June 24 respectively. The first part would be a general survey of the problem and the second volume would embody the Commission's recommendations.

CRIME IN INDIA.*

Sir Cecil Walsh has followed up his two previous books on Indian crime with a third volume of a fascination equally grim. Of the actual stories retailed, it may be enough to say that they are luridly interesting. Sir Cecil Walsh is careful to explain that these stories do not prove that India is exceptionally criminal. In organised crime, as he points out, it is probably far behind Chicago or New York. But the English reader cannot but reflect that in those cities, as in the countries of Europe, the crime is organised, that is, it is the work of the criminal classes: whereas in India the crimes are, at least in the stories given, committed by the ordinary non-criminal rustic population, where they are not the work of the police, who are supposed to be the public guardians.

Interesting as the stories are, the most valuable portion of the book is Sir Cecil Walsh's Introduction on the state of the law in India. He was not a trained bureaucrat of the Civil Service but a Barrister Judge. This leaves obvious blanks in his knowledge, which he readily acknowledges, but it gives special value to some of his views: and particularly the one that the Indianisation of the Judicial Service is leading to a further deterioration in a department already defective: and this not on account of any increase of dishonesty, but of a general lack of discernment of the issues, and a want of moral courage in drawing conclusions. Of the Indian bar and of the skill of Indian medical officers in criminal cases he has the lowest opinion. He fully appreciates the difficulties of the police, and refrains from any abuse of them, but he clearly regards the mass of them as capable of any enormity. In short, he comes to the same disquieting conclusion as Colonel Aubrey O'Brien that "Crime is in a very shocking state in India as a whole." Sir Cecil Walsh quotes the opinion of Sir Harcourt Butler that the Government is saved ten thousand troops in each Province by the High Court. This may be admitted, but there is another side to the question. Sir Cecil Walsh himself points out the difficulties caused by the number of High Courts in India and their highly various interpretations even of a criminal code which is admittedly excellent in itself. Moreover, Sir Cecil Walsh, who is clearly neither a weak nor a competent judge, indicates that he and his colleague on the Appellate Bench felt obliged to upset convictions in cases in which guilt was reasonably clear if not proved beyond doubt, and that in one case did so on an entirely mistaken point. Small wonder that the Police, in his words, "regard the Judge as a dunder-headed pedant," and seek to pad out their case to meet his supposed requirements.

Most people will agree with the author's view that the accused ought to be allowed to be fully examined, though the results to the accused are likely to be more often harmful than has been found in England. The stories which illustrate the ill-feeling between Indian States and the manner in which they seize each other's officers and property are especially illuminating. Taken as a whole, the book is a further proof of the fact that India cannot stand by itself without the European element in its administration. It is well suited for the perusal of many classes of readers.

*"Crime in India." (London: Benn. 10s. 6d.)

INDIAN NOTES

(Continued from page 534.)

in India to run away with a grossly exaggerated idea of the importance or significance of particular incidents. Although the gravity of the situation which threatened to develop in the North-West Frontier Province, and still constitutes a formidable menace to the safety of the Punjab, cannot be ignored, the publicity recently given to the military occupation of Peshawar is a notable instance in point. A correspondent, who was a pilot in the Royal Air Force serving on the frontier during the War, is anxious that the distinction should be made clear between the walled native city, where no Europeans live and has always been a hotbed of intrigue and sedition, and the neighbouring big military cantonment of the same name, which is the strongly fortified base for defence of the Khyber Pass. The old city is governed by Indian magistrates and normally looks wholly after its own affairs. In its labyrinthine bazaars it has been easy for agitators to hide themselves away, and only a military raid such as was recently made could remove them from the scene of their nefarious activities. But that is a very different story from the vague impression that the neighbouring military post had been temporarily abandoned. It is always held in force as part of our traditional policy *vis-à-vis* Afghanistan, which remains unaffected by the new developments.

British Films in India.

We hope that British film producers will pay due heed to the appeal by Sir Atul Chatterjee for "more British films of the right character" for India. If, as the Lord Mayor of London, who presided at the Mansion House meeting last week when the appeal was made, averred, the time has arrived for British ideals, culture and trade to be fostered through the medium of the films, it is particularly unfortunate that India should be flooded with a high percentage of films giving such a false impression of our ideals, moral code and manner of living generally. Although India has its own very flourishing film industry, turning out probably as many feet of films as the manufacturers in this country, cinemas throughout the Dependency are practically all under monopoly contract, and the highly efficient and enterprising American agents have no difficulty in disposing of their productions to Indian purchasers. The Government of India are fully active to the importance of the educational aspect of the film industry and, as the High Commissioner pointed out, the various local governments have had films made for display in towns and villages with a view to instruction in such matters as health propaganda, sanitation and the development of agriculture. The State Railways are also carrying on very useful and effective propaganda by the same medium. On the other hand, incalculable harm is being done to British prestige by films of American origin and conception mistakenly construed by the Eastern mind as microcosms of social life in the West.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

THE LAND IN PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Four hundred years before the Great War, Palestine was conquered by the Sultan Selim I, and since then the Arabs have been in undisturbed possession of their lands. This period ought to be long enough to give an undisputed right to anything, so it is not necessary to go into what there was before then. At that time the law of Turkey was introduced into the country. This law was based on the Muhammadan Sacred Law, and so far as the land is concerned Palestine was divided into six *Timars* (fiefs). After having taken Syria (including Palestine), the Sultan had the choice between two articles of the Muhammadan Sacred Law—the one dividing the country among the Muslim soldiers, or the other confirming the inhabitants in the occupation of their lands and subjecting them to capitations and land tax. He decided on this latter course. Before leaving Syria he had the Cadaster made and the *Timars* (feudal chiefs) were put in charge of the six districts assigned to them, i.e., Jerusalem, Gaza, Safed, Nablus, Ajloun, and Lajoun, and they issued title deeds in accordance with the Cadaster.

Such were the rights, with modifications in detail, which the people of Palestine enjoyed from the time of Sultan Selim up to the Mandate. The three most important articles of the Land Law, as it existed, with modifications, at the later period were the article which dealt with sales, the Article which deals with *Mahlul* (land become vacant by the death of the owner without heirs, his co-villagers have preferential rights to it) and the Article which deals with *Mevat* (fallow land which the inhabitants of the nearest village have a preferential right to cultivate).

Under the terms of the Mandate, the Mandatory Power is responsible for promoting the establishment in Palestine of a National Home for the Jewish people, it being clearly understood that nothing shall be done which might prejudice the civil and religious rights of existing non-Jewish communities in Palestine.

Since the promulgation of the Mandate a good deal has been written and said about the Jewish National Home, but no analysis of the rights of the other communities referred to appears to have been made. These remarks are, therefore, more or less confined to the National Home and its relation to the other rights that might be affected by it. Apart from the religious rights belonging to all communities, there are hardly any other rights than those involved in the ownership of land, and as these belong for the most part to the native Arabs, the whole matter resolves itself into one of land tenure as between Jews and Arabs.

The first act of the Mandatory Power was to deal with the Article of the code relating to sales. As soon as the Mandate became known there was a stir among capitalists to buy land, and in order to stay this, on November 18, 1918, a Proclamation was issued, prohibiting dealings in land. This had the effect of preventing the people from selling their lands at lucrative prices to outsiders, and of creating a restriction in the market.

The second Act was an Ordinance in October, 1920, to abolish the rights of the inhabitants in regard to *Mahlul* land: while its third Act was likewise by an Ordinance, in February 1921, to abolish their rights in regard to *Mevat* land.

It then permitted transactions in land, but by that time there were no purchasers left except the Jewish Societies; all the others had cried off, as, in view of the terms of the Mandate, they were afraid that, if they bought land, they would be expropriated under the terms of the law for that purpose.

Subsequently the provisions of the law in respect of seeing that a seller retained for himself sufficient land for his maintenance were not observed.

The result of this combination of events is that there are 179,600 families, with an average of five persons, at present in Palestine, and as the total area of the country is 22,000 square kilometres, this would give 40 acres to each family, whereas, according to the opinion of competent authorities, at least 50 acres is required in order to maintain a family; so that the country has already got more inhabitants than it can support.—I am, etc.,

F. ONGLEY.

NEWS IN BRIEF.

An Indian Muslim deputation is shortly expected in Palestine to study the situation and support the Arab cause.

Sesostris Sidarouss Bey, the new Egyptian Minister to Yugoslavia, has presented his Letters of Credence to King Alexander.

The next conference of the Little Entente (Roumania, Czechoslovakia, and Yugoslavia) will be held on June 25 at Tatra, Czechoslovakia.

Prince Firouz Mirza Firouz, the Nosrat ed Dawleh, ex-Finance Minister in Persia, has been sentenced to four months' imprisonment and the payment of a fine of 5,800 tomans (£1,100) and been deprived of his political rights for taking a bribe of £387 while Minister.

It is reported that the Arab population of Hebron will be fined £10,000, and the inhabitants of neighbouring villages £6,000 for their share in the riots last August, when the Jewish quarter of Hebron was pillaged and many Jews were massacred. The fines will be payable within a period of five years and imposed under the Collective Punishments Ordinance.

The death occurred in New York last week of Mrs. Nathan Straus, wife of the famous philanthropist, at the age of 77. A native of Germany, whose maiden name was Lina Guthez, she married Mr. Straus in the United States when she was 22. Last year she and her husband gave to the Hadassah medical organisation in Jerusalem the health centre which was opened by Sir John Chancellor, the High Commissioner.

Mr. A. P. H. Hotz, O.B.E., who died recently at Cologne, Geneva, had charge of British interests during the War and for some little time afterwards in Beyrout, where he was the Dutch Consul-General. He founded, when quite a young man, an Anglo-Dutch house of business in Persia, with branches all over the country, which gave employment to many Englishmen as well as Dutchmen. Later he entered the Dutch Consular Service, and during the War was in charge of all the Entente interests at Beyrout, and after the War had charge, in addition, of the interests of all the ex-enemy countries. He was a member of the Royal Geographical Society for many years, and made a valuable gift of books to the Society. He had a large library of books on Eastern travel, and published several works relating to Persia in Dutch.

The death occurred on May 5 at Lymington, Hampshire, of Admiral Sir Sackville Hamilton Carden, who was in command of the naval operations at the opening of the Dardanelles campaign and the destruction of the forts at the entrance, but had to give up his command through being incapacitated by illness. Sir Sackville Carden first saw active service as a Lieutenant of H.M.S. Thalia during the Egyptian War of 1882, and afterwards served as First Lieutenant of H.M.S. Dryad during the Suakim operations and the campaign in the Eastern Sudan in 1884. He hoisted his flag in command of one of the Divisions of the Home Fleet, and then became Admiral-Superintendent of Malta Dockyard. His flag was flying in this appointment on the outbreak of the War, and when Admiral Sir Berkeley Milne left the Mediterranean, Admiral Carden became Commander-in-Chief of that Station. On him devolved the duty of preparing the naval part of the Dardanelles Campaign. Whilst his flag was flying as Commander-in-Chief of the Allied Fleets at the commencement of the bombardment of the Dardanelles Forts he was stricken with a severe illness and was forced to relinquish his command to Admiral Sir John De Robeck.

Mme. Titulesco has returned to London from abroad.

The Hon. Lady Schuster left London last week for India.

Sir Alexander and Lady Kay Muir arrived at the Ritz Hotel last week from Scotland.

Mrs. Alec-Tweedie gave a Moonlight Party at Devonshire House, Mayfair, on May 12.

Lord Lloyd has returned to 30, Portman Square from his recent visit to Angora and Budapest.

Sir Walter and Lady Evans left London on May 8 in the Rawalpindi for a cruise to Greece and Palestine.

General Sir Philip Chetwode will arrive at 44, Grove End Road on May 17 from India.

Baroness de Bethune left London at the end of last week for a cruise to Palestine.

Sir Seymour King, who is cruising in the Mediterranean, expects to return to London on May 24.

Sir Albert and Lady Stern have returned to 14, South Street, W.1, from the South of France.

Sir Frederick Eckstein is at a nursing home, where he underwent an operation for appendicitis on May 11.

Sir Edward Hilton Young left London on May 8 to join the Naldera at Marseilles for Port Said *en route* for Iraq. He expects to be absent six weeks.

Sir Hamilton and Lady Grant left London on May 10 for Yugoslavia and will return to 59, Onslow Square on May 25.

Viscount and Viscountess D'Abernon left last week for Athens and Jerusalem, and will not return to 12, Arlington Street until June 1.

Lord and Lady Sydenham, who are in residence at The Priory, Lamberhurst, Kent, will not return to London until about the middle of June.

Viscount and Viscountess Allenby were the guests of honour at the At Home which Lady des Voeux held on May 8 at the Overseas League to meet members from Overseas.

Dr. Immanuel Olsvanger on May 8 lectured to the English Zionist Federation upon "Job." The lecture was delivered at the First Avenue Hotel, W.C.1., with Mr. B. Janner in the Chair.

EDUCATION.

PUBLIC SCHOOL SCHOLARSHIPS AND ENTRANCE. Enquiries about scholarships or entrance to Trent College, Derbyshire, or the Preparatory School, Bramcote Hall, Notts, may be addressed to Rev. M. L. Maxwell, Christchurch, Jerusalem, or Rev. A. B. Elliott, Dornakal, N.G.S.R. Deccan. Fees 40 guineas per term, including all necessary extras with reductions for sons of Clergy and Officers. Supervised holidays arranged for boys from abroad, at seaside or elsewhere.

Lady Newnes is arranging an historical Egyptian *matinée* performance at the Hippodrome on Tuesday, June 3, at 2.30 p.m., in aid of the Friends of the Poor and the Flinders Petrie Excavations, British School of Archæology.

THE SHAH'S CORONATION.

In celebration of the anniversary of the coronation of Riza Shah Pahlavi, the Chargé d'Affaires and Madame Nabavi held a Reception at the Persian Legation on May 8. The Reception, at which there was dancing, was attended by members of the Diplomatic Corps and a large number of guests.

NEAR AND MIDDLE EAST ASSOCIATION.

On May 22 the Near and Middle East Association are holding a Reception at half-past five to half-past seven o'clock at the Hotel Splendide, Piccadilly, W., to meet Mousa Kazim Pasha, the Grand Mufti, the Mayor of Jerusalem, Aouni Bey Abdul Hadi, Mr. Jamal Husaini, Mr. Alfred Roch, and other members of the Palestine Arab Delegation. Cecil Watts' Quartet will play, and particulars can be obtained from the Secretary, Near and Middle East Association, 7, St. James's Terrace, Regent's Park, N.W.8.

A daily postal service was inaugurated on May 5 between Athens and London by rail to Belgrade and thence by air, thus saving 24 hours.

Mr. Edward P. Lawton, who has held the appointment of American Consul in Cairo for the last four years, has been transferred to Athens as Third Secretary of the American Legation.

General Michael Zhivkovitch died on April 28 at the age of 75. He had been Minister for War in the Serbian Cabinet in 1908, and was in command of the defences of Belgrade during the Great War.

"Talkies" have appeared in Palestine. A performance was given in Jerusalem by a well-known film company in response to a special invitation. Regular performances began on May 3 in Jerusalem and Tel Aviv. At the latter town protests were made on the ground that the talking was not in Hebrew.

The Metropolitan Clement, President of the Holy Synod of Bulgaria, who started the campaign of protest in Bulgaria against the anti-religious policy of Soviet Russia, died of pneumonia on May 3 in his archiepiscopal palace at Vratza, with the Archbishop of Sofia at his bedside. He was 57 years of age. Mgr. Neophytos, Archbishop of Vidin, has been elected President of the Holy Synod in his place.

It is stated from Amman that important changes are announced affecting the Trans-Jordan Frontier Force. A fleet of 34 six-wheeled lorries and tenders is to be added, which will greatly increase the mobility and general efficiency of the force. It is also intended to strengthen the force by the addition of a company which will be mechanised.

THE WEEK AT HOME

London, Tuesday Morning.

An Enigmatic By-Election.

The result of the West Fulham by-election—a Conservative victory by an odd 200 votes—was a curious one, for it enabled a multitude of opposing inferences to be drawn. Lord Beaverbrook and his followers hailed it, of course, as a resounding victory for Empire Free Trade (and at least it may have the gratifying result that the Beaverbrook papers provide us for a short interval with some other topic); the official Conservative greeted it as the belated turning of the tide, for it is the first by-election which the Socialists have lost; and the Socialists, knowing the tendency of by-elections to go against the Government of the day, and aware, moreover, that they were fighting virtually a Conservative-Liberal combination, are by no means dismayed that their poll dropped by a mere two hundred votes. What comfort the Liberals derived from the result is problematical, but they are past-masters in finding bones in bare cupboards.

As an outsider, I can draw only one inference: that Liberals outside Parliament fear Empire Free Trade less than they fear Socialism. And if that is true, the present tactics of the Liberal Party in Parliament are not palatable to the rank and file.

As a matter of fact, he would be a very bold man who would assert that the Government is in a weaker position than it was when it took office. It is, admittedly, increasingly unpopular in certain circles, notably financial and business circles—largely on account of the heavier taxation in the Budget; but I should doubt whether it has really lost many votes. Probably it has made up on the swings of its foreign policy what it may have lost on the roundabouts of domestic issues. There are people who state that the Government is at last being "found out," but my experience is that most folk are amazed at its comparative moderation.

Fixing Retail Prices.

The Consumers' Council Bill passed its second reading last week, but it is obvious that the opposition to it is very considerable. Naturally, the "interests" concerned are opposed to it, but that was taken for granted and could be offset. All the Conservatives, however, opposed it, and it is thought that most of the Liberals (what is liberty in these days?) who abstained disliked it intensely.

Not that there is any objection to the granting of investigating powers—far from it. Quite certainly the country would like to see granted to an official body the power to exact and publish figures. What it does not like is the idea of a horde of bureaucrats fixing prices, supervising every action of retail and wholesale dealers, and meting out punishment. The information which would indicate whether or not traders were profiteering cannot be very difficult to obtain, and, once it were obtained, it would be for the public to see, by boycotting, that profiteering could not be made to pay. Rid the housewife's "shopping" of the element of competition and you take out of her life one of its chief joys. What could possibly compensate her for the loss of the privilege of walking an extra mile up the High Street, to save a penny on a pound of fruit?

The Barge Children.

There are, even in these servile days, some shreds of ideas of liberty left among us. The fact was prettily demonstrated when the Bill to enforce the education of children living on barges was reconsidered last week in the House of Commons. There really was a public protest such as is very difficult to raise in these "cranky" days—against the proposal to take children away from their parents' homes in order to enjoy the undiluted blessings of State education. It was pretended that the Bill was nothing less than an attack upon the sacred institution of the family, and the nation was roused against the imposition of so monstrous a tyranny—with the result that the Bill stands little chance of ever becoming law.

The Poet Laureate.

Now that the choice of Mr. John Masefield as Poet Laureate has been made, it seems the obvious one. He writes well, clearly, vigorously, and at times with beauty. His verse has lilt and colour, and can easily be liked by the multitude.

Probably the chief criticism that could be levelled against his verse is its facility: at times—though, it should be added, principally in his youth—he has been guilty of the descent which musicians occasionally make to the "ballad" standard, and of clichés which make parody easy. But unquestionably he has written some glorious stuff, appealing alike to "highbrow" and "lowbrow." I rather think that he has now purged himself of the dross that appeared in a few of his earlier works, and there is little doubt that he will, as Laureate, make some distinguished contributions to English literature.

The Question of the Skirt.

Not yet, it seems, is the battle of the skirt lost or won. True, skirmishes in the field of evening wear have been mostly won by the "long skirters," but there still exists a considerable army of women determined to die in the last ditch rather than wear long skirts by day. That, at any rate, is how they now are talking: what these logicless creatures will be saying in another six months is, however, another matter.

Already the women have raised the ire of a curious section of mankind, called the Men's Dress Reform Party. These men state that "woman has let us down"; they feel that, far from being a model of cleanliness and good sense, woman, in capitulating at night to the decree of long gowns decreed by the fashion-makers, has been guilty of the basest treachery. She is, in short, returning to the foolish behaviour of the "custom-bound men."

All of which, in essence, is true. The one unchanging verity about woman is that she will always change in accordance with the whims of fashion. And which of us men would really not have it so? The sexes are a poor lot, both of them!

THE ID-UL-AZHA.

The festival known as *Id-ul-Azha* was duly celebrated at the London Mosque at Southfields on May 9. In the afternoon an address was delivered by Dr. W. M. Weston on "The Ideals of Islam." Owing to the late arrival of Sir Francis Younghusband, the Chair was taken by Earl Russell, Under-Secretary of State for India. Dr. Weston said that he spoke, not as a Muslim, but as a warm admirer of Islam. He contrasted with the present tendency in the so-called "civilised" world of seeking to invent a God or at least to help and co-operate with God, the noble and sublime teaching of Islam, which meant resignation or adjustment to the will of God. Unlike the modern West, Islam accepted the Divine decree without dispute. It was the Muslims' profound belief in the Oneness of God which led directly to their belief in the Brotherhood of Man, a belief which was abundantly evident in the actual practices of Muslims. The speaker referred to his visits to Muslim lands, where, he said, he had always been entertained with the utmost hospitality. Contrary to the view which until recently had been propagated by some travellers and missionaries, Islam was essentially a tolerant religion. It was tolerant even in past centuries, when Arabs and the Turks were Caliphs, and at a time when toleration was regarded in Christendom as a deadly sin.

Dr. Weston then spoke of the sublimity and the simplicity of the teachings of Islam—virtues which appealed alike to the highest and the lowest types of intellect. It was a remarkable fact that out of the Semitic race in Asia had come the finest Scriptures in the world—the Jewish, Christian, and Muslim. The Prophet Muhammad was an inspired man, and the Quran was full, not, as some might think, of vague unpracticalities, but of real and applicable truths. The ideals of Islam were noble ideals, however hard they might be of attainment. As a matter of fact, the difficulty of attaining the possession of one's soul and of avoiding concentrating on mundane affairs—this ideal of looking at the stars above us instead of wallowing in the mud at our feet—was in itself an incentive to the unity of mankind. If easily realisable ideals were set before men, chaos was the certain result.

Dr. Weston then sought to refute certain calumnies that had been levelled against Islam, and he singled out, as a subject of Western criticism, the position of women in Islam. That criticism, he said, which even went to the length of asserting that Muslims denied the existence of souls in women, was met by the simple and incontrovertible statement that to women there was accorded in the Quran exactly the same place as to men. As for polygamy, it was hardly for the West, with the organised and recognised systems of prostitution, to throw stones.

Mrs. Margaret Hasluck put the ideals of Islam and of Christianity side by side. She quoted from the Bible and the Quran passages dealing with the sacrifices of animals (peculiarly apt, of course, on the day of *Id-ul-Azha*) and pointedly referred to this common factor in the Christian and the Muslim faith. She urged that Christians should study more earnestly the faith of Islam, and Muslims, that of Christianity.

Miss Margaret Farquharson spoke of the resemblances between the great ideals of Christianity and of Islam. The peoples professing these two faiths, she said, should be marching hand in hand, both aiming at the attainment of justice on earth.

Sir Francis Younghusband said that, having lived for years in Central Asia as a simple traveller, sharing the lives of the Muslim people in their homes and in their tents, he could bear testimony to the reality of the ideal of brotherhood amongst them. They received with the utmost hospitality not only brother Muslims but also the stranger who came amongst them. It was most refreshing to live with a people who attached greater value to the spiritual than to the material universe. The atheism rife in Europe seemed spreading in some Islamic lands, but it was to be hoped that all true Muslims would keep firmly and faithfully to their own convictions of the power of the spiritual world, and on the foundation of that faith contribute to the brotherhood of man.

Maulvi Farzand Ali, the Imam of the Mosque, after the *Azan* had been sounded and the Muslims present had prayed in the Mosque, afterwards entertained a large company to tea.

THE PALESTINE REPORT.

Mr. Leonard Stein, until recently Political Secretary of the Zionist Organisation, lectured to the Central Asian Society on May 7, at the Royal Society's Hall, Burlington House, W. In introducing the lecturer, Lord Peel spoke of the threefold international character of the Mandate for Palestine. It was international in the first place because the Mandatory Power had to report annually to the League of Nations at Geneva, secondly, because the Arabs in Arabia naturally felt great interest in their brethren in Palestine, and thirdly because the millions of Muslims in India felt concern in the fate of their co-religionists in Palestine. Mr. Leonard Stein, who first of all explained that he was speaking as an individual and not in any representative capacity, divided the Report into three main parts. The first dealt with the action or inaction of the Palestine Government in face of the disturbances last August; whether this was adequate or inadequate he would not then discuss. But he would like to emphasise the noble conduct of the British Police during the disturbances.

Next, there were the immediate causes of the riots—the events beginning at the Wailing Wall on the Day of Atonement, 1928. Mr. Stein then gave it as his definite belief that without the introduction of *odium theologicum* relations between Arabs and Jews in Palestine would have remained fairly peaceful. He spurned the idea that responsible Muslim authorities really felt that Muslim rights at the Haram ash Sharif were threatened, and stated that all the acts of the Grand Mufti and others near the Wailing Wall were deliberately designed to humiliate and to provoke the Jews.

But where Mr. Stein most criticised the Report was in its suggestion that the factors of immigration and eviction from the land were ever present in the minds of the Arab population. He quoted evidence from annual reports or from statements of Palestine Government representatives, from Sir Herbert Samuel in 1925 down to Sir John Chancellor at Geneva in July, 1929, to prove that relations between Arabs and Jews were fairly good. All this official evidence of good relations, he said, the Commission of Inquiry had ignored, preferring to present a picture which would suggest that Arabs, when they rushed out last August of the Jaffa or Damascus Gates of Jerusalem, had in the front of their minds thoughts of Jewish immigration and of Jewish purchase of land. Again Mr. Stein criticised the Commission for failing to act as a judicial body, and for not pronouncing on the various pieces of evidence set before them. Instead of saying which they thought was correct evidence, they set out the various theses and left them where they were, so that nobody knew whether they actually accepted, say, the Arabs' evidence upon eviction in the Plain of Esdraelon, or whether they were merely reporting it.

In fine, this Blue Book, unlike other Blue Books, was one that could not be trusted. Its whole perspective of the Arab-Jewish problem was false, and contradicted by official evidence; and it was distinctly unfortunate that its findings might be construed by Arabs as (to use the words of the Jerusalem Correspondent of THE NEAR EAST AND INDIA, in describing Arab reaction to the first summary of the Report) a verdict of "justifiable homicide." In other words, the Report was so sketchy and superficial that it was impossible to accept it as a fair presentation.

After the lecture no discussion took place. The Chairman mentioned, however, that already the Arab case had been given to the Society, that that night they had had a very able presentation of the Zionist's view, and that at a future date Sir Henry Betterton, one of the Commissioners, would be addressing the Society on the Report.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Turkey's Finances.

There are grounds for believing that the conversations at Ankara between the Ottoman Debt delegates and the Turkish Government, which terminated last week, when the delegates left for Paris to make their report to the Debt Council, have been more satisfactory than might have been expected. The methods adopted by the Ankara authorities in the past have induced doubts, rightly or wrongly, as to the good faith of the Turks and the object they had in view in prolonging the negotiations which ultimately led to the Debt Settlement. But it seems clear that, whatever their attitude in the past, they are now genuinely anxious to fall in with any reasonable proposals which will enable Turkey to overcome the existing financial crisis. The point which has led to the present negotiations is the professed inability of the Turks to make further payments on the Ottoman Debt, after the next coupons are met, until the situation improves. At the same time Turkey looks for a loan of a substantial amount which will enable her to place the country's economic position on a sound basis. Unfortunately the financial record of Turkey has been such that it would be impossible to raise a further loan unconditionally in Europe, and the stumbling block has hitherto been the proposal that Turkey should accept a foreign financial adviser. The news that M. Charles Rist, Assistant Governor of the Bank of France, is to go to Turkey shortly to examine the country's finances suggests that the Ankara authorities have now modified their view as to expert foreign assistance in the improvement of the country's finances. If, as appears probable, the bondholders have to make yet another concession by agreeing to the postponement of payments, it will be much to be regretted, but they will have the consolation of knowing that if by doing so they are helping the financial recovery of Turkey they will equally be placing themselves in a firmer position in the future.

Progress in Palestine.

From the economic point of view developments in the past year in Palestine, a review of which is given elsewhere in these columns, were distinctly satisfactory The crops were good, exports again began to take an upward turn, some of the established industries made notable progress, and new ones were established Like some other agricultural countries, one of the drawbacks of Palestine's position hitherto has been the undue dependence on one commodity, the Jaffa orange If the yield is good and market prices are satisfactory then all is well, but if not then trade depression is bound to follow. The encouraging feature with regard to Palestine is that the economic basis is steadily being broadened The Jaffa orange is still, and is likely for long to remain, the basic factor in the country's export trade; last year, for instance, it represented roughly about one-third of the value of the exports. But the country is beginning to develop manufacturing industries, some of which already play their part in the export trade. The Portland Cement Co. (Nesher) of Haifa is the leading example of a successful industrial enterprise in Palestine. It has practicaly ousted foreign competition in its product, but the internal demand for cement last year was such that its exports were relatively small It is, however, now in a position to cater for foreign markets, and having its own vessels is able to ship cement to any part of the Near and Middle East. The company is just as well situated for export business as the Dalmatian cement industry to which I referred last week, and there is no reason why in future years it should not be sending cement as far afield as the factories on the Adriatic coast. Knitted goods, artificial teeth, and leather goods are some of the manufactures which now help to swell the total of the export trade, while the advance of the cigarette manufacturing industry under the guidance of one of the great tobacco companies suggests the possibility of the development of an export trade in this commodity.

Tariffs in Yugoslavia.

An example of the consequence of a high tariff which will be of interest to supporters of Safeguarding in Great Britain is forthcoming from Yugoslavia. Since the War Yugoslavia has imported large quantities of boots from Czechoslovakia, and to consolidate the trade the Czech manufacturer established branches in the leading towns. Since 1925, however, owing to the high import duties, there has been a steady decline in the imports of boots. Thus while for 1925 the total was 243,708 kilograms, by 1927 it had fallen to 185,900, and for last year it was 155,200. Over that period the value of the imports has fallen from 76.6 million dinars for 1925 to 45.1 million dinars for 1929. The Czech manufacturer has now decided to establish a boot factory in Yugoslavia in order to overcome the effect of the high tariff. The factory is to be at Zagreb, and it is estimated that from the beginning 700 workers will be employed, so that against the loss of revenue from the tariff on imported boots Yugoslavia will be able to set another industry.

Yugoslav Plums.

It appears likely to be some time before Bosnian dried

Digitized by Google

plums regain their usual important place in Yugoslavia's export trade. In 1926 the exports totalled 46,500 tons, but last year, owing to the failure of the crop the exports only amounted to 13,000 tons. An inquiry was instituted by the Ministry of Agriculture into the position, and it was found that the poor crop was due not so much to a pest as to the dry summer of 1928 followed by a hard winter, as a result of which a large proportion of the old trees were destroyed. Future crops are dependent therefore on the young trees, and to safeguard the condition of the orchards in the future growers will be compelled to deal with their trees on up-to-date lines. Planting of new trees is taking place on an extensive scale, but it will be some time before they come into bearing, and consequently the crop for the next few years, even with the most favourable conditions, will be bound to be small.

Oriental Telephone and Electric.

At the meeting of the Oriental Telephone and Electric Company, Ltd., a report of which will be found elsewhere in these columns, Sir Henry McMahon, the Chairman, was able to give a most encouraging survey of the company's progress during the past year. Including the amount brought forward and deducting the interim dividend the disposable balance amounted to £104,531 as against £91,029 for the previous year. Dealing with the associated companies, Sir Henry McMahon pointed out that the Bombay Telephone Company has made steady progress, and paid a dividend of 6 per cent. last year as against 4 per cent. The Bengal Telephone Company also made progress, and has increased its dividend from 7½ per cent. to 8 per cent. Owing to adverse trade conditions the Rangoon Telephone Company experienced a slight setback, but was able to maintain its dividend at 6 per cent. free of tax. Reviewing the year, Sir Henry McMahon remarked that it hal been an anxious period, and that from every one of the company's branches overseas they had the same story of slackness and depression in trade and commerce. The shareholders will no doubt share his opinion that in view of the difficult conditions the results obtained by the company are very satisfactory.

COMMENTATOR.

TOBACCO PRODUCTION IN ROUMANIA.

The current issue of the *Correspondance Economique Roumaine* contains an interesting article on the tobacco industry of Roumania by Dr. Chiritescu-Arva, from which we take the following extracts :—

The cultivation of tobacco was introduced in the Danubian Principalities during the 17th century. The climate and soil being favourable, and smoking becoming also customary, the cultivation of tobacco shortly exceeded the requirements of home consumption. Thus the statistics show that in about 1840 tobacco was exported to Austria, Russia, Turkey, and France.

Until the year 1863 the growing of tobacco was free; the growers were required to pay only a small tax on the cultivated area. Under the régime of free cultivation, the cultivated areas varied from 1,500 to 4,500 hectares, and the production from 700,000 to 2,000,000 kg. per annum. In the year 1872, a monopoly was established for the growing, working, and selling of tobacco which was conceded to a limited liability company for a period of fifteen years. After seven years the contract was cancelled, and since 1879 the State has been working the tobacco monopoly. By the Monopoly Act the State reserves for itself the tobacco-growing for home consumption. Under the monopoly régime tobacco growing has made rapid progress, with respect to area, yearly production, and quality. Before the monopoly, the maximum cultivated area was 4,000 ha. and the maximum production 2,400,000 kg., whereas in 1915 the area reached 12,000 ha. and the production 9,000,000 kg.

The following table shows the progress of tobacco growing and production in the Old Kingdom between 1879 and 1915 :—

Year.	Number of growers.	Area Ha.	Production kg.
1879	8,010	2,250.28	762,400
1890	13,543	4,699.35	2,566,501
1900	13,033	4,569.35	4,022,300
1910	24,017	9,930.39	6,999,943
1915	36,513	13,780.43	8,350,551

During the War the area and production were cut down to almost half, so that the home consumption could not even be supplied. After the War, by the extension of the area and the increase of the population, tobacco growing entered a new stage in its developmen. The immediate effect of the increase of the population was the rise of the home consumption to about 15,000,000 kg. per annum. At the same time the demand for exporting tobacco grew owing to the fact that the tobacco obtained from Bessarabia, Dobruja and, generally speaking, the whole vine region of the country, is of a superior quality and highly appreciated for manufacturing finer cigarettes.

The followng table shows the cultivated area and the production of tobacco since the War :—

Year.	Number of growers.	Area Ha.	Production kg.
1924	82,694	31,310.23	22,013,081
1925	86,183	35,723.83	17,268,631
1926	86,636	33,448.36	19,465,904
1927	81,339	30,905.38	20,193,730

The areas cultivated in Bessarabia, Dobruja, and Wallachia are the largest and supply 80 per cent. of the total production.

According to the climate and soil, the territory can be divided into several typical regions for the cultivation of the different varieties of tobacco. These main regions are :—

1. The plain region, consisting of the Danube plains of Wallachia and the Tisza plains of Transylvania, with rich land containing organic substances and nitrogen, favourable for the cultivation of tobacco plants with broad leaves, thick tissues, and with a crop of 1,000 kg. to the ha. The products are mostly inferior kinds of tobacco, used for pipe tobacco and cheap cigarettes. The varieties growing in this region are of American origin.

2. The region of Muntenia, Banat, and the Transylvanian plateau, with sandy-clayey soil, lacking organic substances, produces tobacco with broad leaves, finer tissue, and thinner nerves, favourable for manufacturing cigarettes of intermediary quality. The varieties grown in this region are of Oriental origin.

3. The region of North-Eastern Bessarabia, South-Eastern Moldavia and of Dobruja, with sandy-clayey soil, produces tobacco with small leaves, fine tissue, light yellow colour, pleasant aroma, which is highly appreciated for manufacturing finer cigarettes. The varieties grown in this region are of Oriental origin.

4. The hill region, under 600 metres high, comprising the vine regions of Oltenia and Dobruja, with calcareous soil, rich in mineral substances and very few organic substances, produces tobacco with small, velvety leaves, rich in oils and resinous substances, yellow-reddish colour, pleasant aroma, very much like the Macedonian tobacco.

PALESTINE'S TRADE IN 1929.

Improvements in Exports and Imports.

The difference that a good or bad harvest makes to an agricultural country like Palestine can be seen from a comparison between the trade figures for 1928 and 1929. In 1928 the crops were a complete failure with the result that the export figures for that year made a most unfavourable showing while the imports were increased by the necessity to purchase considerable supplies of foodstuffs to make good the shortage of the harvest. Last year the crops were almost uniformly good, and the export trade again took an upward turn, while there was a further improvement in imports. But for a series of adverse circumstances there is little doubt that trade would have shown an exceptional improvement. An exception to the generally satisfactory harvest was provided by the orange industry. The yield of oranges was much better than in the previous season, but very low prices have been obtained on the British market and this factor and the poor exports of the closing part of the previous season account for the large fall in the value of the exports of this fruit. Like other countries, Palestine has also suffered severely from the world-wide slump in commodity prices, and this has made its effect felt on the export figures, which, in the circumstances can only be regarded as extremely satisfactory. The August disturbances too had an influence on commercial developments, but of a much slighter nature than might have been expected. It is significant of the small extent to which confidence was upset that building operations were again in full swing within a very short period.

On the whole it cannot but be admitted that developments in 1929 justify considerable optimism with regard to the future of Palestine. The country has been passing through a serious economic depression, which has lasted not for one year but for a prolonged period, and the evidence shown last year of recuperative power under somewhat unfavourable conditions is very encouraging. The poor yield of the orange crop was an exceptional circumstance which normally is not likely to be repeated. In the last few years the country has wisely continued to concentrate on the extension of the orange plantations, and it is to be hoped that the experience of 1929 will not be allowed to check the process, for markets can be found for all the Jaffa oranges that Palestine can produce, and in increased output compensation will be forthcoming for a somewhat lower level of prices than growers have been able to obtain in recent years. Industrially, the country is making slow but steady progress, and some of the established industries are showing promise of considerable development. The pending completion of the first Jordan Power House will mark a further important stage in the industrialisation of the country, while the year also saw work in progress on another essential scheme for the development of the country—the improvement of Haifa Harbour. The effect of these and other projects on the progress of the country is likely to be pronounced in the future.

The following table shows the trade figures for 1929 compared with those for 1928:—

IMPORTS.

	£P 1929.	£P 1928.
Local consumption	7,166,593	6,770,818
Transit Trade	265,501	177,447
Specie	12,310	17,949
Total imports	7,444,404	6,966,214

EXPORTS.

	£P 1929.	£P 1928.
Palestine produce	1,554,262	1,487,207
Transit trade	265,501	177,447
Specie	212,667	22,254
Re-exports	197,671	177,892
Total exports	2,230,101	1,864,800

It will be seen from the above figures that there was a substantial increase in imports, and a small increase in the exports of Palestine produce. The total for the imports was easily the highest for the past four years, and was nearly up to the level of 1925. With the exception of 1927 the exports were the best for the past five years. A sign of the change that has taken place in the general position is to be found in the fact that while in 1928 wheat headed the list of the principal increases in imports, last year the leading places were taken by electrical goods with £P68,184 and industrial machinery with £P56,356, wheat flour coming third with £P57,778. Other important increases were in wood for orange cases, £P53,764; Government stores, £P53,033; iron manufactures, £P34,815; manures and fertilisers, £P20,777, and iron tubes, pipes and fittings, £P18,507; while, as showing the effect of developments in the previous year, besides the increase in the imports of wheat flour, there was an increase of £P25,386 in the imports of wheat and one of £P27,914 in the imports of sesame. The principal decrease in the imports is in cotton piece-goods, which show a fall of £P59,768. Other important decreases are in motor cars, £P44,738; wearing apparel, £P39,358; wood and timber, £P38,837; silk tissues, £P28,203; and cement, £P14,856. Egypt as usual occupies the first place in the list of countries from which Palestine draws her imports with £P1,781,620 or 24.86 per cent., as compared with 28.10 per cent. for the previous year. Syria is again second with £P1,055,611 or 14.73 per cent., as against 13.91 per cent., while the United Kingdom is a very close third with £P1,011,082 or 14.11 per cent., as against 11.63 per cent. The fourth place is occupied by Germany with £P743,653 or 10.37 per cent. Allowance must be made for the fact that a considerable part of Egypt's trade consists of transit trade in goods from the United Kingdom.

In the exports the principal increases considerably outnumber the decreases. The principal increase was in water-melons and melons, £P49,614. Other notable increases took place in sesame, £P41,006; lentils, £P22,320; dura, £P16,668; sunflower cakes, £P16,196; oil cakes, £P12,283; artificial teeth, £P4,889; cheese, £P4,340; and tobacco leaves, £P4,530. In the decreases the list is headed by oranges with £P99,975. The exports totalled 1,722,078 cases of the value of £P516,621, of which 1,324,486 cases were shipped to the United Kingdom and 244,995 to Germany. It is interesting to note that Germany is proving an increasingly good market for Jaffa oranges and that better prices have been obtained there than in the United Kingdom. Other decreases were in barley, £P24,078, due to the failure of this crop, and cement, £P12,749. This decline in the exports of cement was due to the demand for the commodity in the country. The Portland Cement Company (Nesher) worked at full capacity throughout the year, and it is significant that the

Digitized by Google

fall in the exports was accompanied by a fall of £P14,856 in the value of the imports. The total of the imports was 7,983 tons, as against 14,204 tons in 1928 and 23,300 tons in 1927. The United Kingdom headed the list of the countries taking Palestine's produce with £P455,672 or 29.32 per cent., Egypt being second with £P366,757 or 23.59 per cent., Syria third with £P307,009 or 19.75 per cent., and Germany fourth with £P116,871 or 7.52 per cent.

There are a number of other features of the country's trade that call for some notice. The number of motor cars imported during the year was 823, as against 1,011 in 1928, and as in previous years the United States of America was the principal source of supply. Palestine is one of the many Near Eastern markets which call for more attention on the part of British motor car manufacturers. There was a very large increase in the yield of tobacco and tombac, the figures benig 1,040,000 kilograms, as against 322,322 for 1928 and 546,742 for 1927. The production of cigarettes amounted to 531,887 kgs., as against 493,715 for 1928, 401,818 for 1927, and 379,078 for 1926. There are now fourteen tobacco factories in Palestine and almost the entire manufacture of cigarettes is under the control of the British-American Tobacco Company. The quality of the local brands of cigarettes is steadily being improved, with the result that the imports of cigarettes are declining. A notable development during the year was the export of 28 tons of leaf tobacco to Poland. Progress continued to be made with the knitting industry, the value of the exports of stockings in 1929 being £P18,919, while an important export trade is being developed in upper and sole leather and leather goods. The value of the exports of these commodities last year was about £P16,000. As in previous years a number of new undertakings were established in 1929, among them a cold storage company, and factories for the manufacture of preserved fruits and syrups from lemons and oranges, safety matches, cardboard boxes, mirrors, and oxygen. In this brief survey it has been impossible to cover all the industries of the country, but sufficient has been said to show that, despite the difficulties of one kind and another with which Palestine has been confronted, progress of a very notable character has continued to be made. The development of a country, neglected as Palestine was before the War, must be a matter of years to accomplish. We are witnessing now the laying of the foundations on which a real and lasting prosperity can be based.

The fifth International Conference on Through Railway Traffic is being held at Odessa.

The Barsi Light Railway have given a contract to Nasmyth, Wilson and Co., Patricroft, Manchester, for two 4—6—4-type locomotives.

THE MALVERN FESTIVAL.

The programme for a stay in England is a perpetual problem for those coming home each year on leave from India, Egypt, and other parts of the Near and Middle East. Except for outstanding events such as the Test Matches the returning voyagers have, as a rule, no idea of what is going on and they land with their minds a perfect blank as to where they will spend their leave. What they hope for is a complete change in restful and ideal surroundings, where there are ample facilities for the active and adequate attractions for those who are not looking for the strenuous life. Malvern is a resort peculiarly suited to meet the desires of both these classes of leave-takers. The town is situated in some of the loveliest country that England possesses, equalling in beauty the glorious scenery of Kent and Sussex. It lies in a region steeped in history, with the old world glamour still in existence, and abounding in buildings of great historical interest. Within easy distance of Malvern are four of the most interesting cathedrals and the ruins of three abbeys. For the sportsman there is the fullest scope, hunting, fishing, golf, tennis being easily obtainable. From August 18 to 30 the Malvern Festival is being held, when plays by Bernard Shaw and a new play by Rudolf Besier will be performed, but throughout the summer the visitor to Malvern will find plenty of attractions. Booklets describing the town and its neighbourhood and programmes of the Festival can be obtained from agents of THE NEAR EAST AND INDIA abroad, the list of which is given on page 559.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, May 30). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malakuta for Calcutta (Birkenhead, May 20); s.s. Mahout for Calcutta (Birkenhead, May 29).

Bibby Line.—S.s. Yorkshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, May 28).

British India Line.—S.s. Morvada for Colombo, Madras, and Calcutta (London, May 17); s.s. Hatipara for Bombay (London, May 31); s.s. Mulbera for Colombo, Madras, and Calcutta (London, May 31).

Cunard Line.—S.s. Bothnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, June 7; Swansea June 10); s.s. Bosnia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, June 11; Liverpool and Swansea, June 13).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 31); s.s. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 24).

P. and O. Line.—S.s. Nagoya for Calcutta (London, May 23); s.s. Razmak for Bombay (London, Mry 23); s.s. Padua for Calcutta (London, June 6); s.s. Malwa for Bombay (London, June 6).

Prince Line.—S.s. Korean Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, May 21); s.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus ports (Manchester, May 21); s.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus ports (Manchester, June 4); s.s. Persian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Cyprus ports, Tripoli, Alexandretta, and Mersin (London, June 11).

Ellerman and Papayanni Lines.—S.s. Lesbian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, May 17; Swansea*, May 17); s.s. Fabian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, May 20; Glasgow, May 10 (agents, John Bruce and Co.); Swansea*, May 12); s.s. Gerano for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, May 24; Swansea, May 20); A steamer for Gibraltar*, Algiers*, Oran*, Syra*, Smyrna, and Constantinople (Liverpool, May 31); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, June 3). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to :—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London May 13.

Recent events in the monetary world possess substantial importance for industrialists and investors as well as for those engaged in money and banking. The outstanding fact is that last week four great monetary centres reduced their official Bank Rates, namely, New York, London, Paris, and Brussels. This simultaneous action can hardly be regarded as accidental, especially since it followed a Board meeting of the new Bank for International Settlements at which the heads of the central banks made personal contact, and had an opportunity of discussing the situation and comparing notes on policy. We may perhaps go so far as to acclaim this concerted lowering of official rates as the first-fruits of the consultative machinery set in motion by the B.I.S. It is a good augury for the future and leads to hopes that ultimately there will grow up between the central banks a degree of co-operation capable of minimising gold movements and levelling the effects of such movements on various markets. If progress on be made in this direction—though such progress must be slow—it will be a boon to industry and trade, to which the jolts and jars of monetary disturbance are a formidable and recurring obstacle.

On this particular occasion the concerted Bank Rate policy was clearly due to the desire to create favourable conditions for the international flotation of the 200 million dollars Reparations Loan, resulting from the Young Plan agreement. It is said that London will not be required to take more than £5 millions, and restriction of London's portion to that figure would be very welcome in view of the rush of new issues which is in prospect. The supposed unofficial ban on new foreign issues in London seems to have gone by the board.

The Nitrate Merger.

Chile is by far the largest producer and exporter of natural nitrate fertilisers, and supplies about one-fifth of the world's nitrogen requirements. Chile's nitrate is of considerable importance to the world as a whole. It is also, of course, of considerable importance to Chile, giving rise to the biggest single industry in the country, and by means of a tax on the product which is exported it has yielded a large proportion of the Government's revenue. Up to the present the industry has been in the hands of English, North American, or Argentine companies, but now the whole industry is to be conducted as one single company. This company is to have a capital equivalent to £75 million pounds. The Chilean Government is to supply over half the capital. The numerous companies hitherto in existence are to own the other half. The Government is to nominate one-third of the number of the directors of the new super company. The export tax is to be abolished, and the Government is to be compensated to the extent of about £4 million this money to be raised by a debenture issue. The scheme has met with some opposition, mainly from some of the smaller companies, but the Chilean Government has secured the agreement to the project of the leading United States and British firms. If the new Chilean company, as it is almost sure to do, secures a friendly agreement with the manufacturers of synthetic nitrate, its prospects should be good.

New Issues.

Despite the rather uncertain situation of the new capital market, a number of important new issues of a high class have recently been made and others are pending, besides the Reparations loan, mentioned above. One loan which should have met a better response than it did is the £800,000 West Ham 5 per cent. Loan, redeemable between 1948 and 1968. This is now quoted at a little below the issue price and therefore gives a yield of about £5 2s. per cent. The New Zealand Government also made an issue to the extent of £5½ million in 5 per cent. stock. The loan is redeemable in 19 years and issued at £99 gives a return of a little over £5 per cent. The Agricultural Mortgage Corporation, of which the Bank of England and other banks are the principal shareholders, have issued £3½ million of 5½ per cent. debentures at par, repayable between 1959 and 1989 at £100. The most important industrial issue was that of Unilevers (the combine incorporating Margarine Union and Lever Brothers). The issue was of two million £1 ordinary shares at £3, a price which in many quarters was considered high. All the foregoing new issues may be considered as of high standing in their respective class. Shortly, appeals for capital will be made by the Governments of Japan and Austria, and, subject to the price being appropriate, they should prove remunerative to investors.

Insurance Meetings.

Last week we referred to two important company meetings held in the preceding week at which the respective Chairmen—Lord Melchett and Sir Felix Pole—dealt at some length with the question of rationalisation. At the annual gathering of the shareholders of the London and Lancashire Insurance Company last Wednesday the Governor, Mr. Pascoe Rutter, referred to the application of similar principles in a field in which they are less often talked of, namely insurance. His company has been a prominent experimenter in rationalisation amongst its 26 subsidiaries, and it claims that this policy has been a proved success. Waste has been eliminated, the best brain power has been utilised, and business has developed, so much so that the staff is on the whole larger than when control was first centralised. At another important insurance company meeting, that of the Scottish Union and National, Mr. T. M. Murray, the Chairman, reporting a further growth in new life business, discussed the relative advantages of whole life and endowment policies. In his opinion probably one of the most desirable forms of life insurance is whole life assurance by limited payments, securing provision, as it does, for dependents in the event of death and restricting at the same time the burden of the premium payments to the period during which this can most easily be borne. Nevertheless, the modern tendency is rather for endowment assurance business. Such policies offer an attractive first-class investment for appreciation, but it will be conceded that from the pure assurance point of view the larger cover the whole life policy offers is a more vital consideration.

Engineering Topics

(By An Engineering Correspondent)

British Commercial Vehicle Industry.

There seems to be a little despondency amongst commercial vehicle makers, so far as those connected with petrol-engined chassis are concerned. Steam wagon makers, on the other hand, seem to be anticipating a period of greater activity and as they have been making their production better known of late, it is fairly certain that they are now about to reap the benefits of advertising. It is a fact that, were anyone to ask the average man to mention the names of half a dozen commercial vehicle makers, it is more than probable that he would start off with mentioning one or two steam wagon firms. The British commercial vehicle industry is capable of turning out the finest lorries, motor coaches, delivery vans, etc., in the world. No foreign production of that type that I know about can even begin to compete with us. Recently, in connexion with some buying work, I had to inspect vehicles of seven different makes, and I noted that in the British productions every piece of work was on the soundest lines; design seemed perfect to the smallest detail, construction had evidently been the object of the greatest care, and the results were such as would have enhanced immensely the reputation of any foreign firm. Yet every particle of the work was British, and it was turned out in that high-class engineering condition merely as a matter of course. By this, I mean that the high grade work which foreign makers put into show vehicles as an example of what they can do, is put into British vehicles as part of the ordinary procedure.

Welding Work.

The strides made in connexion with electric and other welding work have been immense of late, and problems which, a few years ago, would have seemed hard to deal with are now solved almost as a matter of course. I came across an instance of what can be done the other day: a large kettle, of cast iron, and of unusual thinness, capable of holding 13 tons of liquid, was accidentally cracked. It was in a big chemical works, and measured 8 ft. in diameter and over 9 ft. in height. There were one or two peculiarities of a technical character in connexion with it, all of which made obvious that it would be an expensive matter to get it replaced. There was also the loss of time to be taken into consideration, and, in what was felt to be almost a vain hope, the engineer of a big welding firm was called in for an opinion. There was, he said, no doubt that a satisfactory job could be made of it, and he gave an estimate for the work which was accepted. When the men had got the appliances into place and were ready to start the work, it was discovered that the kettle was cracked in two places near the rim; the largest crack was about 30 inches long and the smaller one, whose presence had been unsuspected though it was evidently of old standing, was about 18 inches in length. It was felt, after examination, that it would be better not to try the ordinary methods of welding, as the crack opened appreciably as soon as certain supports were removed in order to gain access to the kettle. Pre-heating the casting was a matter of some difficulty, as it was impossible to move the kettle from an upright position. A number of empty steel drums were placed by the side of the kettle to form a foundation for the temporary furnace necessary for this pre-heating, this taking the form of a small firebrick furnace on a light covering of thin steel sheet. As soon as the metal was sufficiently heated the electrical connexions, which had been got ready in the meantime, were coupled up and the welders got to work. The smaller of the two cracks was satisfactorily welded in a trifle over six hours and the larger in rather over nine and a half hours, by a gang of three men, and, from first to last, the operation in one way and another, took three working days only. It would have taken about three weeks to cast a new kettle and the difference in cost between welding and that of a new kettle is said to be somewhere about £250. Further, the work was so well done that the repaired kettle is quite as satisfactory as it was before the damage took place.

Highway Engineers.

A few years ago the term, highway engineer, was seldom, if ever heard. Before the war we had "road makers" and it was not until the growth of modern traffic rendered it necessary that we should have better and still better roads that it was recognised that road making was a specialist subject, that required the undivided attention of specialists. The highway engineer has to be a man of rather unique attainments: he has to be a civil and a mechanical engineer, a surveyor of no mean order, a business man, and a first-class organiser. He has to know how to judge the quality of materials, possess geological knowledge, know all there is to know about the strength and durability of many materials, know how to

THE P.G. MACRIS TRADING & INDUSTRIAL CO. Ltd.

make all surveys, to design economic gradients, and possess a marked degree of foresight. In short, it seems high time that the attainments, the necessary attainments, of highway engineers were recognised, and consequently the newly-formed Institution of Highway Engineers has not been formed a day too soon. The highway engineer has to be able to measure, weigh and evaluate the demands of traffic, both in character and intensity, and select the most suitable type of road pavement, taking into consideration the original cost and the cost of upkeep. He it is who determines the amount of money to be invested in a certain road and he it is who has to be careful to see that his outlay is in every way justified. It seems that already a large number of highway engineers and surveyors have joined the new organisation, and it is certain that as soon as its claims are more widely known there will be a big increase in its membership.

Excavating Machinery.

A circular entitled "A Mighty Link" has been issued by Ruston-Bucyrus, Ltd., manufacturers of excavating machinery, of Lincoln. It traces out the history of mechanical excavating machinery from the earliest days and is of great interest.

Electric Light Plant for Greece.

A point worth noting by British manufacturers of electric light equipment is that in Greek Macedonia and Thrace there is a growing demand for small electric light plants, particularly those with a capacity of 7 to 50 kilowatts and capable of generating a direct current of 220 volts. There is also a market for plants of less than 7 kw. capacity for lighting private houses, theatres, cafés, and farmhouses. The American Consul at Salonika states that the demand does not appear to be confined to any particular design of plant, although the method of mounting an engine and generator on one platform and connecting the two by a rigid coupling in order to produce a steady and unwavering current is probably preferred. On the other hand, plants consisting of generators that are driven by belt from a detached engine are found to be cheaper, and, consequently, are in favour with a certain class of purchasers. There is practically no demand for storage plants. Salonika dealers estimate that in Macedonia and Thrace a demand for upwards of 800 self-contained lighting plants with 12 to 18 kilowatts capacity could be created provided suitable facilities were offered. There is no domestic manufacture of complete plants nor engines or generators.

ADVERTISING IN

"THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of ***all*** classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Various.—The Department of Public Health, Cairo, invite tenders for the supply during the twelve month commencing May 1, 1930, of paints, varnishes, soft soap, washing soda, hardware, etc. June 20. (D.O.T.)

Drugs, etc.—The Egyptian Ministry of Education invites tenders for the supply of various drugs and medical supplies required for schools and scholars' medical inspection centres. May 31. (D.O.T.)

Chemical Manures.—H.E. the Minister of Agriculture, Cairo, invites tenders for the supply of the following:—48,000 tons of nitrate of soda, 12,000 tons of nitrate of lime, 7,000 tons of superphosphate of lime. June 7.

Boots.—The Egyptian Postal Administration invites tenders for the supply of 2,500 pairs of brown boots. July 18. (D.O.T.)

General Stores.—The Director-General, Ports and Lighthouses Administration, Alexandria, invites tenders for the supply of general stores for the financial year 1930-1931. The schedule of requirements, which relates mainly to small quantities of goods, includes among other articles, coal baskets, fire bricks, hack saw blades, caustic soda, crystal soda, fire clay, sponge-cloth, emery cloth, sheet glass, liquid polish, etc. May 20. (D.O.T.)

Electric Pumping Stations.—The Director-General, Mechanical and Electrical Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of 15 electric pumping stations complete with pumps, motors, switchgears, and pump-houses, etc., at the Isolated Basins, Upper Egypt, between Esna and Aswan. Capacity of pumps will be of 2, 1, and 0.35 cubic metres per second. Copy of specification, conditions of tender, and drawings can be obtained from the Office of the Chief Inspecting Engineer of the Egyptian Government in London. August 17.

Covers and Tubes.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of covers and tubes (motor car and motor cycle) to the Mechanical Transport, Egyptian Army, Abbassia, Cairo, for the period from July 15, 1930, to April 30, 1931. June 14.

Needlework.—The Egyptian Ministry of Education invites tenders for the supply of various needlework materials during the school year 1930-31. The schedule consists of 30 items. June 7. (D.O.T.)

Uniforms.—The Egyptian Postal Administration invites tenders for the supply of uniforms during the twelve months commencing May 1, 1930. July 7. (D.O.T.)

Plant for Waterworks.—The Egyptian Ministry of the Interior invites tenders for the supply and installation of pumping machinery, electric motors, filters, and accessories for the waterworks at Abou-Tig-Nekheila. June 25. (D.O.T.)

Rails, etc.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of rails and angle irons for 1930-1931. June 28.

Weighing Machines.—The Physical Department, Ministry of Public Works, Cairo, invites tenders for the supply of weighing machines, counter scales, and Beranger balances. June 2. (D.O.T.)

Rails and Angle Irons.—The Survey of Egypt, Ministry of Finance, Cairo, invites tenders for the supply of 13,000 tons of new or second-hand tarred rails and 177 tons of new or second-hand angle irons. June 28. (D.O.T.)

INDIA.

Pumping Plant.—The Indian Stores Department invites tenders for the supply and erection of 2 vertical shaft low lift centrifugal pumps, 2 horizontal shaft multi-stage high lift centrifugal pumps, hand-operated overhead travelling crane, piping, valves, switchgear, etc. Alternatively, gear-driven, triple throw ram pumps may be submitted. May 26. (D.O.T.)

PUBLIC WORKS IN YUGOSLAVIA.

In the current issue of the *Belgrade Economic Review* the question of public works in Yugoslavia is discussed and the need for good communications is emphasised. The article continues: -

For every 100 square kilometres there are only 4.1 kilometres of railway line and in the south of the country this relation is still less favourable. But the Yugoslav railway system has still another fault. The Austro-Hungarian administration thought only of how to attach the whole country to Vienna and Budapest and there were no connexions with the Serbian system. Yugoslavia is fortunate, in comparison with Czechoslovakia and Poland for example, in having its own sea coast with numerous good harbours. The connexion of these harbours with their rich hinterland is, therefore, one of the most important needs of Yugoslav economic life and the essential condition to its development. The south Serbian line has been partly built from the proceeds of a loan from America. But still another Adriatic line is needed to pass through the centre of the country and to join Belgrade and the rich wheat lands of the Banat by way of Tuzla, where salt and soda are found, and the Bosnian forest lands with Split, which is the largest of Yugoslavia's Adriatic ports. Short lengths of line are also needed in many places to join up existing lines into one complete system.

The ports on the Adriatic are not yet equipped to deal with the present volume of traffic which passes through them. The building of stores and the provision of warehouses, modern cranes and such things present not merely a temporary want but at the same time a lucrative investment. Many of the coast towns of Yugoslavia are important not only as economic centres, but because they draw tourists by reason of their natural beauty and delightful climate. But there are not enough good hotels to deal with the tourist traffic.

But to bring all the products of the country to market it is not sufficient merely to extend the railway system. This must be completed by the construction of a good system of firm roads. The importance of these is steadily growing as motor traffic by road rapidly grows. But in the matter of hard roads Yugoslavia is in perhaps a still worse position; there are only 33,410 kilometres of roads and considerable parts of these were badly damaged during the War. Little has been done to repair them owing to the lack of funds. The repair and extension of the system of metalled roads requires more considerable sums, which cannot be obtained from normal budgetary revenue. Yugoslavia is on the cross roads between Europe and the Levant and already has some 300,000,000 dinars yearly income from transit traffic. This sum could be greatly increased if telegraph and telephone lines could be laid across her territories, and it is reckoned that the laying of underground cables for this purpose would pay for itself in eight to ten years.

The economic development of Yugoslavia in many places demands investments which are beyond the means of the home capitalists. In the spring of 1929 the French company Batignol began work on the drainage of the Pancheyo swamp. They have to build a protective embankment at a cost of 260,000,000 dinars and by this means will reclaim some 40,000,000 hectares of the best land in close proximity to the capital city. It is estimated that in the country there are hundreds of thousands of hectares of land which are waiting such improvements.

The production of coal and lignite has already passed five million tons a year and can easily be increased. The country is rich also in "white coal"; of four millions h.p. barely 6 per cent. is used at present. The use of cheap electric power in the mining industry promises great profits for parts of Bosnia and Dalmatia.

Even the trade in the most important of our products, wheat, is hindered in its normal development by the shortage of elevators where the wheat of the small producers would be graded and cleaned, prepared for export and stored till prices were favourable. The present Government has brought forward the matter of their construction. There is hardly any branch of economic life in which there is no opportunity for the investment of capital.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended May 3:—

Grain.—The fall in grain prices abroad continued uninterruptedly throughout the week, preventing any business of importance from being concluded on our market. A restricted demand for picked ports in U.K. was perhaps the only bright feature of the market, but even this seems to have died out at the end of the week. Arrivals of grain still leave much to be desired, which fact, no doubt, contributed to a large extent to the difficulty in combining business, seeing that to a large extent grainholders were asking exaggerated prices. The week under review is, however, closing under the influence of a better undertone concerning maize, and it is hoped that this will mark the beginning of an improvement next week. Very little chartering was done during the week, no more than four fixtures having been reported at from 14s. to 14s. 3d. Antwerp/Rotterdam, and 14s. 6d. to 14s. 9d. Antwerp/Hamburg range. The demand for spot tonnage was likewise very limited at about the same rates as last week.

Timber.—Unfavourable news from abroad, especially regarding the arrival of Russian timber at different Mediterranean ports had a further depressing influence on our market. A limited demand is maintained for Syrian ports, where Russian timber is subject to special import taxes, and for small Greek ports where Roumanian wood is still preferred. As a first measure against the ruinous Russian competition some important sawmills have decided to reduce considerably their production till this wave of abnormal competition has passed and normal working conditions return. Rates of freight offered by shippers are in the neighbourhood of £6 for Greece, £7 for Syria and Palestine, £7 Sicily, and £5 15s. Alexandria.

Weather and Crops.—Stormy weather set in last Saturday night and there was fairly heavy rain in the greater part of the country, especially in the south, accompanied by a considerable fall in the temperature, which had become rather high for the time of year. During the week the weather continued to be changeable and cool, with occasional showers, favourable to vegetation, which is well advanced compared with recent years. A swarm of locusts was reported in Southern Dobruja, but the cooler weather was not favourable to their activity and it was expected that they would be disposed of by the authorities before they could do any appreciable damage.

Sulina.—Owing to stormy weather the dredgers were only able to work on three days during the past week. The depth remains at 24 feet, but, as stated last week, it is not possible to guarantee that this depth will be maintained in view of the quantity of silt now being brought down by the river.

Constantza.—Grain: This week about 4,000 tons of grain arrived from the interior. A 6,000 ton steamer cleared for Rotterdam/Hamburg and two others are now loading at the elevators 15,000 tons for the same range, whilst a 5,000 tonner is loading for London and Rotterdam. Ten vessels loaded nearly 56,000 tons of protroleum products and one took oil fuel for bunkers. It was very hot on Saturday followed by a heavy rainfall during the night. Yesterday was rather chilly. Up to 6 p.m. to-day we had fine weather, but now the sky is again covered with heavy clouds.

Bulgarian Report.

Bourgas, April 26.—The market has been lifeless,; insignificant fresh transactions have only been effected. Cool weather and slight precipitations were experienced at the beginning of the week, but the last few days have been mainly fair and the temperature has risen considerably.

Company Meeting.

ORIENTAL TELEPHONE AND ELECTRIC COMPANY.

Another Satisfactory Year.

Sir Henry McMahon's Speech.

The thirty-sixth ordinary general meeting of the Oriental Telephone and Electric Company, Limited, was held on May 13 at the Abercorn Rooms, Great Eastern Hotel, Bishopsgate, E.C. Sir A. Henry McMahon, G.C.M.G., G.C.V.O., K.C.I.E., C.S.I. (Chairman of the company), presided.

The Secretary (Mr. T. K. Brown) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: The net result of the year's working is that after charging £27,142 for depreciation and renewals, as against £23,453 for 1928, adding the amount of £34,425 2s. 11d. brought forward from that year and deducting the interim dividends paid in November last on the Ordinary and Preference shares amounting to £29,415 12s. 10d., there remains a balance for disposal of £104,530 12s. 1d., as compared with £91,028 12s. 1d. for last year, a result which I think may be considered very satisfactory, especially when the somewhat difficult conditions prevailing at all our centres during that period are taken into account. Out of this available balance we recommend:—(1) The payment of final dividends of 3½ per cent., less tax, and 8 per cent., free of tax, on the Preference and Ordinary shares respectively—the latter requiring some £17,000 more for this last year on account of the increase in Ordinary share capital; (2) a special allocation of £12,500 to depreciation, in place of £15,680 transferred to general reserve last year; and (3) a carry forward of the balance, £30,807 0s. 1d., as against last year's £34,425 2s. 11d., which recommendations will, I trust meet with your approval.

The balance-sheet shows on the debit side, an increase in the Ordinary share capital of 141,258 shares representing the amount of the new issue made on January 1, 1929, and which was taken up. The Debenture stock account calls for no comment, showing as it does the usual reduction in the company's indebtedness. But there is a new item, "Subsidiary Company, amount due on Current Account," which formerly would have been included under the heading "Sundry Creditors," but has now to be shown separately as required by the new Act. The item "Sundry Creditors" itself presents nothing abnormal, some £25,500 representing trade accounts for materials, etc., £15,000 for income tax, and a few small items bringing the total up to the figure shown. The reserve for depreciation has been depleted to the extent of £6,120 due, chiefly, to the change from manual to automatic working at Singapore, and it is with the object of replenishing and further strengthening this fund that we recommend in the appropriation account a transfer to it of £12,500.

On the credit side the addtion to plant account is again accounted for mainly by the change of system at Singapore; while the increase under the heading of land and buildings is due to the acquisition of sites, both for new sub-exchanges and for a staff housing scheme, which the Board have found it essential to take in hand in order to cope with the very serious and growing difficulty of finding suitable living accommodation for the European staff at Singapore. Shares in subsidiary and associated companies have been set out in a different form so as to comply with the new Act, which now requires a distinction to be made between the two; and it has not been thought necessary to continue to specify the details as hitherto, as your holdings in these companies are well known to you all, and beyond a slight increase in the number of shares in the Madras Company during the year there has been no alteration in the list as shown for the last two years.

You doubtless wish to know something of the working of our branches and of the subsidiary and associated companies during the year. Of our associated companies, the Bombay Telephone Company shows steady and continuous progress in spite of adverse conditions, both political and industrial, and pays a dividend of 6 per cent. for the year, as against 4 per cent. for 1928. The Debenture stock which you hold in that company is convertible into ordinary shares as from July 1 next, and your Board has decided to exercise that option, since these shares will then rank *pari passu* with the rest of the Ordinary shares already issued, and participate in any higher dividends declared upon them, instead of earning a fixed interest of only 6½ per cent. after January, 1931, as would be the case if retained in their present form of Debenture stock.

The Bengal Telephone Corporation also records progress both in the number of new connerions and in its dividend, which has been increased from 7½ per cent. to 8 per cent. There also, trade conditions have been none too favourable, so that in the circumstances these results may be regarded as satisfactory.

During the year the Madras Telephone Company made an issue of shares to the existing shareholders—of which your company is the largest. Your company thus increased its holding by 25,754 shares. It being considered a matter of policy, however, to endeavour to stimulate local interest in the undertaking, your Board subsequently placed upon the market a certain number of these new shares and 4,325 were taken up at an average price of between Rs.13 and Rs.14 per share. The Madras Company has also been able to offer certain concessions to its subscribers in the form of a reduction in rates, which they confidently anticipate will encourage development by attracting numbers of small traders and residents to the system.

Trade conditions in Rangoon have been very bad during the year, worse, perhaps, than at any other centre except Mauritius, and the result is that the Rangoon Telephone Company has no improvement to record. There is, in fact, a slight set-back, though the company has been able to maintain its dividend of 6 per cent., free of tax. With regard to a possible revision of rates, to which I referred last year, further investigation goes to show that under present conditions it is extremely doubtful whether the development which normally follows from a reduction in rates would be realised in the case of Rangoon, and it has, therefore, been decided with some reluctance to defer this question until a more favourable opportunity presents itself.

I must not conclude my remarks without again expressing our appreciation of and thanks for the loyal services rendered by our staffs both at home and abroad, and also those of the Directors and officials of the undertakings in which we are interested. For many it has been a strenuous year, and for all a somewhat anxious one, for, from one and all of our branches overseas we hear the same story of slackness and depression in trade and commerce, added to which, in many cases, have been anxieties resulting from political disturbance. I trust, however, that by the time I have the pleasure of addressing you again, the air will have cleared, and that we shall be able to look forward to a period of renewed prosperity and development.

There is just one other matter which I would like to mention. Hitherto it has been our practice to declare an interim dividend of 4 per cent. and a final dividend of 8 per cent. It has been suggested, however, that shareholders might prefer a more even distribution of, say, 5 per cent. and 7 per cent., in which case the interim dividend payable in November next could be increased to 5 per cent. I particularly wish to make it clear, however, that if this is done, it must not be taken as an indication that a higher rate than 12 per cent. for the year is to be expected, as the final dividend would then be only one of 7 per cent., instead of 8 per cent. as hitherto.

The motion was carried unanimously.

CENTRAL ASIAN SOCIETY

(in which is incorporated The Persia Society.)

Founded in 1901 to study the politics, commerce, geography, history and archæology of Asia. Authoritative lectures are given, and a quarterly Journal published.

The subscription of £1 per annum entitles members to a copy of each issue of the Journal, tickets for all meetings, and the loan of books from the library.

Applications for membership, stating occupation and connexion (if any) with Asia, to be addressed to the Secretary, 77 Grosvenor Street, W.1

COMPANY NOTES AND REPORTS.

EGYPTIAN MARKETS.

The report of the Egyptian Markets, Ltd., for the year ended December 31 last states that the number of cattle market days lost during the year in consequence of cattle plague was 619, as compared with 507 during the year 1928. The gross receipts from the cattle markets, exclusive of slaughter houses, show a decrease of £1,457, as compared with the year 1928, the total being £56,598 against £58,055. The gross receipts from the general markets for the year under review were £31,728, as compared with £32,049 for the year 1928, a decrease of £321. The net receipts from the slaughter houses worked during the year were £717, against £938 during 1928, a decrease of £221. Three slaughter houses were taken over by the Government during 1929, reducing the number worked by the company at the close of the year to 32. The expenses in the trading account show a decrease of £404 under rents, salaries and wages; and £305 under maintenance and repairs of markets. The net profit derived from the sale of miscellaneous articles and sundries was £6,502, as compared with £9,917 for the previous year, a decrease of £3,415. The low prices ruling for cotton during the latter half of 1929 resulted in a shortage of money in the hands of the fellaheen, which adversely affected the company's trading. Very severe competition in the artificial manures business was also experienced during the year under review.

The net revenue from all sources for the year 1929 amounted to £50,866 17s. 7d., as compared with £54,211 14s. 0d. during the previous year, a decrease of £3,344 17s. 2d. After deduction of the amount of £27,024 19s. 2d., which it is estimated will be required to meet payment of the Government's share of profits for 1929, and the annual premium of £967 16s. 6d. for the amortisation of the share capital, a balance of £21,074 1s. 11d. remains, which, with the amount of £14,203 7s. 5d. brought forward from 1928, makes a total of £36,177 9s. 4d. available for distribution. The Directors recommend the payment of a final dividend (No. 51) on the Ordinary shares for the year ended December 31, 1929, of 5 per cent., and a bonus of 1 per cent., making, with the interim dividend of 5 per cent. paid in November, 1929, a total of 11 per cent. for the year, absorbing in all £19,217, and in accordance with the terms of the memorandum of association of the company, and subject to the settlement of the proportion of profits due to the Government, the payment of a dividend (No. 20) on the Deferred shares at the rate of £8 17s. 8.247/300d. per share for the year 1929, which will absorb £2,666 0s. 7d. and leave a balance of £14,294 8s. 0d. to be carried forward, which balance is also subject to the settlement above referred to.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended May 7:—

Egyptian Futures.

Sakel Contract.—For a short period immediately following our last report, values were maintained at a steady level, but subsequently declining American markets, a disappointing spot demand, and short selling carried values down to practically the previous low point of the season. With the general outlook far from reassuring the market appeared set for a further fall, but at the opening to-day, buying orders began to come in from Alexandria, and, with contracts in poor supply, prices commenced to react sharply, reducing the decline on the week to 33 to 36 points for near and 27 to 10 points for new crop deliveries. To-day's advance in our markets has coincided with a strong upward swing in Alexandria, Julys there gaining about three-quarters of a dollar during the session; information as to the cause of this improvement has not come to hand yet, but we anticipate that it is due to expectations of Government intervention in the month in question. Differences between old and new crop months have fluctuated considerably during the week. At one time, Mays went to 52 points over; but, with heavier tenders than expected, a distinct closing-in has taken place, and those running the position show no inclination to add to their commitments. Trade reports have been very disappointing, and yarn business appears to be almost at a standstill for the time being. With this the case, spinners are only purchasing actual in retail quantities, and we are afraid no improvement can be looked for.

Upper Contract.—A very moderate business has been transacted in this market throughout the past week, and fluctuations have again been mainly governed by the action of the American markets. Trade reports have been rather depressing, and little support has been accorded from this quarter. A slight easing in the spot basis has been witnessed, but with the local stock so reduced we cannot anticipate any pressure developing in old crop months in this direction whilst the present artificial inflation of old crop months continues. Whilst there is nothing in the outlook to lead to the supposition that values will show any permanent appreciation, we are rather inclined to the view that the present reaction will be carried further during the course of the next few days, as the market at the moment appears somewhat oversold and some readjustment of the technical position is due.

Egyptian Spot.

The demand for spot cotton has been on a more moderate scale, quotations have gradually sagged, until to-day when a fairly substantial recovery was made; sales show a big drop from the preceding two or three weeks. At the back of it all lies the uncertainty caused by Government interference, both in America and in Egypt, but political disturbances in India, and a strong attempt amongst fine spinners to maintain yarn prices, have also had their effect. A bright spot in the situation is that prices appear to be at a very reasonable level, and this, sooner or later, must have its effect in attracting buyers.

Sakels.—Only a moderate inquiry has been witnessed and there has been a big drop in sales. Several hundred bales of Good Sakel were tendered during the past week.

Uppers.—A fair inquiry has been met with, some of it for the Continent. Difficulty has been experienced in meeting the demand, however, as the market has been well swept of the medium quality with any pretensions to staple, say, cotton at from 20 to 30 on, and buyers have shown themselves unwilling to pay the advance in basis.

Pilion.—Again, we have to report a fairly good inquiry, and rather more business has been done. This week, it has been principally the better qualities which have benefited.

Nahda.—After a long period of inactivity this cotton appears to be coming into favour again. Unfortunately, there is a big discrepancy between sellers and buyers. Both Egypt and the Continent have been pressing cotton for sale. There would appear to be an outlet for this cotton in Lancashire provided prices are cut, but, generally speaking, recent offers have not been sufficiently attractive when compared with what is offering in other outside growths.

Maarad and White cotton have been in moderate request only. It is difficult to estimate actual results, but we are inclined to think that both these cottons are becoming more popular at the present time.

Sudan Sakel.—A fair business has taken place at steady rates and more sales have been reported.

Tokar Sakel.—A fair inquiry has again been in evidence, but sales have been negligible, and buyers appear to be content with an odd bale or two for testing purposes. We are still of the opinion, however, that this cotton must shortly attract the attention it deserves.

C.i.f. Business.—We have been unable to trace any improvement. Forwardings were returned at 5,343 bales Egyptian and 685 bales Sudan. Spot sales have been estimated at 1,100 bales Egyptian and 500 bales Sudan Sakel. Quotations of Sakel show a drop on the week of 20 points, and Uppers are 6 points lower. There is no change in the quotations of Pilion. F.G.F. Sakel to-day, 14.00d. F.G.F. Upper to-day, 10.26d. F.G.F. Pilion to-day, 10.80d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report as follows for the week ended May 1:—

Since our last report the futures market has been moderately active, with a rather weak tendency. The week's summary of price movements is as follows:—Sakellaridis: May, 28.00 dollars, 0.01 dollars down; July, 27.07 dollars, 0.63 dollars down; November N.C., 25.68 dollars, 0.29 dollars down; January N.C., 25.99 dollars, 0.28 dollars down. Ashmouni: June, 19.82 dollars, 0.02 dollars down; August, 18.65 dollars, 0.38 dollars down; October N.C., 17.74 dollars, 0.23 dollars down; December N.C., 18.03 dollars, 0.27 dollars down; February N.C., 18.41 dollars, 0.23 dollars down.

Sakel.—Week follows week, without the factors ruling the market showing any changes sufficiently important to supply a definite impulse in either direction. It is useless to discuss the near months, as these options are definitely stabilised at the limits fixed by the Government. Regarding new crops, November has been actively dealt in, particularly by the speculative element, but in spite of a fair range of movement both up and down the last few weeks, the level of about 26 dollars has been the point to which fluctuations have eventually gravitated. During the week just closed, the market has been quieter than during preceding weeks. The trade has not operated at all. Information issued through the medium of the daily bulletins of the Ministry of Agriculture regarding the locust invasion, while confirming that the damage sustained by the crop up to the present is insignificant, at the same time indicates that the danger of damage in the future has not yet been entirely removed. There is nothing fresh from Washington regarding the promulgation of the projected law taxing imports of Egyptian cotton into America. A decision on the subject is expected to be taken some time during

th first half of the present month. It seems to be confirmed that the Government will not intervene in July, and this would explain the recent decline of about three-quarters of a dollar in this option. To-morrow is the first tender day of May, and it is expected that the Government will be called upon to receive a very heavy weight of cotton. There is nothing in present conditions, either local or in consuming centres, which leads us to look for any change in the present tendency, and we therefore continue to expect lifeless markets, with very little change in prices. The Sakel/Uppers new crop straddle (November/October) this week stands at 794 points, agains 800 points last week and 1,273 points at this time last year.

Uppers.—What we have stated above regarding the Sakel market may be repeated for Uppers; trade interest is reduced to a minimum and the little business done in new crops has been almost entirely of a speculative or professional character. The outlook is for a continuation of the present state of affairs for the near future. The Ashmouni/American new crop straddle (October/October) this week stands at 204 points, against 252 points last week and 380 points at this time last year..

The week's receipts amount to 164,061 kantars, against exports 264,352 kantars; the stock in Alexandria stands at 3,883,899 kantars.

Spot.—The total turnover amounts to about 5,800 bales, of which we estimate 2,000 bales Sakellaridis, 2,900 bales Ashmouni and Zagora, 100 bales Pilion, and 800 bales other varieties.

Sakellaridis.—With the exception of Middling and Middling Fair, in which a fairly good business was done, the demand for this variety has practically dwindled to nothing.

Ashmouni and Zagora.—The bulk of the demand has been for Good and above. Spot differences are slightly easier.

Pilion.—Only a very small business has been done.

Other Varieties.—There was a good demand for both Nahda and Maarad, mainly in the top grades, but owing to the fairly large quantity of cotton offering, spot differences did not move.

Up-country.—Ginning factories ceased working on April 30, but cotton will continue to be sent down to Alexandria during the first fortnight of May, and it is probable that arrivals will reach 8,200,000 kantars when all the cotton ginned and at present up-country arrives here.

Crop, 1930.—Weather conditions have been favourable, and the progress of the crop is satisfactory everywhere. The increase in the acreage is estimated at present at about 10 per cent.

This year's Egyptian Budget contains a credit of £E220,000 for the construction of new stores for the Egyptian Army.

The Egyptian State Railways have purchased 500 feddans of land at Abu Zabal, Cairo, for the construction of new workshops.

Proposals for the construction of a bridge across the Golden Horn are under consideration.

The Ministry of Public Works, Cairo, received eleven tenders from British and Continental firms for the construction of an isolated basin in connexion with the electricity scheme in Upper Egypt. The tender submitted by Messrs. Callenders Cable Company was lowest at £E106,000.

Why not visit
The SUDAN?

KHARTOUM can be reached either via Egypt or direct by steamer to Port Sudan and thence by train-de-luxe. The social life of Khartoum during the season (December to March), the scenes of Wild Life on the Southern reaches of the White Nile, or interesting short trips organised by the Sudan Government Railways and Steamers from Khartoum, offer a unique variety of experiences to those in search of something out of the ordinary. It is also a new route to or from UGANDA and KENYA, involving neither difficulty nor discomfort. To the Sportsman it is Paradise.

Notes of the Week.

Cabinet Reconstruction in Bulgaria.

In his own time, if not altogether in his own way, the Bulgarian Prime Minister, M. Liaptcheff, has reconstructed his Cabinet. A Ministerial crisis has been threatening for many months, but M. Liaptcheff insisted on having the question of Bulgarian Reparations and the Budget out of the way first. The trouble has come from within the ranks of the Democratic Entente, with which the Government of the country has been identified since the *coup d'état* of June, 1923. This coalition comprises three main political groups, whose leaders are M. Liaptcheff, Dr. Tsankoff and M. Bouroff. Dr. Tsankoff became Prime Minister first, but the country showed signs of wearying of the rather Draconian régime that he instituted, which was little disposed to admit any distinction between members of the Agrarian Party and out-and-out Communists. M. Liaptcheff was, accordingly, entrusted with the Government in January, 1926, and a less ruthless policy towards the Agrarians had the effect of restoring a greater semblance of unity to the country. Subsequently, however, feuds between the rival sections of the Macedonian Revolutionary Organisation came to a head, and Dr. Tsankoff, who had become President of the Sobranye, while his followers remained within the Democratic Entente, adopted a critical attitude towards what he regarded as the Government's half-hearted handling of the Macedonian murder campaign. In the end M. Liaptcheff has been obliged to take Dr. Tsankoff into his Ministry, on the latter's own terms, as far as the number of portfolios allotted to the Tsankovists is concerned. Whether the Ministerial changes will render Government action against the Macedonian revolutionaries more effective only the future can show. Dr. Tsankoff's inclusion in the Cabinet has aroused the misgivings of "moderate" Macedonians, but these may be based more on anxiety for the unity of Bulgaria than on any tenderness for the revolutionaries. M. Liaptcheff is reported to have appealed for Dr. Tsankoff's support on the ground that the unity of the Democratic Entente was essential to its retention of power. This may be merely the enunciation of a truism, or it may indicate that the Prime Minister is not too well satisfied with the state of affairs in the country. Nothing, as far as is known, has been done to bridge the gulf between the *bourgeoisie* and the Agrarian population, and in these circumstances there must always be the danger that the latter will be driven to suppose that its interests can be safeguarded only if it succeeds in driving the *bourgeoisie* from power and taking the reins of government into its own hands. If Bulgaria has to rely on *coups d'état* for her constitutional development, she will forfeit the reputation that she has hitherto enjoyed of a capacity for wise restraint in the matter of party politics.

Yugoslavia and Bulgaria.

The statement attributed to the Yugoslav Foreign Minister when in Geneva will cause some disappointment to those who had found in recent events ground for optimism in regard to Yugoslav-Bulgarian relations. Not only had the conference between the two countries on frontier questions resulted in a satisfactory agreement, but M. Marinkovitch himself had also gone out of his way last January to strike a new note by expressing regret that Bulgaria had not been better treated in the matter of reparations. Last week the Yugoslav Foreign Minister declared that aggression—almost a war—was being made on Yugoslavia by Macedonian *komitajis*, and that Yugoslavia was still waiting for the Bulgarian Government to put an end to it. This state of affairs, he hinted, was mainly responsible for his country's opposition to any change in Article 12 of the Covenant of the League of Nations, which empowers a State to take its own action against an aggressor six months after having informed the League of the aggression. As the last reported outrage by *komitajis* on Yugoslav territory had been followed up by definite action against these bands on the part of the Bulgarian Government, it was hoped that the Yugoslav authorities would infer that steps in the right direction were being taken in Bulgaria and would refrain from insisting upon a pace that could not be adopted so long as the Bulgarians acted alone in the matter.

The Macedonian Question.

To outside observers it would seem to belie the whole history of the Balkan peoples for the last few centuries, if lawless bands ceased to be found while injustices continue in one part or another of the Peninsula. Rightly or wrongly, the Bulgarophone Macedonians who found themselves under Yugoslav jurisdiction were incensed at the suppression of the use of their language in Church, school and public place and at the various methods adopted to "Serbise" them. In accordance with the traditions of the Yugoslavs themselves when under

Digitized by Google

similar conditions, whether in Austria-Hungary or in the Ottoman Empire, they have registered their dissatisfaction in the approved manner, and it remains to be seen whether methods which were unsuccessful when practised by Austrians, Hungarians or Turks will succeed when adopted by Yugoslavs. At the present time there is, no doubt, a Macedonian element which is unlikely to listen to reason, and which can probably be disposed of only by joint action on the part of Bulgaria and Yugoslavia. To rid Yugoslavia, and consequently Europe, of the Macedonian question, however, it would be necessary at the same time to free the ordinary rank-and-file Macedonians who are prepared to be law-abiding under non-oppressive government from the sense of injustice under which they labour at present. Steps in this direction have been taken by the Yugoslav Dictatorship, and it was expected that they would be followed out to their logical conclusion. As it would be distinctly unfortunate if the Belgrade Government allowed itself to be deflected from its policy of placing relations between Yugoslavia and Bulgaria on a satisfactory basis, we may hope that M. Marinkovitch's warning was meant to be nothing more than approval of the trend of the political changes that have taken place in Bulgaria with the re-entry of Dr. Tsankoff into the Government.

The Croat Trial.

From the evidence elicited at the Croat conspiracy trial in Belgrade, so far as it has been reported, it would appear that the Yugoslav authorities succeeded in laying hands on a small body of young Croats who were bent on displaying their dissatisfaction with the existing régime and had formed no clear idea of the ultimate end to which their questionable activities might lead them. When young men start using gunpowder on railway lines, and offer the explanation that they merely wanted to make a demonstration and did not intend to hurt anybody, the State can hardly be blamed for deciding that the country will be better served by their being put out of harm's way for a period. The case of Dr. Matchek, and his associates Colonel Begitch and M. Jellashitch, would appear to be in a different category. The leader of the Croat-Peasant Party admits to having given a small sum of money to M. Jellashitch for distribution among young Croats who were out of work, and it was the case for the Government that this money had been given for subversive purposes. Colonel Begitch's depositions had corroborated the official view, but again the evidence obtained by the police under pressure was shown in court to be of doubtful value, although Colonel Begitch refused to retract his statement that Dr. Matchek had given him money when confronted with the latter's denial. It will be of interest to learn what view the judges take of this conflict of evidence. If the Court decides that there has been no serious conspiracy, but that some irresponsible young men need chastening, Yugoslavia can be congratulated on the issue of the trial, provided that steps are at once taken to overhaul what appears to the outside world as the very terrible police system of the country.

Greece's Grand Old Man.

One of the characteristics of M. Venizelos that has frequently stood Greece in good stead is that he has the courage of his convictions and never hesitates to speak out his mind to the people. It is satisfactory to see that he shows no sign of losing this useful capacity with the passing years. He has recently been touring in Greek Macedonia, establishing personal touch with the inhabitants and speaking freely to them some of the things, no doubt, that they liked to hear, but always, we may be sure, what he wanted them to hear. At a farewell banquet given in his honour at Salonika he took the opportunity of reviewing the general situation in Greece, and here again he dealt with subjects which a less courageous politician might have been content to gloss over. The fall in the prices of agricultural products was not pleasing to the producers, but M. Venizelos was candid enough to declare that he regarded it as an advantage to the people as a whole, and he urged the agriculturists not to expect too much from Government, but to seek remedies for themselves. "Optimism" and "work" were, indeed, his slogans for the well-being of Greece. He emphasised the stability of the existing régime, which, in spite of a difference of views held by two sections of the population, was based on the desire of all to be left in peace, and stated that the Government, having passed a law for the protection of the social order, was fully prepared to cope with any attempts to disturb that order. That law, however, would be incomplete, unless something was done to improve the conditions of workers, and for this reason he commended to employers the insurance measures that had been introduced or would have to be adopted. M. Venizelos's directness of speech, his sincerity and vigorous optimism are conspicuous assets for Greece, which has not escaped the economic stringency from which most countries are suffering.

The Palestine Mandate.

Rightly or wrongly, the British Government is acting as if the Mandate for Palestine were eternal; it has never, so far as we know, given any indication of its readiness to relinquish control of the Holy Land, whether or not a "National Home" to satisfy the Jewish people be established there. There is something a little curious in this final attitude. For, whereas the Palestine Administration strives night and day for the creation of a Palestinian people, of a community, that is, neither specifically Arab nor specifically Jewish, the British Government is inclined to conceive the interests of the two peoples in Palestine, Arabs and Jews, as radically opposed. It will not grant a Parliament when the Arab Delegation asks for one, because, quite simply, it is afraid, or certain, that the Arab majority would not respect the wishes of the Jewish minority (in other words, the Mandate could not be implemented); nor, on the other hand, is it fair to suppose that, if or when a Jewish majority be established in Palestine, a British Government would create a Parliament. No: the only safe assumption is that the Mandatory Power regards the Mandate as eternal; in other words, that neither Arabs nor Jews are to be entrusted with executive power.

The Arab Delegation.

The visit of the Palestine Arab Delegation, though apparently fruitless, will not, one may think, have been entirely in vain, for it has certainly given the British Government an insight into Arab psychology, which it could not well have obtained from written reports. The Arabs' demands, it is true, have all been rejected, as it was always obvious, owing to the double-edged nature of the Mandate for Palestine, that they might be rejected. The Arabs could plead with considerable show of justification from documents such as the Covenant of the League of Nations and the Palestine Mandate itself that at least two of their demands, the cessation of immigration and the establishment of a Government elected by the mandated people, be granted; but equally the British Government could show that, were such demands granted, the Mandate as it stands could not be worked. It is quite patent from the deadlock that has ensued between the Government and the Arab Delegation that the Chapter in the Report of the Commission of Inquiry on the difficulties inherent in the Mandate was not too strongly worded. This deadlock is complete, so complete that over the political future of Palestine darkness is impenetrable. There is no man who can say how things will shape themselves. That the movement to identify the interests of Arabs and Jews has suffered a terrible setback must be admitted by every observer who is not purblind. It is to be doubted, however, whether the Delegation did not commit a tactical error in publishing its disappointment at the rejection of its demands so flamboyantly. For the essentially British attitude towards this problem is that, since the possibility of enjoying "freedom," whether by Arabs or Jews, has depended and still depends in the main on British effort,

Digitized by Google

this assumption of "rights" is extravagant. Without the British conquest by arms of the Holy Land it is highly improbable that either the Arabs or the Jews would be able to make the demands that they are making to-day. It may be that both peoples are now recognising that fact. We hope so; for only on a realistic basis can a peaceful community in Palestine be built up.

The Wailing Wall and Immigration.

It is, one may assume, an indication of the delicacy of the problem and of the nature of the interests involved, that the British Government only last week was able, after months of search for suitable men, to announce the names of the Commissioners who, with the consent of the League Council, will make a final pronouncement on the rights and the wrongs of the Wailing Wall question. Of the impartiality and the utter absence of *parti pris* of M. Loefgren, formerly Swedish Foreign Secretary, of M. Barde, a Genevâ Judge, and of M. van Kempen, ex-Governor of Sumatra, there is not the slightest doubt, and the separate qualities of these three distinguished foreigners represent a most satisfactory combination. In addressing the League Council last week Mr. Arthur Henderson spoke not only of this Wailing Wall Commission, but also of Sir John Hope Simpson's mission, concerning which we repeat our well-founded hope that both Arabs and Jews will help to make it a success. He further stated that the British section of the police in Palestine will shortly have been increased by 479 men altogether. Finally, he referred to the visit of the Arab Delegation in London and of the determination of the British Government to "devise means, within the framework of the Mandate, of satisfying legitimate aspirations and of removing any apprehensions that may still be entertained." It will be profoundly interesting to see what this resolve amounts to. In the competence of Sir John Hope Simpson's forthcoming report we have every confidence; nor, indeed, are there serious reasons for misgivings on the economic side of the life of Palestine. But politically we are afraid that for the next few years the lot of the Palestine Administration will be far from being a happy one. The British Government obviously hopes that economic ointment will in time cure political sores, yet the hope is founded on a reading of history that we cannot share. From the immediate point of view, it is fortunate indeed that the economic aspect of Palestine is bright, for it is to be supposed that the whole cost of the extra policemen will have to be borne locally, and as much as possible, presumably, of that of the two battalions of infantry. Those who can find comfort in such a position, after ten years of the working of the Mandate, must do so. But in the meantime whence will the money come for things like education, the cadastral survey, and so on? It looks as though the preservation of order in Palestine would monopolise the main endeavours of the Administration, which ought surely by now to be handling more constructive matters.

INDIAN NOTES.

The Real Issue.

Although at any moment a fresh disturbance in some part of the country may belie present hopes, the political situation in several respects appears to have sensibly improved during the past week. The Viceroy's review of the position, the announcement of the dates on which two parts of the Statutory Commission's report may be expected, and the publication of the letters exchanged between the Prime Minister and Lord Irwin, setting out the provisional arrangements for the Round Table Conference, the text of which will be found on another page, have undoubtedly cleared the air. On the other hand, it can scarcely be said that the prospects of the Conference itself have become any brighter. The response of the Liberal Party to the Viceroy's appeal "to all persons throughout India, calmly and dispassionately" to consider the history of that troubled country since the beginning of November is characteristic, but the reverse of encouraging. The time-honoured policy of "sitting on the fence," with one foot on either side, is strongly in evidence. Disapproval of the civil disobedience campaign is so hedged around, in the draft statement issued by the National Liberal Federation, with carping and uninformed criticism of the Government's action and the conduct of the police that the distant observer may be forgiven for wondering exactly where Sir Tej Bahadur Sapru, Sir Phiroze Sethna and the other Moderate leaders do stand. With the utmost readiness to appreciate their difficulties, we cannot see how they can hope to "face both ways" indefinitely, and, though we recognise the strength of the bargaining instinct, strong and unqualified condemnation of an avowedly revolutionary movement might at least have been expected. Meanwhile the high hopes entertained in some quarters of a successful issue to the deliberations of the All-Parties Conference have equally failed to materialise. As Lord Irwin has reminded us, "it is evident that no settlement can be considered satisfactory which does not carry the consent of, and give a sense of security to, the important minority communities who will have to live under the new Constitution." That there is very little chance of the Round Table Conference achieving anything at all unless preceded by a real and genuine *rapprochement* between Hindus and Muhammadans is no less patent. How remote that prospect is at present was strikingly revealed in the Minute of Dissent and Supplementary Note appended by Dr. Suhrawardy to the report of the Indian Central Committee and reviewed last week in these columns.

Infant Marriages.

The passing of the Sarda Act has led to an enormous number of infant marriages in India, to forestall its effect. It is generally believed that such marriages are peculiar to the Hindus, whose Shastras enjoin matrimony, in the case of girls, before they attain the age of fourteen. In Sind, however, a marriage was recently announced between a boy who, in the language of the Babu, is still "milking the parental mother," and a girl of four. The boy's father is a Muhammadan gentleman of standing, while the girl is his niece. In another case the bride, aged three, was so sound asleep that the ceremony had to be postponed until next year. The truth is that among both Muhammadans and Hindus, custom has so restricted the choice of brides, while making spinsterhood a disgrace, that prudent parents regard it as their duty to secure early options. It will be interesting to see whether the legislation now in force can dissolve the force of custom. Meanwhile reports from Peshawar show that Congress agents are sedulously using a fabricated version of the Act for inciting ignorant Muhammadans of the lower classes. Propagandists are busily declaring that the Act provides that girls must be medically examined before marriage and have succeeded in spreading the story widely among the trans-frontier tribes. There is no doubt that the dissemination of such lying propaganda has been very largely responsible for the recent recrudescence of violence in the North-West Frohtier Province, which has necessitated the application of the Prevention of Seditious Meetings Act to the whole of the Province and the Peshawar district in particular.

TROUBLED WATERS IN ROUMANIA.

The constitutional practice in Roumania which looks to the King, or under present conditions to the Council of Regency, to terminate the life of the Government when it appears to have lost the support of the country, rather than to leave the Cabinet's fate to the judgment of Parliament, or of the electorate, not only makes for political instability, but also encourages the Opposition to devote its energies to propaganda outside Parliament instead of submitting its policies and principles to critical analysis in the Legislature. Thus it comes about that, in spite of the overwhelming majority possessed in the Chamber of Deputies by Dr. Maniu's Government and in spite of the fact that the present Parliament has yet two more years to run, the Opposition is sedulously endeavouring to create the impression that the fall of the present Cabinet is imminent. A few years ago, it will be remembered, the Liberal Government, under M. Vintila Bratianu, had the same experience, and, although it ultimately yielded to the combined forces of unpopularity at home and abroad, the National-Peasant Party was kept for a considerable period in the political wilderness. The present Prime Minister is certainly spared all foreign complications, for not a little of the strength of his position lies in the fact that his advent to power was hailed with relief in all the countries that are closely linked by economic interests with Roumania, and considerable consternation might be felt outside Roumania at the prospect of a return under another Government to the chauvinistic anti-foreign legislation with which the Liberal Party's last tenure of office was identified. It may be doubted, however, whether M. Bratianu on resuming the reins of government would be tempted to revive the policies that led to his undoing before and were proved to be prejudicial to the interests of the country. The next change of Government in Roumania is likely to hinge on purely domestic matters, and foreign observers will not feel called upon to commit themselves to partiality in regard to Roumanian affairs until they are confronted with a Government that shows itself once more aggressively hostile to foreign interests.
